High Speed Steel.

By J. Duguid, Master Mechanic,
G.T.R. Montreal.

I have given this paper the above name so that I would have a big field to talk about and that I could not be accused of wandering away from the title. I am not going into the subject of high speed steel technically, but will give you my observations in using it, and also what I have read about it. High speed steel got its name no doubt from the fact that when it was first introduced, the only way to get the increased efficiency of it was to run the machines at a high speed, as the old style machines were not built to carry heavy cuts, the driving [illegible] belts and cones being [illegible] narrow to transmit the necessary power, and it was found if you increased these, as was done in some cases, as shown on fig. 1, the other parts of the machine gave out under the strain. These parts then being strengthened up, it was then found that the whole machine frame was not rigid enough and caused the tools to break on account of the vibration, and in the face of these facts all that could be done was to carry about the same size cuts with the high speed steel as with the old carbon steel, but to speed up the machines. It was at this point that the manufacturers of machine tools saw the necessity of building more powerful and rigid machines, and to them should be given as much credit for the increased output of machines as the high speed steel manufacturers. Although the great majority of machine shops are using high speed steel at present, I venture to say that very few of them are getting over 75% of the total efficiency of the steel, principally for the following reasons:

1. The great number of old out-of-date machines and heavy work being done in them. They are therefore not carrying a heavy enough cut, neither can they be run to proper speed, and about 50% of the steel efficiency is all that is being got under these conditions. There are conditions, however, where old machines can be used to good advantage with the high speed steel, and that is on repair work, such as skimming up old piston rods, valve rods, &c.

2. The different shape of tools on uniform work. Workmen will grind machine tools in about the same way as ladies choose their hats, which is every shape, and some of these the most ridiculous. I believe if there was a uniform system in every shop for the grinding of tools, (such as some shops have adopted), that it would greatly increase the life of the steel, also the efficiency.

3. The different speeds and size of cuts on uniform work and material. This is one of the most serious defects in the use of high speed steel or in fact any steel.

4. The use of belting not of proper tightness and belts that are worn out. I think you will agree with me that a great many manufacturers will use a belt until it all falls to pieces, although it may be decreasing the output of their high speed steel by 50%. All belting that is driving machine tools should be adjusted with spring clamps, as shown in fig. 2 so as to ensure proper tension and driving power.

A. Wilcox,
Superintendent District 1, Canadian Northern Railway.

5. The overhang of tools in tool rest, causing excessive chattering and consequent breaking of tools.

6. The use of dull tools, also the want of reforging. The use of dull tools causes excessive heating destroying them, and also a great loss on account of the extra power required to drive the machine.

7. The want of proper supply of cooling water used, thereby allowing the tool to become overheated and fail.

8. The want of variable speed enough on the machines to suit the different diameters of work.

9. The use of too light tools on heavy work.

These are some of the reasons why we are not getting nearly the full efficiency from high speed steel, which must be quite apparent to those of us connected with machine shops. They are all defects that can be remedied with proper supervision.

I will now try to describe to you the action of a tool and its wear in cutting metal. A great many of us imagine that it is the sharp edge of the tool, the same as a razor, that is doing the work, Such however, is not the case. Fig. 3 is an enlarged view of the action of a tool in cutting a chip from a forging at its proper speed, and it is therefore plain that in all roughing cuts the chip is torn away from the forging rather than removed by the action which we term cutting. The familiar action of cutting, as exemplified by an axe or knife removing a chip from a piece of wood, for instance, consists in forcing a sharp wedge (i.e., one whose flanks form an acute angle) into the substance to be cut. Both flanks of the wedge press constantly upon the wood, one flank bearing against the main body of the piece, while the other forces or wedges the chip or shaving away. While a metal cutting tool [illegible] like a wedge, its cutting edge ing formed by the intersection the "lip surface," and "clearance surface," or flank of the tool, action is far different from that the wedge. Only one surface of metal cutting tool, the lip surface ever presses against the metal. The clearance surface, as its name implies, is never allowed to touch the forging. Thus "cutting" with a metal cutting tool consists in pressing, tearing or shearing the metal away with the lip surface of the "wedge" only under pressure, while in the case of the axe and other kinds of cutting, both wedge surfaces are constantly under pressure.

The enlarged view of the chip, tool and forging, shown in fig. 5, represents with fair accuracy the relative proportions which the shaving cut from a forging of mild steel finally assumes with relation to the original thickness of the layer of meta which the tool is about to remove. Son may think this theory is all wrong, b cause they have noted that the cutt they have taken off a forging was of same size as the depth of cut and feed used, but that only shows that were not using a heavy enough feed not running at a proper speed.

In experiments made to show pressure of the chip on the tool c a chip of uniform size it was the pressure varied with w ularity and that the sm was about two-thirds pressure. This is the old light machines wi

heavy cuts of high speed steel. The cause of these variations in pressure is the breaking of the chip in sections. It would appear that the chip is torn off from the forging at a point above the cutting edge of the tool and this tearing off action leaves the forging in all cases more or less jagged or irregular at the exact spot where the chip is pulled away from the forging as shown to the left of A. An instant later the line of the cutting edge, or more correctly speaking, the portion of the lip surface immediately adjoining the cutting edge, comes in contact with these slight irregularities left on the forging owing to the tearing action, and shears these lumps off, so as to leave the receding flank of the forging comparatively smooth. The cutting edge of the tool is continually in action, scraping or shearing off or rubbing away these small irregularities left on the forging, yet that portion of the lip surface close to the cutting edge constantly receives much less pressure from the chip than the same surface receives at a slight distance away from the cutting edge. This allows the tool to run at higher cutting speeds than would be possible if the cutting edge received the same pressure as does the lip surface close to it.

There are many things which indicate this tearing action of the tool. For example, it is an every-day occurrence to see cutting tools which have been running close to their maximum speeds and which have been under cut for a considerable length of time, guttered out at a little distance back of the cutting edge, as shown in fig. 5. The wear in this spot indicates that the pressure of the chip has been most severe at a little distance back from the edge. Still another manner in which in many cases the tearing action of the tool is indicated is illustrated in fig. 6, in which a small mass of metal is shown to be stuck fast to the lip surface of the tool after it has completed its work and been removed from the lathe. When broken off, however, and carefully examined, this mass will be found to consist of a great number of small particles which have been cut off or scraped off the forging, as above described, by the cutting edge of the tool. They are then pressed down into a dense little pile of compact particles of steel, or dust stuck together and to the lip surface of the tool, almost as if they had been welded. In the case of the modern high speed tools, when this little mass of dust or particles is removed from the upper surface of the tool the cutting edge will in most cases be found to be about as sharp as ever, and the lip surface adjacent to it, when closely examined, will show in many cases the scratches left by the emery wheel from the original grinding of the tool.

With roughing tools made of old-fashioned tempered steel, and which have been speeded close to their standard speeds, in most cases after removing this dust pile from the lip surface, the cutting edge of the tool will be found to be distinctly rounded over, and in cases where the tool has been cutting a very thick shaving, the edge will be found to be very greatly rounded over, as shown in the enlarged view of the nose of a tool in fig. 7. With carbon steel tempered tools at standard speeds the cutting edge begins to be injured almost as soon as the tool starts to work, and is entirely rounded over and worn away before the tool finally gives out, but the tool works well in spite of its cutting edge being damaged. With high speed tools at standard speeds, the cutting edge remains in almost perfect condition until just before the tool gives out, when even a very slight damage at one spot on the cutting edge will usually cause the tool to be ruined in a few revolutions.

Carbon tempered tools and also, to a considerable extent, the old fashioned self-hardening tools (such as Mushet), when run at their standard speeds, pass through the following characteristic phases as they progress toward the point at which they are finally ruined: Rounding of the cutting edge, mounting of the steel upon the lip, and the rubbing away beneath the cutting edge. Long before the tool is ruined the fine particles of steel or dust scraped off by the cutting edge begin to weld or stick to the lip of the tool and mount upon it sometimes from 1-16 to ¼ inch in height as shown in fig. 6, as stated above, in the case of modern high speed tools, the damage caused to the tool through the action of cutting is confined almost entirely to the lip surface of the tool.

Doubtless also, the metal right at the cutting edge of the tool remains harder than it is directly under the centre of pressure of the chip, because the cutting edge is next to and constantly rubs against the cold body of the forging, and is materially cooled by this contact.

Whether the lip surface be ground away at high speeds or at slower speeds, the nose of the tool is generally ruined in a very short time after the cutting edge has been so damaged that it fails to scrape off smoothly even at one small spot the rough projections which have been left on the body of the forging by tearing away the chip. The moment the body of the forging begins to rub against the clearance flank of one of

these high-speed tools at or just below the cutting edge even at one small place, the friction at this point generates so high a heat as to soften the tool very rapidly. After a comparatively few revolutions, the cutting edge and the flank of the tool beneath it will be completely rubbed and melted away, as shown in fig. 8. A tool which was still in fair condition when removed from the lathe although showing some slight signs of ruining is shown in fig. 9. The above characteristic of holding their cutting edges in practically perfect condition while running at economical speeds up to the ruining point is a valuable property of the high speed tools, since it insures a good finish, and the maintenance throughout the cut of the proper size of the work without the constant watchfulness required on the part of the operator in the case of old slow-speed tools with their rounded and otherwise injured cutting edges, which when run at economical speeds were likely at any minute to damage the finish of the work. But when one of these high speed tools is nearing its ruining point a very trifling nick or break in the line of the cutting edge will be at once noticed by its making a very small but continuous scratch, projecting ridge or bright streak on the forging, that is, upon that part of the forging from which the spiral line of the chip has just been removed, thus warning the operator of the impending breakdown of the tool.

Regarding the proper speed to run high speed steel. There can be no uniform standard for the speed, for the reason that even on the same class of material there is a wide variation in the speed that it can be economically worked and then again a forging of large dimensions can be cut at a greater number of feet per minute than a small one, on account of its capacity for carrying off the heat generated, and the tool is not cutting on the same point on the circumference so often on account of the larger diameter. A cutting speed which will cause a given tool to be ruined at the end of 80 minutes is about 20% slower than the cutting speed of the same tool if it were to last 20 minutes. On the whole, it is not economical to run roughing tools at a cutting speed so slow as to cause them to last for more than one and a half hours without being re-ground. This of course refers to working on ordinary machinery steel.

High speed can be used on forgings up to 110 ft. per minute, but only on short cuts and lighter feeds on such work as bolts, pins, etc., but when working on heavy rigid forgings that require heavy reduction to bring them to the desired size, it is more economical to increase the feed to the limit of the machine capacity and reduce the speed to suit, as it will be found that by reducing the speed 25%, the feed can be increased 50%.

Heavy cuts and heavy feeds have become specially necessary because superintendents of shops have found it more economical to reduce forging to size by the heavy modern tools and high speed steel than under the hammers in the forge shop, and are therefore having much more material to remove than they formerly did.

The following are some tests I have seen from time to time with high speed steel: 1. Locomotive driving axle, speed 75 ft. per minute, reduction in diameter 1-5, 16 in., feed 3-16. 2. Old locomotive steel tires, two tools, depth of cut ½ in., feed 5-16 in., speed 28 ft. per minute, metal removed, 155 lbs. in 12 minutes. 3. Six pairs of old and 2 pairs of new 63 in. locomotive driving tires turned in 5 hours, 50 minutes, average time, 43.75 minutes each; average cutting time, 35.87 minutes each pair; speed, from 14 to 21 ft. per minute; 5-16 feed.

depth of cut, 3-8 in. 4. Forged steel shaft, 16 in. diameter, 13 ft. long, feed 3-8, depth of cut, 1-1-16 in.; speed, 50 ft. per minute. The tool took this cut the entire length with one slight grinding.

Regarding the shape of turning tools, in this paper I have only referred to standard roughing tools. The shape of tools is of just as much importance as the material they are made of, and must have the following requirements: 1. To have the work true and sufficiently smooth. 2. To remove the metal in the shortest possible time. 3. To do the largest amount of work with the lowest cost of grinding and forging. 4. To be adapted to the largest variety of work. 5. To remove the metal with the lowest horse power. 6. It must be shaped to have the point as strong as possible and cutting edge supported.

One difficulty in practice is to have always a supply of sharp tools for the machinist and it is better to have a few shapes and plenty of tools, than to have many shapes and not enough of any one kind. These should be ground to templets, if they must be done by hand; but an automatic tool grinder will pay even in a moderate-sized shop.

Fig. 10 shows a good standard roughing tool. Note that the lip surface is raised above the body of the tool. This is to increase the life of the tool before being reforged and also to reduce the grinding to a minimum.

The curved-edge cutting tool is best for roughing in all cases for the reason that it removes a shaving which varies in its thickness at all points, and that the part of the cutting edge which finishes the cut is removing so little metal that it remains sharp even though most of the cutting edge has been worn or broken away. The effect of this is shown in fig. 11. This indicates that the accuracy and finish of the work depends on that part of the edge from A to point B, remaining sharp and uninjured. The curved face as shown in fig. 11, also puts the heaviest part of the cutting back from the point and where the tool is heavy and can carry off the generated heat.

Standard tools should have a clearance angle of 6 degrees for all classes of material—a back slope of 8 degrees for all material, and a side slope of 14 degrees for cast iron and hard steel, and 22 degrees for medium and soft steel. The lip angle is determined by making it just blunt enough to stand the cut without crumbling or spalling. A sharp side slope is better than a sharp back slope, because the tool can be ground more often without weakening it, the chips run off better, the strain is more on the base of the tool and it is easier to feed.

It may seem strange that the lip angle for cutting cast iron is not as keen as for the softer steels, but the highest cutting speeds with equal depth of cut and feed can be obtained by using the angles given. The thickness of the shaving has the most important effect of the cutting speed, much more so than the depth of the feed. This is the reason for the advantage of the large curve on the cutting edge, as this decreases the thickness of the shaving as can be seen in fig. 11.

The clearance angle of any tool is the most important. If it is more than 6 degrees it will not properly support the cutting edge which will break and cause a fracture of the tool.

I believe more tools are ruined by careless grinding than by any other means and it is a peculiar fact that while high speed steel can be run at a high temperature in work without injury, it is easily destroyed on an emery wheel, and if the tool is pressed firmly against the wheel and allowed to heat up, small cracks will start in the steel. In a great many shops high speed tools are ground on a dry wheel. I think this is a mistake. Again, when a wet wheel is used there is not a sufficient amount of water used. Experience has shown that not less than four gallons of water per minute should be used. Automatic grinders should be used for heavy grinding on all high speed tools, as the pressure on the wheel is uniform —the shape of the tools is kept uniform, and much better results will be obtained in turning out work.

Water used on high-speed steel increases its capacity in every case and the gain is practically the same for all qualities of steel, and for removing thin or thick chips. With high speed tools a gain is made by using water on cast iron, contrary to most beliefs. A heavy stream of water should be thrown directly on the chip, as shown in fig. 12 and not up under the chip as in fig. 13, even though this might seem the correct way. Experience has shown that throwing it on the chip takes away the heat fastest. A guide to the amount of water to be used is that three gallons a minute is right for tools 2 by 2½ inches, and less for smaller tools. The gain in efficiency by the use of water is given as 40% with modern high speed tools, 30% with old style, self-hardening tools, 20% with carbon tempered tools, 16% in cutting cast iron.

A Veteran Transportation Man's Opinion.

Barlow Cumberland, Vice President Niagara Navigation Co., Ltd., writes from Port Hope, Ont., under date of Dec. 8, as follows:

"Each successive year has added to the interest of the issues of the Railway and Marine World, until one marvels at the widespread information now gathered and presented, with the great advantage over everyday newspaper items, that the data are deliberate and corroborated.

"Specializing in all transportation matters the technical and general information is instructive and informing, whether to investors, financial agents, or officials in rail or vessel occupations.

"At present it is useful in information of current events, in the future its bound copies will be volumes of reference invaluable to lawyers, and persons interested in manufacturing and transoortation by its records of official decisions, and development and progress both of men and projects.

"In this field, The Railway and Marine World stands alone, and is a welcome monthly review of all Canada."

In some shops various cutting compounds or lubricants, (as they are called), are used on lathes and planers but there is no extra efficiency using this material on an engine lathe, or planer except that it does not rust the machine. However, these compounds give first class results on drills, screw-cutting machines and turret lathes, but with these both a cooling and lubricating mixture is required, whereas on ordinary turning all that is required is cooling.

With the advent of high speed steel the power required to drive the machines to their maximum increased enormously, for example, a 12 in. lathe increased from 1 to 4 horse power; a 30 in. lathe increased from 5 to 20 horse power; a 72 in. lathe increased from 15 to 50 horse power, and in a test, a 72 in. lathe with a cut 1½ in. deep, ¼ in. feed and 30 ft. per minute, required 75 horse power.

Fig. 14 shows the horse power required to remove metal with roughing tools of the shape mentioned previously. It must be remembered that the shape not only increases the life of the tools and is easier on the machine, but there is also a marked difference in the power required.

For forging high speed steel an ordinary forge fire will serve; though, indeed, better results may be expected if better apparatus is used. The principal thing is to secure the required heat, and to keep air currents away from the tool in heating. For small tools of the simpler sort good results are sometimes obtained from an ordinary open fire. The result is, however, much more likely to be satisfactory if a sort of hood is built over the fire. This serves to prevent the radiation of heat and the circulation of air currents, and is a necessity in heating tools of any size. It also makes it easier to bring up the heat gradually, and to apply it uniformly on all sides of the tool, so that the heat penetrates uniformly. This is an important point. Unless the mass of steel to be wrought is uniformly hot throughout it will work unevenly in forging, with the result that internal strains are set up which may ruin the tool when it is put at work, if not before. Though the heating is to proceed gradually, in the sense that it must be regular, it may go on quite rapidly. In fact, it should be done as rapidly as may be without burning projecting edges or corners. Unless this is done the heat soaks up into the neck or shank, and when hardening takes place, this important part of the tool loses some of its toughness. However, the fire must not be too hot, for in that case the outside is likely to be burned before the interior is thoroughly heated. In any event there is a liklihood that the tool smith may be deceived into thinking the whole mass properly heated, when in fact, only the outside is hot enough for forging. If the interior has not reached a bright red heat or 1800 degrees F., it is not ready for hammering. Of course, it is impossible to know the condition of the interior, except through its behavior under the hammer after removal from the fire, and it is largely a matter of experience to determine the proper time during which a tool is to be heated. The extent to which the heating is to be carried for hardening may vary within narrow limits, just short of melting point. The steel will then be at a dazzling white, and just beginning to flux. Some brands reach this point somewhat short of the extreme white color. Where this is the case care must be taken that sharp edges and angles of the tool are not melted down. As in forging, it is necessary to see that the heating process proceeds uniformly and reaches through the entire mass of metal.

As most of the high speed steels harden by mere exposure to air, little apparatus is absolutely required in addition to the heating furnace, and some very good results have been obtained with none at all. The hardness of the steel depends considerably, however, on the rapidity of the cooling, therefore mere exposure to the air and slow cooling is not always satisfactory—for many purposes, indeed, it is very unsatisfactory. Most makers recommend the air blast for hardening, and as this furnishes a continuous supply of cool air in rapid motion, the result is generally good. Since part of the latent heat in the air is extracted in the process of compression, compressed air is better for the purpose than that from a blower. The convenience and simplicity of this agent, where available, recommends it.

When high speed steel was first in-

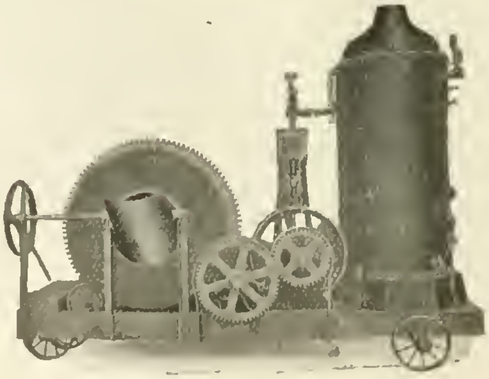
Concrete Mixers



We supply Ransome Mixers, in all sizes, equipped with all styles of power.

Special concrete outfits furnished to suit your requirements.

ROCK CRUSHERS, HOISTING ENGINES, COALING AND WRECKING CRANES, ENGINES, BOILERS, PUMPS, RAILS, Etc., Etc.

We solicit your enquiries. Can we send catalogues?

troduced users were of the opinion that it was only fit for roughing tools. This was a fact at that time, as the edges of the tools would not keep sharp enough for the finer classes of tools. However, since that time the manufacturers of high speed tools have improved it so that at present it can be used, and is used, for milling cutters, reamers, cold saws, and in fact all machine shop tools, with good success, and a great increase of efficiency over carbon steel, and it is also used for the very finest of tools, even razors. High speed steel is also used extensively for twist drills, and good results can be obtained with these, providing they are used on heavy castings or forgings, but if used for light work it must be securely bolted to the drill table, otherwise too many drills will be broken, as high speed twist drills will not stand quick torsion strains. For all classes of rough work I have found that flat drills made from high speed steel give better results than twist drills, as the points can be forged thick and will not break, even with severe usage.

On account of the high price of high speed steel, care should be taken that short ends of tools are not scrapped or mixed up with other pieces of carbon steel, as these short ends can be used up for special cutters or drawn out for smaller sized tools than the original. The best method of marking is by planing or milling a small concave groove the whole length of the tool, then the steel can be distinguished, no matter how short a piece it is.

The foregoing paper was written for presentation before the Central Railway and Engineering Club.

January Birthdays.

Many happy returns of the day to:—

W. U. Appleton, Assistant to Superintendent of Motive Power Intercolonial Ry., Moncton, N.B., born there Jan 29, 1878.

A. H. Bears, Master of Bridges and Buildings C.P.R., Saskatoon, Sask., born at Charlottetown, P.E.I., Jan. 6, 1857.

F. X. Belanger, General Freight and Passenger Agent Temiscouata Ry., Riviere du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

R. H. Bell, Commercial Agent Canadian Northern Ry., Pittsburg, Pa., born at Toronto, Jan. 13, 1865.

G. McL. Brown, European Manager C.P.R., London, Eng., born at Hamilton, Ont., Jan. 29, 1866.

W. H. Burr, Traffic Manager Dominion and Western Express Companies Toronto, born at Bloomington, Ill., Jan. 19, 1864.

C. A. Cotterell, Chief Train Dispatcher District 1, British Columbia Division C.P.R., Revelstoke, B.C., born at Enden, Eng., Jan. 18, 1877.

W. A. Cowan, Resident Engineer C.P.R., Farnham, Que., born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Assistant Freight Traffic Manager G. T. Pacific Ry., Winnipeg, born at Montreal, Jan. 1, 1869.

Sir Sandford Fleming, K.C.M.G., Director C.P.R., born at Kirkcaldy, Scotland, Jan. 7, 1827.

Gordon Grant, Chief Engineer National Transcontinental Railway Commission, Ottawa, born at Dufftown, Banffshire, Scotland, Jan. 2, 1865.

H. Y. Harris, ex-General Manager Midland Ry. of Nova Scotia, Truro, N.S., now of Toronto, born at Devonport, Devonshire, Eng., Jan. 16, 1857.

G. F. Hichborn, formerly Agent Great Eastern Fast Freight Line, New York City, born at Boston, Mass., Jan. 13, 1875.

Carl Howe, Manager New York Central Fast Freight Lines Buffalo, N.Y., born at Berrien Springs, Mich., Jan. 11, 1870.

W. C. Hunter, ex-Manager New Brunswick Coal and Ry. Co., Sussex, N.B., born at St. John, N.B., Jan. 4, 1865.

W. J. Hunter, Division Freight Agent G.T. Pacific Ry., and Commercial Agent G.T.R., Winnipeg, born in Toronto, Jan. 10, 1864.

H. G. Kelley, Chief Engineer G.T.R., Montreal, born at Philadelphia, Pa. Jan. 12, 1858.

Jas. Kent, Manager C.P.R. Telegraphs, Montreal, born Jan. 15, 1854.

A. Lichtenheim, Galena Signal Oil Co., New York, born there Jan. 15, 1855.

A. J. McGee, Secretary-Treasurer, Temiskaming and Northern Ontario Ry. Commission, Toronto, born at Lachine, Que., Jan. 24, 1876.

G. Pepall, Assistant Foreign Freight Agent G.T.R., and Agent National Despatch—Great Eastern Line, Toronto, born at High Wycombe, Buckinghamshire, Eng., Jan. 15, 1849.

W. Phillips, General Eastern Agent Canadian Northern Ry., and General Freight and Passenger Agent, Canadian Northern Ontario Ry., Toronto, born at Toronto, Jan. 31, 1870.

W. Pratt, Superintendent Sleeping and Dining Cars C.N.R., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

J. Pullen, Assistant Freight Traffic Manager G.T.R., Montreal, born at Shepton Mallet, Somersetshire, Eng., Jan. 23, 1863.

L. J. Rouleau, Travelling Freight Agent G.T.R., and Agent National Despatch—Great Eastern Line, Montreal, born there Jan. 6, 1879.

S. L. Shannon, Comptroller and Treasurer Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Jan. 18, 1865.

J. R. Steele, Freight Claims Auditor C.P.R., Montreal, born at St. John's Newfoundland, Jan. 14, 1856.

J. G. Sullivan, Assistant Chief Engineer C.P.R., Montreal, born at Bushnell's Basin, N.Y., Jan. 11, 1863.

J. A. Villeneuve, Comptroller and Treasurer Richelieu and Ontario Navigation Co., Montreal, born there Jan. 4, 1864.

O. C. Walker, Inspector Refrigerator Service Western Lines C.P.R., Winnipeg, born at Newport, Mon., Eng., Jan. 31, 1877.

F. J. Watson, Division Freight Agent G.T.R., Montreal, born at Toronto, Jan. 12, 1866.

G. H. Webster, C.E., Vancouver, B.C., born at Creemore, Ont., Jan. 31, 1858.

T. H. White, Chief Engineer in charge of C.N.R. surveys in British Columbia, Vancouver, B.C., born at St. Thomas, Ont., Jan. 27, 1848.

◆

Legislation Affecting Railways.

A bill which was given a second reading in the Senate, Dec. 1, proposes to change the entire procedure for the incorporation of companies having for their object the building of railways. The first section provides that not less than seven persons of full age may form themselves into an association for the purpose of building a railway, and upon complying with the provisions set out in subsequent sections, may obtain letters patent creating them and their successors a corporation with all the powers and privileges, and subject to all the obligations and restrictions contained in the Railway Act, Revised Statutes, chap. 37, and in any other general act relating to railways. The agreement of association shall contain the name of the corporation, the terminal points, route and gauge of the proposed line, the capital, etc., of the company. Notice of incorporation is to be given by advertisement and to clerks of counties and municipalities through which the line is proposed to be built. After these notices have been given and proved, the company may make surveys, and on the completion of the making of the plans, but within 12 months of the publication of the notice of incorporation, the company may apply to the Board of Railway Commissioners for a certificate that the public interest requires that a railway should be constructed as proposed. If the Commissioners do not see fit to issue this certificate, the company may make a further application within a further period of a year. The Commissioners are empowered to determine various matters which are not specifically mentioned in the Railway Act, but set out in sec. 9 of the bill. Sec. 13 provides that no corporation created under it "shall amalgamate with, or enter into any agreement for making a common fund or pooling earnings or receipts with, or leasing any part of its line to, or any other railway owning a parallel or competing line. Every such amalgamation or arrangement shall be null and void," the only exceptions being agreements as to interchange of traffic, running rights and other purposes authorized by sec. 364 of the Railway Act. It is proposed that the bill shall be made to apply to existing companies only in so far as to extensions which have not been authorized by special acts at the time of the passing of this measure.

The object of the bill, introduced in the Commons by E. A. Lancaster and read a first time Nov. 21, is to require all Dominion railways, in case of any person being killed on a train or on the property of the company, to cause an inquest to be held by the nearest coroner forthwith

It is proposed by a bill introduced in the Commons by W. M. Martin and read a first time Nov. 23, to amend sec. 259 of the Railway Act, chap. 37, Revised Statutes of Canada, by adding the words "and all workmen, day laborers, or other persons employed by the company in the operation of its railway" after the words "such construction," in the fourth line; to add a clause providing that wages shall not be withheld; and a section providing that these provisions shall apply to all arrears due at the time of the coming in force of the act.

There was read in the Commons for the first time, Dec. 1, a bill, introduced by A. Meighen, to amend the Railway Act, sub-sec. 3, sec. 254, and subsec. 4, sec. 294. Under the provisions of this section the railway company is made prima facie liable for loss caused by animals getting on the railway right of way, except in case the company is able to prove that the animal got at large through the negligence or wilful act of the owner. This exception was added last session, and this bill proposes to alter the nature of the proof required by compelling the company to prove that the animal got on to the right of way without negligence on its part, and without violation of the provisions of the law. It also provides for an amendment of subsec. 2, by compelling the railway companies to submit the nature, dimensions and construction of their cattle guards to the Board of Railway Commissioners for approval. The effect of the amendment Mr. Meighen explained, would be that if the companies comply with the specific dimensions prescribed by the Board, they will be absolved, and if they fail to comply they will not be able to throw back the liability on some one who was more remotely negligent.

A bill, introduced by F. F. Pardee, was read in the Commons a first time Dec. 5, for the purpose of "providing for the safety of employes and travellers on railways" by providing for the inspection of boilers for locomotives when completed, by an inspector general working under the supervision of the Board of Railway Commissioners.

Driving Spiral Tunnels on the C. P. R.

One of the most interesting of the many grade reduction works that have been undertaken by railways on this continent is that of the C.P.R. between Field and Hector, B.C., in the valley of the Kicking Horse River. The original distance was four miles, with a grade of 4.5% (compensated) for about three miles, and 3.5 to 4% for the remainder of the distance. For safety, three spring switches or catch sidings were introduced, which were normally closed to divert a train on to the spur and opened only when the engineman of a descending train signalled to the switchman that his train was under control. Owing to the increase in traffic and in train loads it became very desirable to eliminate these extreme grades, but it was a difficult matter to find room for the necessary development of length along the steep sides of this valley. The location finally adopted forms three lines in the valley, connected by loops, and the only way in which these loops could be made was by means of tunnels in the mountain side. The grade is reduced to 2.2% (compensated) and the length is increased to 8.2 miles. The compensation for curvature is 0.04% per degree, but this is increased to 0.06% in the tunnels on account of the liability of damp rails reducing the adhesion. The general character of this work was described in The Railway and Marine World in the issues of Sept. 1907, and Sept. and Oct. 1909. It was shown that while on the old line it required four 154-ton consolidation (2-8-0) engines to haul a train load of 710 tons up the grade, it was estimated that one of these engines would handle 980 tons on the new line.

Fig 1 shows the old and new locations, together with the positions of the tunnels, etc. The contract for this stretch of grade reduction work was awarded to Macdonald, Gzowski & Co. of Vancouver, B.C. Their work included the grading of 8.25 miles of line, two spiral tunnels, one short straight tunnel (710 ft.) and four bridges over the Kicking Horse River. The grading was the average heavy rock work. Fig. 3 shows one of the cuts in solid rock, the material being handled out by stone boats on a log track.

The most interesting work was the driving of the spiral tunnels. These are on loop curves of 10 degs. (or 573 ft. radius), with a grade (as reduced by compensation) of 1.6%. Tunnel 1 is 3,200 ft. long, and turns an angle of about 234 degs.; the difference in elevation of its portals is about 48 ft. Tunnel 2 is 2,890 ft. long, turning an angle of about 232 degs., and having a difference in elevation of about 45 ft. at the two portals. Figs. 2 and 5 show both portals of tunnels 1 and 2. Fig 4 is a cross section of the tunnels.

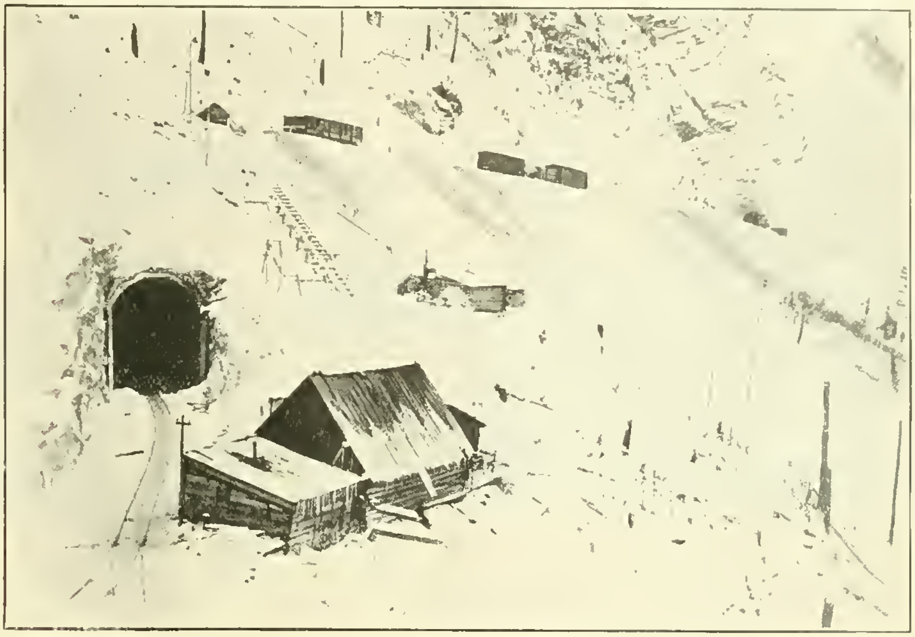

Fig. 2. Upper and lower portals, spiral tunnel No. 1.

For the following information as to the details of the construction work on the two spiral tunnels we are indebted to C. S. Gzowski, of the contracting firm. There was a camp and plant for each tunnel, and the equipment for each plant was practically the same. Table 1 shows the principal equipment of the plant for both tunnels. The location of the plant for camp 1 was put on the old line about 250 ft. in elevation below the portal of tunnel 1, and about 800 ft. distant from it. The plant was located at this point as there was a small bench on the mountain side which enabled the machinery for the compressor, etc., to be handled conveniently from the old railway line. Another reason was that water for operating the plant was obtainable there by digging wells and catching the seepage.

The plant at camp 2 was located on the Kicking Horse River about ¼ mile beyond tunnel 2 and on about the same level as that tunnel, or 150 ft. below the old railway line. The plant for this camp was unloaded off the old line and let down a skidway to its location.

The first operation that of excavating both portals of each tunnel was conducted by hand labor while the machinery at each camp was being installed. By the original plan of operation it was intended to use compressed air drills and do the mucking by hand from a jumbo car. After a short trial of this method it was decided to use power shovels (operated by compressed air) at each working end of both tunnels. This necessitated doubling the capacity of the air compressors as well as the boiler capacity.

Tunnel Driving.

The driving of the tunnels was through crystallized limestone very much distorted and in places (where badly crushed) timbering had to be used. About 25% of the length of each tunnel was permanently timbered and enlarged to a sufficient size to allow of a concrete lining being put inside at some future time. In fact, in the untimbered portion, after the character of the ground had been well determined, it was decided to enlarge this also, to permit of a future concrete lining.

The method of driving the rock section which did not require timbering, was to drive a full top heading, keeping it about 10 or 12 ft. ahead of the bench (which was kept as vertical as possible) and to shoot the heading and bench at the same time. After a shot was completed, the drillers mucked back from the heading sufficient to set up their drill columns, and then set up and started the drilling. In the meantime, the shovel (run by air) was moved up and started mucking out the last shot. This shovel gang would get cleaned up about the time the drillers had the heading

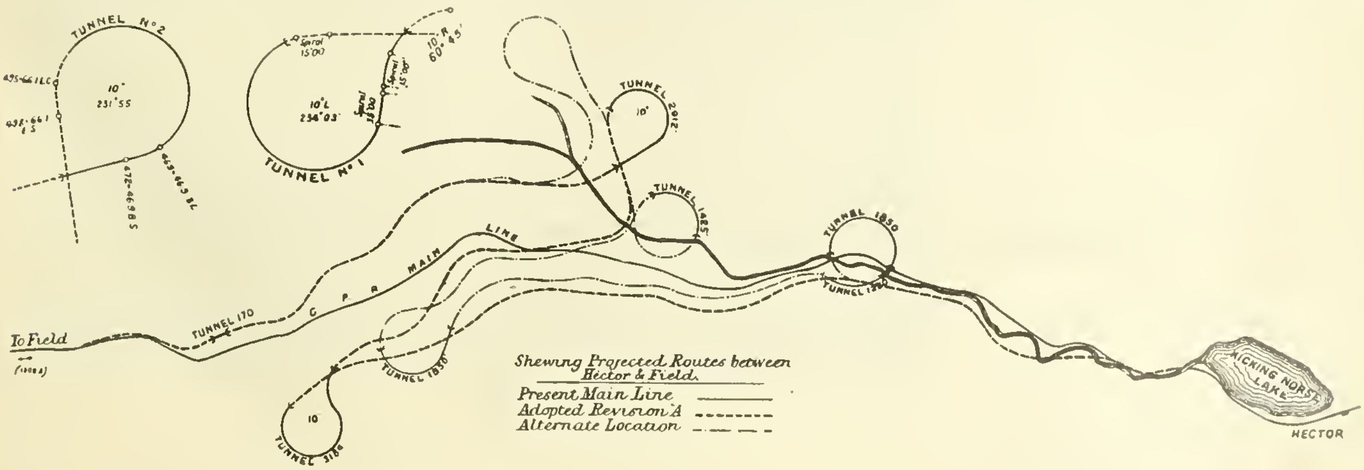

Fig. 1. C.P.R. grade reduction work between Field and Hector, B.C., showing the two spiral tunnels.

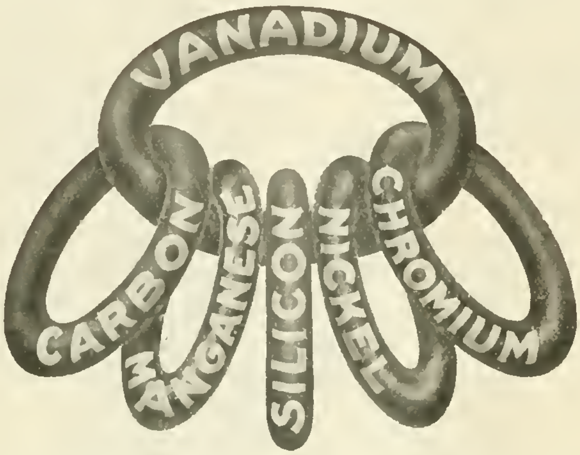

Vanadium Holds Them All Together

Amervan
FERRO VANADIUM
The Master Alloy

Vanadium Steel made from the right kind of Ferro Vanadium and submitted to the right kind of heat treatment is the highest type of steel known to the metallurgical world. There is absolutely nothing beyond it for strength, toughness, durability, freedom from fatigue and crystallization, and general all round workability.

The most important factor in making good Vanadium Steel is the quality of the Ferro Vanadium by which the Vanadium is introduced.

The determination of the proper chemical composition of Ferro Vanadium is a vital matter, and requires expert knowledge. The manufacture of the right Ferro Vanadium requires good ores, infinite precaution, factory methods as precise and accurate as laboratory methods, and unceasing analysis—*to make sure.*

The American Vanadium Company commercialized Ferro Vanadium. It controls rich and extensive mines; has studied Vanadium from every standpoint and operates the largest and most complete factory in the world for the production of Vanadium Alloys.

We guarantee our Vanadium Alloys to be right, and you can insure the quality of your Vanadium Steel purchases only by insisting that your steel maker employ AMERVAN—the tried and proved and proper

Pittsburgh, Pa.

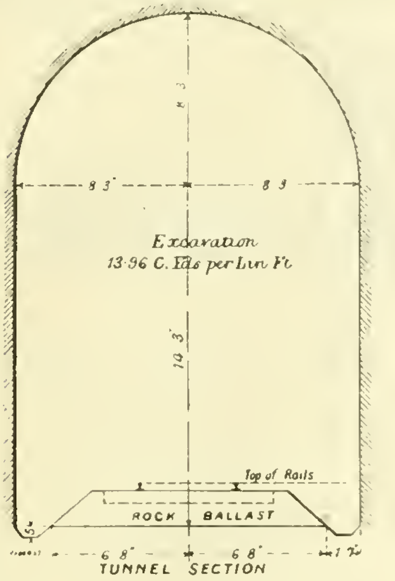

Fig. 4. Cross section of spiral tunnels.

drilled and the down holes of the bench finished. The shovel was then moved back about 150 ft. The drillers then drilled lifter holes in the bench.

When all the drilling was finished, the drills, hose lines and fittings were all moved back. While this was being done, the cut holes in the heading were being loaded for springing. These cut holes were sprung and then fired. Then the side rounds and lifters of the heading, as well as all the bench holes, were shot at one time. This method of keeping the bench close up to the heading allowed the greater part of the muck of each shot of the heading to be thrown back with the bench muck, which was removed directly by shovel. When the timbering had to carried as the heading was driven, the bench was left about 50 ft. back. The heading was shot and then mucked by hand, the material being carried to the bench in cars, and then dumped. The permanent timber plates were put in and each segment trimmed off, and then lagged and wedged up. The bench was always kept as vertical as possible. Before shooting the bench, the wall plate was well supported by blocking up, and the last full-length post protected by old timbers. Just enough bench was shot in each round to allow another full post to be put in, and then this muck together with the muck coming from the heading was cleaned up with the power shovel.

DRILLING.—The arrangement of the drill holes was varied somewhat from time to time as the character of the ground changed. The stratification of the rock as encountered in the different parts of the tunnels varied from nearly horizontal (sometimes dipping up, down or to one side) to practically vertical and parallel to the direction of the tunnel. The formation of the ground at tunnel 1 was somewhat uniform, in regard to its stratification, lying with a plane dipping about 20 degs. to the northeast, but as the tunnel made the best part of a circle this was encountered at all angles in the face. The stratification of the ground at tunnel 2 had not the same general uniformity as that on the other side of the valley. The hardness of the rock, the distortion and other conditions changed every few feet.

The general plan of the drill holes in the heading was to put in two rows of cut holes about 12 ft. deep and sloped so as to nearly meet. The side holes and lifters were about 10 ft. deep. The distance of the side holes from the tunnel line was judged by the character of the ground. These were varied as much as 2 ft. in line. The bench had a row of down holes on the top about 8 ft. back from the edge and about 10 ft. deep; also a row of lifter holes in from the bottom of the face, 12 ft. deep, so pointed as to go 1 ft. below grade. The aim was to break 8 ft. of heading and the same amount of bench each round. It was found necessary to change the number of holes very largely as the rock changed. In tight ground the round of the heading would not break back within sometimes 2 ft. or more of the bottom of the holes, while in other ground it might go practically to the bottom.

The rock was of such character that the drilling throughout almost the entire length of both tunnels was most difficult. The formation being crystallized, it was brittle; and having been distorted by upheaval it was in a semi-fractured state. This condition made small wedge-shaped pieces break off in the holes behind the bits of the drills and jam them. Various shaped drill bits were tried, but none of them overcame the difficulty. The old trick of throwing small bits of iron into the hole was the most effective. The progress of the work was very considerably retarded by the bad conditions for drilling, and although the number of drills was increased to as many as space would permit of working, the desired progress was never attained.

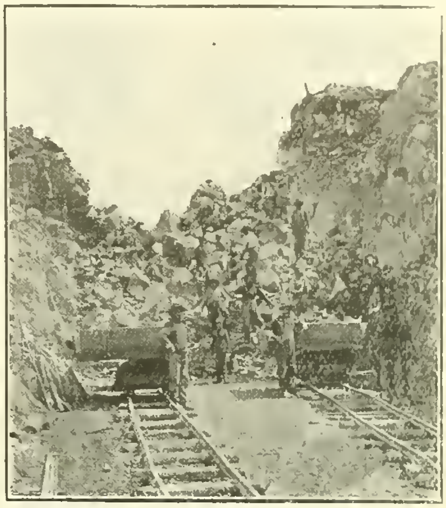

Fig. 3. Solid rock cut, debris being removed by stoneboats on a log track.

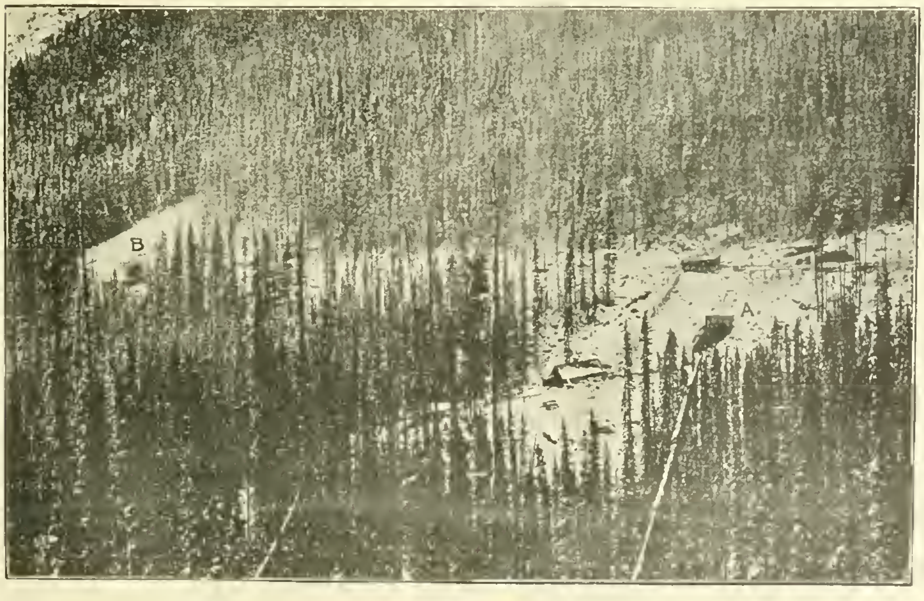

Fig. 5. Upper and lower portals spiral tunnel No. 2.

MUCKING.—The shovels were the standard no. 20 Marion shovels, with special short booms and dipper arms, and rock dippers with Panama teeth. The compressed air was delivered into the boiler, which acted as an additional receiver. The shovels were set as close to one side of the tunnel as possible and had each a special short jack arm to support it on the inner side. There were four shovels, one on each end of both tunnels.

A track of 2-ft. gauge was used for the cars, and a double track was run in the whole length of the tunnel to a switch; which was kept close up to the shovel. The empty cars came in on one track and the loaded cars went out on the other. The cars were built on the ground and held about 4 cu. yds. One car was switched alongside the shovel and loaded then run out and replaced by another. It took only about a minute for a loaded car to be run out and another empty switched in place as the switch was kept as close as possible to the shovel.

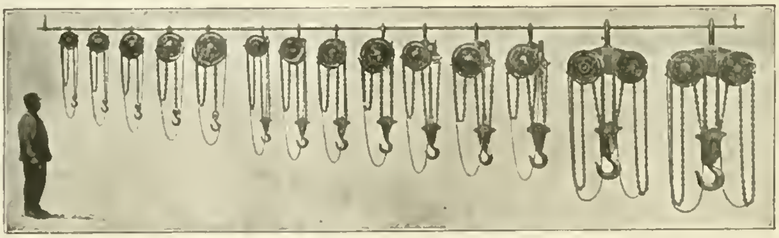
The tunnels being on a continuous grade one end was being driven up grade and the other end down. Where driving down grade the loaded cars were hauled out by horses and ran back by gravity. When driving up grade the loaded cars ran out by gravity (manned by brakemen), and were hauled back by horses.

WATER.—In each tunnel there was considerable water from seepage through the crevices, and small springs were struck in different places. With the ends being driven up grade there was no difficulty as a ditch at the side of the tunnel took care of this water. In the end going down grade, all the water naturally drained towards the face of the tunnel. To take care of this a sump hole about 3 ft. square and 3 ft. deep was put in a few feet back from the face. A pump operated by compressed air kept the water down in the sump hole, discharging out of the tunnel through a 4-in. wooden pipe. A new

USE THE READING CHAIN BLOCK

It has all the advantages of other chain blocks and many important features of superiority possessed by no other.

HIGHEST EFFICIENCY GREATEST DURABILITY



The Reading Multiple Gear Chain Block is used by the biggest and most important Railroad Systems in America, as well as the biggest Industrial Corporations, and is recognized wherever used as being superior to any other block made.

MUSSENS LIMITED

MONTREAL	TORONTO	COBALT	WINNIPEG	CALGARY	VANCOUVER
318 St. James St.	73 Victoria St.	Opp. Right of Way Mine	259-261 Stanley St.	Crown Bldg.	Mercantile Bldg.

sump hole was put in from time to time as the face of the tunnel progressed, and occasionally the pump was moved forward as the lift got too great for the suction end.

If anything went wrong with the pump for a short time the tunnel would fill very rapidly with water. In order to avoid the delay due to this, a second pump was installed, making a duplicate system, so that if anything went wrong with one pump the other could be turned on by merely opening the valves. In the winter considerable trouble was experienced with the discharge pipe freezing near the outlet end in the tunnel. This was overcome by covering the pipe with manure.

ELEVATION.—The elevation of the work being about 5,000 ft. above sea level, a certain allowance had to be made in figuring the steam and compressed air plant. A gain was made in generating steam, and on the exhaust end of the steam, but there was a loss on the compression of the air and a gain on the exhaust of the air drills and other machines.

WEATHER.—During very cold weather considerable difficulty was experienced with the freezing up of the air supply pipe lines from the compressor houses to the tunnels. This was due of course, to the freezing of the moisture condensed from the compressed air. Where the pipes leading away from the compressors were going up a considerable grade there was no trouble experienced, because the moisture condensing out of the compressed air would run back to a warmer part of the pipe. Where the pipes were nearly level or running down grade, they were continually freezing in different places during the very severe snaps. Additional air receivers were put on the air lines close to the compressors to further cool off the air and further condense out the moisture and also small blow-off cocks put at intervals along the pipe. These methods somewhat reduced the freezing trouble, but did not altogether overcome it.

METHOD OF GIVING LINE AND GRADE.—A base line was established between the two portals, which intersected with the tangents (or tangents produced) of the curves, on which the tunnel was driven. From this base line all alignment was given by setting out calculated deflections and distances. As a proof of the correctness of these calculations previous to starting the work these lines were run out on the prairie and they checked practically exactly. Centres were given from time to time in the tunnels 20 ft. centres as a rule. A table of offsets from the productions of these short chords was given the foreman, who was thus able to get his centre at any time from the last two centres. The centres were marked in the roof as well as on the bottom. The levels, of course, did not need any particular plan of action, being carried as in ordinary work, but with great care. The final result when the headings met was practically exact, the alignments closing within ¾-in. and the grade within a few hundredths.

PROGRESS RECORDS.—Table 2 shows the monthly progress at each tunnel. At first sight the record does not appear to be very good. As a matter of fact, however, it is considered to show very good progress under the adverse conditions due to difficulties in the drilling, troubles with water, the timbering and the very cold weather in winter.—Engineering News.

TABLE 1.—PLANT FOR DRIVING SPIRAL TUNNELS.

1 American-Rand cross-compound air-compressor capacity, 1,050 cu. ft. of free air per min. Air cylinder 22 and 13 × 16 ins.; steam cylinders, 14 and 24 × 16 ins.

1 Ingersoll-Rand straight-line air compressor; 1,100 cu. ft. per min. Cylinders, 20 and 20 × 30 ins.

1 Ingersoll-Sergeant straight-line air compressor; 1,425 cu. ft. per min. Cylinders, 24 and 20½ × 30 ins.

8 Fairbanks-Morse duplex pumps; 6 × 4 × 6 ins. to 8 × 5 × 12 ins.; 6 ram pattern, 2 piston plunger pattern, 5½ × 3½ × 5 ins.

1 Atlantic pump, 7 × 4½ × 6 ins.

9 boilers; 2 return tubular, 100 h.p.; 4 locomotive type, 80 h.p.; 2 locomotive type, 100 h.p.; 1 100 h.p.

2 engines: (1) 7 × 10 ins., 25 h.p.; (1) 4 × 5 ins.

1 hoist; cylinders 5 × 7 ins.

1 hoisting engine with boiler; 25 h.p.; cylinders, 7 × 10 ins.

1 d.c. generator, 25 kw., 250-volt, 100 amperes.

2 Westinghouse d.c. compound-wound generators, 6 kw., 125-volt, 48 amperes.

4 Marion steam shovels (operated by compressed air).

22 Canadian-Rand Little Giant rock drills.

6 rock drills.

G. T. P. R. Rotary Snow Plow.

The Grand Trunk Pacific Ry. as mentioned in our last issue ordered from the Montreal Locomotive Works recently a rotary snow plow, 12 ft. cut, scoop wheel. The engine consists of two horizontal cylinders, 18 x 26 inches each, cast with half saddle, and rigidly bolted together and to the frame. Steam is distributed to the cylinders by slide valves actuated by Walschaert valve gear, so arranged that the pistons of the two cylinders operate in opposite directions. Each cylinder is connected to a cross shaft, on the end of which is a bevelled gear pinion which meshes with the bevelled gear on the end of the wheel shaft. The boiler is of the locomotive type, with Belpaire firebox, and carries a pressure of 190 lbs. Steam is conveyed from the dome of the boiler to the steam chests by means of outside wrought iron pipes, one on either side of the boiler. The throttle valve is of the balanced type, so designed that steam enters from the top only.

The wheel of the rotary consists of 10 hollow cylindrical cone shaped scoops, fastened by T-irons to the hub of the wheel, and to the steel plate disc which forms the back of the wheel. Each scoop is open on the front side its entire length, through which the snow is taken in. The openings in the scoop are of ample width to admit the snow cut by the knives, thus preventing choking or clogging of the wheel. The knives, which are of cast steel, are hinged one on each side of the opening, and are so arranged that they automatically adjust themselves into cutting position. Each pair of adjacent scoops is tied together at their outer ends, where the force is greatest, by a rod, making the periphery of the wheel practically one solid piece. The wheel is encased in a drum with a rectangular front or hood. The bottom of the front or hood is cut away in the shape of a V, so that on the sides it projects only slightly in advance of the cutting blades of the wheel; while at the centre, the knives are the first to encounter the snow. In consequence, the hood presents no dead surface to be forced into the snow, but practically the whole front of the rotary is a sharp cutting edge. The top of the hood is provided with a spout fitted with a movable cover. The wheel can be made to rotate in either direction, to throw the snow to one side of the track or the other and the cover of the spout may be turned to suit the direction in which the wheel is rotating. A feature of the rotary is a pneumatic gear for operating the cover of the spout, which has been added to the hand wheel operating device of the older design, and greatly facilitates handling of the plough.

Another feature of the rotary is the hood lifting device. In pulling the rotary back out of a drift, over cleared snow, particularly when the snow is wet or heavy, or at places where the ice cutters could not be operated, such as in yards, where the frogs and switches make this impossible, it sometimes happens that the loose snow will be scraped up and packed up under the hood, lifting the plow. To obviate this difficulty, the hood-lifting device has been applied; by means of which the front end of the shovel can be raised a maximum height of seven inches by means of power operated ball bearing jack screws. Power is derived from the rotary wheel shaft, the device being thown in or out of gear by means of a friction clutch mounted on the wheel shaft, and operated by a lever. The power is transmitted by means of a chain from the wheel shaft to a longitudinal shaft which drives the jack screws through a system of bevelled gears, worms and worm wheels mounted on a transverse shaft. A signal is placed in the pilot house, operated by a lever fulcrumed in the plow frame, which indicates when the high and low stops are reached, and also the intermediate heights of rise in inches between these two points.

The plow is carried on two four wheel plate frame trucks, especially designed to carry a maximum of strength with the minimum of weight. Ice cutters and flangers are applied as a safeguard against derailments. The ice cutters which are composed of two parts, the wing and the cutter, are secured to a wrought iron frame supported by bearings on the front of the frame of the forward truck. When in working position, the wing projects over the rail, and the cutter point projects down below the rail on the inside directly in front of the forward wheels. The flanges are secured to a wrought iron frame supported by bearings on the rear axle of the front truck. A pneumatic operating gear under the control of the pilot is provided, by which the ice cutter and flangers may be simultaneously raised or lowered. The frame is constructed of I beams and channels.

In the design of the cab, care has been taken to provide one of strong construction. It is partitioned off in front of the boiler, the forward part being the pilot house, and the rear the engineer's cab. The rotary is equipped with a Westinghouse E.T. No. 6 brake equipment. Following are the principal dimensions:

Total weight	200,000 lbs.
Total wheel base	22 ft.
Cylinders	18 x 26 ins.
Boiler	Belpaire type
Boiler pressure	190 lbs.

◆

Edmund Wragge, C.E., of Toronto, at one time Local Manager G.T.R. there, was married on Dec. 5 to Miss Maud Kingsmill, second daughter of Nicol Kingsmill, K.C., Canadian Solicitor Michigan Central Rd.

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

D. B. Hanna at Halifax.

The inauguration of the Canadian Northern Steamships, Ltd. winter service between Bristol, Eng., and Halifax, N.S., was marked by a dinner on the s.s. Royal Edward at Halifax, Dec. 6, at which a large number of prominent men from Nova Scotia, New Brunswick and Prince Edward Island were present. D. B. Hanna, Second Vice President C.N.S., who presided, said in part:—

It is a matter for regret that owing to important appointments made before this dinner was arranged, neither Mr. Mackenzie nor Mr. Mann is present with us tonight. It does, however, give me an opportunity of saying some things regarding them and the large enterprises they represent, which could not be as freely mentioned in their presence. I have the unique distinction of being the first appointed officer of the enterprises identified under the general name of Mackenzie and Mann. In 1896 it was my privilege as an officer of the Manitoba and North Western Ry., to frequently meet Mr. Mann in connection with construction for the Lake Manitoba Railway and Canal Company, which was the nucleus of the Canadian Northern Railway. I remember in one of our discussions, Mr. Mann suggesting a change in my position—to withdraw from the M. and N.W.R., now owned by the C.P.R., to take charge of the operations of his 100 miles of road. Subsequently I accepted his offer and became Superintendent. Incidentally I may say I was also train dispatcher, road master, treasurer, auditor, general freight and passenger agent, and any other departmental chief that may occur to a railroad man. In fact, it was essentially a one man's position. That was exactly 14 years ago this week. On Dec. 12, 1896, if my memory serves me, I made the first trip over the road with Mr. Mann. I confess that although I had lived in Western Canada for 10 years, I did not form a very high opinion of the traffic prospects of the line. The country was new and settlement was scarce, for the immigration which afterward flowed in such large numbers had not begun. Mr. Mann intended sailing for Europe the following week, and with that caution and thriftiness which is said to be characteristic of the Scotch, I arranged for a line of credit. I am glad to say, however, I had no occasion to use the credit, and I can say with absolute truthfulness, that from that day until now the gross revenues from our lines west of Port Arthur have always been sufficient to meet operating charges and fixed charges. The development of our system in the past 14 years has often been referred to, and at the risk of too much repetition, I propose to repeat a few of the facts.

Perhaps there is not one fact more illuminating than this, that whilst the company operated 100 miles in 1897, it is today operating, or has in course of construction, 7,135 miles. This does not include the British Columbia section of some 500 miles, or the gap still to be constructed between Sudbury and Port Arthur of 600 miles. But it includes all of our lines in Ontario, Quebec and Nova Scotia, so that by the end of 1914, when we hope to see the various gaps filled in, the Canadian Northern and its allied lines, all in Canada, with the exception of a few miles, will operate not less than 10,000 miles of railway. This, I submit, is a unique achievement that may perhaps never be duplicated by any other two men. A pay roll that in 1896 was $650 a month, reaches over a $1,000,000 a month in 1910. A gross revenue from the 100 miles of road in 1897 of $60,000, has grown to over $18,000,000 in 1910, from the C.N.R. and its allied railways. A staff of 13 men and a boy in 1896 reaches 48,400 in 1910. But it is proper to state in respect to the number of employes, I have included those of the subsidiary undertakings of my principals, which are in many respects identified with the C.N.R. proper. Whether it is in mining of coal, or iron ores, or in lumbering, or in grinding flour, or the making of cement, or salt, or in the electric business, or in iron products, in steamships, in the hotel business, or the grain elevator business, I want to make it perfectly clear that the governing principle of it all is the creation of traffic for the C.N.R.

We have not been content to build railways with the help of the Government; but we have taken all kinds of steps to develop commerce, with the result that not a cent has been called for from any Government under any guarantee that has been given. If my principals had no other object in view but that of making money for themselves, there were ample facilities at their command; but the dominating factor in the development of the C.N.R. has been to give to it every auxiliary, which makes for its own development and for the confidence of those who have invested in it. Thus, Mr. Mackenzie and Mr. Mann might have retained to themselves the land grant, which is valuable today, also the express, telegraph and sleeping car business subsidiary companies for these sources of revenue. They did neither. All the benefits accruing from these subsidiary services belong to the C.N.R. without cost to itself. Whilst the C.N.R. has been developing with such giant strides, the same story is true of Western Canada and the Dominion of Canada as a whole. I think we may claim some share of credit for this, if for no other reason than that in the construction of so much new mileage new continents have been opened up for settlement. At present there are 535 cities, towns and towns in embryo on the C.N.R. Sixty of these towns have a population of over 500, and 85 places have been given transportation facilities within the past 4 months.

In the Province of Alberta alone one new school has opened every school day, and during the year 1900 over 20,000 acres of land were settled upon daily. In opening up so much new territory it became an essential part of our policy to link up the old road with the new. With that directness which always characterized the work of Mackenzie and Mann, steps were taken to secure steamships. To have waited the construction of the type boat we had in view meant at least two years before we could become factors in the ocean travel. Therefore, when an opportunity offered for the purchase of the two boats now known as the Royal Edward and Royal George, we took advantage of it, and our company are now as much at home on the ocean as they are on land. Not many years ago the Dominion Government offered a very substantial subsidy for a 20 knot service. Today Canada is enjoying such a service, and, I regret to say, without the subsidy accruing to us. I need not discuss the appointments of these boats. You can judge for yourselves and we have every reason to hope that, in conjunction with the other Canadian ocean liners, a larger measure of British travel will flow through Canadian ports rather than by way of New York and Boston. In association with the steamship service we have inaugurated a very extensive immigration scheme, and today in the old land there are at least a score of active Canadian men and women on the C.N.R. staff preaching the gospel of emigration to Canada. I believe we have the support of the provinces of Nova Scotia and New Brunswick in these enterprises. I believe, with the facilities which we are able to offer the immigrant and the settler, that we shall enjoy a substantial share of this class of travel, and it will be a great pleasure to us to learn that so long as the steamers have their terminus at Halifax a steady stream of travel will pass through the port.

Why do I tell you these things? The answer, I think, is not far to seek. We believe the Maritime Provinces and the port of Halifax need us as much as we need them. The development of Canada is going on from sea to sea; and if the eastern part of the Dominion is to enjoy its full measure of the western development, and if the western provinces are to enjoy all the advantages of expansion in the East, and particularly its port facilities, such as we have here, there must be a close rail connection between the East and the West. I do not propose to say how this shall be done. You have the Intercolonial Ry., with its terminus in Montreal, but without any hold of its own on business with Ontario and the four great western provinces. I submit to you that there is no question of more vital importance than a frank and full discussion of how the I.C.R. can be linked up with the C.N.R. The C.P.R. has its terminus in St. John, the G.T.P. proposes to have its terminus in the east, and I ask you whether a connection for the C.N.R. into Halifax would not be advantageous to all concerned.

◆

Great Northern Ry. Lines in Canada.

Manitoba Great Northern Ry.—Alderman Douglas, Winnipeg, stated Dec. 10, after an interview with J. Fisher K.C., who is solicitor for the G.N.R. in Winnipeg, that he had been advised from St. Paul, Minn., that no further progress would be made with the company's projects in Winnipeg and Manitoba at present.

Kaslo and Slocan Ry.—A. H. MacNeill, Solicitor for the G.N.R. in Vancouver, had a conference with the Premier of British Columbia, Nov. 29, respecting the question of the restoration of the K. & S. Ry. track and the resumption of train service on the line. A Kaslo dispatch Dec. 3, states that the G.N.R. is not anxious to operate the line at all, and another press dispatch, states that, "what is left of the line" will be "transferred to the C.P.R. and that the line will be rebuilt and operated next year."

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Work has been suspended on the line in the vicinity of Princeton, B.C., for the season. Grading has been completed to Cardiff, and tunnle work at the entrance to Princeton was completed Nov. 30, 1910. It is said work will be resumed in June.

The Board of Railway Commissioners has authorized the building of an industrial track from False Creek to Powell St., Vancouver, paralleling the company's present track on Boundary St. Application is being made to the Board for permission to build two additional industrial tracks in the city.

Plans have been laid before the Board of Works of the Vancouver city council, showing the bridges which the company proposes to erect over the cut in Grandview at Broadview and Lakeview Drive. The plans were disapproved as they did not conform to the stipulations concerning similar structures in the city. The plans which the company is working out contemplate the laying down of two extra tracks in the Grandview cut, which will be widened all the way through the city. Three industrial spur lines are also contemplated in the same vicinity. The plans for the laying out of the land to be reclaimed at False Creek are being prepared, and these show that it is intended to lay at least 20 tracks. (Dec., 1910, pg. 1047.)

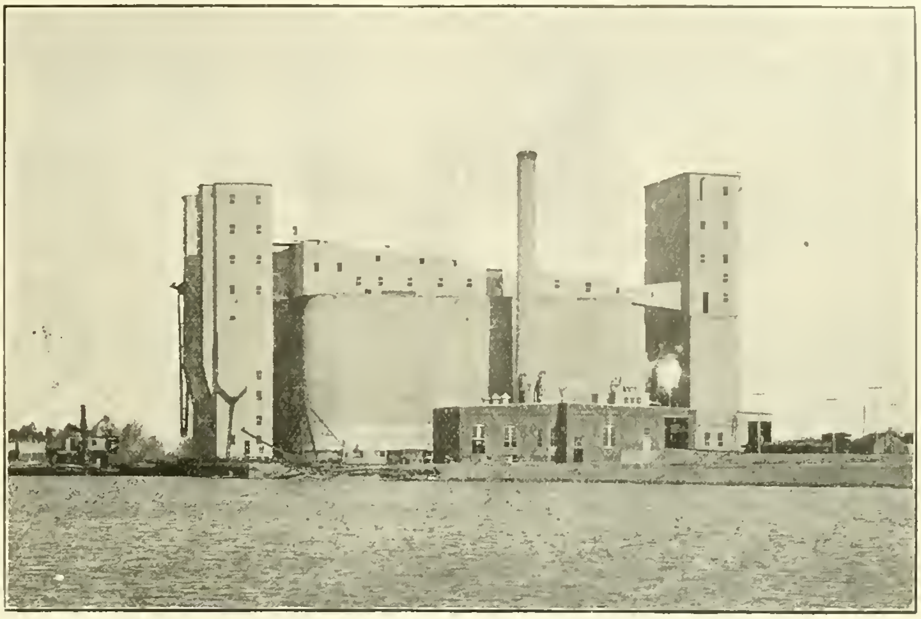
PITTSBURG AND NEW YORK

C. P. R. Elevator at Victoria Harbor.



Canadian Pacific Ry. Elevator at Victoria Harbor, Ont.

The Canadian Pacific Railway, which is in possession of large elevators at the head of Lake Superior, found it necessary to provide additional facilities at the eastern end of the lake haul, where its numerous grain vessels could be readily unloaded and the grain either stored or reloaded into railway cars for shipping eastward to Canadian territory. Hence it obtained a site at Victoria Harbor, Ont., at the extreme eastern end of Georgian Bay. With an island for a foundation, the company will have an ideal site for its terminal, after the extensive dredging and filling operations now under way are completed.

The new elevator plant has just been completed, consisting of two marine towers for unloading lake vessels, a 2,000,000 bush. storage house, a working house for loading cars and a 1000 k.w. power plant to supply the necessary power for operating the machinery. Each marine tower is 150 ft. in height, built of structural steel, covered with corrugated iron and mounted on 40 heavy car wheels. Steel stairs are provided from bottom to top and the roof and all the floors are of concrete. Each tower is self-propelling, travelling independently on the double track between the storage house and the slip, and can thus work to its full capacity regardless of the spacing of the hatches and different capacities of the various holds in the boats. The marine legs are specially designed so that they can enter passenger boats as well as freighters. Each marine leg will elevate 20,000 bush. of grain per hour on the dip, and a complete set of air-operated ship shovels and clean-up shovels is provided to bring the grain to the legs as rapidly and economically as possible. The marine legs deliver the grain to 1,000 bush. scales, after which it is elevated to the top of the towers and by an arrangement of spouts and conveyors dropped into any bin of the storage or working-house.

The storage house consists of 32 cylindrical reinforced concrete bins 33 ft. inside diameter and 31 interspace bins, each of which holds about a fourth of the capacity of a cylindrical bin. All the bins have hoppered bottoms, so are self-emptying. The present total capacity of the storage house is 2,000,000 bush. and the plant is so arranged that future extensions may be added to raise the capacity to 10,000,000 bush. With extension of the storage, additional marine towers are also contemplated.

The working house or shipping elevator, is also of concrete to the top of the bins and has a structural steel cupola covered with corrugated iron. All of the floors and roof are of concrete. The storage capacity of the workinghouse is comparatively small, being about 85,000 bush., as this part of the plant is intended principally for weighing and shipping the grain to railway cars. For this purpose are provided two 2,000 bush. scale hoppers, each on a 120,000 lbs. scale. Four car-loading spouts lead to two loading tracks one on each side of the house, each running through a track shed. This house will be able to load 200 cars in a 10 hour day. When necessary the cars can also be unloaded in the working house and boats or barges can be loaded by a special boat-loading spout on one of the towers. All of the machinery in the elevator plant is driven by electric motors. The working house may be readily extended to twice the present size with double the present equipment of legs and scales; so when business increases to require faster loading the shipping house will be enlarged to supply the demand.

To provide power for all this machinery and light for the buildings and yards, a modern power plant has been built. This is equipped with four 250 h.p. Babcock & Wilcox water-tube boilers which supply steam at 160 pounds pressure to two 500 k.w. Westinghouse-Parsons turbo-generators. The smokestack is of reinforced concrete 160 ft. high. A system of 750 incandescent lamps and 12 arc lamps makes the operation of the entire elevator plant as easy at night as in the day time. There are also installed a complete system of telephones, electric signal lights and bells and dust collectors. The entire plant is absolutely fireproof as with the exception of transmission ropes there is nothing combustible in it. Wire glass is used in all of the windows and the electric wiring is all in metal conduit. As an extra precaution for the protection of cars and boats, a fire pump has been provided which supplies water to a number of hydrants around the elevator. A concrete wharf 240 ft. long, carried down to a depth to provide for 25 ft. of water, was built along the front of the elevator.

In addition to the new elevator plant just completed, three-quarters of a mile of wharf, 800 ft. of flour shed, and 700 ft. of freight shed are now under construction. The entire work of elevator plant wharves and sheds, is being done under the direction of J. G. Sullivan, Assistant Chief Engineer, C.P.R., with Resident Engineer G. G. Ommanney in general charge at Victoria Harbor. All of the work is being executed by John S. Metcalf Co., grain elevator engineers, of Montreal and Chicago. The total expenditure for this construction will be in the neighborhood of $1,100,000.

◆

Demurrage Rules.—The Interstate Commerce Commission, in the matter of the investigation and suspension of certain demurrage schedules, reported recently, recommending that for six months following Dec. 1, 1910, the free time upon lumber and forest products, coal, grain, and grain products be extended from 48 hours to 72 hours, provided, however, that the application of the average rule shall only be allowed upon a 48 hour basis. Before the expiration of that period the Commission will be able to intelligently determine what commodities, if any, should be given a longer free time than the standard 48 hours.

Alberta Railway and Irrigation Co.

The reports for the year ended June 30 show a total revenue from railways, colliery, canals, profits on land sales, etc., after providing for depreciation, of $389,216. After deducting interest on prior lien, and 5% debenture stock, there was a surplus of $269,066, from which a dividend of 5% on the share capital was declared, absorbing $162,500, leaving $106,566 to be carried forward to the current year's accounts. The gross earnings of the railway were $378,128, against $320,936 for the previous year. The coal sales were 239,623 tons, an increase of 12,931 tons over the previous year. The land sales were 74,545 acres, and realized $805,491, the average price being $44.03 an acre for irrigated lands and $6.43 an acre for non-irrigated lands. There was also sold, 1,121 acres, in which the company has an interest with the C.P.R., the company's profit being $3,026 or equal to $2.70 an acre. The profit from sale of town lots was $146,900, the estimated profit from the sales being $611,700, but only profit received during the year from lands free from the trust viz.—$116,400, is included in the revenue account. The amount in reserve in connection with land sales is $1,643,478, and in connection with C.P.R. lands, $108,340. On June 30 the company had 221,425 acres remaining unsold, in addition to some town lots in Lethbridge Raymond Milk River, New Dayton and Chinn.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—A bill confirming the Provincial guarantee for the bonds issued in 1909 for the building of this projected railway, under the special legislation of 1908, was read a second time by the Legislature, Dec. 4. The principal feature of the bill, however, is that it declares the proceeds of the bond issue, now deposited in three banks, is to "form part of the public revenue fund of the province, free and clear of any claims by the A. and G.W. Ry. Co., its successors or assigns, and the province shall indemnify and save, harmless, the railway company, its assets and its undertakings from any and every claim made under said bonds or any of them."

W. R. Clark, of Kansas City, Mo., President of the company, has appealed to the Dominion Government to look into the matter, and to the U.S. Government to see what steps can be taken to look after the interests of the shareholders, who are almost without exception, citizens of the U.S. The bond issue was made through J. P. Morgan & Co., New York.

The plans for the railway which were submitted to the late government, and which were not to be found when wanted, were discovered behind some shelves in a cupboard in the Speaker's room in the Legislature building at Edmonton, Dec. 11. They were not signed as having been approved by the Premier. (Nov., 1910, pg. 909.)

Algoma Central and Hudson Bay Ry.—In an interview at Toronto, Dec. 3, W. C. Franz, General Manager, Lake Superior Corporation, said the company was pushing construction on the line between its present northerly terminus and the C.P.R. transcontinental line at Hobon, Ont., at four points, and that 30 miles of track had been laid. There were, he said, 2.000 men engaged in the work, and it was expected to have it completed by the end of 1911. As soon as this work was completed it was intended to go on with extending the line from Hobon to a junction with the National Transcontinental Ry., 115 miles. Survey parties were in the field locating a route for this line.

The work at present in hand is the clearing of the right of way graded several years ago, and its completion from the end of steel to Hyde Park Jct., the present terminus of the Michipicoten branch, and the construction of the line from that point to Hobon. The gangs are at work northerly from near Pangassin, the present end of track, north and south from Hyde Park Jct., and southerly from Hobon.

We were advised Dec. 12 that very good progress was being made with the construction of the extension from Hawk Lake Junction to Hobon, on the C.P.R. transcontinental line, and from Hawk Lake Jct., southerly to the present end of steel on the main line. On this latter section of the line, track had been laid to mileage 68 from Sault Ste. Marie, and track has now been laid to the first bridge north of the Batchawana River, about mileage 82. The bridge at this point is being built, after which the track laying will be proceeded with, and it is expected that steel will be laid to the Montreal River by about April. This is a large bridge, the contract for the superstructure of which has been let to the Canadian Bridge Co., Walkerville, Ont. Timber has been delivered at Agawa Bay on Lake Superior, which is opposite mile 100 on the main line, and the construction of the large bridges at this point will be gone on with during the winter, so as to permit of rapid tracklaying in the spring. At the north end of the line track is laid through to the Michipocoten River about 19 miles south of Josephine Jct., and the contractors' forces are now engaged in building the bridge over this river and other small bridges in the vicinity. It is expected to lay track as far south as mileage 144 this winter. North from Hawk Lake Jct. it is expected that the contractor will have finished the grading by June 15, when tracklaying and ballasting will be started. It is hoped to have the line completed to Hobon by the end of the year. The Magpie branch, which starts at mileage 18 on the Josephine branch, and extends north and west for nine miles to Magpie mine, is also well under way. Track has been laid to the crossing of the Magpie River, about 5.50 miles, and the bridge across this river is under construction.

North from Hobon one survey party is in the field running a line to a connection with the National Transcontinental Ry., and it is expected that with the beginning of the year two additional parties will be put in the field to locate the line. It is the company's intention to have this line built as early as practicable.

Atlantic, Quebec and Western Ry.—At a recent meeting in London, Eng., of the depositors in the Charing Cross Bank, which holds the company's bonds, it was stated that if money can be found to complete the line it is highly probable it will become a valuable asset. The line, it was stated, was a very costly one to build, owing to the very large number of bridges across rivers and streams. The country through which the line passed was sparsely inhabited, but large sums had been expended in opening up the timber resources, and it was expected there would be a considerable timber traffic. (Dec., 1910, pg. 1027.)

Burrard Inlet Tunnel and Bridge Co.—Soundings and surveys of the Second Narrows have been completed by the company, and preparations have been made for the making of borings to ascertain what work it will be necessary to do to get a secure foundation for the abutments and piers of the proposed bridge. Cleveland and Cameron, Vancouver, B.C., are the engineers.

A petition is being signed asking the Dominion Parliament to grant a subsidy towards the building of the bridge. It is pointed out in the petition that the company is being financed chiefly by the municipalities interested, that the Provincial Government has granted $250,000, and that a private corporation, to which Parliament granted a subsidy some years ago, has failed to do anything to earn it. It is suggested that not less than $300,000 be granted towards the building of the bridge and $10.000 a mile towards the railway connections. (Dec., 1910, pg. 1013.)

Burrard, Westminster Boundary Ry. and Navigation Co.—Application is being made to the Dominion Parliament to extend the time within which the company may build the lines authorized by chap. 68 of the statutes of 1907, as amended by chap. 50 of the statutes of 1909. Tupper and Griffin, Vancouver, B.C., are solicitors for applicants. (July, 1909, pg. 475.)

Canada and Gulf Terminal Ry.—We are advised that the section of the line from St. Flavie to Matane, Que., has been completed, and that arrangements have been completed for the placing of a train service in operation over it, on receipt of an order from the Quebec Public Utilities Commission. Survey parties are in the field to locate a line from St. Flavie westerly to a junction with the National Transcontinental Ry. near Lake Temiscouata, and easterly from Matane along the valley of the Matane River towards Gaspe Basin. The total length of the line as projected from the N.T.R. to Gaspe Basin will be about 300 miles. The route proposed to be followed is through the rear portions of Temiscouata and Rimouski counties and the centre of Gaspe Peninsula, through rich agricultural and timber lands, the route through the Gaspe Peninsula being practically through a virgin forest. The section of the line completed has been built to the N.T.R. standard, and laid with 80 lb. steel, which standard it is proposed to follow throughout. (Oct., 1910, pg. 825.)

Canadian Inter-Mountain Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build the following lines: from Coutts, at the International boundary, northerly to Milk River, thence westerly to Cardston, thence southwesterly to the western boundary of Alberta, at the summit of Kishemench Pass, thence westerly in British Columbia, to the Flathead River, and thence northerly to the C.P.R. Crow's Nest Pass line at Fernie; from Milk River easterly to Estevan, Sask., with branch lines, of which the following are specifically mentioned: from the confluence of Calder Creek and Flathead River to Elko; from Cardston to Lethbridge; from tp. 3, range 1, west 4th meridian, to Lethbridge; from tp. 4, range 19, west 3rd meridian, to Swift Current, Sask.; from tp. 6, range 29, west 2nd meridian, to Moose Jaw, Sask. Taylor, Harvey and Baird, Vancouver, B.C., are solicitors for applicants.

The Canadian Western Ry. Co., we are advised, is applying for an extension of time for construction. For some time nothing has been done in the way of pushing arrangements for building the line owing to the situation created by the enquiry into the Alberta and Great Waterways charter. At the time the question affecting this company came up, the C.W.R. had completed its surveys for a line from Calgary by way of Pincher to the International boundary, and had received a promise from the Alberta Government that the Legislature would be asked to vote a subsidy. (Dec., 1910, pg. 1013.)

Chicago, Milwaukee and Puget Sound Ry.—It is expected that early in the spring a through passenger and freight service will be operated over this line, which is the extension to the Pacific coast at Seattle, Wash., of the Chicago, Milwaukee and St. Paul Ry. The annual report of this latter company reports upon the progress of construction of the main line and branches. Of these branches the one which is of importance so far as Canadian interests are concerned, is that from Warden, Wash., which has been completed for 47.5 miles northeasterly to Hamlin. If this line were continued northeasterly it would reach Metalline, Wash., from which point the Idaho and Washington Northern Ry. proposes to build a line to the International boundary south of the Salmon River, B.C. (See Chicago, Milwaukee and St. Paul Ry., Dec, 1910, pg. 1013. See also Salmon River to Peace River).

Graham Island Ry.—Application is being made to the British Columbia Legislature to incorporate a company with this title to build a railway from Skidegate Inlet on Graham Island through the centre of the eastern portion of the island to Masset village, or the shore of Masset Inlet. H. W. R. Moore, Victoria, is solicitor for applicants. (Sept., 1910, pg. 725. See also Skidegate to Indian Village.)

Halifax and Eastern Ry.—Press reports state that practically all the arrangements have been completed between the company and the Nova Scotia Government for the beginning of con-

struction in the spring. (Nov., 1910, pg. 911.)

Imperial Traction Co.—The Dominion Parliament is being asked to incorporate a company with this title, with power to build railways as follows: from Hamilton to Guelph, Guelph to Berlin, Berlin to Stratford, Stratford to St. Marys, St. Marys to London, London to Ingersoll, Ingersoll to Woodstock, Woodstock to Brantford, Brantford to Hamilton, with an extension from the latter line to Niagara Falls, and a branch from the Stratford-St. Marys line to Lake Huron and following the shore to Sarnia. Harding and Owens, Stratford, Ont., are solicitors for applicants.

Indian River Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build the line authorized by sec. 1, chap. 95 of the statutes of 1907. L. A. Cannon, 139 St. Peter St., Quebec, is the solicitor. (Dec., 1910, pg. 1013.)

International Ry. of New Brunswick.—The line from Campbellton, on the Baie des Chaleurs, across New Brunswick to St. Leonards, 113 miles, has been completed and passed for traffic. A connection with the C.P.R. has been made at St. Leonards, and freight trains have been running for some time. A passenger service was started early in Dec. A connection will be made with the National Transcontinental Ry. near St. Leonards. T. Malcolm, the contractor, stated in Montreal recently, that the station buildings, etc., were being erected, and that next year the road would be in first class shape for handling traffic. Nothing had, it is said, been decided as to connecting the line with U.S lines at Van Buren Me. across the St. John river from St. Leonards, or with the old Atlantic and Lake Superior line, on the Quebec side of the Restigouche River. (Sept., 1910, pg. 727.)

Kettle Valley Lines.—It is reported that the valuators have agreed on a figure of approximately $62,000 as the price which the K.V.R. will pay for the right of way which was graded between Midway and Rock Creek, B.C., by the old Midway and Vernon Ry., and that the amount will be utilized to pay off claims filed against that company so far as it will go. The right of way has been cleared between Midway and Rock Creek, 10 miles, and the track was reported to have been laid on this distance Dec. 10. It was expected to complete the tracklaying on a further distance of about 10 miles by Dec. 31. Grading gangs are working westerly from Rock Creek, and easterly from Merritt, there being about 1,000 men at work. (Dec., 1910, pg. 1015.)

Kootenay and Alberta Ry.—A press report states that this company's immediate project is to build a line from the Beaver Creek coal mines to Pincher Creek, and thence southeasterly to the International boundary and on to Butte, Mont. We are officially advised that the Mont. We are officially advised that tenders will shortly be called for for the building of a line which will start from about a mile west of Pincher station on the C.P.R., on a course 16 miles southwest to Beaver Creek colliery, and that work will be commenced thereon during the current winter. A press report from Pincher Creek, Alta., stated that tenders were received Dec. 10, for the building on the line. The engineering party has moved its headquarters to the Milk River, near Mountain Mill, and is continuing its survey work southerly. L. B. Merriam, C.E., is in charge of construction. The company is controlled by the Western Coal and Coke Co.

Following are the officers and directors for the current year of the Western Coal and Coke Co., which controls the K. & A. R.:—President, E. B. Greenshields, Montreal; Vice Presidents, Hon. R. Mackay, Montreal, and J. B. Ferguson, St. Catharines, Ont.; other directors, H. A. Lovett, J. W. McConnell, Montreal; J. N. Lake, J. E. Woods, Toronto. (Dec., 1910, pg. 1015.)

Lethbridge Collieries Co.—A spur line of about a mile has been located and is being built by the C.P.R., from the C.P.R. Crow's Nest Pass line these collieries.

Following are the officers and directors for the current year:—President, E. B. Greenshields, Montreal; other directors, Hon. R. Mackay, H. A. Lovett, J. W. McConnell, N. Curry, Montreal; J. S. Hough, D. B. Adams, I. Cockburn, C. H. Campbell, Winnipeg. (Nov., 1910, pg. 911.)

Lloydminster to Fort MacMurray.—Application is being made to the Dominion Parliament to incorporate a company to build a line from Lloydminster, Sask., via St. Paul de Metis, and Lac La Biche, to Fort MacMurray, near the junction of the Clearwater and Athabasca rivers. It is also desired to have power to build the following branch lines: from south of the Saskatchewan River, via Brudenheim to Edmonton, Alta.; from Lloydminster southerly via Medicine Hat to the International boundary, near the Milk River, Alta.; from Lloydminster or a point on the last mentioned line, southwesterly via Buffalo Lake to Blackfields and Red Deer, Alta.; from near Lloydminster, southeasterly via Manitou Lake and Scott, to Saskatoon; from Lloydminster, or a point on the main line northerly via Cold Lake to Lac La Loche and the headwaters of the Clearwater River; from Lloydminster via Elbow, near Fort Pitt, via Dore Lac and Lac La Ronge to Hudson Bay, or a point on the railway to Hudson Bay. The notice of application is signed by H. B. Hall and H. C. Lisle.

Manitoulin and North Shore Ry.—Tenders will be received to Jan. 2 for the grading of the roadbed and the erection of all structures on the following sections of the line: from Crean Hill, mileage 22.7 west of Sudbury, to a connection with the present line at Espanola, and from Espanola southerly to mileage 61.

We are advised that excellent progress is being made with the 18 mile section of the line from Little Current, northerly. The section of the line for which tenders are being received to Jan. 2, extends from Crean Hill, to White Fish Bay.

New Brunswick and Prince Edward Island Ry.—A branch line in Sackville, N.B., is being surveyed by Professor Crowell. As far as possible the line will run along the boundary line of the Fawcett property, crossing Main st., by the Fawcett foundry, and up the hill to the quarry. There will be a good deal of curvature on the line, and a heavy gradient to the quarry.

Peace River Great Western Ry.—The provisional directors named in the bill now before the Alberta Legislature for the incorporation of a company with this title are: R. A. Grant, R. H. Percival, W. J. Cook, C. E. Johnston, Winnipeg; G. Cochrane, Moredon, Man. (Dec. 1910, pg. 1015.)

Portland Canal Short Line Ry.—Track is reported to have been laid from Stewart, B.C., to a point about four miles inland, and that about 75% of the whole work on the line to Bear River has been completed. (Nov., 1910, pg. 911.)

Reid Newfoundland Ry.—Grading was reported to have been completed on the Bonavista branch Nov. 30, and track was reported to have been laid to beyond Trinity East. Between Catalina and Bonavista there is a stretch of marsh land extending for about a mile and a half, which will require considerable filling before track can be laid across it. Ballasting was proceeded with until prevented by the frost. (Dec., 1910, pg. 1015.)

St. John Valley Ry.—Recently engineers representing the Mackenzie, Mann & Co. interests and the G.T. Pacific Ry., and F. C. Dunn, a New York engineer, have been in Fredericton, N.B., looking over the plans of the surveys made for this projected railway by the Provincial Government engineering staff. The Provincial authorities decline to say anything as to the purpose of these negotiations. (Dec., 1910, pg. 1017.)

Salmon River to Peace River.—The British Columbia Legislature is being asked to incorporate a company with this title to build a railway from Salmon River, Dean Channel, Bella Coola or other points near, on the western boundary of the province to Sigulta Lake, to Kivalcho Lake, along the Uhalghart River to Entiaco Lake, along the Entiaco River to Natulkus Lake, along the Upper Nechaco River to Fraser Lake, thence easterly to the point where the Peace River crosses the eastern boundary of British Columbia. Elliott, McLean and Shandley, Victoria, are solicitors for applicants.

In connection with this project U.S. papers state that the Idaho and Washington Northern Ry., which at present has its terminus at Metalline, 11 miles south of the International boundary, proposes to extend northerly along the Salmon River Valley. A route is reported to have been surveyed along the valley to Salmo, thence along the Beaver Valley to Trail, and other points in British Columbia. The I. and W.N.R. is reported to be working in conjunction with the Chicago, Milwaukee and St. Paul Ry. (See Chicago, Milwaukee & Puget Sound Ry.)

Simcoe, Grey and Bruce Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Southampton, easterly to Owen Sound, easterly and southeasterly, passing Meaford, Thornbury, Collingwood and Orillia, to the Canadian Northern Ontario Ry., east of Orillia, Ont. Mackay, Telford and Macdonald, Owen Sound, are solicitors for applicants.

Skidegate to Indian Village.—The British Columbia Legislature is being asked to incorporate a company to build a line on Graham Island, Queen Charlotte group, from Skidegate Inlet northerly to opposite Gambus Island across Gambus Island and Masset Inlet, northwesterly, touching the east end of In-Tsua Lake, across Naden River and around the western shore of Naden Harbor to the old Indian Village. Power is also asked to build branch lines, and more particularly one from opposite Gambus Island, parallel with the shore line of Masset Inlet to Masset village, thence northeasterly to between Cape Fife and Rose Point. C. F. Davie, Victoria, B.C., is solicitor for applicants.

Sydney and Louisburg Ry.—The question of the construction of a subway under the tracks at McQuarrie's crossing, Sydney, N.S., is under consideration. The city engineer in his report urges that efforts be made to reduce the gradients of the approaches to the subway, so as to be more favorable for traffic, which was approved. The company has under construction a short spur from McKeegan's point to Dixon's platform, about a mile, and is reconstructing the line between mileage 30 and 31. Surveys are being made for a branch front Balls Creek, for 2.4 miles, to the limestone quarries, and from Morinin station for 2.25 miles to the Birch grove collieries. (June, 1910, pg. 453.)

Temiskaming and Northern Ontario Ry.—An order-in-council was passed by

TAYLOR & ARNOLD, Limited
Selling Agents—MONTREAL

the Ontario Government Nov. 30, authorizing the building of a branch line from near Kelso to the Porcupine district, about 32 miles, at an estimated cost of $450,000.

The Government early in 1910 made an agreement with a private company to build such a line, it being understood that a charter would be given by the Legislature at the 1911 session. This agreement subsequently passed under the control of interests represented by E. A. Wallberg, Montreal, who is interested in power development plants on the Metagami and other rivers. While surveys have been made no actual construction has been done, and the Government has taken the position that the company has forfeited its right to further consideration. The charter has been cancelled and the order-in-council passed authorizing the building of the line under the general authority for the building of branch lines by the T. and N.O. Ry. Commission. J. L. Englehart, Chairman of the Commission, in an interview subsequently, said: "Our engineers are out on the survey work from Kelso, and work will be begun at once. We expect to have the line in operation by June 1." The line will, it is said, be built across a sandy plain to Night Hawk Lake, which will be crossed by a bridge, and by an easy route to the Porcupine River, which will also be crossed, about 1.5 miles north of the Crombie townsite, thence through the centre of Tisdale tp. to the Metagami River. Steam will be used for hauling trains at first, but press reports state that the line will ultimately be operated by electricity.

We were advised, Dec. 12, that the branch is being built by the Commission direct, and that though actual surveys are not yet completed, everything possible will be done this winter, the intention being to complete the line and have trains running by July 1. J. M. Bourke, C.E., has been appointed Superintendent of Construction. (Dec., 1910, pg. 1015.)

Timagami and Ontario Northern Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build its projected railway from Sturgeon Falls, Ont., northerly. The notice of application is signed by J. Craig, President, Sturgeon Falls, Ont. (Aug., 1910, pg. 631.)

Toronto, Hamilton and Buffalo Ry.—A press report states that the company has acquired some 23 acres of land close to Cline's Park, Hamilton, for additional yard space. (Dec., 1910, pg. 1017.)

Vancouver to Winnipeg.—A letter has been addressed by the Minister of Public works for British Columbia to the Premiers of Alberta, Saskatchewan and Manitoba, suggesting that the four provinces should unite for the purpose of building a scenic railway from Vancouver to Winnipeg.

◆

Station Location Plans.—The Board of Railway Commissioners has directed that in future whenever it is the intention of a railway company to construct a permanent station, and an application is to be made to the Board for its approval, a copy of the application and plan be served on the municipal authority of the district in which the station is to be erected; or if there is no municipal authority, then on the Government or other authority having control over the district.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., in writing from Vancouver in answer to an enquiry respecting progress of work says, "I am glad to help with the Railway and Marine World, which we all admire and enjoy."

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses and net profits from July 1, 1910, with increases over, or decreases from, those of 1909-10:

	Earnings.	Expenses.	Net Earnings.	Net Increase
July	$1,225,100	$876,900	$348,200	$118,600
Aug.	1,093,000	830,000	263,	58,600
Sept.	1,279,900	898,700	381,200	69,700

◆

Quebec Central Railway.

The report for the year ended June 30 shows gross earnings $1,105,867; expenses $759,556; net operating earnings, $346,311; interest earned $5,675; net income $351.986, against $1,021,682 gross earnings; $724,918 expenses; $296,764 net operating earnings; $9,176 interest earned; $305,940 net income for the year ended June 30, 1909. Added to the balance brought forward from 1909 $46,232, there was a balance on hand at June 30, of $398,218, from which is deducted, interest on 4% debenture stock $116.525; interest on 3% debenture stock, $49,348, and interest on 7% income bonds $115.545, leaving a balance of $117.200, of which $15,000 has been transferred to the reserve contingent fund bringing the amount to the credit of this fund to $80,000. Out of the surplus of $102,200, a dividend of 2% for the year was declared, absorbing $55,607, and the balance of $46,593 was carried forward to the current year's accounts. During the year there was an issue of £75,000 of 4% debenture stock for capital purposes raising the amount outstanding at June 30, to £604,837. The general balance sheet shows assets of $10,290,150.92, the liabilities of $10,008,457.90. The rolling stock owned at June 30, is given as follows: 23 locomotives, 13 first class cars, 6 second class cars, 3 baggage cars, seven baggage and mail cars, seven baggage and passenger cars, one official car, two dining cars, 308 box cars, 325 flat cars, 74 stock cars, six refrigerators cars, 20 drop bottom coal cars, five gondola hopper bottom coal cars, 35 Hart convertible cars, seven vans, one ballast spreading car, four snow plows, one steam shovel, one steam shovel tank car and six miscellaneous cars.

At the annual meeting in London, Eng., Oct. 19, E. Dent, President, said that this was the first time that the Board had felt justified in declaring a dividend He also pointed out that the increased train loads necessitated the use of stronger bridges and culverts and the use of heavier ballasting, and stated that the laying of 80 lb. rails was being continued. The extension of the line to St. Justine, was practically completed by June 30, and the returns from operating have been included in the current year's earnings. The report was carried unanimously, and the directors re-elected for the current year, as follows: E. Dent, F. Grundy, A. Bremner, T. Lindley, and F. H. Norman. F. Grundy, Vice-President died since the meeting was held.

RAILWAY, FREIGHT AND PASSENGER CARS OF ALL KINDS

STEAM RAILWAY STATISTICS FOR YEAR ENDED JUNE 30, 1910

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which is arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus mark (—) before figures in the net earnings column shows that there was a deficit in the operations of the line to the extent of the figures given. The numbers in brackets—thus (1)—after the name of a railway refer to notes on page 29. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

Name of Railway	Mileage	Passenger Earnings	Freight Earnings	Gross Earnings	Maintenance of Way and Structures	Maintenance of Equipment	Traffic Transportation Expenses	General Expenses	Net Earnings
Alberta Ry. & Irrigation Co.	111.82	$ 111,202	$ 244,292	$ 377,453	$ 74,957	$ 37,508	$ 105,470	$ 22,517	$ 136,999

T. McAVITY & SONS, LTD.

ST. JOHN, N. B.

— MANUFACTURERS OF —

Brass and Iron Body Globe, Angle and Gate Valves

A strictly high class, at the same time not expensive valve is the

"Victor 200"

Hard Metal Globe Valve

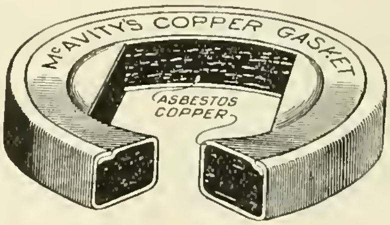
Suitable for Working Steam Pressure of 200 lbs.
Tested 1000 lbs. Hydraulic

"Victor 200"

Valve Discs

Combination Copper and Asbestos

For Jenkins' Valves or valves of similar type.



Made with two flat sides inside or with round hole. These Discs outlast plumbago or asbestos discs six to one, and are the best discs on the market. Send for sample and try it in your worst place. Price List on Request.

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.
THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R. R. and Niagara Falls.

Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Sleeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED" The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario

W. E. DAVIS, Passenger Traffic Manager, Montreal. G. T. BELL, Asst. Pass. Traffic Manager, MONTREAL.
G. W. VAUX, Gen. Passenger Agent, MONTREAL

Notes to Steam Railway Statistics.

(1) The Alberta Ry. and Irrigation Co.'s lines include the lines of the Alberta Ry. and Coal Co., and the St. Mary's River Ry. It has trackage rights over 1.60 miles of C.P.R. tracks.

(2) The Algoma Central and Hudson Bay Ry. and the Manitoulin and North Shore Ry. are owned by the Lake Superior Corporation.

(3) The Atlantic, Quebec and Western Ry. has under construction an additional 70 miles. It has trackage rights over 1.75 miles of the lines of other companies. The Atlantic and Lake Superior Ry. has been acquired by the Quebec Oriental Ry., a subsidiary of the A. Q. & W. Ry.

(4) The Bay of Quinte Ry. has trackage rights over 19 miles of another company. The Thousand Islands Ry. is also owned by the same interests. Since the date covered by the statistics the B. of Q. Ry. has been acquired by the Mackenzie-Mann interests.

(5) The Great Northern Ry. owns and operates the following lines in Canada: Brandon Saskatchewan and Hudson Bay Ry.; Midland Ry. of Manitoba; Crow's Nest Southern Ry.; Kaslo and Slocan Ry.; Red Mountain Ry.; Nelson and Fort Sheppard Ry.; Vancouver, Victoria and Eastern Ry. and Navigation Co.; New Westminster Southern Ry.; Victoria Terminal Ry. and Ferry Co.; and Victoria and Sidney Ry. The Midland Ry. of Manitoba has trackage rights over 0.99 mile of another company's line. The Bedlington and Nelson Ry. mileage includes 8.67 miles operated under lease. The Nelson and Fort Sheppard Ry. mileage includes 5.42 miles of leased lines. The New Westminster Southern Ry. and the Vancouver, Victoria and Eastern Ry. have each trackage rights 1.48 miles over the Fraser River Bridge owned by the British Columbia Government.

(6) The British Yukon Ry. is the Canadian portion of the line operated as the White Pass and Yukon Route, connecting with steamers on the Yukon River to Dawson in the summer, and with stages in the winter.

(7) The Intercolonial Ry. mileage does not include the Windsor branch 32 miles, operated by the Dominion Atlantic Ry. It has 16 miles of second track. It operates its trains into Montreal over the G.T.R., its trackage rights over foreign lines being 40.36 miles.

(8) Mackenzie, Mann & Co. (Ltd.), interests own or control and operate the following railways: Canadian Northern Ry.; Canadian Northern Ontario Ry.; Canadian Northern Quebec Ry.; Edmonton, Yukon and Pacific Ry.; Halifax and South Western Ry.; Inverness Ry. and Coal Co.; Quebec and Lake St. John Ry. and the Schomberg and Aurora Ry. The Canadian Northern Ry. figures include the statistics relating to traffic over the Manitoba Ry., which it operates under a lease from the Government of Manitoba. The lines included in the Manitoba Ry. are the Northern Pacific and Manitoba Ry., Winnipeg Transfer Ry., Portage and North Western Ry., and Waskada and North Eastern Ry. Its earnings, etc., also include those of the Qu'Appelle, Long Lake and Saskatchewan Ry., and of the Edmonton, Yukon and Pacific Ry., which report mileage separately. The Canadian Northern Quebec Ry. has trackage rights over 58.65 miles of other companies' lines. The Canadian Northern Ontario Ry. has trackage rights over 3.80 miles into the Union Station Toronto. The Halifax and South Western Ry. has 2.30 miles of trackage rights over the Intercolonial Ry. into Halifax.

(9) The Canadian Pacific Ry. mileage includes 2.909.5 miles of main lines owned, 3.020.60 miles of branches and spur lines owned; 2,576.10 miles of lines of proprietary companies; 1,309.80 miles of lines operated under lease; 184 miles of lines operated under contract, and 37.30 miles of lines operated under trackage agreements. It has 397.50 miles of second track, on lines owned, and 155.90 miles on leased lines. The C.P.R. returns include the earnings and expenses of the Esquimalt and Nanaimo Ry. The lines operated by the C.P.R. include the Montreal and Atlantic Ry., which has 6.40 miles of second track, and a leased line—Lake Champlain and St. Lawrence Junction Ry. The C.P.R. also owns with the New York Central and Hudson River Rd., the Toronto, Hamilton and Buffalo Ry.

(10) The Caraquet Ry. operates the Gulf Shore Ry.

(11) The Central Ontario Ry. operates the line owned by the Marmora Ry. and Mining Co., (formerly the Ontario, Belmont and Northern Ry.).

(12) The Cumberland Ry. and Coal Co. also owns the Springhill and Oxford branch, 14 miles which is not being operated.

(13) The Dominion Atlantic Ry. operates under agreement the Windsor branch of the Intercolonial Ry., 32 miles, which is included in the D.A.R. mileage, but not in that of the I.C.R. It has also trackage rights over 14.42 miles of other lines.

(14) Grand Trunk Pacific Ry. is reported to be under construction, although it is being operated between Winnipeg and Edmonton.

(15) The G.T.R. mileage includes the Buffalo and Lake Huron Ry., 161.30 miles, leased and partly owned. The G.T.R. figures include the earnings, etc., of the Magnetawan River Ry. It has 706.48 miles of second track, and has trackage rights over other lines totalling 13.71 miles. It also owns the Canada Atlantic Ry., and the St. Clair Tunnel Co., which report separately, and the G.T. Pacific Ry., which reports 945 miles of track laid, but does not report any earnings or expenses for the year under review. It also controls the Central Vermont Ry., which operates the Montreal and Province Line; the Montreal and Vermont Jct. Ry. and the Stanstead Shefford and Chambly Ry. The Canada Atlantic Ry. mileage includes the Ottawa, Arnprior and Parry Sound, Ry.; it also operates under lease the Central Counties Ry., and the Pembroke Southern Ry., which report mileage separately.

(16) The Hereford Ry. is owned and operated by the Maine Central Rd. which also owns the Princeton branch, Washington County Ry.

(17) The International Ry. of New Brunswick was originally known as the Restigouche and Western Ry. Although 80 miles are reported completed it had not been opened for public traffic.

(18) The London and Port Stanley Ry., practically owned by the City of London, Ont., is leased to the Lake Erie and Detroit River Ry., which is owned

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

CHICAGO, ILL., U.S.A.

and operated by the Pere Marquette Rd., a U.S. company. The P.M.R. has trackage rights over 130.57 miles of other Canadian lines

(19) The Maritime Ry., Coal and Power Co., owns the line formerly owned by the Canada Coals and Ry. Co.

(20) The Massawippi Valley Ry. has trackage rights over 2.95 miles of another company's lines. It is operated by the Boston and Maine Rd.

(21) The Morrissey, Fernie and Michel Ry. includes 5.03 miles of leased lines. It is owned by the Crow's Nest Pass Coal Co.

(22) The New Brunswick Ry. and Coal Co. owns and operates the old Central Ry. of New Brunswick. It is operated by a commission appointed by the New Brunswick Government.

(23) The New York Central and Hudson River Rd. owns the Ottawa and New York Ry., and the St. Lawrence and Adirondack Ry. It also controls the Toronto, Hamilton and Buffalo Ry.; the Rutland Rd., which owns the Rutland and Noyan Ry.; and the Michigan Central Rd., which controls the Canada Southern Ry. This line has 226.18 miles of second track on main lines, and 16.80 miles of second track in branches and spurs. The Ottawa and New York Ry. operates 1.90 miles under trackage rights. The St. Lawrence and Adirondack Ry. mileage includes 13.30 miles of leased lines, and it has also trackage rights over 8.92 miles of other companies lines.

(24) The North Shore Ry. owns the line formerly known as the Beersville Coal and Ry. Co.'s line.

(25) The Quebec Montmorency and Charlevoix Ry. reports as to the section of the Quebec Ry., Light and Power Co.'s lines upon which steam trains are operated. There are 6.00 miles of second track and three miles operated under contract.

(26) The Quebec, Montreal and Southern Ry., includes the old East Richelieu Valley Ry., the United Counties Ry. and the South Shore Ry. It is owned by the Delaware and Hudson Co., which also owns the Napierville Jct. Ry.

(27) The Sydney and Louisburg Ry. is owned by the Dominion Coal Co. It operates 1.09 miles of line owned by a proprietary company and has trackage rights over 1.20 miles of other lines.

(28) The Temiskaming and Northern Ontario Ry. is owned by the Province of Ontario and is operated by a Commission.

(29) The Toronto, Hamilton and Buffalo Ry., is owned by the New York Central and Hudson River Rd., and the C.P.R. It has 2.04 miles of second track and has trackage rights over 4.36 of foreign lines.

(30) The Wabash Rd. does not own any track in Canada, but operates over G.T.R. tracks under lease.

(31) The gross earnings of the Kingston and Pembroke Ry. are given as less than the totals of the figures given in the columns for passenger and freight earnings. In the column of the statistical tables for other earnings from operation the figures for the company are preceded by "Cr." and the amount of the figures, $4,342, deducted from the total freight and passenger earnings give the total gross earnings.

(32) The Bruce Mines and Algoma Ry., Pontiac and Renfrew Ry., and Vancouver Copper Co.'s line are not being operated

◆

Norton Griffiths and Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000, and office at Winnipeg, to carry on the business of general contractors, for the construction and equipment of tramways, docks, harbors, piers wharves, canals, etc., and to assist in the promotion of companies for their operation.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

Rates on Rice from Montreal.

12275. Nov. 17, 1910.—Re application of Mount Royal Milling & Manufacturing Co., of Montreal, complaining (a) that the G.T.R. and C.P.R. unjustly discriminate against rice manufactured in the province of Quebec by giving preferential rates to cleaned rice from Great Britain, arriving at Montreal by ocean steamships, and reshipped from Montreal wharf in competition with product of complainant's mills to the same Canadian destinations; (b) that the rates on cleaned rice from Montreal are unreasonably high in comparison with the rates from Boston to the said destinations in Canada. through Montreal:

It is ordered that rice, not otherwise specified, in packages, in less than carloads, be included in the first supplement to the Canadian Classification no. 15 at fourth class, instead of at third class, as at present classified, on the understanding that the said supplement be submitted for the approval of the Board within two weeks following the issuing of this order.

Rates on British Columbia Lumber.

12290. Sept. 8, 1910.—Re application of Fullerton Lumber & Shingle Company, Ltd., of Vancouver, B.C.: (1), complaining of the rate of 6c. per 100 lbs. charged by the G.N.R. on lumber from Tynehead to Cloverdale, B.C., 7.1 miles, as excessive and unreasonable; (2), asking that order 6612, Feb. 23, 1909, be varied so as to include Winnipeg in the list of places covered by the joint tariff issued by the G.N.R., pursuant to the provisions of the order; and (3), complaining of the practice of the C.P.R. and G.N.R. regarding minimum weight for carloads. It is ordered:

1. That the Great Northern Ry. be directed to adopt, not later than Jan. 1, 1911, the rates and minimum weights of the C.P.R. Special Mileage Tariff, C.R.C. no. W. 1112, effective Feb. 20, 1909, to apply on lumber, etc., on the New Westminster Southern Ry., and also on the other railways owned, controlled or operated by it in B.C., to the extent required by the mileages of the said railways.

2. That the application to vary the order 6612, to include Winnipeg in the list of places covered by the joint tariff issued by the G.N.R. (Vancouver, Westminster & Yukon Ry.), pursuant to the provisions of the said order, be refused.

3. That leave be granted the complainant to file another application with the Board regarding the practice of the C.P.R. and the G.N.R. in connection with minimum weight for carloads.

Export Rates on Lumber.

12391. Sept. 20, 1910.—Re application of Canadian Lumbermen's Association and Montreal Board of Trade Transportation Bureau, complaining that the railway companies in increasing the export rates on lumber which previously existed, have not complied with order 10528, April 19, 1910; and applying for an order directing the railway companies to carry out the provisions of the said order and issue tariffs on lumber, for export, to comply therewith:

It is ordered that the C.P.R., the G.T.R. and the C.N.Q.R. publish and file tariffs, to be made effective not later than Jan. 1, 1911, reducing the export rates to Montreal on lumber from points in the Province of Quebec, north and east of Montreal, so that the same difference shall exist between the present domestic rates on lumber to Montreal and the said rates for export, as existed between the old domestic rates and the old rates for export.

W. E. & L. S. R. Ry. Passenger Fares.

12308. Nov. 16.—Re application of residents of Kingsville, Cottam and Essex, Ont., alleging unjust discrimination in passenger fares by the Windsor, Essex and Lake Shore Rapid Ry.:

It is ordered that the discrimination complained of as to the fares between Cottam and Essex, and Cottam and Kingsville will be removed by advancing the one-way fare between Cottam and Essex from 10c to 15c, and reducing the one-way fare between Cottam and Kingsville from 20c to 15c.

◆

Cumberland Railway and Coal Co.

The control of this company has been acquired by interests connected with the Dominion Steel Corporation, and at a meeting held Dec. 1, J. H. Plummer, President D.S.C., was elected President, and H. McInnes, Vice President of the C. Ry. and Coal Co.

The C. Ry. and Coal Co. owns a number of collieries and a coal handling plant at Springhill, N.S., a railway of 32 miles extending from the collieries to Springhill Junction on the Intercolonial Ry., and a branch of 14 miles from the collieries to Oxford on the I.C.R. Oxford and New Glasgow branch, which has not been used for traffic for some years. It has also 16 miles of yard track and sidings, which, with the main line, is laid with steel rails. There are only a few small bridges and culverts on the line. It owns six locomotives, seven passenger cars, 520 freight cars, and two cars used for the company's service. It has outstanding $1,000,000 of common stock, and received $39,850 subsidy from the Dominion Government and $173,650 from the Nova Scotia Government, there being unearned $4,950 of the Dominion subsidy voted, and $10,800 of the subsidies voted by the Nova Scotia Legislature. The net earnings for the year ended June 30, 1909, the latest figures available, were $53,322.82.

◆

C. P. R. Pitch Tank Cars.

The C.P.R. is having built in the U.S. 60 steel tank cars, specially designed for carrying pitch. They are of 50-ton capacity, with steel underframes and standard trucks.

The tank shell is double rivetted and strong throughout. The pitch will be admitted to the tank through the dome opening in the top, which has a cover without screw heads or parts liable to be clogged with the pitch.

The discharge valve is simply constructed to provide an easy outflow with as little obstruction as possible, and is made to suit a 4 in. pipe connection for carrying away pitch. The discharge valve is also steam jacketed to assist in the rapid outflow of the pitch.

The heating system is designed to heat the pitch very rapidly, and all fittings in connection therewith are located on the outside of the tank, where they can be easily got at without disturbing the contents of the tank.

The tanks have good provision for sealing them against loss of contents. They are fitted with friction draw gear, and hand and air brakes, and should on the whole prove very serviceable for the purpose for which they are designed.

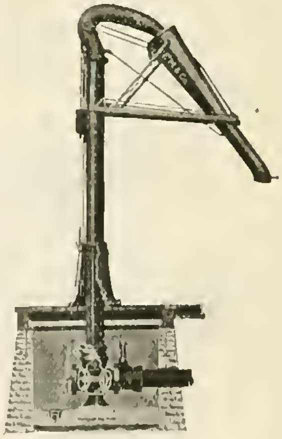
Sheffield-Johnson Flexible Spout Standpipe Installed on C.P.R. at St. Clet, P.Q.

SHEFFIELD-JOHNSON

The Ideal Standpipe



Showing Telescopic Spout Lowered.

It meets with the approval of practical railway men and its popularity is assured. It has a range of flexibility of 5 ft. or over as desired and the spout can be introduced directly into the highest as well as the lowest tender. Nothing could be simpler, more easily operated or more convenient than the type of telescopic spout shown. This, in connection with our horizontal main valve and other special features, makes a combination that is far ahead of all other standpipes on the market. Locks automatically and positively parallel with tracks when not in use. Revolves in complete circle. Operated entirely by one man. Self-draining—cannot freeze. Equipped with relief valve.

The Canadian Fairbanks Co., Limited

Fairbanks Scales, Fairbanks-Morse Gas Engines,

MONTREAL TORONTO ST. JOHN, N. B., WINNIPEG SASKATOON CALGARY VANCOUVER

C.P.R. Betterments, Construction, Etc.

Dominion Atlantic Ry.—C.P.R. engineers have completed an inspection of the bridges on the D.A.R. It is proposed to strengthen a number so as to enable heavier trains to be run and to build a new bridge near Digby, on the location made by the old Western Counties Ry. This will enable the company to abandon a portion of the present route which includes two bridges, and will give a shorter and better approach to Digby. A deputation waited on the management at Montreal, Dec. 7, in connection with a proposal to extend the line to Bear River.

St. John Improvements.—C. Murphy, General Superintendent of Transportation, on a recent visit to St. John, N.B., stated that an announcement would shortly be made with respect to the plans for utilizing the property recently acquired on Mill and Main streets.

St. Stephen, N.B.—Press reports from Calais, Me., state that some move is being made in that vicinity towards the extension of the C.P.R. line, now terminating in St. Stephen, N.B., to Calais, and thence to Mattawamkeag, Me. The company's yard accommodation at St. Stephen has been largely increased and the tracks now terminate at the landing place, opposite Calais.

Bridge at St. John's, Que.—Five spans are reported to have been completed by the Dominion Bridge Co., of the new bridge across the Richelieu River at St. Johns, Que. It was expected to have the bridge completed by Dec. 31.

Place Viger Improvements, Mantreal.—The steel work of the viaduct to carry Notre Dame St., across the C.P.R. lines at Place Viger station is being erected. The viaduct will be 1,006 ft. long and 52 ft. wide. Except where the three tracks entering the station will pass the space under the viaduct will be utilized as freight sheds. The station building itself will be four stories, instead of two, as originally proposed. The steel work is to be started at once, and it is expected that the building will be completed by June 1.

Windsor Street Station, Montreal.—Rapid progress is being made with the erection of the additions to this station, and it is expected that the entire work will be completed by the end of 1912. It is reported that over 1,000 tons of steel has been got into position, and that the whole of the steel skeleton will be completed by April 1.

Lachine Bridge.—Replying to a question in the House of Commons, Dec. 6, the Minister of Railways stated that he had discussed with the President of the C.P.R., the question of building a traffic addition to the bridge across the St. Lawrence River, at Lachine, now being rebuilt by the C.P.R. He had been informed that a traffic bridge could be built separately for less cost than would be required to make over the railway bridge as suggested.

Hawkesbury to Cornwall.—It was unanimously decided at a meeting held recently to gather all the necessary information as to routes and traffic possibilities for a line from Cornwall to Hawkesbury, and to ask the C.P.R. to build and operate it.

Ottawa Tunnel Proposals.—The Minister of Railways told a deputation from Kingston, Ont., Dec. 8, that the Government not been asked to consider the proposal to close up a portion of the Rideau Canal in Ottawa, in order that the C.P.R. might utilize it as a tunnel. It would be a pretty large order to ask the Government to do this, and without committing the Government in any way, he would say that there was a history about the old canal that would make him not very ready to interfere with it. If a company came and offered an alternative route it might be a different matter. The Ottawa city council has referred the whole matter back to the Board of Control for consideration.

Campbellford, Lake Ontario and Western Ry.—The route plan approved by the Minister of Railways shows a line starting from west of Cobourg, Ont., and running north of the G.T.R. through Port Hope and practically paralleling until near Newcastle, when a turn is taken northerly touching the north eastern corner of Newcastle townsite, and then continuing easterly, to Bowmanville, then south-westerly through that town, and on to the boundary of Darlington and Whitby townships, where the route again approaches the G.T.R. The route then takes a northerly turn, runs through Oshawa, touches the north east corner of Whitby townsite, and then south-westerly to the boundary of Scarborough and York townships, where a northerly turn is taken to a junction with the Toronto, Montreal line east of the Don River.

The Georgian Bay and Seaboard Ry.—has been built from Victoria Harbor to Coldwater Jct., on the Toronto-Sudbury line, and construction is being proceeded with between Coldwater Jct., and Bethany siding on the C.P.R. Toronto-Montreal line. The original route map approved by the Minister of Railways, showed a line through Orillia and Lindsay to Peterboro, but a revised location has been approved from Lindsay to Bethany Village, and a plan showing the location between Bethany Village and the Toronto-Montreal line has been filed and is awaiting approval. The route plan shows that the Lindsay and Bobcaygeon Ry. will be used in Lindsay town, and south of the G.T.R. tracks, and the route will be south easterly through Ops and Manvers tps., reaching the Toronto-Montreal line just inside the boundary of Cavan tp. The principal bridge on the line will be that across Distillery Creek, Lindsay. The general contract, for the sections of the line now under construction, was let to the Toronto Construction Co., and sub-contracts have been let to Johnson Bros., for the section between Lorneville and Cambray, and to Perry and Stewart, for the section between Cambray and Lindsay.

West Toronto Yard Extensions, etc.—Some preliminary work is being done in preparation for the building of the new bridge across the Weston road at the West Toronto station. Preparations are also being made for rebuilding the station, which is not only inconveniently situated for the public but the accommodation for the company's staff is utterly inadequate. In connection with the yard extensions towards Lambton, the Board of Railway Commissioners has made an order for the building of a 32 ft. subway under Jane St., instead of the 26 ft. one proposed by the company.

Additional Western Lines—The C.P.R. is applying to the Dominion Parliament for authority to build the following lines, from or near Wilkie on its Pheasant Hills branch southerly and southeasterly to a junction with its Moose Jaw branch in tp. 30, r. 16 or 17, w. 3 m. Sask.; from at, or near Kerr Robert on its Moose Jaw branch, northeasterly and easterly to a junction with the line described first mentioned in tp. 38 or 39, r. 19 or 20, w. 3 m., Sask.

Hamiota to Birtle.—The route of this projected line will be north westerly from Hamiota, crossing the Canadian Northern Ry. near Debbar, and on to Birtle, Man., 32.7 miles. We are advised that the company has not yet reached a definite decision as to when this line will be built.

Bulyea Branch.—The Board of Railway Commissioners has approved of the revised location of this branch from mileage 0 on the Pheasant Hills branch to mileage 18.49, in sec 33, tp. 20, range 22, west of the second meridian, Sask.

Edmonton Station, Etc.—We are officially advised that the company's engineering department is considering plans for the yards and station at Edmonton Alta. No construction will be put in hand until after the completion of the bridge across the North Saskatchewan River which it was expected would be completed by the end of 1910.

The company has purchased a building in the city, which, after renovation, will be occupied as offices by the company's ticket, telegraph and city freight departments, as well as by the Dominion Express Co.

Kootenay Central Ry.—The Board of Railway Commissioners is being asked for a recommendation to the Governor-in-council to sanction a lease of the K.C.R., now under construction, to the C.P.R., for 999 years from Jan. 1, 1911. The route plan for this projected line was approved by the Minister of Railways, Dec. 1.

Westminster Jct., B.C.—A press report states that the C.P.R. has acquired an area of 1,800 acres of land at Westminster Jct., B.C., for terminal purposes.

Esquimalt and Nanaimo Ry.—The extension of the line under construction from Wellington to Alberni, has been completed for the first 30 miles and opened for traffic. There are stations at Nanoose Bay, McBride Jct., Coombs and Cameron Lake. For the present one train is run each way on Tuesdays, Thursdays and Saturdays.

Good progress is being made with the grading of the remaining section of the line into Alberni, and it is stated that the contractors expect to have the work completed to Alberni by Jan. 31, that track laying will be gone on with at once, and that the whole line will be ready in April. (Dec., 1910, pg. 1025.)

◆

Board of Railway Commissioners.

The fifth annual report of the Board of Railway Commissioners, just issued, covers the year ended Mar. 31, 1910. After noticing the amendments made in the Railway Act last session of Parliament, the report states that the Board held 78 public sittings, at which 533 applications were heard. The places at which the Commissioners held public sittings were:—Ottawa, Toronto, Fort William, Sudbury, Bracebridge, Ont.; Montreal, Que.; Winnipeg, Brandon Man.; Regina, Saskatoon, Prince Albert, Sask.; Edmonton, Calgary, Alta.; Vancouver, Victoria, Nelson, B.C. A few of the more important matters which came before the Commissioners are dealt with

The record department reports formal applications, complaints, filings, etc., as follows:—No. of applications made, 3,921; no. of informal complaints, 494; no. of reports of accidents, 892; no. of reports of crossings, 331; no. of reports on condition of stations, 487; no. of files made during the year, 6,125, against 3,479 in 1908-09; no. of filings during year, 30,900, against 27,383 in 1908-09; no. of orders issued during year, 3,310, against 2,249 in 1908-09. The report of the Chief Engineer showed that 397 inspections had been made in various parts of the Dominion; that of the Chief Operating Officer, that 282 cases of accident had been investigated and reported upon.

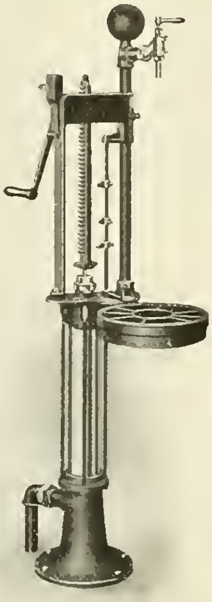
The Board's staff includes:—

TRAFFIC DEPARTMENT.—Traffic expert, J. Hardwell; chief clerk, G. A. Brown; nine clerks. Total salaries, $14,950.

ENGINEERING DEPARTMENT. — Engineer, G. A. Mountain; Assistant Engineers, T.

Oil Storage in a Signal Tower

is not hampered by space limitations when the Bowser Outfit No. 126 is used. A floor space of less than two square feet is sufficient for the pump, and the tank is kept outside, buried underground near the track where it can be conveniently filled direct from supply cars. This outfit exemplifies the thoroughness with which every detail in



Bowser Oil Storage Systems

(adopted by nearly 150 railroads)

has been thought out and applied to conditions such as they exist. The pump can be adjusted to fill exactly different sized lamps, at a single stroke of the pump. An accurate half-gallon, quart or pint can also be discharged at each stroke, as may be desired.

Drop a postal for our Booklet No. 18, on railroad oil storage.

S. F. Bowser & Co. Ltd., 66-68 Fraser Ave., Toronto

TURRET LATHES

"WARNER & SWASEY"

They are the simplest, most efficient Turret Lathes on the market—modern in every detail. We sell all sizes from the small 5-8 in. up to the 3 5-8 in. For railroad shop use the Hollow Hexagon Turret Lathes have all the facilities known to modern practice. This type is a most efficient machine for Bar Stock or Forging work. There are three sizes of Hollow Hexagon Turret Lathes each capable of handling a wide range of work. ∴ ∴

L. Simmons, H. A. K. Drury, N. Canelion; Electrical Engineer, J. Murphy; one clerk and one stenographer. Total salaries, $15,750.

Record Department.—Record officer, E. W. McNeill; seven clerks. Total salaries, $7,750.

Secretary's Department. — Assistant Secretary, E. A. Primeau; Chief Clerk, A. E. Ecclestone; chief clerk and accountant, A. Lapointe; seven clerks and stenographers. Total salaries $9,900. The salary of the Secretary, A. D. Cartwright, is not included in this, being provided separately.

Operating Department.—Chief operating officer, A. J. Nixon; Assistant chief operating officer, A. F. Dillinger; Inspectors, E. C. Lalonde, Jas. Ogilvie, M. J. McCaul, W. S. Blyth, Jas. Clark, J. H. Shinnick. One clerk and one stenographer. Total salaries, $18,350.

Law Department.—Law Clerk, A. G. Blair; stenographer and librarian, Miss Larose. Total salaries, $3,400.

The staff also includes R. Richardson, private secretary to the Chief Commissioner, $2,000; four stenographers, whose salaries total $2,650; three messengers with salaries totalling $1,950, and a cook for the private car Acadian. During the last fiscal year eight clerks and stenographers were employed temporarily, the total amount paid them being $770.

◆

P. E. I. Railway Round House.

The Prince Edward Island Railway shops at Charlottetown were described in our issue of July 1910. The 20-stall round house with turntable, which was completed last year, occupies the whole of the area between Water St., on the north, the car shops to the south, Prince st., on the west, and the general block of shops on the east, taking in practically the whole area of the old house, with a larger area to the south and east. In order that there might be no interference with the housing and cleaning of locomotives one-third of the south side of the old engine house was removed, so enabling one half of the new building to be put up before the rest of the old building was torn down. The old turntable was only removed on the completion of the new building and new turntable so far as to enable the northern half to be used. The foundations of the building are of concrete, piles, capped with concrete, being used for the turntable. This is 57 ft. and the engine pits are each 52 ft. long, and 3 ft. wide inside, and are all provided with drainage pipes, catch basins, piping for hot air heating, etc. The walls are 17 ft. high at the outside and 21 ft. high to the turntable. The roof is of tar and gravel laid on grooved spruce planks, with 4 by 14 in. joists laid to two, three and four foot centres; standard cast iron sunken jacks are fitted over each pit. Office and store room accommodation, and a room for the enginemen are provided. The building is heated with direct steam heat, and lighted by electricity. The installation consists of 63 incandescent lamps of 16 c.p. each, with 19 extension cords inside and five 32 c.p. incandescent lamps outside, with all necessary switches. The building was erected from plans prepared by W. B. Mackenzie, Chief Engineer Government Railways.

◆

The Canadian Renard Road Train Co., Ltd., of Vancouver, B.C., is said to be establishing a road train service on the Cariboo route from Ashcroft to Barkerville. The train consists of an automobile with motor of 100 h.p., and four trailer cars, each with a capacity of 10 tons. The speed will be about six miles an hour, and the cost of the train is said to be $35,000.

G.T.R. Betterments, Construction, Etc.

New England Southern Ry.—The extensions of this line, which is a subsidiary of the Central Vermont Ry., which in turn is controlled by the G.T.R., intended to provide an outlet to the ocean at Providence, R.I., will, it is said, be put under contract in the spring. All the surveys are reported to have been completed in Rhode Island, Massachusetts and Vermont. Application is being made by the New York, New Haven and Hartford Rd., for authority to build a line between South Vernon and Brattleboro, paralleling the C V.R., "to condemn and take over such C.V. stations and terminals" and utilize such portions of the C.V.Ry. right of way as may be required.

Level Crossings, Montreal to Lachine.—The Board of Railway Commissioners had under consideration Dec. 1, the question of the level crossings between Montreal and Lachine. The Board directed the filing of plans by Montreal West, Lachine, and St. Pierre, showing all crosings of highways and railways together with any suggestions with regard to the elimination of the crossings or protecting the same. The matter will come up for consideration again early in the new year.

Ottawa Station Chimney.—A special system of lightning protection is being installed at the new station in Ottawa. The cable is of pure copper braided 28 strand wires, with a capacity of about 220-900 c.m. cross section and ½in. in diameter, made of seven strands. Large arrow points are to be placed equidistant apart on the conductor encircling the top of the chimney and extending 3 ft. about it. Each point is of specially prepared copper, gold plated, hand burnished, with pores filled. At the terminal of each down lead, two large ground reservoirs are to be set. All fasteners are of 94% pure copper and all connections are interwoven or braided in splices. M. M. Campbell C.E., is the inspector.

Ottawa, Rideau Valley and Brockville Ry.—Press reports state that C.W. Morse, and some other engineers are working in the vicinity of Smiths Falls, Ont., in connection with surveys for this projected line. The surveys being maue in that vicinity are with a view of reaching some deposits of iron ore to the north.

Guelph Station.—At a conference between the company's representatives and the city council, Dec. 9, it was decided that the company pay $9,000 for Jubilee Park, and provide a foot passageway under the tracks at Neeve St. The park property is being acquired for a site for a new station, and for additional yard space.

Holmedale Switch, Brantford.—The agreement between the company and the city council of Brantford, Ont., with respect to the building of the Holmedale switch, has been signed. The plans which have been filed show that the line will leave the G.T.R. main line just east of the overhead bridge at the Institute for the Blind, proceed diagonally across the grounds, curving across the tennis ground, then by a straight line to Chestnut Ave., the route will then enter city property at the old Buck farm, and continue direct across the water works property, passing the water works a little to the west and continuing straight to the river. The company will bridge the river some distance north of D'Aubigny Creek and will cross the Burford road connecting near the pork factory with the present Brantford and Tillsonburg branch. The Ontario Government has signified its willingness to grant the right of way through the Institute for the Blind grounds upon certain terms which the mayor says the council will accept. U. E. Gillen Superintendent Middle Division, was in the city Dec. 3, when he said the construction of the line would not be started until the spring. (Dec, 1910, pg. 1035.)

Canadian Car and Foundry Co., Ltd.

Following is the financial statement for the first fiscal year ended Sept. 30. 1910:—

Assets.

Capital Assets:		
Real estate, buildings, plant, machinery, patents and goodwill	$10,534,207.19	
Less—Proportion of surplus of merged companies set up at organization applied in reduction thereof	612,645.74	
		$9,921,561.45
Investments (at cost)		50,153.90
Current Assets:		
Inventories of manufactured products, materials and supplies, at or below cost	$2,465,245.66	
Accounts receivable	1,976,450.23	
Car trust notes (less reserve for unearned interest)	158,028.47	
Bills receivable	17,082.08	
Deposits on Government contracts	43,663.33	
Cash in banks and on hand	89,053.00	
		$4,749,522.77
Deferred Charges to Operations:		
Rental, taxes and insurance paid in advance		31,882.91
		$14,753,121.03

Liabilities.

Capital Stock:		
Authorized—125,000 shares of $100 each	$12,500,000.00	
Issued and outstanding:		
Preferred—7% cumulative	5,000,000.00	
Common	3,500,000.00	
		$8,500,000.00
First mortgage 30 year 6% sinking fund gold bonds, due 1939:		
Authorized—$7,500,000.00		
Issued		3,500,000.00
Purchase money notes		500,000.00
Current liabilities:		
Bank advances	$626,743.90	
Bills payable	10,096.75	
Accounts payable and pay rolls	801,917.13	
Rentals, taxes, and interest accrued	82,282.03	
Reserve for preferred dividend (declared Oct. 1, 1910)	87,500.00	
		1,608,539.81
Reserve funds:		
Depreciation funds	$88,437.83	
Contingent and miscellaneous operating funds	44,446.73	
		132,884.56
Proportion of surplus of merged companies set up at organization	$612,645.74	
Less—Applied in reduction of capital assets	612,645.74	
Profit and loss account:		
Profit for 11 months ended Sept. 30, 1910, after deducting bond interest	$832,529.99	
Deduct—Dividends on preferred stock	320,833.33	
		511,696.66
		$14,753,121.03

Sir Thos. G. Shaughnessy, President C.P.R., and Lord Strathcona, R. B. Angus and C. R. Hosmer, directors C.P.R., have been re-elected directors Bank of Montreal.

The Government claim against the C.P.R. for alleged unpaid customs duties, is again before the Exchequer Court at Montreal. The claim, which was originally for $320,000, now stands at $60,000, and recalls the case where D. Hobbs, in the C.P.R. service, was sentenced some few years ago for fraud in connection with these customs payments by the C.P.R. The Government does not claim that the company attempted to avoid payment, but that the amounts were not received by the Customs authorities.

National Transcontinental Railway.

The report of the Commissioners for the construction of the line from Moncton to Winnipeg, covering the year ended Mar. 31, 1910, contains some additional particulars to those given in the report of the Department of Railways as quoted in our last issue. The total contracts for steel superstructures, bridges and viaducts awarded to Mar. 31, 1910, amounted to 38,984 tons, of which the bridges completed equalled 12,975 tons, leaving 26,009 tons of steel in bridges then under construction. There are 23 steel bridges on the line in New Brunswick, five of which were completed, 17 in process of construction and one—the crossing of the Salmon River at Chipman,—which had not been started at the date of the report. All the bridge work in the district is now reported to be completed. In District B., which takes in 507.22 miles, east and west of the Quebec River there are 44 steel bridges, of which 25 had been completed, 11 were in progress and 8 had not been started at Mar. 31, 1910. Eight steel bridges were in progress and four were to be built on District D. The 16 bridges on District F, have all been completed since the date of the report. No contracts have been let for steel bridges in Districts C., and E.

C. O. Foss, District Engineer District A., is reported to have stated Nov. 30, that the big viaduct over the Salmon River at Chipman was about two-thirds completed and that it was expected to have the steel work completed by Dec. 30. The Commissioners recently completed an inspection of the sections of the line completed west of Quebec. Tracklaying has been completed for about 100 miles west of Cochrane Ont. the point of junction with the Temiskaming and Northern Ontario Ry. West of the end of this track there has been laid 10 miles on the O'Brien contract, which carries the line to the Metagami River. Thirty miles of grading has been completed beyond the river.

Replying to questions in the House of Commons, Dec. 1, the Minister of Railways said that during the summer of 1909, borings were made at the site of the Quebec Bridge, 10 holes being drilled on the south side, and nine on the north side, down to the solid rock. The north main pier is founded on solid rock, and the south main pier is on a solid foundation 79 ft. below ordinary water level. The Board of Engineers had not made any tests of the velocity of the wind at the site of the bridge, but the designs of the structure are based on calculations, including strains due to wind having a velocity of 100 miles an hour in any direction. Answering a further question Dec. 2, the Minister said the matter of the Quebec Bridge and terminals had been discussed in an informal way with the various railway companies interested, but further action at the present time was considered premature. The Minister had a conference with the Board of Engineers in New York, Nov. 26, when matters connected with the substructure were under discussion. Nothing has been announced as to the letting of a contract for the superstructure and it is not expected that any definite announcement will be made until after Jan. 30.

S. N. Parent, Chairman of the Commissioners in an interview Dec. 8, said the plans and specifications for the terminals and union station in Quebec were being prepared. The station would be over 300 ft. long and 100 ft. wide, and would cost about $500,000. The shops would in all probability be located at Cap Rouge, in the vicinity of the Quebec bridge.

The Minister of Railways replying to questions in the House of Commons, Dec. 12, said the percentage of the contracts completed, the amounts paid contractors, and the amounts reserved on Oct. 31, 1910, were as follows:

Contractor.	Through mileage.	Estimated cost at date of contract.	Percent. of work done, Oct. 31, 1910.	Amount paid to Oct. 31, 1910.	Amount reserved, Oct. 31, 1910
Grand Trunk Pac. Con. Co.	0.00— 50.00	$989,895.90	99.05	$1,791,480.80	$99,053.42

Tenders will be received to Jan. 24, for the supply of 61,200 gross tons of 80-lb steel rails with the fastenings for same.

GRAND TRUNK PACIFIC RAILWAY.

The construction of branch lines from the Winnipeg-Edmonton line is being pushed. The first line being built is at Melville, Sask., one section running northerly to Yorkton, and during last season it was extended to Canora, where it will terminate for the present.

We are advised in connection with recent press reports respecting the company's plans for a line to Hudson Bay, that there has been no change in its intention, as reported in our Oct. issue, that when connection is made with the projected Dominion Government line to Hudson Bay, it will be by an extension of its line from Melville, Sask.

To the south of Melville the branch has been built to Balcarres and the extension into Regina is under construction. Negotiations for the entrance into Regina have been completed and it has been agreed between E. J. Chamberlin, V.P. and G.M., and the city authorities, that the station will be located at the corner of 16th Ave. and Albert St., and the freight sheds east of the fair grounds, on lands given by the city. It was stated at a meeting of the city council Nov. 23, that a line would be built from Regina northerly and westerly to Edmonton. The laying out of the yards and the building of the station and freight sheds will be gone on with as quickly as possible. Southerly from Regina a line is being built to the International boundary on which considerable progress has been made.

The next line being built is the Battleford branch, which will have a length of 48 miles and on which approximately 45% of the grading has been completed.

The third branch starts from west of Watrous, Sask., and will extend to Prince Albert. On this line about 85% of the grading is done, and track laying has been begun.

The fourth branch starts at Tofield, Alta., and runs southerly to Calgary. Track has been laid to mileage 47, and grading has been completed to Red Deer, while clearing and other preliminary work has been done between Red Deer and Calgary.

The company is asking the Minister of Railways to approve plans for a line from Moose Jaw to the elbow of the Saskatchewan River, but as several towns want to have the route changed so that they may be served the consideration of the matter has been adjourned to see what could be done.

The company is reported to have acquired land on McDougall Ave. south of Jasper St., Edmonton, on which it is proposed to erect a large hotel.

The members of the Alberta Legislature were taken over the line west of Edmonton on a special train Dec. 4. Track has been laid for some distance beyond Edson and the grading to the Yellowhead Pass is reported to be well forward. B. B. Kelliher, Chief Engineer, is quoted as stating that if the present rate of progress is maintained a contract will be let in the spring for the section between Tete Jaune Cache and Aldermere, the only section of the line not under contract. It is expected to have track laid to the Yellowhead Pass by Jan. 31. Some of the construction gangs closed down their camps for the season, Nov. 30, but those engaged on the heavy earth work and the rock work will remain out all winter. The construction engineering department has moved its headquarters from Edmonton to Fitzhugh.

With respect to the situation at Fort George, B.C., the company has filed its plans with the Provincial Government locating the station grounds on the Indian Reservation there. This is the point from which a branch line is to run to Vancouver, and for which surveys are about completed. Three parties are in the field and will remain until the work is completed.

Track has been laid easterly from Prince Rupert to Newtown, B.C., mileage 100. Steam shovels are at work at Kitsumkalum taking out ballast, for the line. In the Kitselas Canyon three tunnels are being driven through the rock, and these are expected to be completed in the spring, which will enable track to be laid as far east as Hazleton.

In Prince Rupert, work is well forward on the preparation of the site for the yards and sidings. The work has included the removal of 400,000 cubic yards of solid rock, which has been used to fill up at other points, thus making an embankment along the water front between the present wharf and Morse Creek, a distance of 0.75 mile. The total mass of rock cleared away was 1100 ft. long, 180 ft. wide, and reaching in places to a height of 68 ft. The work has been in hand for two years and a half, the contract having been sublet by Foley, Welch and Stewart, to Ross and McColl.

Application is being made to the Dominion Parliament for an act extending the time within which the Pacific Northern and Omineca Ry. company may build the lines authorized by chap. 90 of the statutes of 1902 as amended by Chap. 141 of the statutes of 1906.

◆

An unconfirmed press report says the C.P.R. may shorten its Toronto-Winnipeg line by building a new line from Nepigon, 70 miles east of Fort William, to Savanne, 71 miles northwest of Fort William.

A Railway to Hudson Bay.

The question of whether Hudson Bay is sufficiently free from ice to permit of safe navigation, is one of the things which will determine the success of the railway to Hudson Bay, as a factor in trade between Western Canada and Europe. That vessels of large burden have entered the bay with cargoes, and having discharged them have returned safely to ports in Canada and in Europe, is conceded, but the question to be decided is the length of the season of navigation and the safety of the channels to the port, which will be reached by the railway. During the summer of 1910 six vessels passed into the bay, and of these the Adventurer, which arrived at the southern extremity of James Bay, Ont., Julv 27, reports that she did not meet much ice. The Stanley's experience was similar, at a little later period, while the Earl Grey did not meet with any ice. The Chrissie Thomas got stuck in the ice, and was towed to Fort Nelson by the Stanley. The Adventure and the Stanley encountered considerable ice on their return trips in Sept. The Discovery and the Pelican are Hudson's Bay Co.'s vessels, and reports as to their experience is not available. A number of navigators state that navigation can only be carried on for about six weeks, while the Adventure's officers say that there is safe navigation only between July 15 and September 30.

Replying to questions in the House of Commons, Dec. 5, the Minister of the Interior stated that no land has been sold on special account of Hudson Bay railway construction. Under the authorization of 1908, there have been sold as homesteads and pre-emptions, to Oct 10, aproximately 6,375,200 acres. on which there had been received $627,738.26, on homesteads and $667,412.52 on pre-emptions. The approximate amounts due were $1,100,317.74 on homesteads, and $21,678,717.48 on pre-emptions. The revenue collected on this account had been deposited to the credit of the Consolidated Fund on account of Dominion Lands Revenue.

Replying to questions in the House of Commons, Dec. 1, the Minister of Railways said the contract for the substructure of the bridge over the Saskatchewan River at Pas Mission, had been let to Mackenzie, Mann & Co., at schedule prices, the estimated amount being $104,870. A contract had also been let for the superstructure of the bridge to a bridge building company at schedule prices, the estimated amount being $171,500. The Government had not entered into any negotiations or contracts with any person or persons with a view of leasing the line to any person or company upon completion, neither had any decision been arrived at as to the policy on which the line will be operated upon completion.

Press reports state that tenders will be asked early in the year for the section of the line from the Pas to Split Lake 150 miles. Representatives of several contracting firms have recently gone over the route.

A very large deputation of farmers, principally from the western provinces, with some from Ontario, waited on the Government at Ottawa, Dec. 16, and presented resolutions upon various matters In reference to this projected railway the resolution was to the effect that the railway and all terminal facilities should be owned and operated in perpetuity by the Dominion Government under an independent commission. The Premier said the Government was in a position to undertake construction at once, and that the matters referred to in the resolution would receive attention.

A press dispatch from Prince Albert, Sask., Dec. 15, states that Mackenzie, Mann & Co., who have the contract for the substructure for the bridge at the Pas, Sask., have failed to find a satisfactory bottom for the bridge piers after having bored for a depth of 250 ft., and that they have abandoned the work.

A Saskatoon, Sask., dispatch of Dec. 20 contradicts the Prince Albert report, and says the contractors have not abandoned work on the bridge. and that a good foundation was found at 50 ft.

◆

Dominion Atlantic Railway.

Following are extracts from the report for the year ended June 30, 1910:—

1909.		1910.
	GROSS REVENUE.	
£162,765	Passengers, mails, etc.	£162,210 0 8
104,258	Mercandise, etc.	111,433 7 8
£267,023		£273,643 8 4
	EXPENDITURE.	
£37,661	Maintenance charges	35,863 12 11
82,380	Operating and general charges	88,564 17 11
92,378	Steamer expenditure	90,950 11 5
212,419		215,379 2 3
£54,604	Net revenue	£58,264 6 1

Passenger business on both railways and steamers has yielded a slight increase during the year, and the effect of the depression which followed so severely on the financial crisis in the U.S. during the previous year is now passing away. A good apple crop contributed largely to the freight earnings, and, in spite of the fact that a very mild winter prevented the usual prosecution of the timber industry, the earnings under this head are some £6,689 above the previous record. The falling off in miscellaneous receipts is due to the absence of charters for any of the steamships during the year. Gross receipts for the year show an increase of £6,620, while expenditure has also increased by £2,960, resulting in an increased net revenue of £3,660. There is an available balance for the year, including £1,388 5s. 10d. brought forward from the previous year, of £59,652 11s. 11d. From this there falls to be deducted £45,055 1s. 4d. for interest charges, leaving a balance of £14,597 10s. 7d. The suspense account, which is a provision for the depreciation of steamers, and which stood at £22,803 2s. 8d. on June 30, 1909, is being increased by £13,000, making it £35,803 2s. 8d., leaving £1,597 10s. 7d. to be carried forward. The proportion of working expenses to gross receipts during the year has been 78.7%, compared with 79.5% the previous year, a decrease of 00.8%. There has been no capital expenditure during the year. Temporary loans, which on June 30, 1909, stood at £117,000, were reduced during the year to £99,000, and have since been reduced to £90,000.

Under date of May 12, 1910, a circular was addressed by the Bank of Montreal to all stockholders then on the register, making an offer for the purchase of the preference and ordinary stocks. As announced in the recently published report of the Canadian Pacific Ry. Co., almost all the preference and ordinary stocks of the Dominion Atlantic Co. have been acquired by friends of the former company in accordance with the terms of the circular of May 12. Under the arrangement then made the former directors retired, and T. Skinner, H. W. Birks and F. W. Taylor have been elected.

After many years' devoted service in the company's interests, R. L. Campbell has retired from the office of Secretary under a special pension. O. F. Walford, who has long been in the service of the company, has been appointed his successor.

◆

Thomas Tait's Resignation.

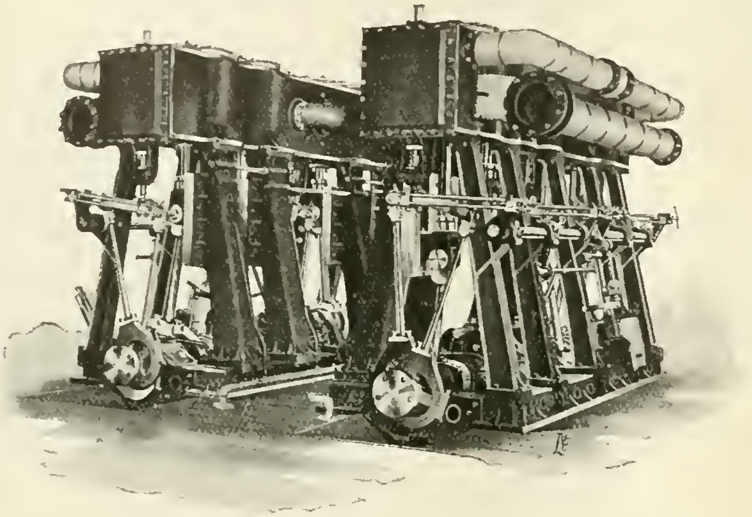
We are officially advised that, on the attention of the Premier of Victoria, Australia, being called to the press dispatch cabled from Melbourne, and which was published in some Canadian papers on September 22, alleging that Thomas Tait had resigned on account of accidents on the Victorian railways; the Premier immediately requested the Reuter agency to send the following dispatch: "Hon. Mr. Murray, Premier of Victoria, emphatically contradicts certain villifying press reports from Australia published in some Canadian papers Sept. 22, regarding resignation of Thos. Tait, Chairman Victorian Railway Commissioners, and Mr. Murray states resignation not only entirely voluntary but greatly regretted by Government."

D. H. Ross, Canadian Trade Commissioner, wrote from Melbourne, Nov. 21, to The Toronto Globe as follows: "In a number of Canadian papers, issued on Sept. 22nd last, there appeared a cable from Australia in which the resignation of Thos. Tait, Chief Commissioner of the Victorian Railways, was attributed as the outcome of recent railway accidents near Melbourne. Months before the Richmond accident occurred (through the errors of signalmen), Mr. Tait confidentially informed the State Government that, owing to private reasons, it was imperative for him to leave Australia before the end of this year. When his resignation was announced in Parliament, the Premier and many members eulogized the services rendered to the State by Mr. Tait, and regret was expressed at his departure. The railways have proved a profitable investment under his administration, when previously they were worked under a heavy annual loss. The Victorian passenger trains are now the best in Australia, and would be creditable to any country. Concurrent with the splendid profits recently earned, the rolling stock, track equipment and station buildings have been greatly improved. It is a regrettable incident that such aspersions on Mr. Tait's Australian career should have been cabled to Canada. His resignation was purely voluntary and is deeply regretted by the Government and throughout the State."

◆

Railway Bylaws, Rules and Regulations.—The Secretary of the Board of Railway Commissioners has issued the following circular:—"I am directed by the Board to call your attention to the requirements of sec. 310 of the Railway Act, as follows:—'All bylaws, rules and regulations, except such as relate to tolls and such as are of a private or domestic nature and do not affect the public generally, shall be submitted to the Governor in Council for approval.' The Board directs that you inform it, as soon as possible after the receipt of this circular, whether your company has complied with the requirements of said section and, if not, your company should take immediate steps to do so. If any application is filed for approval it should be accompanied by not less than five copies of the rules and regulations in question."

Marine Engines



Now is the time to go over your plant carefully and place your order for new machinery or repairs. We have special equipment for building all types of Marine Boilers and Engines. We also handle repair work.

Specifications and quotations on request.

STOVEL'S

Indexed Commercial Routing and Shippers'

MAP OF ONTARIO

Featuring the Railway Systems of the Province in Complete Detail—Each System in a Separate Color

To the business enterprise employing travelling salesmen, that has a number of selling agents, or does a more or less extensive mail order business, this map offers advantages that cannot be reckoned in dollars and cents. It will save you time and worry and give you a firmer grip on the selling details of your business by placing your whole selling organization literally "under your thumb." May we tell you ALL about it?

Published Exclusively by

STOVEL COMPANY

We make a specialty of Railway Engraving and Printing and are prepared to submit sketches for railway maps and designs for folder covers, etc., on request.

Engravers and Publishers of Modern Canadian Pocket Maps and Stovel's Commercial Routing and Shippers' Map of Western Canada.

Stovel Maps are standard from Coast to Coast. Our complete Price List of modern Canadian maps and Folder descriptive of the Routing Maps await your request. Will you write to-day? Address Department R.M.

Railway Rolling Stock Notes.

The Canadian Northern Ry. has ordered 20 consolidation locomotives.

Haney, Quinlan and Robertson have received a four-wheeled locomotive from the Montreal Locomotive Works.

The G.T.R. has recently added to its rolling stock, 245 box cars, built by the Canadian Car and Foundry Co., Montreal.

The Black Lake Consolidated Asbestos Co. has received a four-wheeled locomotive from the Montreal Locomotive Works.

The Michigan Central Rd. has received eight consolidation and two Pacific locomotives from the Montreal Locomotive Works, details of which we have already published.

In referring to the receipt, by the G.T.P.R. of four ten-wheeled locomotives, nos. 620 to 623, in our Dec., 1910, issue, we inadvertently mentioned the builders as the Montreal Locomotive Works instead of the Canadian Locomotive Co., Kingston, Ont.

The Ha Ha Bay Ry., has added two electric motors to its rolling stock, which at present consists of two locomotives, one steam shovel, 52 flatcars, 13 construction dump cars, six box cars, two passenger coaches, one snow plow, and two electric track motors.

The G.T.P.R., has received three dining cars, nos 4,000 to 4,002; nine refrigerator cars, nos. 340,237 to 340,246, and 62 flat cars, nos. 361,376 to 361, 437, from the Canadian Car and Foundry Co., Montreal, and six 10-wheel locomotives, completing order for 10, from the Canadian Locomotive Co., Kingston, Ont.

The Intercolonial Ry., between Nov. 17 and Dec. 17 placed orders at its Moncton shops for one Pintsch ggas car, four stock cars, one refrigerator car, and one official car (replace), and received three colonist cars from the Silliker Car Co., Halifax, N.S.

The Canadian Northern Ry., between Nov. 15 and Dec. 15, 1910, received the following additions to rolling stock: two baggage cars and three first class coaches, from the Canadian Car and Foundry Co., Montreal; 20 refrigerator cars and 75 box cars, from the Crossen Car Manufacturing Co., Cobourg, Ont., and 25 box cars from the Silliker Car Co., Halifax, N.S.

The C.P.R., between Nov. 15 and Dec. 15, received the following additions to rolling stock: three first class cars, one second class car, 33 horse cars, and six D.10 locomotives, also 20 flat cars and two vans for the Esquimalt and Nanaimo Ry., from its Angus shops, Montreal; 35 steel coal cars and five ore cars, from the Canadian Car and Foundry Co., Montreal.

The C.P.R., between Nov. 15 and Dec. 15, ordered the following rolling stock: 88 box cars, 10 flat cars, 13 stock cars, 51 freight refrigerator cars, 51 passenger refrigerator cars, one steel coal car, 53 vans, 10 switching locomotives, one hump switching locomotive and six D.10 locomotives from its Angus shops, Montreal; 2,000 steel frame box cars from the Canadian Car and Foundry Co., Montreal; 10 consolidation locomotives from the Montreal Locomotive Works, and 20 consolidation locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Powell River Lumber Co. has ordered one Columbia type locomotive from the Montreal Locomotive Works, of which the following are the chief details:—

Weight in working order	80,000 lbs.
Weight on drivers	58,000 lbs.
Weight on trailers	13,000 lbs.
Weight on engine truck	9,000 lbs.
Wheel base, driving	7 ft.
Wheel base, engine	22 ft. 6 ins.
Cylinders	14x22 ins.
Boiler, type	Straight top.
Boiler pressure	165 lbs.
Tubes, number and diameter	106, 2 ins.
Tubes, length	11 ft. 8 ins.
Brakes	Westinghouse.
Tank capacity	1,200 U.S. gals.

The Quebec Contracting Co. has ordered one mogul locomotive from the Montreal Locomotive Works, of which the following are the chief particulars:

Weight in working order	131,000 lbs.
Weight on drivers	113,500 lbs.
Weight on engine truck	17,500 lbs.
Weight on tender	102,500 lbs.
Wheel base, driving	12 ft. 6 ins.
Wheel base, engine	20 ft. 6½ ins.
Wheel base, engine and tender	50 ft.
Cylinders	19x26 ins.
Boiler, type	Extended wagon top.
Boiler pressure	180 lbs.
Tubes, number and diameter	275, 2 ins.
Tubes, length	10 ft. 5¼ ins.
Brakes	Westinghouse American.
Tank capacity	5,000 imp. gals.

Following are the chief details of the 2,000 steel frame box cars which the C.P.R. is having built by the Canadian Car and Foundry Co., Montreal:—

Length inside	36 ft. 0 in.
Length, centre to centre of trucks	26 ft. 10 in.
Length over buffer blocks	38 ft. 1¼ in.
Width inside	8 ft. 6½ in.
Height inside	8 ft. 0 in.
Height top of rail to eaves	12 ft. 7 9-16 in.
Height, top of rail to top of running board	13 ft. 4¾ in.
Journal boxes	McCord
Journal bearings	Canadian Bronze Co.
Bolsters and brakebeams	Simplex
Side bearings	Susemihl
Axles	Steel
Axles, tender	5½ in. by 10 in.
Axles, engine truck	6 in. by 10 in.
Axles, radial truck	7 in. by 14 in.
Wheels	Cast iron, C.P.R. standard
Air brakes	Westinghouse
Couplers	Simplex

As Viewed by a Railway Superintendent.

Morley Donaldson, Superintendent Ottawa Division Grand Trunk Ry., who has been a subscriber for many years, writes:—

"I have always read the Railway & Marine World with pleasure, and believe it to be a necessity in our Canadian railway life. I find the news accurate and complete in details we all want to know. If continued in its present form, its future success is assured."

The Canadian Northern Ry. has ordered 200 latest type Hart convertible cars from the Hart-Otis Car Co., Montreal, which will be built at the Canadian Car and Foundry Co.'s Turcot Works. Following are chief dimensions:—

Capacity	80,000 lbs.
Width over side sills	8 ft. 10 ins.
Length inside as hopper	20 ft. 10 ins.
Length inside as gondola	34 ft. 8 ins.
Width inside	8 ft. 8 ins.
Width over all	10 ft. 2½ ins.
Width at top	9 ft. 10 ins.
Height from rail to floor	4 ft. 4⅛ ins.
Height from rail to top of car	8 ft. 1⅜ ins.
Height inside	3 ft. 9¼ ins.
Truck centres	26 ft. 8 ins.
Wheel base of truck	5 ft. 4 ins.
Length of hopper door opening	16 ft. 8½ ins.
Width of hopper door opening	2 ft.

Following are the chief details of the 12 G.1 and G.2 locomotives, which the C.P.R. is having built at the Montreal Locomotive Works, as mentioned in our last issue:—

Weight on drivers	135,999 lbs
Total weight	215,000 lbs. (G 1) 214,800 lbs. (G 2)
Weight of tender loaded	134,000 lbs.
Capacity, water	5,000 imp. gals.
Capacity, coal	10 tons
Heating surface, firebox	183 sq. ft.
Heating surface, tubes	2,777 sq. ft.
Heating surface, total	2,960 sq. ft.
Heating surface, superheater	539 sq. ft.
Grate area	45.6 sq. ft.
Tubes, no. and diar.	193 2¼ in., 22 5 in.
Wheel base, driving	13 ft. 0 in.
Wheel base, total engine	33 ft. 7 in.
Wheel base, engine and tender	59 ft. 6¾ in.
Boiler, type	Extended wagon top, radial and cross stayed
Boiler pressure	200 lbs.
Superheater	Vaughan and Horsey
Cylinders	21 in. by 28 in.
Driving wheels, diar.	69 in.
Valve gear	Walschaert
Valve, type	Piston 11 in.
Axles, main	9½ in. by 12 in.
Axles, others	9 in. by 12 in.

Following are the chief details of the 20 consolidation locomotives which the C.P.R. is having built by the Canadian Locomotive Co., Kingston, Ont.:—

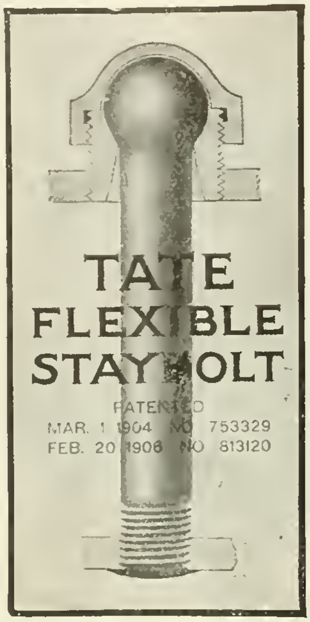
Weight on drivers	195,000 lbs.
Weight, total	220,000 lbs.
Wheel base, rigid	16 ft. 6 ins.
Wheel base, total engine	25 ft. 5 ins.
Wheel base, engine and tender	55 ft. 8 ins.
Length over all, engine and tender	66 ft. 4 ins.
Width over all, engine and tender	10 ft. 1 in.
Height over all	15 ft. 2 ins.
Heating surface, firebox	180 sq. ft.
Heating surface, tubes	2,631 sq. ft.
Heating surface, total	2,811 sq. ft.
Driving wheels, diameter	63 ins.
Driving wheel centres	Cast steel.
Driving journals—Main 10x14, others	9½x14 ins.
Cylinders	24x32 ins.
Boiler, type	Extended wagon top.
Boiler pressure	180 lbs.
Tubes, number and diameter—270 2 in., 24 5 in.	
Tubes, length	15 ft. 2¾ ins.
Brakes	Westinghouse ET.6.
Grate area	49 sq. ft.
Superheater	Vaughan and Horsey.
Superheater, heating surface	450 sq ft.
Tender, weight loaded	134,000 lbs.
Capacity, water	5,000 imp. gals.
Capacity, coal	12 tons.
Tank, type	Water bottom.
Truck, type	Outside equalized
Truck wheel, diameter	36¼ ins.
Wheel, type...Cast steel centres with retaining rings.	
Journals	5½x10 ins.
Brake beams	Simplex high speed.

Victorian State Railway.

The report of the Victorian, Australia, State Railways for the year ended June 30, issued recently, is the last complete year for which the Commission of which Thomas Tait was chairman, is responsible. The gross revenue was $21,626,059, and the working expenses, including special payments, into railway accident and fire insurance fund of $364,987, and the rolling stock replacement fund of $827,305 were $13,195,734, leaving a net revenue of $8,430,325. The net revenue of the St. Kilda and Brighton Electric St. Ry. was $9,855, making the total net revenue $8,440,180. The interest charges and expenses were $7,167,946, and the pensions and gratuities $517,455, which, deducted from the total net revenue, left a surplus for the year of $754,779. As compared with the figures for the year ended June 30, 1909, the surplus shows a decrease of $388,537. A general comparison of the results of the operation of the lines for the seven years since June 30, 1903, and the seven years preceding that date shows an increase in gross revenue of £31,339,296: in working expenditures of £13,366,732, and in net revenue of £17,972,564: There was an increase of £2,617,009 in the amounts for special expenditures and charges in liquidation of extraordinary liabilities, in the interest charges and expenses (charges for pensions and gratuities, appear in the years 1908-9 and 1909-10 only) of £1,491,996. The general results show that in the seven years prior to June 30, 1903, there was a total deficit of £9,304,982; in the seven years ended June 30, 1910 there was a total profit of £4,558,577.

The total capital expenditure on the line has been £43,200,941, an increase of £600,564 during the year. Of lines constructed, 47.96 miles, costing £392,741, have been abandoned, and there has been expended upon lines not constructed £342,898. The interest on these two amounts is being charged against the railways.

TATE FLEXIBLE STAYBOLTS



Allow for and Accommodate the Forces of Expansion and Contraction along the lines of Least Resistance

The Tate Bolt can be longitudinally adjusted to compensate for the difference of expansion of Outer Boiler Shell over Fire Box

MODERN DESIGNS FOR MOTOR CONNECTION

Canadian Northern Ry. Construction, Etc

Canadian Northern Quebec Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the branch from Hedleyville Jct., to the Montmorency Lumber Co.'s pulp mill, 7.62 miles.

James Bay and Eastern Ry.—The Board of Railway Commissioners has authorized the company to build across the public road between lots 19 and 20, range one, Ashuapmouchouan tp., Lake St. John County, Que.

Canadian Northern Ontario Ry.—Orders have been issued by the Board of Railway Commissioners to cross and divert public road in lots 275 and 276, St. Benoit parish, to divert and cross by a bridge the public road at station 656-56 St. Andrew's parish; and to build across the public road between lots 15 and 16, Junction Gore, Gloucester tp.

At a session of the Board of Railway Commissioners held at Ottawa, Dec. 6, the matter of the proposed temporary entrance of the C.N.O.R. into Ottawa across Hurdman road, was further adjourned until the city council had time to consider the matter. The Chief Commissioner said the understanding was that the tracks, if laid across the road, are to be used for freight purposes only for two years, and that if used for any other purposes, the Board will compel their removal.

The work on the line between Toronto and Ottawa so far as it has been put under contract, is reported to be well forward. The grading as far as Trenton is practically complete, tracklaying is well advanced and some ballasting has been done. The station buildings are being erected, and the work of connecting up the different sections will be completed as soon as the steel work on the several bridges under construction is completed.

Plans showing a portion of the company's proposed line in North Toronto have been filed with the Minister of Railways. The section for which approval is asked extends from Poplar Plains Road to west of Leaside Jct., the line paralleling the C.P.R.

The location plans for the line to connect up the Toronto-Sudbury line with the C.N.R. at Port Arthur, between mileage 500 and mileage 525, came before the Board of Railway Commissioners, Dec. 7. Owing to difficulties it is necessary to secure permission to use portions of the C.P.R. right of way, and the consideration of the plans was postponed in order to enable the C.P.R. to be consulted.

Canadian Northern Ry.—The contract for the erection of the train shed at the C.N.R.-G.T. Pacific-National Transcontinental Ry. station in Winnipeg, has been let, and work will be gone on with at once. The shed will be 800 ft. long, covering six tracks, but arranged so that it may be extended to cover an additional six tracks. It is expected that the building will be completed by the fall.

Press reports state that 176 miles of the branch line from Vegreville towards Calgary, Alta., have been completed, and that it has been decided not to operate a train service on the section recently completed until the spring. It is proposed to complete the erection of some steel bridges on the line during the winter.

In connection with the branch from this line starting from Stettler and proceeding by way of Red Deer to Rocky Mountain House and the Brazeau River district, the company's representatives, Dec. 7, withdrew the plans from the consideration of the Board of Railway Commissioners. A considerable amount of grading has been done on this line, but it was laid down by the Board that location plans will not be approved for any portion of a railway where grading has been done before approval has been obtained. The Alberta Central Ry. also opposed the company's application to the Alberta Legislature for authority to build this and other lines, having a total estimated length of about 700 miles, but the bill was approved by the Railway Committee and read a second time. The title of the company proposed to be formed in Alberta is the Canadian Northern Western Ry. The lines authorized to be built are: from Edmonton or Strathcona to the boundary between Alberta and British Columbia, near the Pine or Peace River Pass: from some point on the line between Edmonton and Calgary to Rocky Mountain House, thence to the Brazeau and Macleod Rivers, and on to a junction with the C.N.R. west of Edmonton, with power to build branch lines. We are advised that the Alberta Legislature has passed an act providing a subsidy by way of guarantee of bonds for the building of the first 50 miles of a line into the Peace River and Grand Prairie districts. The company has its engineers in the field but the work has not progressed sufficiently to enable any definite decision to be made as to the route which will be followed. A press report states that the Northern Construction Co. is preparing to begin grading on the line to Peace River in the spring.

In a recent interview at Edmonton, D. D. Mann, Vice-President, is reported to have said he was able to give the Premier of the Province a definite assurance that the line to Athabasca Landing will be completed in 1911 and that 300 miles of steel will be laid on the lines guaranteed by the province; that the line into Calgary will be finished and about 75 miles of grading done south of Calgary; that 200 miles of grading would be done on the line west towards the Pacific coast: and that progress would be made on the line to connect up Edmonton with Pas Mission via Lac la Biche, Battleford and Prince Albert.

Canadian Northern Pacific Ry.—We are officially advised that the original contract of the Northern Construction Co. for building 60 miles on the Lower Fraser River, has been extended to cover an additional mileage, to Hope, about 15 miles above Chilliwack Village. The clearing is finished on the first contract, and the bridging and grading about half done. Ties are being delivered, and it is expected that the first lot of rails for the line will be delivered about Mar. 1. The wharf at Port Mann is under construction, and will be sufficiently far advanced to permit the landing of the rails in March. The rock work on the line is being rapidly proceeded with, but the weather prevents much of the other work being done to advantage.

Speaking in New Westminster Nov. 29, D. D. Mann, Vice President, is reported to have said that the establishment of terminal facilities at Port Mann would in no way interfere with the announced plans for freight and passenger terminals in New Westminster. Mr. H. McLeod, General Manager and Chief Engineer, Canadian Northern Ry., accompanied Mr. Mann, and together they went over the route of the line in New Westminster and on to Port Mann.

Two survey parties have just come out of the field from the Thompson River district, on account of the ice and snow making the work impracticable, and three other parties are expected to give up work almost immediately. It is expected that contracts will be let for some of the heavier work in the Fraser Canyon in the near future.

Vancouver Island.—A line has been located for 100 miles from the gorge at Victoria to Barkley Sound and has been approved for the first 10 miles. The gradient is 1½% compensated; the curvature is fairly heavy and in some cases has been sacrificed in order to obtain this gradient. The highest summit is 800 ft.

A Victoria dispatch, Dec. 19, says tenders have been asked for the first section of the Vancouver Island line, the work to be completed in 1911. (Dec., 1910, pg. 1031.)

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Tallman Brass and Metal Co., Hamilton, Ont., has got out an Arctic Metal watch fob.

The Montreal Steel Works, Ltd., is paying 10% dividend on its common stock for 1910, the highest previous dividend being 7%.

The Dominion Wire Rope Co., Ltd., Montreal, incorporated under the Canada Joint Stock Companies Act, has been licensed to carry on its business in Manitoba, with S. C. Dunn, Winnipeg, as its agent.

The Canadian Westinghouse Co., has issued circular 1098, describing and illustrating various types of switchboard indicating meters, direct current indicating meters, alternating current indicating meters and type K indicating meters for direct and alternating current, etc

Taylor & Arnold, Ltd., railway material and supplies, Montreal, have opened an office in the Scott Block, Main Street, Winnipeg, with G. C. Walker in charge, to look after all the company's western interests.

The Westinghouse companies have issued a neat pocket diary for 1911, containing interesting data and formulae relating to electrical and other engineering matters, and giving, amongst others, a condensed description of the electric locomotives supplied for the G.T.R. St Clair tunnel.

A. W. Wheatley, heretofore Manager Montreal Locomotive Works, having been appointed Manager of the American Locomotive Co.'s plant at Dunkirk, N.Y., Percy Webb, heretofore Engineer of Construction, has been appointed Manager Montreal Locomotive Works, and D. W. Fraser, heretofore Superintendent, has been appointed Works Manager.

Robert W. Hunt and Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at Montreal, to carry on the business, in all its branches, of civil mechanical, mining and electrical engineers, analysts, metallurgists, surveyors, assayers, examiners and inspectors, to take over the Canadian business of Robt. W. Hunt and Co., and also to acquire the business and carry out the contracts of the Standard Inspection Bureau Ltd., incorporated under the Ontario Companies Act.

The C.P.R. has taken offices in the newly built Liver Building, situated on the water front, opposite the Princes Landing stage, Liverpool, Eng., and we are officially advised that all its Liverpool offices will be concentrated there about May 1.

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

How the Foreman Can Promote Shop Efficiency.

By E. T. Spidy, Instruction Card Inspector C. P. R. Angus Shops, Montreal.

The shop foreman's success in this direction depends, to a large extent, on the limits to which he can exercise his power to make alterations in the shop and its methods of working, and the amount of co-operation he receives from his superiors, as well as from the men under his charge. A foreman is in reality the pivot upon which the smooth running of the shop depends. He has to bear the load laid on him by his superiors in his responsibility for efficient output, and he has also to keep his men "well oiled" in order to ensure the smooth running of the inner working of the shop. This double responsibility must always be kept in view. The situation is governed by two words which are the keynotes of all efficient shop management. They are system and co-operation. Bear in mind that when you have a system that ensures the co-operative efforts of the men, and gives them confidence in your acting right towards them, so surely will your output be increased.

The following discussion is intended to be helpful to the foreman who intelligently desires to make the most of the machinery in his care. The questions and suggestions are based on an average machine shop, where all the machinery may not be of latest type, but where the best possible efficiency is desired. The questions are not arranged in order of importance, for it would be difficult to decide which was the most important.

"Is my piecework system in good condition—can I improve it in any way?" The foreman is often called upon to set a price for a piece of work. Considering the multifarious duties he has to perform, it is almost beyond reason to expect that all the prices he makes are good, either from the employer's or employe's point of view, and his knowledge as to what a job is worth is often left to the workman's honesty on the first piece, or to his own judgment in comparing it with similar jobs. A foreman does not get the time to study each job sufficiently. The time has come when uncertain methods like this have to be abandoned and more accurate information on the subject obtained. The situation may be improved by the setting apart of a man, whose duty it should be to study the work, the machine, the man, and the conditions under which he works, and also to set the price. This man will be responsible for any information the foreman should require with reference to the work and must be on hand when the foreman approves of the price submitted. Not only will this man relieve the foreman of a vast amount of work, but in a short time he will be of great value to him. He will be able to not only supply the foreman with details as to the condition of the machines, but also to suggest new tools, jigs, etc. He will become an expert in this line. In selecting him the best possible judgment must be used, for the success of the system will depend largely on him. He must be a man of average experience, fairly well educated and a good workman, a man of activity and energy, and one not afraid of the feeling he will at first arouse. More than likely the workmen will be prejudiced against him at first, but he must work to gain their confidence, so that finally with their co-operation the best results or maximum efficiency will be attained. His success in obtaining the co-operation of the men will do more toward efficiency than any driving system that exists or ever did exist.

"Have I machines that are overburdened or doing a class of work for which they are not suited?" It may not be possible to rearrange the machines in the shop, but as it is the foreman's duty to assign the work to them he should be careful that it is proportioned equitably and not to have a light machine doing a class of work beyond the range it was designed for. He should be on the lookout to avoid congestion. More machine failures are to be traced to the unsuitability of the work operated on than from any other cause, and this may often be obviated by a little discretion in assigning the work to the machines.

"In what condition are the machines? Are they in a state of good repair?" This is a point too often neglected and often a couple of men may be seen around the shop continually "patching up" the machines. To maintain efficiency it is necessary to keep up a high standard of repair, and when anything goes wrong to have it repaired properly rather than to "patch it up for the time being," for it pays in the long run in the life of the machine.

"Do any machines require re-speeding?" The progress made during the past few years in high-speed steel, and the cutting speeds possible with it, as compared with ordinary carbon steel, have made it necessary to revise the speed of the machines in order to take full advantage of its properties. There is little gain in using high-speed steel tools unless they are operated at their maximum cutting speed. Certain machines may have a large enough range to cover this, but many will be found deficient. Drilling machines require attention especially in shops where they are not of modern type. While in the case of lathes, boring mills, etc., feed and depth of cut may be easily increased, a fast feed on a drill necessitates a high cutting speed for efficient work, and a machine is required to run up to 300 r.p.m. to keep in tune with modern high-speed drills.

"Am I using the best steel obtainable? Do I know what the best steel is?" This is a question well worth studying and will pay well, for a large item on the expense account depends on it. It is admittedly more the work of a specialist, but the foreman should know, as so many new and different steels are at present on the market, all of which claim to be the best. No doubt many have special features worth consideration, and they should be tested to find which one is best suited to each class of work and the machines. No definite rule can be laid down as conditions vary greatly, so experiment is the only satisfactory method of obtaining any reliable information.

"Are my tool standards correct?" All shops nowadays have tool standards in some condition or other, and it will not be necessary to emphasize having a standard shape for grinding cutting tools to. Standardization may be carried too far, however, because good practice shows that work of large diameter requires different cutting lip angles on the tools from that required by average work. Much information on this point may be obtained from grinding machine manufacturers and although too much reliance must not be placed on it, yet modified by results of experiments, a considerable saving may be effected.

"Do the men receive their tools in a satisfactory way?" This question of distribution is important, for in order that a machine may pay the best dividends it must be in constant use. Therefore when tools require replacing they should be collected from the men and new tools delivered to them, thus avoiding the necessity of their walking to the tool stores to wait about or otherwise waste time. A man may be permitted to grind his tool when it only requires touching up, but when he has any amount of metal to grind away it should be sent to the tool grinding department. A sufficient nuber of grindstones should be in the shop and should be well placed to avoid the men congregating at them.

"How is the tool room stocked? Are there sufficient tools ready for delivery?" Nothing will tend to drag back a shop more than a deficiency in the number of tools. Having decided what steel is best, have a quantity of tools made so that the workman will not have to slow down his machine because he is obliged to use an inferior tool. Firms are naturally slow about buying a lot of high-speed steel on account of its high price, but first decide if it is worth it, and, if it is, get enough tools made to be of use to you and not enough to go on with. The expense of the more elaborate tools, such as milling cutters, jigs, etc., requires that a system of checking be adopted that the tool may be traced if needed urgently anywhere else. Small metal checks with the men's number on will answer admirably, the man giving a check for each tool he receives, the check being placed where the tool was taken from. Obviously there must be a systematic arrangement of tools in the tool room to operate this system successfully.

"Do the men have trouble in getting their work?" It is the foreman's duty to see that the men are supplied with work, but apart from seeing that the work is suitable to the machine, he must employ a method by means of which the men know what is to be done next, and not to have them waiting on him or any of the gang bosses for information. It is not possible without an extensive system of instruction to entirely eliminate this difficulty, but much may be done by careful forethought. This matter is receiving much attention from some of the more progressive concerns, and card systems of instruction to the men are being developed to a high degree.

"What kind of hoist service have the men at their machines for individual use?" The individual hoist service a man has at his command has much to do with his output. The position of the machine and the roof construction of the shop are the main factors in determining the overhead rail arrangement applicable. Compressed air hoists of the cylindrical type are being gradually recognized as superior for this purpose, although not always applicable by reason of their length, but a power hoist of some description should be used in preference to hand blocks. Where machines are arranged in lines, end to end, a continuous overhead rail is economical as it will not be necessary to supply a hoist to each machine. This system is also good in connection with heavy bench work, where the work may be transported from the vise to the shop trucks or anywhere required. When machines are separated a radial crane track is very serviceable, or, where this type is undesirable, a semicircular rail suspended from the girders and serving two or three machines is often good. The foreman should have little difficulty in finding the type best suited to his requirements.

In Conclusion.—Many foremen may say that they have not the time to study these questions in the detail, but let them remember that unless they do give thought to these details they will progress little beyond their present state. It is in considering the details that progress is to be obtained, for it is the little parts that make the whole. Much may even be attained by the judicious placing of apprentices. See that the men are provided with sufficient light. See that there is an adequate supply of water or cutting compound; a system of overhead supply to each machine with a return flow to the pump beneath the floor is worth considering. Belts should be looked after and an indicator system should be employed to enable the workman to locate the belt-lacer when required. This indicator system may also be employed for other officials, if considered necessary. If the foreman has not the time to look to these details, then it is up to the management to give him such assistance that he may be in the position to con-

sider them. There must be harmony in the management and, although somewhat difficult to obtain, the co-operation of the workmen. When combined with systematic organization, no doubt remains as to ultimate results.—Railway Age Gazette.

◆

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for Oct. 1910, $35,712, against $52,722 for Oct. 1909. Cumulative net profits for four months ended Oct. 31, 1910, $108,493. Approximate railway receipts for Nov. 1910, $35,333, against $40,860 for Nov. 1909.

Atlantic and Lake Superior Ry.—Judgment has been given in the Quebec courts against the company, in favor of Z. Perrault and E. Gervais, contractors, for $33,219.23 and interest for work done in building the line.

Canadian Pacific Ry.—A Montreal dispatch says that of the 24,000-odd shareholders in the C.P.R., Sir Thos. G. Shaughnessy recently stated that about 2,500 were Canadians.

Dominion Atlantic Ry.—Gross earnings for Oct., 1910, $115,400, against $136,615 for Oct., 1909. Aggregate gross earnings for four months ended Oct. 31, 1910, $588,800, against $611,817 for same period 1909.

Esquimalt and Nanaimo Ry.—A meeting of shareholders was held at Victoria, B.C., Dec. 29, to sanction the creation and issue of bonds, and authorize and approve the form of mortgage to be given to secure the payment of them.

Guelph Junction Ry.—The directors have authorized the issue of bonds for the increased stock which the city of Guelph now holds, since the private shareholders were relieved of their shares. The company has issued $150,000 of stock, which is all held by the city.

Lake Superior Corporation.—A press dispatch from Philadelphia, Pa., states that the directors are considering an issue of 4% bonds for the purpose, among other things, of retiring the present income bonds.

New Brunswick Southern Ry.—The Board of Railway Commissioners is being asked to recommend the Governor-in-council to sanction the lease of this line to the C.P.R. for 999 years, from Jan. 1.

Quebec and Lake St. John Ry.—Total earnings for Nov. 1910, $55,124.86, against $53,251.05 for Nov., 1909. The mileage open during the two periods mentioned, was 285.4, earning an average of $193.11 per mile, and 285, earning $186.84, respectively. Aggregate total earnings for 11 months ended Nov. 30, 1910, $560,454.36, mileage operated 285.4, earnings per mile, $1,975.09, against $550,984.11 aggregate total earnings; 285 miles operated, and $1,939.82 earnings per mile, for same period, 1909.

Quebec Central Ry.—Gross earnings for Sept., $105,400.74; expenses, $68,732.97; net earnings, $36,667.77, against $102,442.35 gross earnings: $64,910.83 expenses; $37,531.52 net earnings for expenses; $114,922.31 net earnings for September, 1909. Gross earnings, for Oct., 1910, $100,405.87; expenses, $66,136.36; net earnings, $34,269.51, against $101,485.82 gross earnings; $68,917.43 expenses; $32,568.39 net earnings for Oct., 1909. Aggregate gross earnings for four months ended Oct. 31, 1910, $461,684.05; expenses, $292,495.69; net earnings. $169,188.36, against $413,161.42 aggregate gross earnings; $265,670.72 expenses; $147,490.70 net earnings for same period 1909.

St. Maurice Valley Ry.—The Board of Railway Commissioners is being asked to make a recommendation to the Governor-in-council to sanction the leasing of this line to the C.P.R. for 999 years from Jan. 1.

St. Mary's and Western Ontario Ry.—A meeting of the bondholders was held at Embro, Dec. 6, at the request of the town of St. Mary's, to consider what steps should be taken in view of the fact that the interest on about $80,000 of bonds, held by a number of townships through which the railway passes, is over two years in arrears. The bonds are secured by a second mortgage on the property, and representatives of the company, stated that the revenue was not sufficient to meet the interest on the first mortgage, so that there was nothing available for the second mortgage, and that there was no prospect of any substantial increase of revenue, unless some further extension of the road were made.

Temiscouata Ry.—Profits on operation for Sept., 1910, $3,736, and for nine months ended Sept. 30, 1910, $34,768.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Following are the officers and directors for the current year:—President, L. M. Hill, St. Paul, Minn.; Vice President, F. B. Brown, Seattle, Wash.; Chief Engineer, A. H. Hogeland, St. Paul; Assistant Chief Engineers, A. Stuart, Seattle, Wash., and J. H. Kennedy, Grand Forks, B.C.; other directors, A. H. MacNell, K.C., W. H. Parker, Vancouver, B.C.; A. M. Thomas, F. M. Studley, Seattle.

Dipper Dredge for Railway Embankment.

By F. N. Smith, Resident Engineer B. C. Electric Railway, Abbotsford, B. C.

It may be of interest to some of your readers to learn of the building of a large embankment from side-borrow on the B.C. Electric Ry.'s Fraser Valley branch, across Sumas Prairie in the southern part of British Columbia. The Fraser Valley branch is a 60-mile electric line in the valley of the Fraser River, connecting New Westminster and Chilliwack and touching the international boundary at Huntingdon. There is nothing out of the ordinary in any of the construction, with the exception of the three miles across Sumas Prairie, about 15 miles from Chilliwack. This prairie is flooded every year by the back water from the Fraser during the June freshets, so it was necessary to build an embankment three miles long and 17 ft. high to be above this flood water.

The contract was let Aug., 1909. The contractors used 3 cu. yd. drag scrapers operated from towers, the material being dumped between the towers and the borrow pit. While about 50% of the material was put in place this way the contractors were unable to complete the dump owing to the soft condition of the clay soil when mixed with water. The contract was relet in April, 1910, to Ironside, Rannie, Campbell & Pike, of Vancouver, and they have successfully completed the work, using floating dredges, thereby handling the material as dry as possible. The accompanying illustration shows one of the dredges at work, where the top of the dump is 22 ft. above the water. The boom is 75 ft. long and the dipper has a capacity of 2½ cu. yds. This dredge has put up 2,000 cu. yds. per day of two 8-hr. shifts, using four men to a shift. It was built by J. N. Pike, of the contracting firm, and the machinery was furnished by the Marion Steam Shovel Co.

◆

White Pass and Yukon Railway

The balance sheet for the year ended June 30, 1910, shows that there was a balance brought forward from the previous year, of £57,932, from which were paid, to sinking fund, £18,162; dividends, £27,500, leaving £12,270, which, with the profit for the year added, £40,894, leaves a balance to be dealt with this year of £53,164, against £57,913 for the previous year. During the year the number of passengers carried was 14,846; freight, 22,969 tons, against 12,192 passengers, and 24,617 tons of freight in the previous year.

S. H. Graves, President of the local companies, in speaking on the report at the recent annual meeting in London, Eng., said that the year had been a trying one. The chief feature was the shipment of heavy machinery, and although these plants had displaced a large population of hand miners, and in consequence reduced the traffic from passengers and the importation of foodstuffs, he looked forward to history repeating itself, which showed that in the long run the substitution of machinery for hand power tended to increase rather than diminish employment. Another feature was the damage to property, and dislocation to service on both the railway and the river occasioned by the abnormal climatic conditions. The year had, however, been one of substantial progress as regards the development of the Yukon. In the Klondike new and important installations had been completed and others inaugurated, which gave promise of continued activity in the future. One of the dredges built this year in the Klondike was the largest in the world, some of the single pieces of its machinery weighing nearly 30 tons. Work upon various quartz properties in the Klondike had been prosecuted during the year, with varying results, and some of the owners appear confident as to the future. In the White Horse district the ore branch of the railway had been extended some five miles, and ore shipments commenced in September. But the delay in the completion of the ore branch, caused by the floods already mentioned, coupled with the shortage of labor which prevailed this year on the Pacific coast, so retarded mining operations that further development was still necessary before ore shipments could be steadily maintained on the contemplated scale. Meanwhile, until a steady tonnage was assured, the cost of keeping the ore branch open through a Yukon winter would hardly be justified, and for this winter it was thought better not to incur the expense. In the Windy Arm district work had been prosecuted with renewed activity on some of the most promising of the properties, and ore shipments from them were increasing. The Atlin district had also been active throughout the season and increased its output. None of the mining districts which are served by the line had failed to show material progress during the year.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the [illegible]

12383. Nov. 25.—Authorizing Tillsonburg, Lake Erie and Pacific Ry. to build spur for Ingersoll Nut Co., Ingersoll, Ont.

12384. Nov 24.—Approving proposed work in connection with drain to be built along and under C.N.O.R. right of way, in L'Orignal.

12385. Nov. 26.—Authorizing C.N.Q R. to open for traffic its Montmorency branch from Hedleyville Jct., to the Montmorency Lumber Co.'s pulp mill 7.62 miles.

12386. Nov. 26.—Authorizing Montreal and Southern Counties Ry. to open for traffic, the portion of its line from St. Denis St., St. Lambert, to Longueuil, Que., 3½ miles.

12387, 12388. Nov. 25.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Woodstock, Thames Valley and Ingersoll Ry, in Woodstock, and across Bell Telephone Co.'s wires at lot 1, con. 14, London tp.

12389. Nov. 25.—Authorizing Western Canada Power Co. to erect wires across C.P.R. between Pitt River and Westminster Jct., B C.

12390. Nov. 21.—Approving Edmonton, Yukon and Pacific Ry. right of way plan through west half of block 13 of Hudson's Bay Co.'s reserve, Edmonton, Alta., reducing the width from 49½ ft. on north side of centre line to 25 ft.

12391. Oct. 13—Authorizing C.P.R. to operate trains over G.T.R. spur to Horse shoe Quarry Co.'s premises, St. Marys, Ont., and to build spur for Horseshoe Quarry Co., to connect with G.T.R spur, to be completed within three months.

12392. Nov. 28—Authorizing Western Canada Power Co. to erect wires across C.P.R. New Westminster Branch, B C.

12393. Nov. 26.—Authorizing C.N.O.R. to build between lots 15 and 16, Junction Gore, Gloucester tp

12394. Oct. 26.—Approving location and detail plans of proposed G.T.R. station building at corner of McGill and Youville Sts., Montreal.

12395.—Nov. 28—Authorizing C.P.R. to build temporary spur for Algoma Steel Bridge Co. across Winnipeg Electric Ry. and to join same at Louise Bridge, and ordering that all C.P.R. trains before making crossing be brought to a stop and flagged over crossing, the spur to be built within three months.

12397.—Nov. 28.—Authorizing C.P.R. to build within three months, an industrial spur for Boyd and Fordham, Vancouver, B.C

12398. Nov. 28.—Authorizing C.P.R. to build spur for W. H. Wortman, between Saskatchewan and Dublin Aves., Winnipeg.

12399. Nov. 28.—Ordering C.P.R. within 90 days to install improved electric bell at crossing of Princess Ave., Lachute, Que.

12400. Nov. 28.—Authorizing city of Woodstock, Ont., to lay water pipes under C.P.R. at Tecumseh St.

12401. Nov. 26.—Authorizing Canadian Light and Power Co. to erect wires across Bell Telephone Co.'s wires at Melocheville, Que.

12402. Nov. 14.—Ordering Vancouver, Fraser Valley and Southern Ry. to insert diamond where it crosses Vancouver, Victoria and Eastern Ry., and that crossing be protected by interlocking plant, derails, and home and distant signals on both lines on each side of crossing.

TURN RULE

12403. Sept. 6.—Authorizing V.V. & E. Ry. & Nav. Co. to carry spur over B.C. Electric Ry. and certain streets in Vancouver B.C.

12404. Nov. 28.—Authorizing town of Oshawa Ont., to lay sewer across lands and under G.T.R. at lot 7, east Whitby tp.

12405. Nov. 28.—Ordering Central Ontario Ry. to provide farm crossing for E. Lynch, Maynooth, under railway bridge where line crosses his farm.

12406.—Nov. 14.—Authorizing C.N.O.R. to cross and divert public road in lots 275 and 276, St. Benoit parish.

12407. Nov. 26.—Authorizing James Bay and Eastern Ry. to build between lots 19 and 20, r. 1, Ashuapmouchouan tp., Que.

12408. Nov. 29.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Tillsonburg, Lake Erie and Pacific Ry. (C.P.R.), in North Oxford tp.

12409.—Nov. 29.—Authorizing C.P.R. to build spur for Provincial Reformatory, Guelph tp., Ont.

12410. Nov. 28.—Authorizing G.T.R. to build siding and spur to premises of Railway Signal Co. of Canada, Ltd., Lachine parish, Que.

12411. Nov. 30.—Approving revised location of C.P.R. Bulyea branch from mileage 0 to 18.49 on Pheasant Hills branch, Sask.

12412. Nov. 28.—Authorizing C.N.Q.R. to build spur to Montreal Steel Works, Ltd., Montreal.

12413. May 12.—Declaring, in complaint of G. Taylor, of Winnipeg, that rate properly chargeable by C.N.R. on grain from Buchanan, Sask., to Headingly, Man., was 17c. per 100 lbs. We were officially advised, Dec. 19, that this order had been recalled, and would probably be cancelled.

12414. Nov. 30.—Authorizing Tillsonburg. John Morrow Screw Co., Ingersoll, Ont.

12415. Nov. 30.—Adding Quebec, Montreal and Southern Ry. as party to application of W. A. Stewart, Napierville, Que., and village of St. Cyprien, complaining of inadequate accommodation and unsatisfactory train service furnished by Napierville Jct. Ry.

12416. Dec. 1.—Extending to June 1, period during which North American Telegraph Co. may charge telephone tolls which it was previous to July 13, 1906, authorized to charge.

12417, 12418. Dec. 1.—Extending to June time within which contract forms of National, American, Canadian and Dominion Ex. Co.'s are approved.

12419. Dec. 1.—Extending to June 1 time within which forms of money and freight receipts of Maritime Ex. Co. are approved.

12420. Dec. 1.—Extending to June 1 period during which Bell Telephone Co. may charge tolls which it was authorized to charge previous to July 13, 1906.

12421. Dec. 1.—Extending to June 1 time within which contract forms of United States and Great Northern Ex. Cos. are approved.

12422. Dec. 1.—Authorizing C.P.R. to build temporary bridge to carry Notre Dame St. over tracks leading to its Place Viger terminal, Montreal, pending completion of permanent bridge.

12423, 12424. Dec. 1.—Extending to June 1 time within which C.P R. and G.N.W. Telegraph Cos. may be allowed to charge tolls authorized under 7-8 Ed. 7, chap. 61.

12425. Dec. 1.—Extending to June 1 time within which White Pass & Yukon Ry. may be allowed to charge tolls authorized under 7-8 Ed. 7, chap. 61.

12426. Dec. 1.—Authorizing Montreal Terminal Ry. to build siding across Victoria Ave., Montreal East.

12427. Dec. 1.—Amending order 12249, Oct. 12, 1910, authorizing T.H. & B.R. to build spurs from Grant Ave. to Wentworth St., Sherman Ave. and Prospect St., Hamilton, Ont.

12428, 12429. Dec. 1.—Authorizing Canadian Niagara Power Co. to erect wires across Bell Telephone Co.'s wires at two points in Bridgeburg, Ont.

12430. Dec. 2.—Approving proposed change in location of Georgian Bay and Seaboard Ry. (C.P.R.) in Orillia, Ont.

12431. Sept. 26.—Authorizing C.P.R. to build spur and four sub-spurs in Brandon, Man.

12432, 12433. Nov. 30, Oct. 10.—Authorizing G.T.P.R. to build on Main, Walsh, Harold and Hardisty Sts., Fort William, Ont.

12434. Dec. 2.—Adding city of Montreal as party re highway crossing on C.P.R. known as Pacific Ave., St. Louis du Mile End, and ordering C.P.R. to place day and night watchman there.

12435. Oct. 14.—Dismissing application of Michigan Sugar Co. for order against Chatham, Wallaceburg & Lake Erie Ry. re rate on sugar beets.

12436. Dec. 3.—Authorizing G.T.R. to build siding from its Lachine canal bank branch on Lachine canal reserve to a point opposite Canadian Light & Power Co.'s property.

12437. Dec. 3.—Authorizing G.T.R. to build branch to Canadian Bag Co.'s premises, Toronto.

12438. Sept. 17.—Authorizing C.P.R. Co. to build spur to Great West Lumber Co's premises Red Deer, Alta.

12439. Sept. 21.—Dismissing C.N.R. application for authority to build a temporary spur and branches in Regina, Sask.

12440. Dec. 2.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires in Brantford tp.

12441. Dec. 3.—Authorizing C.P.R. to build spur for Weldman & Co., Winnipeg.

12442. Dec. 6.—Authorizing Shawinigan Water and Power Co. to erect wires across Farmer Lumber Co.'s switch from C.P.R. loop, Wabasso branch, Three Rivers, Que.

12443. Dec. 1.—Adding town of Lachine, Lachine parish, and Montreal West as parties to application on behalf of town of St. Pierre, Que., complaining of closing by G.T.R. of Simplex St., Lachine.

12444. Dec. 1.—Dismissing application of W. Raymond, Ste. Agathe des Monts, Que., for order directing C.P.R. to build farm crossing on lot 36, r. 10, Morin Canton, Terrebonne co.

12445. Dec. 1.—Dismissing application of A. Heroux, St. Maurice de Champlain, Que., for order directing C.P.R. to build farm crossing lot 417.

12446. Dec. 1.—Extending to July 1 time for completion of work in connection with deviation of water main under Central Vermont Ry., St. Alexandre parish, Que.

12447. Dec. 1.—Ordering C.P.R. to file before Jan. 15, plans for erection of gates, giving details of location and layout, to be installed at Westminster Ave., Montreal West; gates to be installed and work completed before June 15.

12448. Dec. 1.—Ordering Maine Central Rd. to place snowfence, at present obstructing view on west side of crossing at Main Road, Eton parish, Que., in such location and condition as the Board's Engineer may direct, and erect and maintain electric bell, to be approved by the Board.

12449. Dec. 1.—Adding Canada Paper Co. as party to application re G.T.R. crossing of public road leading to St. Francis River bridge, Windsor Mills, Que.

12450. Dec. 1.—Adding city of Montreal as party to application of town of Notre Dame de Grace, Que., for order amending order 8208, Sept. 14, 1909.

12451. Dec. 1.—Ordering C.N.Q.R. to build farm crossings for A. Paquette, St. Sauveur parish, Que., before May 15, 1911.

12452. Dec. 2.—Dismissing application of St. Maurice & Champlain Telephone Co. for order directing Portneuf Telephone Co. to abide by provisions of agreement dated Mar. 6, 1907.

12453. Dec. 1.—Extending to May 15 time within which city of Montreal may build tunnel under C.P.R. at St. Lawrence Boulevard crossing.

12454. Sept. 16.—Authorizing city of Calgary, Alta., to build subway at Eighth St. west; work to be completed Sept. 1, 1911.

12455. Dec. 1.—Ordering that G T.R. cease from interfering with siding on its property adjoining that of D. McManamy, Sherbrooke, Que., and to leave a passage-way 10 ft. wide for entrance to his building, also to leave grain-carrier for carrying grain to his building.

12456. Dec. 2.—Ordering C.N.Q.R. to fence its property and tracks at Hochelaga terminals, Montreal, equip ends of house-tracks with modern stop-blocks, install gates at Moreau and Prefontaine Sts., with tower near Moreau St., and install gates at St. Germain St., with day and night watchman.

12457. Dec. 6.—Authorizing town of Wiarton Ont., to lay sewer under G.T.R. where its two switches leading to Crown Portland Cement Co., cross Brown St.

12458 to 12461. Dec. 6.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across T H. & B. Ry. and Hamilton Radial Electric Ry. at two points in Hamilton and across Bell Telephone Co.'s wires in Downie tp.

12462 to 12465. Dec. 6.—Authorizing Shawinigan Water & Power Co. to erect wires across St. Maurice Valley Ry., Wabasso branch at four points in Three Rivers, Que.

12466. Dec. 7.—Authorizing Quebec Ry., Light, Heat & Power Co., to erect wires across C.N.Q.R. on Charlesbourg Road, near Quebec.

12467 to 12468. Dec. 6.—Authorizing Water Commissioners for London, Ont., to erect wires across Bell Telephone Co.'s wires at two points.

12469. Dec. 7.—Extending to June 1, 1911, time for approval of Canadian Northern Telegraph Co. tolls, and allowing it to charge tolls authorized under 7-8 Ed. 7, chap. 61.

12470. Dec. 7.—Authorizing C.P.R. to build branch joining its Portal and Stoughton to Weyburn branches, across road allowance on west boundary of n.w. ¼ sec. 15 and road allowance on west boundary of s. w. ¼ sec. 22, tp. 8, r. 14, w. 2, m., Weyburn, Sask.

12471. Dec. 7.—Authorizing C.P.R. to build spur for Contractors' Supply Co. of Toronto, at mileage 20, on its Owen Sound sub-division, Caledon tp., Ont.

12472. Dec. 7.—Authorizing C.P.R. to build spur for Gibson, McCormack, Irvin Co. West Toronto, Ont.

12473. Dec. 7.—Authorizing C.P.R. to build spur for Redcliffe Manufacturing Co., Redcliffe.

Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

12474. Dec. 6.—Rescinding order 12209, Nov. 7 1910, made upon application of C.P.R. to build spur for the Gres Falls Co., at mileage 2.22 from Piles Jct., Que.

12475. Dec. 6.—Authorizing C.P.R. to build spur for Canadian Tube & Iron Co., Montreal.

12476, 12477. Dec. 7.—Authorizing James Bay & Eastern Ry. to cross and divert public road in Indian Reserve, Loke St. John County.

12478. Dec. 7.—Authorizing C.P.R. to reconstruct bridge 11.9, over Assiniboine River at Headingly, Man.

12479. Dec. 7.—Extending to June 1, 1911, time for approval of G.T.P. Telegraph Co.'s tolls.

12480. Dec. 7.—Authorizing C.N.O.R. to cross and divert Broken Front St., Sidney, tp.

12481. Dec. 7.—Approving road diversion in s.e. ¼ sec. 14, tp. 53, r. 5, w. 5, m. North Alberta District.

12482. Dec. 7.—Dismissing application of city of Grand Forks, B.C., for order directing Kettle River Valley Ry. to carry out terms and conditions of agreement, and forthwith to build its railway so as to afford proper and adequate facilities for traffic from Grand Forks fo 50 miles up north fork of Kettle River.

12483, 12484. Dec. 7.—Authorizing C.P.R. to build spurs for Canadian Fairbanks Co., Saskatoon, and Outlook, Saskatchewan Flour Mills Co., Outlook, Sask.

12485. Dec. 7.—Authorizing Ontario Hydro-Electric Power Commission to use its transmission wires at 47 points.

12486, 12487. Dec. 6.—Dismissing application of Nepean tp., Ont., for leave to build crossing at Magee Ave., across Ottawa Electric Ry., and authorizing it to build highway crossing over Ottawa Electric Ry, at Strathcona Ave.

12488. Dec. 6.—Ordering C.N.Q.R. to place interlocking plant where it crosses Montreal St. Ry. near Valois Ave. and Ontario St. in proper shape within 10 days.

12489. Dec. 9.—Authorizing C.P.R to build two spurs for city of Calgary, Alta., in Victoria Park.

12490. Dec. 9.—Authorizing C.N.O.R to build across side road in lot 35, con. 1, Sidney tp.

12491. Dec. 9.—Authorizing North Bay Light, Heat and Power Co., to erect wires across C P.R. at Ninth St., North Bay Ont.

12492 Dec. 9.—Authorizing Dufferin Light and Power Co. to erect wires across C.P.R. at Centre St., Orangeville, Ont.

12493. Dec. 9.—Authorizing Gres Falls Co. to erect wires across C.P.R. at Three Rivers, Que.

12494. Dec. 9.—Authorizing Dufferin Light & Power Co. to erect wires across C.P.R. one mile west of Orangeville, Ont.

12495. Dec. 9.—Authorizing Stratford Light and Heat Commission to erect wires across G.T.R. at Ontario St., Stratford Ont.

12496, 12497. Dec. 10.—Authorizing Ontario Water Co., of Niagara Falls, to erect wires across Niagara, St. Catharines and Toronto Ry at two points in St. Catharines.

12498. Dec. 10.—Authorizing city of Winnipeg to lay water main under C.P.R. at Alfred Ave.

12499. Dec. 10.—Authorizing C.P.R. to build spur for Great West Felt Co., Elmira, Ont.

12500. Dec. 10.—Authorizing C.P.R. to build spur for University of Saskatchewan, at Sutherland.

12501. June 22.—Dismissing application of C.P.R. and Montreal Terminal Ry. for order interpreting certain provisions of order 4988, July 8 1908.

12502. Dec. 10.—Authorizing C.N.O.R. to connect with G.T.R. at Cobourg

12503. Sept. 21.—Dismissing application of Prudential Exchange Co., Lang, Sask., alleging discrimination by C.P.R. in rates on coal from Fort William and Port Arthur to Lang, as against Moose Jaw and Regina.

◆

Passenger Meetings at Rochester.—The Niagara Frontier Summer Rate Committee will meet at the Seneca Hotel, Rochester, N.Y., on Jan. 17, 18 and 19. The rate clerks will meet on Jan. 17 and 18 at 9 a.m., and the general meeting will be held on Jan. 19, at 11 a.m. The Great Lakes and St. Lawrence River Rate Committee will meet at the same place on Jan. 19, immediately after the adjournment of the Niagara Frontier Committee meeting.

The International Water Lines Passenger Association will meet at the same place, on Jan. 19, at 9 a.m.

MAINLY ABOUT PEOPLE.

John Galt, consulting engineer, formerly of Toronto, died at Vernon, B.C., Dec. 18.

H. D. Reid, Vice President Reid Newfoundland Co., arrived in Montreal from St. John's, Nfld., Dec. 7.

Hugh A. Allan, of the Allan Line, was in Montreal early in Dec., for a few days, and later returned to England.

Mrs. Yates, widow of the late Henry Yates, railway contractor, died at Brantford, Ont., Dec. 22, aged 82.

H. P. Dwight, President Great North Western Telegraph Co., celebrated his eighty second birthday in Toronto, Dec. 23.

Mrs. Hayter Reed, wife of the Manager in Chief C.P.R. Hotels, arrived in Montreal from England early in December.

A. R. Creelman, General Counsel C.P.R., and Mrs. Creelman returned to Montreal early in December from England.

G. Bury, who died in Montreal, Dec. 16, aged 69, was father of G. J. Bury, General Manager Western Lines C.P.R., Winnipeg.

R. Marpole, General Executive Assistant C.P.R., Vancouver, B.C. sailed from St. John, N.B., Dec. 2, for a three months holiday in Great Britain

R. Shaver, sub-contractor on the Esquimalt and Nanaimo Ry. Alberni extension, was married at Alberni, B.C., recently, to Miss M. Gibson.

Lord Strathcona contributed $5,000 towards the fund of $41,000 just raised in Winnipeg, to clear off the debt on the Y.M.C.A. building there.

Jas. Oborne, General Superintendent Ontario Division C.P.R., returned to Toronto, Dec. 12, from Great Britain, where he spent a six weeks holiday.

Col. Rathbun, President of the Rathbun railways and steamboat lines, and Mrs. Rathbun returned to Deseronto, Ont., early in December from England.

Barlow Cumberland, Vice President Northern Navigation Co., has been elected a fellow and corresponding member of the Literary and Historical Society of Quebec.

E. R. Gossett was presented with a cabinet of silver by the head office staff of the Canadian Northern Ry., Toronto, on his marriage, Dec. 7, to Miss H. M. Lee.

I. W. Hutchins was presented with a pair of gold cuff links by the G.T.R. advertising office employes, Montreal, Dec. 6, on leaving the company's service.

Mrs. A. Gendron, who died in Quebec recently, was mother of Mrs. S. N. Parent, wife of the Chairman of the National Transcontinental Railway Commissioners.

W. Hunt, for many years connected with the Panama Rd., who died in New York recently, formerly resided in Hamilton and Montreal, at which latter place he was buried.

W. D. Power, heretofore chief clerk Freight Department C.P.R., Vancouver, B.C., has been appointed Traffic Officer, Vancouver Board of Trade Transportation Bureau.

J. E. Davis, formerly a machinist in the G.T.R. shops at Stratford, Ont., is reported to have been appointed Master Mechanic of the Hocking Valley Ry., Columbus, Ohio.

C. M. Hays, President G.T.R. and G.T.P.R., was a guest at the annual dinner of the Dominion Commercial Travellers Association at Montreal, Dec. 19, when he spoke on transportation.

Martin Gower, Supervisor of Apprentices C.P.R., Montreal, was present at the recent meeting of the Society for the Promotion of Industrial Education, at Boston, Mass.

A. C. Shaw was presented with a diamond pin by his railway friends in Chicago, Ill., on his removal to Winnipeg, Man., as C.P.R. Assistant General Passenger Agent there.

C. B. Foster was presented with a gold watch by the C.P.R. passenger staff at Vancouver, B.C., on the occasion of his recent promotion as General Passenger Agent at Winnipeg.

R. Ivers, who resigned his position as locomotive foreman C.P.R., at Moose Jaw, Sask., a short time ago, on account of ill health, is undergoing treatment at the Sanitarium at Gravenhurst, Ont.

W. Whyte, Vice President C.P.R., and H. Sutherland, Executive Agent Canadian Northern Ry., have been elected directors of the Winnipeg Industrial Exhibition for the current year.

C. C. Wellerman was presented with a fur-lined overcoat by the members of the railway branch of the Y.M.C.A., Sarnia, Ont., on leaving to take up similar duties at the general Y.M.C.A., Matawa, Ont.

Lt.-Col. A. H. Macdonald, K.C., Secretary Guelph Junction Ry., Guelph, Ont., has been appointed a member of the parole board of the Provincial reformatory there, by the Ontario Government.

Hon. Angus McDonnell, who is railway contracting on the Esquimalt and Nanaimo Ry., Vancouver Island, left Nov. 26 for a holiday, which he is spending with his father and mother, the Earl and Countess of Antrim, in Ireland.

Neil Keith, a well known railway contractor, latterly engaged on the C.P.R. Weyburn-Lethbridge branch, disappeared from the camp at Ogeman, Sask., towards the end of November. His frozen body was found Dec. 14, several miles the camp.

W. D. Power was presented with a travelling bag and silk umbrella by the C.P.R. freight department staff, Vancouver, B.C., recently, on leaving the service to become traffic officer for the Vancouver Board of Trade Transportation Bureau.

J. L. Englehart, Chairman of the Temiskaming and Northern Ontario Ry. Commission, has presented his house and grounds, valued at $50,000, to the town of Petrolea, Ont., for use as a hospital, as a memorial of his wife, who died recently.

W. J. Shepperd, President of the Northern Navigation Co. of Ontario, and J. Playfair, of the Inland Navigation Co., have been elected directors of the Spanish River Pulp and Paper Mills, Ltd., which has taken over the Spanish River Pulp and Paper Company's business.

R. G. Harvey, railway contractor, who built the Brockville, Westport and Sault Ste. Marie Ry. (recently acquired by the Mackenzie, Mann interests), and the Halifax and Yarmouth Ry. (now part of the Halifax and South Western Ry.) died in Brockville, Ont., Nov. 27.

H. Williams, at one time in the service of the old Great Western Ry. and subsequently with the Canada Southern Ry. and its successor, the Michigan Central Rd., being Chief Dispatcher at St. Thomas, Ont., on retiring from active work, died at Winnipeg recently, aged 63.

Miss Mackenzie and the Misses Ethel and Grace Mackenzie, daughters of Wm. Mackenzie, President Canadian Northern Ry., left Toronto Dec. 14, for London,

DEARBORN TREATMENT RELIEVES THE WORST WATER CONDITIONS

During this season of scant rainfall and low water supplies, with correspondingly increased quantities of alkali salts in the water, Dearborn Treatment is indispensable to Railroads operating in alkali water districts.

On a railroad where the water conditions are worse than they have been for many years, and it was necessary to wash boilers at the end of every trip, the mileage has been increased, with the use of Dearborn Treatment, to eight trips between washouts.

The saving in boiler washing expense alone will pay for the treatment, without considering the greatly increased efficiency of the locomotives.

TATE BIFUNCTIONAL ACCUMULATORS

Are ideal for train lighting. They are 30 per cent. lighter than any other Storage Battery of same rated capacity.

They can be charged more rapidly, and show much higher Watt-hour efficiency on slow or rapid discharge.

They do not require to be washed out for the removal of sediment from the cells, because there is no sediment deposited.

This battery solves the problem of efficient lighting of trains by electricity.

It is important to railway managers that they should investigate the Tate Bi-functional Accumulator.

We also manufacture storage batteries for Automobile engine ignition and lamp lighting, and for all other purposes for which a storage battery can be used.

TATE ACCUMULATOR CO. OF CANADA, LTD.

TORONTO, CANADA

Eng., where Miss Grace Mackenzie will be married to Count de Lesseps in January. Mr. and Mrs. Mackenzie will prabably leave for England about the middle of January.

G. R. Fairhead, who has been appointed Commercial Agent Canadian Northern Ry., Hamilton, Ont., was born in Toronto, Mar. 6, 1882, and entered railway service in 1897, since when he has been, to 1902, clerk offices of Division Freight Agent, and Assistant Foreign Freight Agent G.T.R., Toronto; 1902 to Dec., 1910, in office of General Eastern Agent Canadian Northern Ry., Toronto.

W. Stitt, General Passenger Agent Eastern Lines C.P.R.; W. E. Davis, Passenger Traffic Manager; G. T. Bell, Assistant Passenger Traffic Manager; G. W. Vaux, General Passenger Agent, and H. R. Charlton, General Advertising Agent G.T.R., were present at Boston, Mass., Dec. 21, at a dinner given to N. E. Weeks and G. H. Watson, Chairman and Secretary respectively, of the New England Passenger Association.

E. J. Hebert, who has been appointed First Assistant General Passenger Agent Eastern Lines C.P.R., Montreal, was born there, June 18, 1864, and entered railway service Oct., 1879, since when he has been, to July, 1882, in General Office, G.T.R., Montreal; July, 1882, to May, 1905, in General Passenger Department C.P.R., Montreal; May, 1905, to Dec. 1, 1910, General Agent Passenger Department C.P.R., Montreal.

R. S. Logan, Assistant to the President G.T.R., John Pullen, Assistant Freight Traffic Manager G.T.R., R. Bickerdike and C. A. Jaques, both connected with various marine interests in Montreal, are interested in the formation of the Country Club of Montreal, Ltd., recently incorporated under the Quebec Companies Act, with a capital of $50,000, and office in Montreal, for the promotion of outdoor exercise and social intercourse.

Sir H. Montagu Allan, of the Allan Line; R. B. Angus, director C.P.R.; E. T. Galt, President Alberta Ry. and Irrigation Co.; C. M. Hays, President G.T.R.; C. R. Hosmer, director C.P.R.; Sir Thos. G. Shaughnessy, President C.P.R.; H. Paton, President Shedden Forwarding Co., and Jas. Ross, formerly President Dominion Coal Co., are interested in the incorporation of the Winter Club, Ltd., under the Quebec Companies Act, with a capital of $149,000, and office at Montreal, to maintain a club house for recreation and social intercourse.

In giving some biographical data referring to D. Crombie, in our last issue, we mentioned that he entered railway service in 1883, instead of in 1882, and also stated that from July, 1900, to Apr., 1906, he was Superintendent of Transportation Pere Marquette Rd., Detroit, Mich., and from Apr., 1906, to Oct., 1907, Master of Transportation G.T.R. Middle Division, London, Ont. He left Pere Marquette Rd. service early in 1903, and from then to early in 1907 he was engaged in private business, entering G.T.R. service early in 1907.

T. Hoben, Assistant Superintendent Canada Eastern Division Intercolonial Ry., who was visiting Chicago, Ill., died there suddenly, Dec. 4. His retirement, which was announced in our last issue, was to take place Dec. 31, and he was to be placed on the superannuation list, as from Jan. 1. In his early days he was associated with Alex. Gibson in the construction of the railway along the eastern side of the St. John River, now part of the C.P.R., and was later connected with the construction of the Canada Eastern Ry., now part of the Intercolonial Ry.

G. C. Wells, whose appointment as Assistant to Passenger Traffic Manager C.P.R., Montreal, was announced in our Dec., 1910, issue, was born at Brockville, Ont., Apr. 15, 1866, and entered railway service Mar. 6, 1882, since when he has been, to May 13, 1892, in General Passenger Department G.T.R., Montreal; May 13, 1892, to June, 1895, rate clerk Passenger Traffic Department C.P.R., Montreal; June, 1895, to Jan., 1898, chief rate clerk same office; Jan., 1898, to Nov. 22, 1904, Chief Clerk Passenger Traffic Department C.P.R., Montreal; Nov. 22, 1904, to Oct. 29, 1910, Assistant General Passenger Agent C.P.R. Eastern Lines, Montreal.

A. C. Shaw, whose appointment as Assistant General Passenger Agent C.P.R. Western Lines, Revelstoke and east, at Winnipeg, was announced in our last issue, was born at Detroit, Mich., of Canadian parentage, and entered railway service in 1880, since when he has been, to Mar., 1886, in city ticket office Great Western Ry. (now G.T.R.), Toronto; entering C.P.R. service in the District Passenger Office, Toronto, in Mar., 1886, he was later in the same year, transferred to the General Passenger Department, Montreal, where he filled various positions, until 1900, when he was appointed General Agent Passenger Department at Chicago, Ill., in which position he remained to Nov. 1, 1910.

G. A. Lizotte, whose appointment as General Agent Canada Gulf and Terminal Ry., is announced on another page, was born at Quebec, Nov. 1, 1863, and entered railway service in Apr., 1880,, since when he has been, to Sept., 1881, telegraph operator Quebec, Montreal, Ottawa and Occidental Ry., now part of the C.P.R.; Sept., 1881 to Oct., 1882, operator Troy, Greenfield and Hoosac Tunnel; Oct., 1882, to July, 1883, operator C.P.R.; Aug., 1883 to May, 1885, Chief Train Dispatcher Construction Department C.P.R.; June, 1885, to July, 1895, Chief Train Dispatcher Quebec and Lake St. John Ry.; July, 1895, to Nov., 1903, Auditor Freight and Passenger Receipts Pontiac Pacific Jct. Ry. and Ottawa and Gatineau Ry.; Aug., 1903, to 1905, Secretary Ha Ha Bay Electric Light Co.; Aug., 1905, to July, 1908, controller of train crews G.T.R.; July, 1908, to Oct., 1910, C.P.R. Telegraph Department.

A. Wilcox, whose portrait appears on the first page of this issue, was born at Kincardine, Ont., Jan. 2, 1865, and entered railway service in 1881, since when he has been, to 1883, successively, operator, ticket, and freight clerk Toronto, Grey and Bruce Ry., Owen Sound, Ont.; 1883 to 1887, operator and agent at various points and relieving dispatcher C.P.R. at Winnipeg; 1887 to 1890, train dispatcher C.P.R., Moose Jaw, Sask.; 1890 to 1903, Chief Train Dispatcher C.P.R. Moose Jaw, Sask.; 1903, Chief Train Dispatcher C.P.R. Cranbrook, B.C.; July, 1903, to July, 1904, Chief Train Dispatcher Canadian Northern Ry., Port Arthur, Ont.; July, 1904, to Jan., 1908, Superintendent District 2, C.N.R., Winnipeg; Jan., 1908, to May, 1909, Superintendent District 1, C.N.R., Port Arthur Ont.; May to Nov., 1909, Superintendent District 3, C.N.R., Dauphin, Man.; Nov., 1909, he was transferred to Port Arthur, Ont., as Superintendent District 1, which position he still holds.

E. A. Evans, who has resigned the position of Chief Engineer Quebec Ry. Light, Heat and Power Co., and Quebec Ry. Light and Power Co., was born in Kensington, London, Eng., Feb. 26, 1855, and between 1875 and 1883 was engaged as engineer on construction for the Cheshire Lines Committee (composed of the Midland, Great Northern and Great Central Rys.), and for the Lancashire and Yorkshire Ry. Coming to Canada in 1884, he was, in that and the following year, engaged on surveys for the projected Port Rowan and Lake Shore Ry., and the Pontiac, Pacific Jct. Ry., and for about a year, to Mar., 1886, was with the Geological Survey of Canada. Since then he has been, successively, Mar., 1886, to Jan., 1889, engineer Pontiac, Pacific Jct. Ry., Gatineau Valley Ry., and on surveys for the St. Lawrence bridge at Quebec; June, 1889, engineer in charge of re-alignment and improvement of grades, ballasting and general completion of the Quebec and Lake St. John Ry. from Whitehorse trestle to Roberval, 178 miles, and in charge of construction of branch line from Chambord Jct. to Chicoutimi; on the completion of this he was appointed engineer in charge of construction of Quebec city electric railway, and General Manager on the opening of the line. The company has since developed into the Quebec Ry., Light and Power Co., and has built a suburban line along the north shore of the St. Lawrence River to Ste. Anne de Beaupre and Cap Tourment, and also carries on a lighting and power business, with a large power development plant at Montmorency Falls; he held the position of General Manager and Chief Engineer until the end of 1909, when, on the absorption of some other light and power companies, he was appointed Chief Engineer. He is a member of the Canadian Society of Civil Engineers, was one of the founders of the Engineers' Club, Montreal, and took an active part in establishing the Canadian Street Railway Association, in which he has served as member of the executive committee, Vice President, and in 1908, President.

◆

Natural Gas Lighting on the C.P.R.—The C.P.R. has adopted the use of natural gas for lighting purposes, on its trains running north and south of Calgary, Alta. The gas will be transported from Brooks, about 114 miles east of Calgary, where the cars will be charged from the tanks. The medium of transportation consists of a flat car, on which are mounted 36 forged steel gas flasks, 18 of which are 10 ft. by 9¼ in. diar., and 18 15½ ft. by 9¼ ins., and are capable of carrying 100 atmospheres. They are equipped with reducing valves for charging the cars at reduced pressure.

The Interstate Commerce Commission issued orders Dec. 21 reducing the price heretofore exacted by the Pullman Co. for upper berths in sleeping cars. An order also was issued providing that after Feb. 1 certain specified reductions in the charges for lower berths northwest of Chicago shall be made by the Pullman Co.

La Compagnie de Pulpe de Chicoutimi has been re-incorporated under the Quebec Companies Act, with a capital of $1,000,000, and office at Chicoutimi, to manufacture and deal in pulp, paper, etc., and in connection therewith to build and operate tramways, wharves, docks, steam and other vessels, etc. The provisional directors are Hon. N. Garneau, G. Lemoine, J. A. Couture, Quebec; I. N. Belleau, Levis; W. Hanson, Montreal; F. X. Gosselin and J. E. A. Dubuc, Chicoutimi.

During Sept. and Oct., 1910, 35 employes were killed and 39 injured in the course of their work on Canadian railways. Of the fatalities, 19 were due to being run over, four to dynamite explosions, three to being caught between cars, two each to collisions and to falls, one each to derailment, to falling material, to a gunshot wound, to drowning and to the explosion of a locomotive; while of the other accidents, 12 were due to being run over, seven each to being caught between cars and to falls, four to collisions, three each to falling material and to derailments, two to being struck by locomotives, and one to machinery.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy Anyone who may notice any error in our announcements will confer a favor by advising us

Government Railways Managing Board.—J. B. T. Caron has been appointed a member of the Board, in charge of the legal work connected with the Government railways, and with office at Moncton, N.B.

Canada and Gulf Terminal Ry.—J. R. Cassidy has been appointed Superintendent. Office, St. Flavie, Que.

G. A. Lizotte has been appointed General Agent. Office, Matane, Que.

Canadian Northern Ry.—We are officially advised that G. H. Shaw, Traffic Manager, will have his office transferred from Winnipeg to Toronto early in February, and that his jurisdiction will be extended to include the Mackenzie, Mann and Co.'s eastern lines as well as the western, and also the Canadian Northern Steamships Ltd.

The position of Superintendent of Publicity and Advertising, heretofore held by A. Hawkes, has been abolished. R. Croasdell, heretofore chief clerk, has been appointed Advertising Agent. Office, Toronto.

H. Logan, heretofore City Freight Agent, Toronto, has been appointed Travelling Freight Agent there, vice G. R. Fairhead, appointed Commercial Agent at Hamilton, Ont.

G. R. Fairhead, heretofore Travelling Freight Agent, Toronto, has been appointed Commercial Agent, Hamilton, Ont. Office, Federal Life Bldg.

C. H. Green, heretofore Travelling Freight Agent at Toronto, has been transferred to the Commercial Agent's office, at Hamilton, Ont.

Canadian Pacific Ry.—E. J. Hebert, heretofore General Agent Passenger Department, Montreal, has been appointed First Assistant General Passenger Agent Eastern Lines. Office, Montreal.

F. O. Hopkins, heretofore chief clerk to General Passenger Agent, has been appointed Assistant General Passenger Agent Eastern Lines. Office, Montreal.

A. W. Porter, heretofore Superintendent Sleeping, Dining and Parlor Cars and News Service, District 5, Vancouver, B.C., has been appointed Superintendent same service, District 3, Winnipeg, vice E. W. Kolb, transferred to other duties.

W. K. P. Kennedy, heretofore Superintendent's Accountant, North Bay, Ont., has been appointed Inspector of Timekeeping Western Lines. Headquarters, Winnipeg.

T. Fawcett, heretofore Trainmaster, Calgary, has been appointed General Fuel Agent Western Lines, vice C. Hood appointed Trainmaster Calgary Terminals. Office Winnipeg, Man.

E. W. Duval, heretofore Trainmaster, Maintenance and Operation Calgary Terminals, Calgary, Alta., has been appointed Superintendent District 1, Saskatchewan Division, vice J. M. Cameron transferred to Medicine Hat, Alta. Offices Moose Jaw, Sask.

E. B. Paterson has been appointed locomotive foreman at Wilkie, Sask., vice G. Andrews, assigned to other duties.

J. McQuarrie has been appointed locomotive foreman at Sutherland, Sask., vice M. W. Boucher, transferred.

A. Morrison has been appointed locomotive foreman at Wynyard, Sask.

J. S. Dennis, heretofore Assistant to the Vice President, has been appointed Manager of the Company's Irrigation and Land Interests in Alberta and British Columbia, and will perform such other duties as may be assigned to him from time to time by the President. Office, Calgary, Alta.

C. W. Peterson, who has been General Manager Canadian Pacific Irrigation Colonization Co., since 1906, has been appointed Superintendent of Irrigation. He has charge of the maintenance and operation of the Irrigation Canals and the Distributing System, and of Agricultural Development and Colonization of the Irrigation Block. Office, Calgary, Alta.

C. Hood, heretofore General Fuel Agent, Western Lines, Winnipeg, has been appointed Trainmaster Maintenance and Operation Calgary Terminals, vice E. W. Duval promoted to be Superintendent at Moose Jaw, Sask. Office Calgary, Alta.

J. M. Cameron, hertofore Superintendent, District 1, Saskatchewan Division, Moose Jaw, Sask., has been appointed Superintendent, District 1, Alberta Division, vice J. G. Taylor transferred to Eastern Lines. Office Medicine Hat, Alta.

F. W. Green, formerly General Roadmaster at Calgary, Alta., has been appointed Roadmaster Thompson sub-division and Nicola branch, Pacific Division, vice G. Munro, retired. Headquarters, Kamloops, B.C.

The position of Assistant Trainmaster at Kamloops, B.C., heretofore held by A. Houghton, has been abolished.

H. C. Ganson has been appointed Superintendent Sleeping, Dining and Parlor Cars and News Service, District 5, Vancouver, B.C., vice A. W. Porter, transferred.

A. J. Davis has been appointed acting foreman painter, Vancouver car shops, during the absence of A. Parker on six months leave.

Delaware and Hudson Co.—F. B. Moffitt, heretofore Travelling Passenger Agent, Albany, N.Y., has been appointed Canadian Passenger Agent. Office, 160 St. James St., Montreal.

W. H. Henry, heretofore Canadian Passenger Agent, has been appointed City Passenger Agent, Montreal. Office, 286 St. James St.

W. F. Sheehan has been appointed Travelling Passenger Agent, Albany, N.Y., vice F. B. Moffitt, promoted.

Grand Trunk Pacific Ry.—The following agents have been appointed:—Justice, Man., R. L. Harrop; Pope, Man., C. McMahon; Lazare, Man., T. J. Shields; Gerald, Sask., L. Saunders; Tate, Sask., A. E. Hofferd; Bradwell, Sask., H. F. Henshaw; Yorkton, Sask., S. C. McDonald.

Grand Trunk Ry.—J. Duguid, heretofore General Foreman Toronto shops, has been appointed Master Mechanic Eastern Division, vice J. C. Garden, transferred to Battle Creek, Mich. Office, Montreal.

W. C. Sealey, heretofore erecting shop foreman at Stratford, Ont., has been appointed General Foreman, Toronto shops, vice J. Duguid, promoted.

W. Davis, heretofore chargeman, has been appointed erecting shop foreman at Stratford, Ont., vice W. C. Sealey, promoted.

H. MacDougall, heretofore agent at Brampton, Ont., has been appointed Travelling Freight Agent. Headquarters, Stratford, Ont.

J. C. Garden, heretofore Master Mechanic Eastern Division, Montreal, has been appointed Master Mechanic Battle Creek shops, Mich., vice J. T. McGrath, who has been appointed Superintendent of Rolling Stock, in charge of the Chicago & Alton Rd.'s locomotive and car shops and terminals at Bloomington, Ill.

G. W. Gillespie, heretofore Chief Train Dispatcher, Durand, Mich., has been appointed Master of Transportation Western Division, vice R. Doyle, resigned. Office, Durand, Mich.

H. J. Tobin has been appointed Chief Train Dispatcher, Durand, Mich., vice G. W. Gillespie, promoted.

The following agents have been appointed:—Emsdale, Ont., J. E. Bell; Angus, Ont., A. M. Clark; Stayner, Ont., C. K. Clark; Brampton, Ont., C. B. McCollum; Alma, Ont., F. Anguish; Rose Point, Ont., M. J. Mullin; Henrysburg, Que., J. O. Prefontaine; St. Louis, Que., J. W. Marchand; Brighton, Ont., outside, T. C. Lockwood; Richwood, Ont., outside, A. Richardson; Durham, Ont., outside, J. R. Gun.

Intercolonial Ry.—We are officially advised that the Government Railways Managing Board has taken no action with reference to the resignation of G.R. Joughins, Superintendent of Motive Power, and that he still continues to occupy the position.

Michigan Central Rd.—L. W. Landman, heretofore General Passenger Agent Lake Erie & Western Rd., is reported to have been appointed General Passenger Agent, Michigan Central Rd., vice P. W. Ruggles, resigned on account of ill health. Office, Chicago, Ill.

New York Central and Hudson River Rd., West Shore Rd., Boston and Albany Rd.—W. R. Barnet has been appointed Assistant General Passenger Agent. Office, Grand Central Terminal, New York.

Portland Canal Short Line Ry.—M. M. Curran has been placed in charge of construction, W. H. Grant, Manager of Construction, having had to return to Toronto on account of illness.

◆

Our Inland Seas.—The history of the discovery and the development of navigation on the great inland seas of North America is treated of in a volume of 380 pages, illustrated by 70 engravings. The writer, J. C. Mills, of Saginaw, Mich., deals in a most complete and interesting manner with the history of the three centuries elapsing from the first discovery of the French-Canadian voyageurs, when their sole means of navigation were "pirogues" or dugouts and the birch bark canoes of the Indians, to the present day, when steel ships of over 600 ft. in length steam along at the rate of over 20 miles an hour. Chap. 19 is specially devoted to the Canadian mercantile marine of the present day, but the information given in it is not quite so up-to-date as is that given in the chapters specially devoted to U. S. vessels. For instance, whilst the Hamonic is mentioned among Canadian vessels, reference is not made to the Turbinia, the first turbine driven steamer on the inland lakes, and some of the larger Canadian lake freighters; nor any reference to the G.T.R. car-ferry service on Lake Ontario. Several chapters are devoted to the building of a lake freighter, and the concluding chapter deals with the economies of lake navigation. The price of the volume is $1.75 net, the publishers are A. C. McClurg & Co., Chicago, Ill. It may be obtained through The Railway and Marine World's Book Department.

Blue Book of American Shipping for 1910.—The fifteenth annual volume of this marine directory has been issued by the Penton Publishing Co., Cleveland, Ohio. It has been carefully revised to date, and the various lists of vessels are arranged under such headings as will enable ready reference being made. The general and statistical information is also full and complete. The volume contains practically everything that those engaged in navigation business on the Great Lakes should know, and much information of value for those engaged in shipping on the coastal waterways of North America. It is issued at $5 and may be obtained through The Railway and Marine World's book department.

TOOLS FOR ALL PURPOSES

We carry the Largest and Best Assorted Stock of Tools in Canada, and Mechanics will find every new idea in the tool trade shown in our stock. We name below a few of our lines:

Wiley & Russel, Stocks, Dies, Taps, Etc.
Butterfield, Stocks, Dies, Taps, Etc.
Oster, Stocks and Dies
Starret's Fine Tools
Brown and Sharp's Fine Tools
Western Tool Co.'s Lathe, Planer, and Shaper Tools

We cordially invite all interested in Tools to come in and view our stock. We will gladly demonstrate any of our lines.

I. C. R. Blacksmith Shop, Moncton.

By Arthur Rochell, Foreman Blacksmith, I.C.R.

This shop is 375 by 76 ft., and 40 ft. high, giving a floor space of 28.500 sq. feet and a total space in shop of 1,140,000 cubic feet. It is built of reinforced concrete and has three large doors capable of taking in a load of material; the windows are of the three decker type. The lower ones are pulley balanced and can be raised up and down at the same time, that is one pushes up and the other comes down. The top ones are arranged to push out and in, causing a complete inflow of fresh air and at the same time an out go of gas and smoke that may escape from the fires. The roof is slightly pitched and has 12 longitudinal skylights. In the skylights are 6 sashes that can be raised up, giving an opening space for ventilating the roof, 9 by 6 ft. This gives ample roof ventilation as well as roof light.

The fuel for furnace purposes is water gas made by a special plant. It gives good results. The motive power is electric and all machines have an independent motor to drive them. There are 12 double fires, placed at an angle of 45 degs., with a floor space for each double fire of 5.25 sq. ft. There are 7 single fires for heavy work. There are 6 steam hammers, 5 power hammers, ranging in size from a 4,000 lb. steam hammer to a 250 power hammer, and 5 sets of shears that will cut any size iron from 16 x 2 ins. down.

The iron rack is placed at one end of the shop, is 126 by 42 ft., so that a car can be run and loaded under cover and placed at the spot required for use. The iron is placed in the rack from the outside at the back. Sliding doors are provided so that any section can be used with the rest closed up. This is necessary here to keep the snow out. The heavy work at the furnace is done at this end of the shop, and all the machines are also at this end, so the iron taken from the rack, is sheared to length, made on the particular machine required and moved straight up the shop when done, without going back an inch, thus giving great economy in handling. The shop has a track down the middle that will take two narrow or one broad gauge trotters which are used to bring in iron from the rack or to carry out finished material.

Smoke is disposed of by the much abused down draft system, but it is one that we devised ourselves, and is a great success and makes the shop practically dustless and smokeless. It consists of a graduated underground concrete duct 5 ft. sq., at the exhaust end and tapering from this point to the farthest off fire so that at the extreme ends it is 16 ins. in diameter. Each fire has a 10 in. pipe with a 36 in. hood over the fire. The hood telescopes into the pipe and can be raised or lowered at the will of the smith. The smoke duct is supplied by an 8 ft. dia. by 4 ft. wide exhaust fan speeded at 200 revolutions a minute. This discharges the smoke, gas and dust with the heat, through the stack that reaches above the roof and which is capped with a weather vane that turns easily with the wind so that the mouth is always turned away from the direction of the wind.

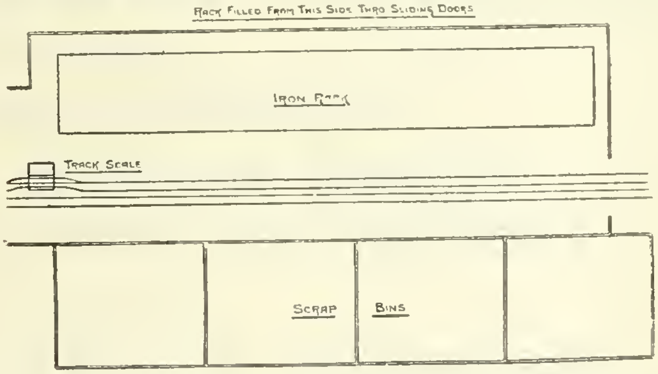
The fan blast for the forges is placed on a platform by the side of the wall and is 12 ft. above the floor. There are three fans of 6 oz. blast that supplies the fires with a great blast. These are underground out of the way, giving the shop a clear space overhead for the cranes to swing clear round.

The cranes are self-balancing pyramids, and are so placed that on the double fires one crane will serve both fires. There are 25 cranes, ranging from 6 tons down to half a ton.

Under the fan platform is a rack to hold hex. bolts and such material for locomotive work and as they are required, they are cut to length and supplied.

The tool dresser's corner is placed down by the machine shop door and is partitioned off from the rest of the shop so that he is not bothered by men standing around. He has a power hammer and furnace, air blast for tempering, and all other appliances for the dressing of tools speedily.

The spring maker's section contains a combination spring machine for punching and slotting, shearing plates and rolls for drawing down the points if required, and also a 60-ton hydraulic buckling and stripping machine, with a 1½ ton crane that swings clear round to serve all points as may be needed. There is also a pneumatic riveting machine for putting on drawbar yokes.



The above small plan is a continuation of the larger one at the left side of the page. The iron rack and scrap bins are at the right hand end of the blacksmith shop as shown in the other plan. There was not room to give the whole plan in one section.

404 St. James St. - - - - MONTREAL

The shop has plenty of working space. It is equipped with modern machinery, and is practically dustless and smokeless. We believe it has no superior and few equals on this continent.

Following is a list of tools: 6 steam hammers; 5 Champion power hammers; 5 box iron shears; 3 bulldozers; 4 bolt headers and forging machines; 2 nut makers; 1 file cutter and grinder; 1 eye bender; 1 tapering rolls; 1 hot saw, 6 in. cut; 1 track spike maker; 1 automatic rivet and track bolt machine; 2 air hammers for welding brake rods; 1 riveting bull for putting on drawbar yokes; 1 combination spring machine; 1 spring buckling and stripping machine; 31 forges; 16 gas furnaces with grinding wheels, etc.

The foreman's office is in the centre of the shop. All parts of the shop can be seen from it and the men can see the foreman when he is there and get all things that are necessary for their work, from a requisition for material or a blue print for their guidance.

The numbers given below correspond to the number on the plan by which the location of the principal machines will be seen:

141—Track bolt and rivet machine, automatic action.
142—Track spike machine, automatic action.
143—No. 6 bulldozer.
144—Pneumatic bulldozer.
145—3 in.. header and forging machine.
146—1½ in. bolt header.
147—1 in. bolt header.
148—6 in. hot saw, high speed.
149—Scrap shears, 2 in. stroke.
150—Shears for cutting bar iron.
151—No. 4 bar iron shears for cutting bolt iron.
152—Combination spring machine.
153—Small power hammer.
154—4,000 lbs. double frame steam hammer.
155—1,800 lbs. steam hammer, frame maker.
157—1,200 lb. steam hammer.
162—Air drawbar riveter.
163—60 ton hydraulic spring buckling machine.
166—No. 9 Beaudry power hammer.
167—1¼ eye bender.
169—No. 6 Guillotine bar iron shear..
171—No. 3 taper forging bolls.
172—600 lbs. steam hammer.
173—600 lbs. steam hammer.
174—No. 11 Beaudry Champion hammer.
170—1½ in. hot pressed nut maker.
176—No. 7 Champion hammer.
177—No. 9 Champion hammer.
178—2 in. bolt header.
179—2¼ in. bolt shears.
180—No. 9 bulldozer.
181—2,000 lbs. single frame steam hammer.
289—No. 2 Lion file cutter.
290—No. 1 file grinder and stripper.
291—File knife whetting machine.
297—1 in. nut maker, hot pressed.
F—Furnaces.
F—No. 1 case hardening furnace.
F.P.—Face plates.
T.—Water tanks for cooling iron.

New Railways in Quebec Province.

The Quebec Public Utilities Commission has authorized the opening for passenger traffic of the following lines:

Canada and Gulf Terminal Ry. from Ste. Flavie to Matane, Que.

Quebec Central Ry., from St. George, Beauce, to the dividing line between Dorchester and Bellechasse counties, St. Irdine parish, 31.34 miles.

The Canadian Mono-Rail Corporation, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $2,000,000, and office at Montreal, to manufacture and deal in mono-rail railway cars and supplies, and to promote any industry, providing it is one to which the company may supply transportation facilities; to build, own and operate railway switches, harbors, piers, wharves, and steam and other vessels. The provisional directors are, L. A. David, J. H. Brittle, J. J. Robson, G Salmon. C. J. E. Charbonneau and C. E. Guerin. Montreal.

Central Vermont Railway

The report for the year ended June 30, 1910, shows gross receipts $4,088,411.03; operating expenses, $3,145,562.35; net receipts, $942,848.68, to which are added $9,068.59 from parlor cafe car service; $33,720 interest on securities held by the company, making $985,637.27, and from which are deducted: taxes, $133,125.12; rentals, etc., $21,615.02; hire of equipment, $85,084.72, and fixed charges, $721,038.35; total, $960,863.21, leaving a net result of $24,774.06, showing a net increase in the receipts from all sources of $293,078.76, and a net increase in expenditure of $577,951.22. During the year the following amounts were expended in improvements, and included in operating expenses:—New bridges, $10,560.99; new tracks, sidings and spurs, $5,742.29; new fuel and water stations, engine houses and turntables, $6,886.30; new stations and warehouses, $8,351.82; new steel rails, difference between values of old steel rails taken and new steel rails laid down, $22,522.19; new tools and machinery, $760.44; new crossings, $7,807.42; total, $62,631.45.

Two miles of new 80 lb. steel rails were laid near Richmond, and 19 miles of released sawn 80 lb. steel rails were laid between Stafford and Willimantic, 6½ miles in district 3, 1½ at Richmond, and four miles between Oakland and St. Albans; 19½ miles released 72 lb. rails were laid on the Richford branch; 3¾ miles of released 56 lb. rails were laid in district 2, and five miles on the Williamstown branch. Industrial spurs, totalling 5,963 ft., and a siding for public delivery, 525 ft., were built at South Vernon. New stations were built at South Vernon and South Franklin, and extensive repairs were carried out on a number of others. New steel bridges were erected at Norwich Town and South Coventry, Conn., Palmer, Mass., and East Granville, Vt., and repairs carried out on six others. Four flat cars, one stores car and six cabooses were built in the St. Albans shop, and added to rolling stock during the year. The company owns 536.4 miles of railway, of which 99.4 miles are in Canada.

The officers and directors for the current year are:—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, G. C. Jones, E. C. Smith, W. S. Webb, J. W. Stewart, J. G. McCullough, E. H. Baker, C. W. Witters, S. E. Kilner, A. Tuttle, C. P. Smith, E. L. Marston.

Press reports state that a telephone dispatching system will be installed between St. John and McAdam Jct., N.B., on the C.P.R., and that it will be ready for operation by the spring.

W. H. Grant, who left Toronto last spring for Stewart, B.C., as Manager of Construction of the Portland Canal Short Line Ry., has had to return east, owing to rheumatism brought on by the excessive rainfall at Stewart. He is now at Mount Clemens, Mich., for a short time.

Sir Thos. G. Shaughnessy, President C.P.R., while in the U.S. recently, is reported to have said on the subject of rate conditions:—"We have the advantage of having rate matters settled by one body, a Government commission, which has plenary power. The scope of its decisions affects the entire people, while in the U.S. you have a large number of State commissions rendering various decisions. In Canada we are making no effort toward obtaining a general rate advance, although the proceedings before your Interstate Commerce Commission are being watched with keen interest. However, any declaration of your commission is not likely to result in a rate advance on the C.P.R."

Too Late for Classification.

Alberta and Great Waterways Ry.—A bill was introduced in the Alberta Legislature, Dec. 16, for the purpose of raising $7,400,000 upon the credit of the revenues of the province. The introduction of the bill has to do with the straightening out of the difficulties arising out of the contract with the A. and G. W. Ry. for the building of a line to Fort McMurray, for which the Province guaranteed the bonds, and which contract is referred to in the preceding paragraph.

Nipigon to Savanne, Ont.—A press dispatch dated Dec. 22 states that the C.P.R. has placed engineers in the field to locate a cut off from near Nipigon to Savanne, Ont., which will shorten the distance between Montreal, Toronto and other eastern points, and Winnipeg, Man., by about 50 miles. If the cut off is built through traffic between Winnipeg and Montreal or Toronto will not go through Fort William, as at present.

Ha Ha Bay Ry.—A contract has been let to Boulianne and Boulianne, for the building of a branch line from La Terriere Jct. to near Riviere du Moulin bridge, about eight miles. The contractors, we are advised, have started work and it is expected that this branch will be ready for operation about June 1.

In connection with the progress of construction on the main line, we are advised that the ballasting upon the first 19 miles has been completed from St. Alphonse to Chicoutimi, on the Quebec and Lake St. John Ry., and that a train service is being operated. A branch is also being operated to Port Arnault, Que.

The company has purchased the electric railway owned by La Compagnie du Port de Chicoutimi, about a mile in length, and extending from the Chicoutimi Pulp Mill yard to the wharf. (June, 1910, pg. 449.)

Hamilton to Port Dover.—G. S. Lynch-Staunton, K.C., Hamilton, Ont., announces that people for whom he is acting have applied for a charter to build an electric railway between Hamilton and Port Dover, Ont., and that if terminal arrangements in Hamilton can be made with the Dominion Power and Transmission Co., work will be started in the spring.

Kootenay and Alberta Ry.—The route plans for this projected railway are before the Minister of Railways for approval. We are advised that tenders will be called for in a few weeks and construction work will be in charge of L. B. Merriam as Chief Engineer.

Toronto, Niagara and Western Ry.—The plans being filed in Brantford and various other places between Hamilton and Windsor, credited in press reports to the Canadian Northern Ontario Ry., are in reality being filed by the T., N. and W. Ry., which is a Mackenzie, Mann & Co. company, originally projected to build a railway between Toronto, Hamilton and Niagara Falls, along the right of way of the power line of the Electrical Development Co.

H. M. Wicksteed, Chief Locating Engineer for Mackenzie, Mann & Co., was in Hamilton early in Dec. in consultation with the City Engineer as to the proposed routes for the line into that city from Toronto. This question is before Board of Railway Commissioners' Chief Engineer, and nothing will be definitely decided until his report is made. Some grading has been done at West Toronto, near Port Credit, and near Oakville, but this is probably only for the purpose of keeping the charter alive until the company's construction plans are fully matured. (Nov., 1910, pg. 965.)

Apportioning Cost of Crossings Protection.

At a sitting of the Board of Railway Commissioners in Montreal recently, when the question of the protection of level railway crossings was under consideration, the solicitor for the city contended that where it was shown that the conditions such as they exist today were senior, so far as the city was concerned, that the person who disturbed these conditions, who aggravated the servitude or the danger, should pay for the protection of the public.

Chief Commissioner Mabee said in reply: "We do not apply any such principles anywhere, and never have. To get rid of some 10 or 12 level crossings from the union station out of Toronto to the east we compelled the city of Toronto to make a contribution of a third. They are paying a third to eliminate level crossings out of the union station to the west along the G.T.R. We have asked every municipality to assist where we have furnished protection. We cannot do anything else. If we commenced to load upon the railways all of the capitalization of these protective appliances, we would have the companies out of business in five years, or else you would be paying a good deal higher freight and passenger rates. The municipalities themselves contribute to these dangers. The cities and towns are growing, there is more traffic on the streets to be protected, and so why should not the municipalities in fairness contribute? There is no use in arguing against not paying anything, because the municipalities have got to pay. Living in this enlightened age, we have to pay for this protection and these improvements. The march of civilization requires it, and we have to get down into our pockets and help."

Q. and L. St. J. Ry. Freight Rates.

In the case of Proteau and Carignan vs. the Quebec and Lake St. John Ry. the Quebec Public Utilities Commission has given the following decision:—The plaintiffs complain that the rates for the carriage of merchandise, and principally on brewery products, are too high on the Q. & L. St. J. Ry., and that the rates are higher than those of other railways for the same or longer distances. They also complain that the Q. & L. St. J. Ry. has broken a special agreement made in 1904, by which the company granted to brewers a special rate, lower than that established for all railways and covered by the Canadian Freight Classification, approved by the Board of Railway Commissioners. At the hearing of their complaint, the plaintiffs produced a comparative statement showing the rates from Quebec to St. Raymond, Lake Edward, Roberval and Chicoutimi, and the rates for equal or longer distances on the C.P.R., I.C.R. and C.N.Q.R. To this the respondent company replied that its rates are reasonable, having regard to the conditions under which its railway is operated; that they are not higher than on other railways operating under similar conditions, and that there was no reason for keeping in effect a special tariff. different from the uniform classification established and recognized by all railways. With regard to this latter point the commission is advised that the Q. & L.St.J.R. was within its rights in abolishing the special tariff and in following the uniform classification established and recognized.

In making comparisons between the rates charged by the Q. & L.St.J.R. and by other railways, it is necessary to take into account the peculiar conditions under which this road is operated. It is a colonization railway crossing a mountainous country. On a very considerable portion of its length from Riviere a Pierre to Chambord, 120 miles, the population is very scant, and only gives a slight revenue to the railway. On this part of the railway, between Allen's Mills and Riviere a Pierre, there are grades of 106 ft. to the mile. as well as very sharp curves, which increase greatly the cost of operation and limit the weight of trains running on this section. Finally it is notorious that the company is not prosperous and that there is no reason for exacting from it reduced rates unless it is proved that they are illegal or unjust. The commission has compared the Q. & L.S.J.R. with those of certain C.P.R. branches which present similar conditions, such as the Nominingue, Waltham and Temiskaming lines, and has found that the rates charged are practically the same. Taking as an example the rates for beer shipped in quantities less than carloads (3rd class) here are some figures:—

	Miles.	Rate per 100 lbs.
Q. & L. St. J.—Quebec to Raymond	35	.15
C.P.R.—Montreal to St. Lin	36	.16
C.P.R.—Montreal to St. Jerome	33	.15
C.P.R.—Montreal to Shawbridge	42	.17
C.P.R.—Montreal to St. Hermas	37	.17
C.P.R.—Montreal to Wyman	36	.17
C.P.R.—Mattawa to Temiskaming	39	.17
Q. & L. St. J.—Quebec to Lake Edward	112	.29
C.P.R.—Montreal to L'Annonciation	113	.24
C.P.R.—Petewawa to Temiskaming	113	.29
Q. & L. St. J.—Quebec to Roberval	188	.35
C.P.R.—Montreal to Davidson	189	.35
Q. & L. St. J.—Quebec to Chicoutimi	227	.36
C.P.R.—Ottawa to Temiskaming	233	.38

The Commission is of the opinion that the comparisons shown in the above statements are more just than those submitted in the plaintiffs' statement, which refers to points such as Cap Sante, Portneuf, Montmagny, Joliette, Riviere du Loup and St. Jerome, which are located on lines built and operated under conditions which differ greatly from those which exist for the Q. & L.S.J.R. The Commission is therefore of the opinion that there is no reason at present, on the proof produced, to justify the complain of the plaintiffs, and the complaint is dismissed.

Canadian Government Telegraphs.

During the year ended Mar. 31, 1910, 31 miles of new telegraph lines were strung in Cape Breton, N.S., from Enon to Gabarus, 63.5 miles from Strathlorne to Whycocomagh, N.S.; 27 miles in Quebec, and 70 miles of a line from Athabasca Landing, towards Peace River Landing, Alta. This line will have when completed, a total length of 290 miles. The Government telegraph lines have now a total mileage of pole lines of 7,748.5 miles. D. H. Keeley, General Superintendent, in his report, gives details of the work done on each line, and of the work done by the cable steamer Tyrian. The Government owns a line of 14 miles in Newfoundland, from Cape Ray lighthouse to Port au Basque, where a connection is made with the Anglo-American Telegraph Co.'s land line system, by which company it is operated under an arrangement. The line was strung in connection with the Dominion Government signal service. The total expenditure for the fiscal year was $422,665.96, and the total income $136,747.31. The signal service, meteorological service and fisheries bulletins are handled free of tolls. The number of offices along the Government lines is 479. A complete list of tolls for messages over the different lines is appended, and also reports from the local superintendent.

Following is a list of the staff having charge of the operation of the lines:—

Headquarters at Ottawa. D. H. Keeley, General Superintendent; M. W Crean, J. E. Gobeil, Technical Assistants to Superintendent.

General Inspectors:—A. B. McDonald, North Sydney, Cape Breton, lines in Nova Scotia and New Brunswick; J. S. Macdonald, Edmonton, Alta., lines in Northwest and south British Columbia.

Superintendencies:—E. Pope, Quebec, Dist. Supt., North Shore and G.N.W. traffic; J. C. Tache, Dist. Supt., Chicoutimi district and North Shore to Bersimis; E. H. Tetu, Long Point of Mingan, Dist. Supt., North Shore, East Bersimis; P. Pouliot, Dist. Supt., Quarantine Line, etc., to Grosse Isle; A. Malouin, Dist Supt., West Point, Anticosti Island; A. Le Bourdais, Grindstone, Dist. Supt., Magdalen Islands; D. C. Dawson, St. John, N.B., Dist. Supt., Cape Breton system; Mrs. C. C. Seely, Grand Manan, N.B., Dist. Supt., Bay of Fundy system; J. McR. Selkirk, Leamington, Ont., Dist. Supt. Pelee Island system; R. C. Macdonald, Edmonton, Alta., Dist. Supt., Northwest Territories; Wm. Henderson, Victoria, Dist. Supt., British Columbia south; C. S. Stevens, Summerland, B.C., Supt., Penticton line; J. T. Phelan, Vancouver, B.C., Supt., Yukon system; H. Gilchen, Whitehorse, Y.T., Dist. Supt., Atlin-Boundary.

Telegraph and Cable Matters.

The Great North Western Telegraph Co. has moved its Vancouver offices to new premises in Cope Block.

T. N. Vail, President American Telephone and Telegraph Co., has been elected President Western Union Telegraph Co., vice R. C. Clowry, resigned.

W. Marconi, of the Marconi Wireless Telegraph Co., recently announced that a wireless telegraph station had been established at Coltano, Italy, and messages exchanged with the stations at Clifden, Ireland, and Glace Bay, N.S.

W. J. Camp, Electrical Engineer C.P.R. Telegraph, Montreal, attended the recent meeting of the Eastern Division of the Association of Railway Telegraph Superintendent at New York.

The Board of Railway Commissioners has extended to June 1, the time during which the North American Telegraph Co. may charge the telephone tolls, which were authorized prior to July 13, 1906.

The Pacific Cable Co. has installed new receiving and transmitting apparatus between Bamfield, B.C., and Fanning Island. This is a recent invention, and it is claimed, will materially increase the speed of receiving and transmitting messages.

The Marconi Wireless Telegraph Co. is erecting a wireless telegraph station on the Magdalen Islands, with a view to securing constant communication with Charlottetown, P.E.I., as communication between the islands and the mainland by cable is frequently interrupted.

The Board of Railway Commissioners has extended to June 1, the time within which the C.P.R., G.N.W Telegraph Co., and Canadian Northern Telegraph Co., may be allowed to charge tolls, as authorized by 7-8 Edward 7, chap. 61, and has extended the time to the same date for approval of G.T.P.R. telegraph tolls.

Cable reports from England state that there is a movement on foot for the laying of a state owned cable across the Atlantic to Montreal, where connection would be made with C.P.R. and Pacific Cable Co.'s leased wires. The route mentioned is from the north of Scotland. by way of Faroe Islands, Iceland, Greenland and Labrador.

J. Milward, Manager Pacific Cable Co., is reported to have stated, in Victoria, recently, that the negotiations for lower rates on deferred messages were proceeding favorably, and it was expected that a rate of 1s. 6d. a word on messages delivered within 48 hours would come into effect early in the year. The present rate of 3s. a word would be maintained for messages for immediate delivery.

The G.T.P. Telegraph Co. has now in operation its line from West Fort William, Ont.,. through Winnipeg and Edmonton, to Edson, Alta., about 1,400 miles. This line is being continued westerly through the Yellowhead Pass to Tete Jaune Cache, which point it was expected would be reached by Dec. 31 From Prince Rupert easterly, the telegraph line has been erected to milepost 100, and the material has all been placed along the route to Aldermere, 245 miles east of Prince Rupert. During 1910, in addition to the completion of the lines mentioned, 23 new offices were opened between Fort William and Winnipeg, and telegraph lines were erected on the following branch railway lines:—Yorkton Branch, Melville to Canora, Sask., 55 miles; Prince Albert Branch, from Young, Sask., northerly for 30 miles; Regina Branch, Melville to Balcarres, Sask., 31 miles; Calgary Branch, Tofield to Red Deer, Alta., 87 miles. The whole of the work has been carried out under the supervision of A. B. Smith, Manager G.T.P. Telegraphs.

◆

Grain Elevator Notes.

It was reported early in Dec. that there was over 1,000,000 bush. of grain in the two G.T.R. elevators at Portland, Me.

The Saskatchewan Milling and Elevator Co.'s recently built flour mill, with a capacity of 1,000 barrels a day, at Saskatoon, was opened for business recently.

The La Riviere Farmers' Elevator Co., Ltd., passed a resolution, Nov. 30, to dispose of its elevator, to wind up its affairs, and to apportion its assets among the contributories.

T. Horn who has been acting as Dominion Grain Inspector, Winnipeg, since the resignation of his brother, D. Horn, and pending the confirmation of his appointment by the Governor-in-council, died there, Dec. 19.

The Thunder Bay Elevator Co., is being proceeded against by the Dominion Warehouse Commissioner, on charges of rendering incorrect statements of the quantities of various grades of wheat in store in its warehouse at Fort William, Ont., for the week ended Dec. 10, 1909.

The G.T.R. elevator at Port Dalhousie, Ont., was destroyed by fire Dec. 7, the loss is estimated at $30,000. The elevator, which was built about 50 years ago, has not been utilized to any great extent for some time, and it is stated that there is no intention of rebuilding there.

The Goderich Elevator and Transit Co.'s annex to its elevator at Goderich, Ont., was opened for business towards the end of Nov. It is being used chiefly for winter storage purposes at present. The whole work of erecting, including the construction of the pontoons supporting the structure on the waterfront, was completed within eight months.

The Alberta Pacific Elevator Co., is reported to have purchased a site on the north bank of the Fraser River, between Pitt River and the C.P.R. Hammond station Vancouver, in connection with its project for shipping grain from that port. It is stated that an elevator will be erected on this site, and another one on the south shore of Burrard Inlet.

The Grain Growers Grain Co. is applying to the Dominion Parliament for incorporation, with power to take over and carry on the business of the Grain Growers Grain Co., Ltd., incorporated under the Manitoba Joint Stock Companies Act, upon such terms as may be agreed upon between the shareholders of the new and old companies, and with the same powers as are possessed by the old company. Bonnar, Trueman and Co., Winnipeg, are solicitors for the applicant.

D. W. McCuaig, Chairman Manitoba Elevator Commission, is reported to have said, at Portage la Prairie, Dec. 5, that the commission had operated a large number of elevators during the season. In southern Manitoba, conditions were very bad, two of the elevators had not received a bushel of wheat, and had been closed, and quite a number of others had scarcely received any wheat. These were not a success but were being kept open in fairness to those who supported them. At many points they were patronized, and at others, where large petitions were sent in, nearly all the farmers loaded over platforms. On the northwestern line at certain points, the elevators were a great success.

In response to the recent deputation of western farmers to Ottawa, respecting, among other things, the Government control of terminal elevators, the Dominion Premier, pointed out that the Government had a bill on the subject already prepared, and he considered that it would not be sufficient to look after the elevators at Fort William and Port Arthur, as the same operations complained of, could take place elsewhere. The problem, he said, would be solved, if the carriage of grain on the St. Lawrence could be so improved that it would not be possible to divert it to other channels, which improvement could only be carried out in two ways, by improving the St. Lawrence, and by providing, also, a route through the Ottawa River, which is the shortest route between west and east.

◆

Among the Express Companies.

The Western Ex. Co. has withdrawn its service from the Bellingham Bay and British Columbia Ry., and has closed its offices at the various points touched in the State of Washington.

The Dominion Ex. Co. has issued its local tariff C.R.C. 2491 regulating the return of proceeds of c.o.d.'s or collection originating in Europe and, cancelling its C.R.C. 2456.

The Board of Railway Commissioners has extended to June 1, the time within which the contract forms of the National, American, Canadian, Dominion, United States and Great Northern Ex. Cos. are approved, and also the Maritime Ex. Co.'s money and freight receipts.

The Dominion Parliament has before it, a bill, which was read a first time recently, to compel express companies to furnish a statement of unclaimed balances in their hands, and after a certain time, to transfer these unclaimed balances to the Government as trustees.

The Dominion Ex. Co. announces that the embargo against removing dogs out of the district west of the eastern boundaries of York and Simcoe counties, Ont., has been removed, and shipments of dogs may again be accepted, according to the rules in the governing classification, and may also be accepted for transportation to Montreal.

The Dominion Ex. Co.'s building, which is in course of erection in Montreal, will be occupied, on the ground floor and basement, by the Dominion Ex. Co. and the C.P.R. steamship ticket offices. The top floor has been specially designed for the use of the Montreal Club, at present located in the C.P.R. Telegraph Building. The intermediate eight floors will be rented as offices.

The Dominion Ex. Co., in a recent circular to agents states that shipments of special traffic for points north of Vancouver, B.C., including Prince Rupert, Port Simpson, Port Essington, and intermediate points named in C.R.C. 2105, should be charged double rates, i.e., special traffic matter rates from origin to Vancouver or Victoria, in addition to special traffic rates between Vancouver or Victoria and destination.

The Canadian Ex. Co. has extended its service over the G.T.P. Steamship routes and in this connection has opened offices at Prince Rupert, Stewart, Vancouver, Victoria, B.C., and Seattle, Wash. All business from common points in the east, for Prince Rupert and Stewart, must be way-billed on Vancouver at existing through rate, and business from eastern exclusive points, must be way-billed on Sarnia, Ont., or Detroit, Mich., and all offices much consign business for any of these new offices, care of Great Northern Ex. Co., St Paul, Minn., and mark way-bills in the same manner.

The Canadian Northern Railway Express Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000, and office at Toronto, to purchase, hold and dispose of shares in capital stock, bonds, debentures and debenture stock of the Canadian Northern Express Co., or of any other company authorized to carry on the express business, and to carry on any branches of such business in Canada and elsewhere. The incorporators are:—R. H. M. Temple, A. J. Reid, K.C., R. P. Ormsby, A. J. Mitchell, and J. B. Robertson, all connected with the Canadian Northern Ry., Toronto.

The Dominion Ex. Co. has issued a notice to its agents, instructing them that owing to the provisions of the Ontario Liquor Act, they must refuse shipments of intoxicating liquors, when destined to local option points, unless it is represented that they are for the consignees' personal or family use, which, agents are advised to have endorsed on the shipping bill by the shipper. In no case should such goods be sent to such points c.o.d. By a recent amendment to the act, the police are authorized to seize and remove liquor which is found in transit or in course of delivery, on the premises of an express company, and which they believe to be sold or kept for sale, contrary to the provisions of the act. Shipments which arrive at a station, billed as liquor, or which can be ascertained to be liquor without breaking the package in which it is shipped, may be seized by the authorities if they believe it is to be sold or kept for sale, contrary to the provisions of the act. A police officer has no authority to break open the companies' cars, offices or shed, for the purpose of making a search without a search warrant from a justice of the peace, but a constable, provincial officer or license inspector may, without warrant, peacably enter and make searches upon the companies' cars, lands or buildings, for liquors which he suspects have been illegally shipped. When a shipment is seized, a receipt must be taken from the officer, and when a package is broken open under a search warrant, an acknowledgment should be taken from the officer. When a search warrant is being executed, the agent must accompany the officer while search is being made, after first examining the warrant, and prompt advice should be given by wire to the Superintendent of the seizure, or search, with a reference to the shipping bill, and any papers served on the agent should be forwarded to the Superintendent by the first train.

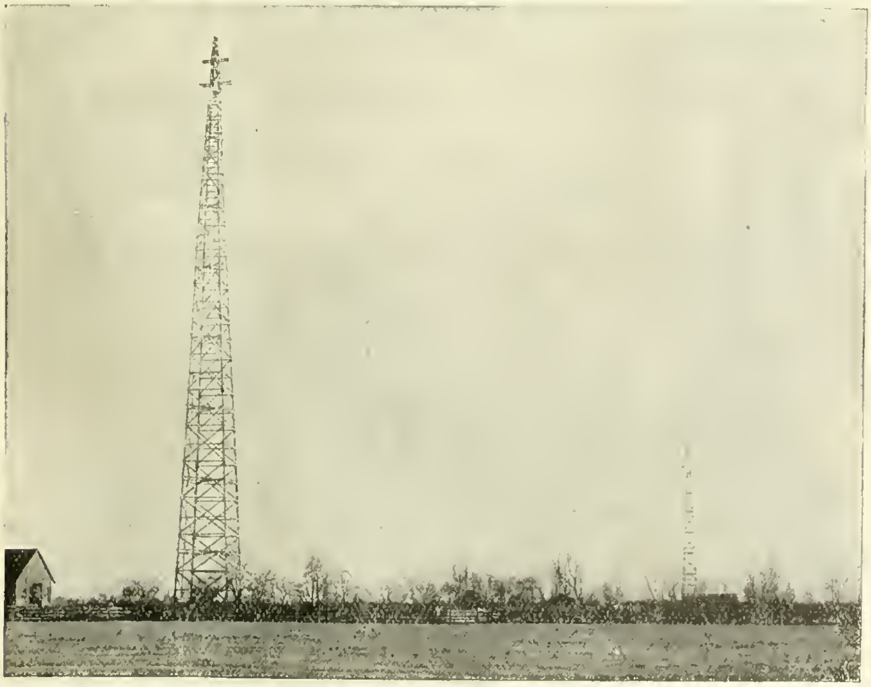
B.C. Electric Ry. transmission lines supplying light and power to the Lower Fraser District, including Ladners and the Delta.

British Columbia Electric Railway Co.

This corporation consists of two allied companies, the British Columbia Electric Railway Co., Ltd., and the Vancouver Power Co., Ltd. The latter was formed as a subsidiary concern in 1898 for the purpose of generating power by means of a hydro-electric plant at Lake Buntzen, on the North Arm of the Burrard Inlet, an arm of the Gulf of Georgia. The power developed by this plant is utilized and distributed by the B.C.E.R. Co., and employed for lighting, power, and street and interurban railway work on the lower mainland of British Columbia, especially in and around the city of Vancouver, the commercial capital of B.C.; New Westminster, the old capital of the mainland; North Vancouver, and the Fraser Valley, east of New Westminster. In addition there are two other branches of the industry on Vancouver Island, viz.: The Vancouver Island Power Co. and the Victoria branch of the B.C.E.R. Co., which operates in and around the city of Victoria, the capital of the province.

The history of the undertaking has been a marvellous record of almost unprecedented growth, unprecedented even in that most rapidly developing branch of engineering—electricity. That such is the case may be judged by a brief survey of the following: In 1904 the street railway work of Vancouver city was handled by one 500 k.w. rotary convertor, whilst today in the Vancouver substation alone there are one 1,000 k.w., one 500 k.w. and two 2,000 k.w. rotaries, a total of 5,500 k.w., and the company has in addition substations at four other points, and one portable substation. The total capacity of its substations at present is over 7,000 k.w., and new machines are being installed for over. 2,000 k.w., all of which will be carrying full load almost as soon as installed. Such is the phenomenal development in street railway work alone. In the other branches, light and power, the story is the same —one of great and rapidly increasing growth. When it is considered that every part of the plant has been installed to take the place of out-of-date machinery in a short six years, it will be seen how great has been the development which has taken place in this "last outpost" of the Empire. An auxiliary steam plant for two turbine units has recently been added for a stand-by and for emergency cases. In the lighting branch the company had in 1904 about 4,600 meters installed on the lower mainland, whilst now it has over 20,000 meters. In the power load it had in 1904, 1,200 h.p. of connected load, whilst in 1910 it has 11,000 h.p.



B.C. Electric Ry. towers 1 and 2 across the Lower Fraser River, on the Ladners—Delta transmission line.

Four hundred feet above high tide is Lake Buntzen, named in honor of J. Buntzen, director of the company, and for several years its General Manager. This lake of 500 acres is fed by the waters of the eternal snows, but would be inadequate to supply a plant of this magnitude. It has, therefore, been connected by means of a tunnel to Lake Coquitlam, altitude 432 ft., area 2,300 acres, drainage area 100 sq. miles, whilst the rainfall amounts to 150 inches per year. This tunnel, 12,775 ft. in length, is the longest purely hydro-electric tunnel in the world, and of itself constitutes a work of no mean engineering character. A concrete dam 54 ft. high across the canyon (the outlet of Lake Buntzen) at once raises the water level of this lake, increases its storage capacity and contains the pipe intakes.

Like similar undertakings in other places, the history of the electrical industry in B.C. has been one of growth from small beginnings through various vicissitudes to a position of assured success, but in few places has this growth been so phenomenal or the success so marked as it has in B.C. The installation of electrical plant was inaugurated by the Vancouver Electric Illuminating Co., Ltd., in 1887, and in 1889 a second company, known as the Vancouver St. Ry. Co., Ltd., was formed to operate by animal traction. In 1890 the two companies were merged and the lines electrically operated. In 1890 there was also commenced the New Westminster interurban system and the Victoria, Vancouver Island system. These were again merged into one company, known as the Consolidated Railway Co., Ltd., and as such were operated until 1897, when the B.C. Electric Ry. Co., Ltd., was formed and purchased the amalgamated undertakings, which have been run continuously by this company ever since.

In 1905 the hydro-electric plant at Lake Buntzen was installed, and from that time to the present all power has been derived from this source. The site for the generating station has been blasted out of the solid rocks and cliffs,

TALK ABOUT YOUR INVESTMENTS

Here is what one Railroad has done with Booth Water Softeners

Increased the life of fireboxes—stay bolts and radial stays, 75%

Reduced boiler repairs 40%
Reduced fuel consumptio 20%

Increased hauling capacity—due to absence of leaky flues and stay bolts

Locomotives make from 400 to 500 miles between washing boilers

CAN YOU BEAT IT?

That's only half the story, too. Haven't room to tell it all here. Write us for the rest

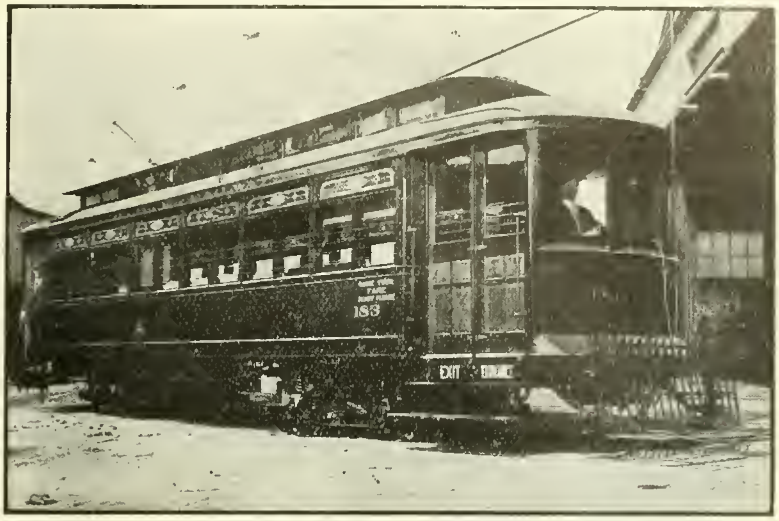
and the buildings were erected from the granite so quarried. The within pictures of this plant and surroundings show the transformer houses, step-up stations and operators' dwellings. Immediately behind and above the power house an electric elevator in a concrete shaft serves as a means of quick conveyance from one to the other. To the right of the power house is a concrete warehouse and wharf built on concrete piers. Cars loaded with the heaviest machinery and freight are landed on this wharf over a drop apron, at any stage of the tide. The installation in the power house at present consists of six units, totalling 33,000 h.p. Four of the units are 3,000 h.p. each, the other two 10,500 h.p. each.



Type of city car built in B.C. Electric Ry. shops at New Westminster.

Two pole lines 80 ft. apart carry four distinct sets of high-tension transmission wires over a private right of way to the north shore of Burrard Inlet, opposite Barnet. Between two wooden towers on this north shore and two steel towers at Barnet on the south shore, a span of over 3,000 ft., these four high-tension sets of lines cross the salt water, giving a headway of 132 ft for clearance of the masts of sailing vessels. From Barnet almost straight west one pole line, with two sets of transmission wires, continues to Vancouver city substation; the other almost straight south to Burnaby substation. The Vancouver substation and the Burnaby substation are interconnected along the company's private right of way, the Westminster-Vancouver Interurban Ry., by two independent sets of transmission wires, so that in case of trouble on any one line an uninterrupted service may still be maintained. From Burnaby substation two sets of transmission wires run out to New Westminster city substation and five new substations about twelve miles apart on the Fraser Valley branch to the city of Chilliwack, 64 miles from New Westminster. From Barnet a further high-tension transmission line leads directly east, dividing into two branches, one supplying Lake Coquitlam and the other the asylum farm substation, a Government institution, and New Westminster Junction. From the Vancouver substation two sets of transmission lines lead out towards the city of North Vancouver and its surrounding district, crossing the harbor at the Second Narrows on a set of high masts 190 ft. above tide water. The receiving substation for this line is located in the east end of this city; the other line follows the right of way of the Lulu Island Ry. to the substation on Lulu Island. A new and additional substation is now being erected along this line at Shaughnessy Heights, in Point Grey district, to take care of this rapidly growing suburb.

The Vancouver city substation naturally is the largest and most interesting. It supplies the business, residence and street lighting of the city, the suburbs of South Vancouver and Point Grey, the power for numerous industrial motors in these districts, and the city's extensive street railway system. Two six-phase 60-cycle rotaries, recently added to its equipment, are particularly interesting to the electrical engineer as being the largest of their kind in the world. Next to the Vancouver substation, the most important substation on the system is located at Burnaby, about nine miles from Vancouver, on the Vancouver-Westminster interurban line. It is the switching point for Westminster City-Vancouver, Westminster Interurban and Fraser Valley branches. Two 10,000-volt transmission lines distribute power over considerable distances to large sawmills on Burnaby Lake to the north and the Carbolineum works on the Fraser River to the south. The Lulu Island substation apparatus operates the Vancouver and Lulu Island Ry. and the Eburne-Westminster line, and also lights the residences of the farmers along and near these railways, the town of Steveston at the mouth of the Fraser, the town of Ladner on the south side of the Fraser River, the motors in the salmon canneries along the river bank, and the stables, barns and dairy houses of the farmers in this district. A portable substation, mounted on trucks for hauling from place to place, is found very useful and convenient to assist in the moving of large crowds to the various parks both in Vancouver and Westminster, and to the exhibition grounds in both cities.

The electric railway system of the company, consisting of the mainland and the Vancouver Island (Victoria) systems, is fully shown on the map between pages 80 and 81 of this issue. It comprises 200 miles of track on the mainland and 25 miles in Victoria and its suburbs. All along the various interurban lines the company has extended its lighting and power circuits. These are greatly appreciated, and exceedingly well patronized by the residents and settlers of the districts traversed, giving them practically all city conveniences in their suburban homes, and even on the farm. Small electric motors for water pumping and other household duties are used quite extensively from these lines. For the improvement of the suburban roads, rock crusher motors are operated for various municipalities. Along the banks of the Fraser River from Point Grey (Eburne), through South Vancouver to Burnaby, a number of industries and factories have by this means been able to obtain a cheap and reliable power, available at all hours of the day, as well as a good and frequent railway service, with siding facilities for the handling of freight in carload lots. Into the timbered sections branch power lines have been built for the operation of sawmills and shingle mills, obviating the hauling of the unwieldy and ponderous logs, at the same time clearing up these districts for the settler and his plow. A number of plants of this kind have been installed in the timber between Vancouver and Westminster and near North Vancouver. All of these, when first connected and started up, were closely surrounded by timber, which is now receding in the distance before the onslaught of electrically-driven saws and planers. The lumber from these mills is again worked up in the numerous electrically-operated woodworking establishments, box factories, shipbuilding yards, etc., in the three cities. The car-building shops of the B.C.E.R. Co. in New Westminster is a good example of the use of the electric power. Since the extension of the company's power circuit to New Westminster and through its manufacturing and wholesale section, a number of very important industries have adopted the electric drive, among others a large can factory, an ice and cold storage plant,

Type of suburban car built in B.C. Electric Ry. shops at New Westminster.

2 GRAND PRIZES AND

5 GOLD MEDALS

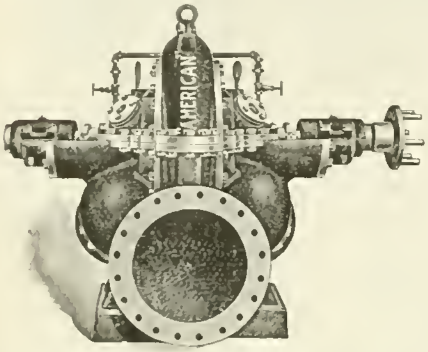
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

INTERNATIONAL LIBRARY OF TECHNOLOGY

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Write for catalog now.

INTERNATIONAL TEXTBOOK COMPANY

Box 1072, Scranton, Pa.

"THE SWEETEST OF ALL THE CHARITIES."

Will You Help It In Its Hour of Need....?

THE HOSPITAL FOR SICK CHILDREN

COLLEGE STREET, TORONTO

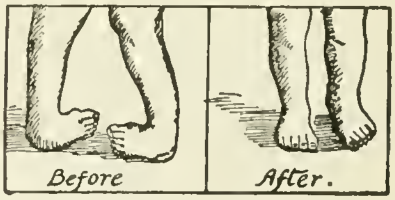
READY FOR MOTHER.

Appeals to Fathers and Mothers of Ontario on behalf of suffering children.

This Institution did more work in 1910 than ever before. Total In-Patients 1,224. Of these, 783 were from the city and 441 from the country.

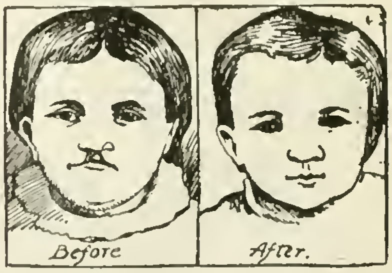
Since its organization, the Hospital has treated in its cots and beds 16,837 children; 12,370 of these were unable to pay and were treated free.

There were 60 cases of club feet corrected last year.



THE HOSPITAL IS A PROVINCIAL CHARITY.

The sick child from the most remote corner of Ontario has the same claim as the child living within sight of the great House of Mercy in College Street, Toronto. Our cause is the children's cause. Could there be one that has a stronger claim on the people of this Province?



Perfect results in Harelip cases. 18 infants were relieved of this terrible deformity last year.

If the Hospital is to continue its great work, it must appeal to your pocketbook as well as to your heart. Let your Dollars be messages of mercy to the suffering little children of Ontario.

Please send your contribution to J. Ross Robertson, Chairman, or to Douglas Davidson, Secretary-Treasurer, The Hospital for Sick Children, College St., Toronto.

several machine and iron works, butcher shops and their cooling plants, bakeries, plumbing shops, printers, etc. The swings of the two bridges spanning the Fraser at New Westminster city are also operated by the current from this company's lines. All along the river front of this city power lines are now available for any industries intending to locate there. These same power lines are now being extended along the Fraser Valley line to Chilliwack, 64 miles, and have already reached Huntingdon, about 43 miles from New Westminster, serving towns and villages, farmers and sawmills, en route. On this line particularly the mill is taken to the timber instead of the timber to the mill. Many and varied are the uses to which the electric current supplied by the company is put. Its flexibility lends itself to almost any undertaking.

◆

Freight and passenger electric locomotive, B.C. Electric Ry.

Projects, Construction, Betterments, Etc.

Alberta Electric Ry.—In addition to the powers applied for in the notice referred to in our last issue, this company is asking the Dominion Parliament for power to build the following lines:—From Calgary to Macleod, Alta.; from Calgary to Brooks, passing Windermere, Strathcona and Bassano, and also power to build branch lines from the said lines in the districts known as the C. P. Irrigation Blocks. (Dec., 1910, pg. 1065.)

Assiniboia, Man.—A proposition has been made to the municipality of Assiniboia, near Winnipeg, by a real estate company to build an electric railway on streets running north from Portage Ave.

Brandon, Man.—Application is being made by a Vancouver, B.C., financial corporation for a franchise for an electric railway in Brandon, Man. The Mayor, referring to the fact that petitions were being circulated favoring the granting of the franchise, said it had been the general policy of the council to refuse to grant any applications for such a franchise, believing that the city could not afford to give away so valuable a concession. (Dec., 1910, pg. 1065.)

British Columbia Electric Ry.—The city council of Vancouver, B.C., has under consideration the desirability of granting a new franchise for 23 years, covering greater Vancouver.

The Board of Railway Commissioners has ordered the Vancouver, Fraser Valley and Southern Ry., which is building the line through Burnaby tp. to insert a diamond where it crosses the Vancouver, Victoria and Eastern Ry., and that the crossing be protected by interlocking plant, derails and home and distant signals on both lines on each side of the crossing.

The new interurban station which is being built in New Westminster will be of brick, two stories high, on concrete foundations. The roof will be supported on steel columns, so arranged that additional stories can be added as desired. The building will be 132 ft. square, with frontages on Columbia, Front and Eighth streets. On the ground floor, in addition to the accommodation for the public, there will be the offices for the dispatching staff of the company's entire interurban system. Three sets of tracks will pass diagonally through the building from Eighth St. to Front St., and passengers will only be allowed inside the part of the building devoted to the arrival and departure of cars. There will be also on this floor waiting rooms, ticket offices, parcel and express offices. On the second floor there will be offices for the Manager of the Interurban lines, the Local Manager, Divisional Engineer, Auditor, Trainmaster, Roadmaster, and rooms for the employes. In connection with the erection of the building yards will be laid out, and freight sheds, repair shops and other buildings erected. (Dec., 1910, pg. 1065.)

Cape Breton Electric Co.—The Sydney, N.S., city council passed a resolution Dec. 2, asking the company to extend its line to Waterford, along the shore, about 8.5 miles. (June, 1910, pg. 495.)

B.C. Electric Ry. handling big crowds at Vancouver.

Galt, Preston and Hespeler Ry.—The question of an extension of this line from Guelph to Elmira, Ont., is under consideration, but it is said that the company has not reached any decision as to what it will do. The municipalities through which the projected extension will pass are anxious that the line should be built, but have not reached an agreement as to which of three suggested routes should be adopted. (July, 1909, pg. 491.)

Hamilton, Waterloo and Guelph Ry.—J. Patterson, who is conducting the negotiations for the building of this projected electric railway, stated at Hamilton, recently on returning from London, Eng., that he was not in a position to make an authoritative announcement as to construction. He, however, expected shortly to be in a position to do so. (Oct., 1910, pg. 875.)

Huron and Ontario Ry.—Application is being made to the Dominion Parliament to extend the time within which the lines and branches authorized may be built. T. H. Kilgore, Confederation Life Building, Toronto, is Secretary of the company. The act of incorporation gives the company general power, but in endeavoring to arrange routes, etc., the company has proposed to build a line to be operated by electric power. (Dec., 1910, pg. 1069.)

International Ry.-International Traction Railways.—Application is being made to the Dominion Parliament for an act "enabling the International Traction Railways to acquire and become possessed of all the estate property, name, rights, privileges and franchises of the International Ry. in Canada." The notice is given by A. M. Grier, Solicitor for the company, Niagara Falls, Ont. (Mar., 1910, pg. 231.)

London and North Western Ry.—D. A. Stewart advised the London, Ont., city council, Nov. 28, that it had been decided to withdraw the company's application for a guarantee of bonds for the present. (Dec., 1910, pg. 1069.)

London Street Ry.—London and Lake Erie Ry. and Transportation Co.—We are advised with respect to the press reports that a merger of these companies with the London Electric Co. was being arranged, that so far as the latter company is concerned there is no foundation for the reports. From another source we are informed that there have been some attempts to arrange for some such merger, but with what mea-

Opportunities for Industries
AND
Townsites in Western Canada

The Industrial and Townsite Department of the CANADIAN NORTHERN RAILWAY is prepared to furnish valuable information to, and will co-operate with, Homeseekers, Manufacturers, and Wholesale and Retail Merchants, in all lines of business who are seeking locations.

The entire line of the Canadian Northern Railway runs through the great wheat belt of Western Canada, where practically every acre can be put under cultivation. There is no waste land, and nowhere are crops more certain and markets more accessible.

The Canadian Northern is opening numerous new towns, where there are good openings for merchants, mechanics and professional men—some splendid opportunities for young men to get started in life.

In no section are there better educational advantages, greater social opportunities, or more healthful climatic conditions. Values are low compared with other sections of the country with like conditions and soil. If you are seeking any kind of location, write

sure of success is not known. Other reports state that the merger, if it takes place at all, will include the Grand Valley Ry. and the lines associated with it, and that the whole will come under the control of the Mackenzie, Mann & Co. interests. (Dec., 1910, pg. 1069.)

Montreal and Southern Counties Ry.—Press reports state that an arrangement is being made by which the company's cars may be run over the Montreal Street Ry. beyond McGill St., in the same way as the Lachine cars.

Plans have been approved by the Board of Railway Commissioners for the proposed station building at the corner of McGill and Youville streets, Montreal. An order has been issued by the Board of Railway Commissioners authorizing the opening for traffic of the line from St. Denis St., St. Lambert to Longueuil, Que., 3.5 miles. (Nov., 1910, pg. 965.)

Moncton Tramway, Electricity and Gas Co.—O. P. Boggs, Manager, has notified the Moncton, N.B., city council that it is proposed to lay tracks on a number of the streets in the city, and asking that the routes may be approved. The notice is under consideration. (Oct., 1910, pg. 875.)

Montreal Street Ry.—The city council received a letter from E. A. Robert, President, Dec. 10, stating that the existing agreement between the city and the company was not sufficiently broad to meet the requirements of the city, and suggesting that representatives of the city and the company get together and discuss the situation. The letter is under consideration. (Dec., 1910, pg. 1067.)

Moose Jaw Electric Ry.—Track has been laid on approximately three miles of paved streets in Moose Jaw, Sask., and for some distance on the unpaved streets. The power house and barns are to be located at the corner of Fourth Ave. and High St., where the company has purchased ten lots. The barns will have a capacity for 20 cars, but will be so arranged that they can be added to. It is hoped to have six miles completed by the middle of the year, when the line will be opened for traffic. (Oct., 1910, pg. 875.)

Nanaimo General Electric Ry.—This is the title of the company which it is proposed by the Dominion Stock and Bond Corporation to incorporate for the purpose of building an electric railway in Nanaimo, B.C. The taxpayers are being asked to pass a bylaw granting a franchise to the company, and authorizing the city council to guarantee $300,000 of the company's 4½% bonds for 20 years. The city is to receive 10% of the company's revenue. (Dec., 1910, pg. 1067.)

B.C. Electric Ry. erecting shop, New Westminster.

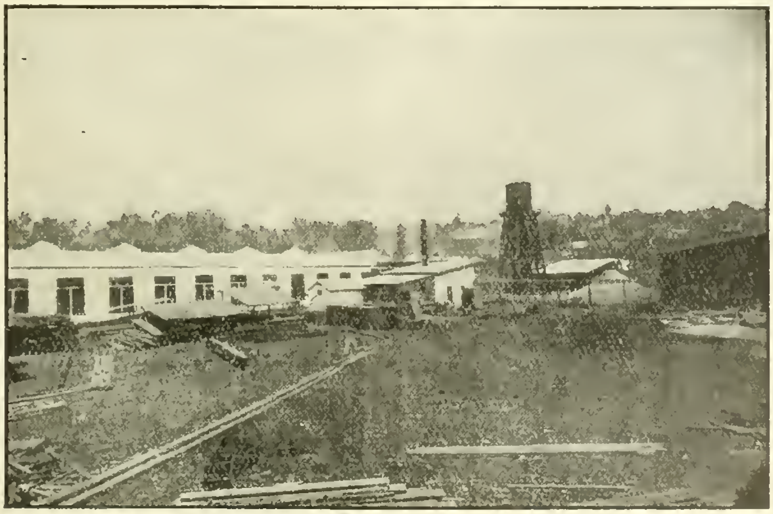
Niagara Falls, Welland and Dunnville Electric Ry.—Press reports state that final steps were taken towards the building of this projected electric railway at a meeting of the directors held Dec. 1. F. E. Misener, Marshville, Ont., is Secretary. (Nov., 1910, pg. 965.)

North Midland Ry.—A bylaw will be voted on Jan. 2 by the taxpayers of London, Ont., favoring the guarantee of the company's bonds for $200,000. The company proposes to build a line from London to St. Marys and Stratford. A. E. Welch, who is associated with the Western Central Ry. is also connected with the directorate of this company. (Oct., 1910, pg. 875.)

Ottawa and Kingston Electric Ry.—A trip over the route of this proposed electric railway has been made by A. H. N. Bruce, C.E., Ottawa, preliminary to the application for a charter of incorporation. At a conference with the railway committees of the Ottawa Board of Trade and the city council, Nov. 23, Mr. Bruce stated that the route of the proposed line was quite feasible, and that sufficient power for its operation could be obtained at Ottawa. Nothing, however, can be done until the company has been incorporated, and parliamentany authority obtained for the building of the line. (Dec., 1910, pg. 1067.)

Peoples Ry.—The taxpayers of three townships and of one town will vote Jan. 2 on bylaws authorizing the taking of preference stock in this projected railway. The places, together with the amount of stock proposed to be taken are:—Fergus, $20,000; West Garafraxa, West Luther, $30,000 each, and Proton, $36,000.

Owing to the assignment of F. Maxwell, who had a grading contract between Berlin and Bloomingdale, and the sale of his plant by the bailiffs, the company has taken over the contract, and is continuing the grading under the charge of its Chief Engineer. (Dec., 1910, pg. 1069.)



Rear view, B.C. Electric Ry. plant, New Westminster.

Port Arthur and Fort William Electric Ry.—The taxpayers of Port Arthur, Ont., are being asked to approve a bylaw to raise $75,000 to pay for 80 lb steel rails to be laid on Cumberland St., and to pave such portions of the street as are at present unpaved. The taxpayers of Fort William are being asked to pass a bylaw authorizing the raising of $100,000 for street railway purposes. (Oct., 1910, pg. 875.)

Saskatoon, Sask.—The city council decided at a recent meeting not to ask the taxpayers to pass a bylaw authorizing the building of a street railway at present. Two companies represented by W. S. Weeks, Edmonton, Alta., and —. McRae, Ottawa, are making applications for a franchise. (Dec., 1910, pg. 1069.)

Toronto and Eastern Ry.—The plans for the line through the towns of Oshawa, Whitby and Cobourg have been approved by the respective councils, and the company will in the near future apply to the Board of Railway Commissioners for approval of its location plans.

Western Central Ry.—The application being made to the Dominion Parliament for extension of powers, etc., has been amended by the addition of the following:—"Providing that its electric railway, authorized to be constructed from Toronto Ont., to London, Ont., with branches to Stratford, Woodstock and Wellesley may be extended from London to Windsor, and connecting therewith that ferries may be maintained across the Detroit River."

The company was originally incorporated by Ontario Legislature in 1905, and has secured extensions of time for construction at various times since. A. E. Welch, who was interested in the promotion of the old South Western Traction Co., is associated with this project, and also with that of the North Midland Ry. (Dec., 1910, pg. 1069.)

Watrous, Sask.—A press report states that the National Securities Corporation

British Columbia Electric Ry.—Gross earnings for Oct. 1910, $349,664; working expenses $205,266; net operating earnings $144,398; renewal funds $25,417; net earnings $118,981; approximate income from investments $20,000; net income $138,981, against $264,306 gross earnings; $131,679 working expenses; $132,627 net operating earnings; $16,394 renewal funds; $116,233 net earnings; $16,500 approximate income from investments; $132,733 net income for Oct. 1909. Aggregate gross earnings for four months ended Oct. 31, 1910, $1,247,122; net earnings $531,577, against $967,172 aggregate gross earnings, and $454,296 net earnings for same period 1909.

Calgary St. Ry.—Gross earnings for Oct., $20,501.30; expenses, $10,858.77; net earnings, $9,642.53; for Nov., $19,857.01; expenses, $10,170.58; net earnings, $9,686.43. Aggregate gross earnings for 11 months ended Nov. 30, 1910, $190,757.88; expenses, maintenance of way and structures, $7,500; maintenance of equipment, $11,015.06; transportation, $75,597.63; general, $7,509.36; interest and sinking fund, $29,874.68; 5% contingent reserve, $9,537.89; net profits, $51,736.36.

Grand Valley Ry.—Action has been entered by the First National Bank of Birmingham, Pittsburg, Pa., to recover from the G.V. Ry., Brantford, Ont., $1,023.42 on certain overdue bond coupons.

Halifax Electric Tramway.—Railway receipts for Nov., $15,524.28, and for two week ended Dec. 14, 1910, $7,176.41, against $14,603.64, and $6,900.92 for same periods 1909.

London St. Ry.—Gross earnings for Nov., 1910, $20,644.79; expenses, $15,494.46; net earnings, $5,150.33; deductions, $2,363.05; net income, $2,787.28, against $18,964.07 gross earnings; $14,211.51 expenses; $4,752.56 net earnings; $2,363.05 deductions; $2,389.51 net income for Nov., 1909. Aggregate gross earnings for 11 months ended Nov. 30, 1910, $232,390.58; expenses, $165,217.56; net earnings, $67,173.02; deductions, $26,308.25; net income, $40,864.77, against $221,685.18 aggregate gross earnings; $154,361.38 expenses; $67,323.80 net earnings; $26,445.81 deductions; $40,877.99 net income for same period 1909.

Montreal St. Ry.—Passenger earnings for Nov., 1910, $355,586; miscellaneous earnings, $10,512.34; total earnings, $366,098.34; operating expenses, $227,441.90; net earnings, $138,656.44; city percentage on earnings, $11,692.01; interest on bonds and loans, $15,763.22; rent leased lines, $552.90; taxes, $4,000; surplus, $106,643.31; expenses per cent. of earnings, 62.13, against $323,446.50 passenger earnings; $11,424.77 miscellaneous earnings; $334,871.27 total earnings; $200,137.56 operating expenses; $134,733.71 net earnings; $11,814.27 city percentage on earnings; $14,471.85 interest on bonds and loans; $498.67 rent leased lines; $4,000 taxes; $103,948.92 surplus; 59.76 expenses per cent. of earnings for Nov., 1909. Aggregate total earnings for two months ended Nov. 30, 1910, $752,786; operating expenses, $433,191.96; net earnings, $319,594.04; total charges, $64,011.14; surplus, $255,582.90, against $688,878.22 aggregate total earnings; $374,872.53 operating expenses; $314,005.69 net earnings; $61,864.27 total charges; $252,141.42 surplus for same period 1909.

Toronto Ry.—Gross earnings for Nov., 1910, $365,466.21; expenses, $192,103.82; net earnings, $173,362.39, against $325,416.71 gross earnings; $168,112.31 expenses; $157,304.40 net earnings for Nov., 1909. Aggregate gross earnings for 11 months ended Nov. 30, 1910, $3,941,125.10; expenses, $2,033,438.42; net earnings, $1,907,686.67, against $3,515,684.40 aggregate gross earnings; $1,786,491.36 expenses; $1,729,193.04 net earnings for same period 1909.

Winnipeg Electric Ry.—Gross earnings for Oct. 1910, $304,114; operating expenses $151,782; net earnings $152,332, against $247,074 gross earnings; $123,766 operating expenses; $123,298 net earnings for Oct. 1909. Aggregate gross earnings for 10 months ended Oct. 31, 1910, $2,602,499; net earnings $1,296,958, against $2,087,971 aggregate gross earnings, and $1,044,926 net earnings for same period 1909.

◆

Street Car Situation in Toronto.

The description of the Toronto Ry.'s latest type of standard convertible cars in our last issue contained the following sentence:—"The entrance to car is large on the outside of vestibule. making it very convenient for the pay-as-you-enter system, as all passengers have to pass over the entire platform in order to enter." We wish it to be clearly understood that this expression of opinion merely refers to the platform, which with a proper division by a railing might easily be made suitable for the p.a.y.e. system. We must not, however, be understood as expressing the opinion that the new cars, as a whole, are adapted for that system. They have only one rear door. In a city where the traffic is as dense as it is in Toronto, and where the cars are frequently unduly crowded, especially at the rush hours, we believe that two rear doors are necessary, one for entrance and one for exit, and that one exit only, at the front, is not sufficient.

The Toronto Ry. Co.'s bylaws respecting smoking, spitting, etc., and respecting closed motor and trailer cars, as published in our last issue, were approved by the Ontario Railway and Municipal Board Dec. 2. On the bylaw respecting closed motor and trailer cars the board was not unanimous, Chairman Leitch and Deputy Chairman Ingram being in favor of it, and H. N. Kitson dissenting on several points. The company at once proceeded to enforce the bylaws, and the p.a.y.e. system was within a few days put in operation on all the cars. The system proved so inconvenient, on account of specially adapted cars not having been provided, that very general opposition was aroused among the citizens, which culminated in a large mass meeting called by the Mayor, at which resolutions were adopted calling on the Ontario Railway and Municipal Board to reconsider its action, and also asking the Provincial Premier to interfere. After the meeting a mob interrupted the car traffic on a number of streets and did considerable damage by breaking windows, etc.

The matter again came before the Ontario Railway and Municipal Board, Dec. 9, when the city applied to have the p.a.y.e system suspended. This was refused by the Board. Counsel for the company stated that conductors were to be allowed to exercise their judgment as to passengers going out by the rear doors when cars were crowded and when there was no crowd attempting to get on.

On Dec. 19, the Ontario Railway and Municipal Board went further into the question, and at the opening of the hearing, Chairman Leitch said the company had fallen down in its attempt to give a p.a.y.e service. After considerable discussion it was decided to suspend for a month the Board's former approval of the bylaw respecting closed motor and trailer cars, counsel for the Toronto Ry. stating that the company must not be considered as waiving any of its legal rights. The Board's decision permits the p.a.y.e system to be continued for the month on the cars on which stationary fare boxes have been installed. On all cars not so equipped, passengers may enter the cars before paying. The company may proceed with alterations to its cars on the understanding that it assumes the risk of their not conforming to the standard which the Board may finally decide on.

The general consensus of opinion among street railway managements throughout Canada and the United States is that the p.a.y.e system is in every respect the most satisfactory for handling passengers, but it cannot be said to yet be on trial in Toronto, for as before stated, specially adapted cars have not been provided. Where specially constructed cars are in use, as in Montreal, Ottawa, Hamilton, Calgary, Edmonton, New York, Baltimore, Buffalo, Cleveland, Chicago, St. Louis and a large number of other cities, the system is working admirably and with general public approval. In Philadelphia and Pittsburg, attempts to introduce the system without proper cars resulted in failure, which coupled with the experience in Toronto, shows that the system cannot be operated successfully except on the Montreal type of car. Many of the Toronto cars, which have short rear platforms, are not adapted for it and in all cases the rear platforms should be closed in on one side and at the back.

Montreal Street Railway Accidents.

In our last issue a brief reference was made to an inquiry held by the Quebec Public Utilities Commission in reference to accidents on the Montreal St. Ry., and connecting lines, etc. The Commission made the following order:

1. That no further cars of the single truck pattern be placed in use upon any of the routes without special permission of the Commission and for cause shown. 2. That the number of such cars be reduced each year by 50 at least, and be replaced by larger and double truck cars. Upon application, and for reasons shown and satisfactory to the Commission, the use of such cars upon certain routes will be permitted and sufficient cars of the kind may be retained for the purpose.

3. That all cars 30 ft. or more in length and weighing 25,000 lbs. or over be equipped with air brakes in addition to hand brakes and proper sanding appliances. That cars operating upon routes where there are severe grades, such as the Guy street, be provided with an emergency brake as well as other brakes.

4. That all cars be equipped with an automatic mechanical drop wheel guard to be approved by the Commission. The apron to be attached to the truck. If this be not possible in some cases, then to the platform, as near to the truck as possible, and the wheels further protected by a wire rod screen in addition. This wire rod screen to be placed upon all single-truck cars in addition to the wheel-guard, in any event. The wheel-guards must have a manually tripped connection in addition to the automatic gate, so as to insure an additional safety should the automatic gate fail in its operation. That the tripping gate be placed not over 6 ins. from the ground and the apron of the wheel-guard not over 5 ins. Both tripping gate and apron will be so adjusted that in winter they may be kept the required height above the ice and snow. 5. As soon as cars are so equipped the fenders shall be removed. 6. Draw bars must not project beyond the platform of the car in any case and must be held firmly in place as near to the floor of the platform as possible when not in use. 7. All projecting iron or steel bumpers must be removed.

8. The speed limit of eight miles per hour must be adhered to. 9. All accidents occurring in which there is any injury done to persons, shall be reported to the Commission immediately after their occurrence, with the following particulars: Name and address of person injured or killed; date, time and locality where the accident occurred; number of the car, names of employes present and those of witnesses with addresses. Full particulars of how the accident occurred and of the age, sex, and condition of the person injured. Particulars of the appliances for safety upon the car, whether same were called into use, and how they operated. Rate of speed, route and direction of the car at the time. 10. Before a car is taken out, it must be examined by the motorman and conductor, and a report handed in to the company showing that the trolley, controller, trucks, wheels, motors, bearings, rheostat, fender (if any), wheelguards, brakes and lights, have been examined and are in order. This report to bear the car number, date and time, and be signed by both conductor and motorman. These reports shall be countersigned by the receiving official to denote receipt by him and kept on file. No car shall be taken out which is defective in any of the foregoing respects. If any accident occurs to any of the foregoing appliances while the car is out, the motorman shall report the injury in writing at the nearest station reached after the accident occurs.

A record of all complaints against conductors, motormen or inspectors shall be kept and summarized with the action taken thereon in a monthly report to the Commission.

The foregoing orders, three to 10 inclusive, shall apply to all cars operated over the lines of the Montreal St. Ry. Co., but the use of fenders shall be permitted in the city upon cars operating around the mountain or outside of the city limits and in every case when required by other competent authority.

The work and alterations as outlined above shall be carried out within the following delays: In respect of all double truck cars within four months. In respect of all other cars within 10 months. All work to be done to the satisfaction of the Commission's Engineer, and appliances maintained in thorough working order, subject to inspection and test at any time.

The order of the Commission respecting wheel-guards, brakes and inspection of cars shall apply to all electric railways and tramways under the jurisdiction of the Commission, unless for special reasons communicated to the Commission in writing within 30 days of the receipt of the order, some modification is allowed. Cars operating at over 10 miles per hour in any part are to be provided as well with a suitable fender, or other protection in front, approved by the Commission.

Electric Railway Notes.

The London St. Ry. has received one heavy double broom electric snow sweeper, from the Ottawa Car Co.

The Sherbrooke St. Ry. has received one heavy double broom electric snow sweeper from the Ottawa Car Co.

D. S. Barton has been appointed Consulting Electrical Engineer Quebec Ry. Light Heat and Power Co., on special duty.

The Moose Jaw Electric Ry. has ordered six pay-as-you-enter type cars from the Ottawa Car Co. for spring delivery.

The Regina city council is in the market for six motor cars for its line, construction of which will be started in the spring.

The Quebec Ry., Light and Power Co. has received two 18 ft.. pay-as-you-enter cars, 30 ft. long over all, from the Ottawa Car Co.

The Hamilton St. Ry. has received two 31 ft. cars, 44 ft. long over all, mounted on 27-G-1 trucks, from the Ottawa Car Co.

The Calgary St. Ry. has ordered 12 single truck, single end pay-as-you-enter cars, 8 ft. wheel base, from the Preston Car and Coach Co., Preston, Ont.

The Calgary St. Ry. has received two 33½ ft. semi-convertible pay-as-you-enter cars, 46½ ft.. long overall, mounted on 27-G-1 trucks, from the Ottawa Car Co.

The Port Arthur and Fort William Electric Ry. has ordered two 33½ ft. semi-convertible cars, 46½ ft. long over all, mounted on 27-G-1 trucks, for Port Arthur, from the Ottawa Car Co.

The Levis County Ry. passenger elevator was practically destroyed by fire, Dec. 5. It was built in 1901, costing about $30,000, but has not been used very extensively.

The Edmonton Radial Ry. has ordered four double truck single end pay-as-you-enter cars, 31 ft. 10 in. bodies, mounted on 27-G-1 trucks, from the Preston Car and Coach Co., Preston, Ont.

The British Columbia Electric Ry., has erected a lecture room at Vancouver, and given the use of equipment, in connection with the night school work carried on there, by a committee of the employes, the funds being supplied by the company.

The Quebec Public Utilities Commission has authorized the Quebec County Ry., a subsidary of the Q.R.,L. & P. Co., to open for traffic the portion of its railway from Maple Ave., Montcalm, northerly and westerly to the top of Sillery Hill.

The Edmonton Radial Ry. has ordered four 30½ ft. semi-convertible car bodies, 43½ ft. long over all, and has received two 28 ft. pay-as-you-enter cars, 44½ ft. long over all, mounted on 27-G-1 trucks, and one heavy double broom electric snow sweeper, from the Ottawa Car Co.

The Port Arthur and Fort William Electric Ry. has ordered two single end double truck pay-as-you-enter cars, 31 ft. 10 in. bodies, mounted on 27-G-1 trucks, for Port Arthur, and two double end, but otherwise similar cars for Fort William, from the Preston Car and Coach Co., Preston, Ont.

C. J. Pigot, heretofore Secretary and Roadmaster Quebec Ry., Light and Power Co., has been appointed Chief Engineer Quebec Ry. Light, Heat and Power Co., vice E. A. Evans, resigned. He will have charge of all construction work, (except electric), track and roadway, real estate and buildings, and general engineering.

The Montreal Tramway and Power Co. has been incorporated in London, Eng., with a total capitalization of $20,000,000, to take over the Montreal Street Ry. and other concerns. The officers and directors are:—President, E. A. Robert; Vice President, J. W. McConnell; Secretary, H. R. Mattison; other directors, F. H. Wilson, J. G. Ross, H. A. Lovett, K.C.

The Dominion Power and Transmission Co., Hamilton, Ont., has ordered from the Preston Car and Coach Co., Preston, Ont., for delivery by May 1, three interurban cars, 55 ft. 8 ins. over bumpers, 43 ft. 8 ins. over end posts, 8½ ft. wide over sills, mounted on Baldwin Locomotive Works trucks with steel wheels, and with Westinghouse electrical and air brake equipments.

The Quebec County Ry. was fined $200, Dec. 6, by the Quebec Public Utilities Commission for laying tracks on the south side of the road from Maple Ave. to Sillery, for which permission had not been granted, instead of on the north side, for which permission had been granted. On the favorable report of the Board's engineer, the company was authorized to continue the laying of rails on the south side.

The arbitrators in the differences between the Winnipeg Electric Ry. and its employes, after a protracted hearing, brought in an award against the men, whose principal ground of complaint was that the company refused to reinstate some employes who had been dismissed for having gone into public houses while in uniform. The men expressed dissatisfaction with the award and went on strike Dec. 17.

The British Columbia Electric Ry. during 1911 will build, at its own car shops at New Westminster, 30 city type steel frame, pay-as-you-enter, double truck, four motor cars; three interurban steel or wood frame pay-as-you-enter double truck four motor cars, and a number of box, flat and dump cars, and will place orders, tenders for which have been asked, for 30 city type steel frame pay-as-you-enter double truck four motor cars; 10 suburban, steel or wood frame pay-as-you-enter double truck four motor cars; two interurban, steel or wood frame pay-as-you-enter double truck four motor cars, and two electric locomotives.

ELECTRIC RAILWAY STATISTICS FOR YEAR ENDED JUNE 30, 1910

The following abbreviations are used in the names of railways—E., electric; E.R., electric railway; E.S.R., electric street railway; Ry., railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operations of the line to the extent of the figures given. The numbers in brackets—thus (1)—after the name of a railway refer to notes below.

Name of Railway	Mileage	Gross Earnings	Operating Expenses	Taxes, Interest, etc.	Net Income or Deficit	Passenger Car Mileage	Freight Car Mileage	Fare Passengers Carried
Berlin & Waterloo S.R. (1)	3.12	$ 31,750	$ 24,313	$ 5,436	$ 1,999	90,000	7	673,514
Berlin & Bridgeport Ry. (1)	2.40	6,307	5,237	960	73	34,400	....	150,648
Brantford & Hamilton E.R. (2)	23.00	98,748	67,913	59,771	—28,936	233,733	32,978	372,905

Notes to Electric Railway Statistics.

The various lines carried 99,227,824 transfer passengers, bringing the total number of passengers carried to 460,192,700, and the twenty lines carrying freight reported that 852,294 tons had been transported.

(1) The Berlin and Waterloo St. Ry. is owned by the town of Berlin, Ont. It leases the Berlin and Bridgeport Ry. from a company.

(2) The Dominion Power and Transmission Co., owns or controls the Brantford and Hamilton Ry., Hamilton and Dundas Ry.; Hamilton, Grimsby and Beamsville Electric Ry.; Hamilton Radial Ry.; and Hamilton St. Ry.

(3) The British Columbia Electric Ry. operates local lines in Vancouver, New Westminster and Victoria, and interurban lines radiating from Vancouver. It has 13.44 miles of second track, and operates over 21 miles of leased lines.

(4) The Chatham, Wallaceburg and Lake Erie Ry. added $9,300 to reserves and special charges, and paid $14,040 in dividends out of net income.

(5) The Galt, Preston and Hespeler Ry. which also operates the Preston and Berlin Ry. under lease, has 1.36 miles of second track. It is operated in connection with the C.P.R. under a lease. The C.P.R also owns the Hull Electric Co. This company has 11.51 miles of second track and operates over 1.82 miles of leased track.

(6) The Grand Valley Ry. mileage includes the lines of the Brantford St. Ry., the G.V. Ry., and the Woodstock, Thames Valley and Ingersoll Ry., which were reported separately in previous years.

(7) The Guelph Radial Ry. is owned by the city of Guelph.

(8) The Halifax Electric Tramway Co. has 3.09 miles of second track. It paid $84,000 in dividends out of net revenue.

(9) The International Transit Co.'s line, owned by the Lake Superior Corporation at Sault Ste. Marie, Ont., connects with the Trans St. Mary's Ry. at Sault Ste. Marie, Mich., owned by the same company.

(10) The London St. Ry. has 6.79 miles of second track. It paid $33,120.00 in dividends out of net income.

(11) The London and Lake Erie Ry. and Transportation Co. is the old Southwestern Traction Co. It has trackage rights over the St. Thomas St. Ry. 2.28 miles.

(12) The Montreal St. Ry. has 57.18 miles of second track, and operates over 8.58 miles of leased tracks. It reports a surplus of $2,591,365.46 after adding $200,000 to reserves and paying $999,573 in dividends. It owns the Montreal Park and Island Ry., which has 14.61 miles of second track, and paid $18,900.00 dividend out of the latter's net income. It also owns the Montreal Terminal Ry., which has 4.66 miles of second track.

Harbor and River Works, 1909-'10.

The total expenditure of the Department of Public Works for the year ended Mar. 31, 1910, was $11,342,565.29. Of this sum there was expended on harbors and rivers $3,207,233.59; on dredging, plant, etc., $3,669,030.18; and on telegraphs, $448,649.70, the remainder being on public works, other than those affecting transportation interests. The total revenue received was $485,884.96, of which $45,816.92 was from graving docks, and $136,747.31 from telegraph lines.

The expenditure on dredging, which covers the provision, maintenance and repairs of dredging plant as well as the actual work done in harbors and along channels, now amounts to nearly one-third of the department's total expenditure. The usual method heretofore used for deepening channels has been that of excavation, and this is the only method in the case of maritime harbors. On the inland lakes and rivers, however, considerable study has recently been given to a more economical and better method; that is, to raise the surface of the water by means of dams and controlling works at the outlets, thus establishing reservoirs for the storage of the surplus water which comes down in the spring, so that later they may be gradually released to increase the low water flow in time of deficiency. The Department has in hand at a number of points improvements of this nature. Comparatively few years ago 14 ft. navigation was ample for all needs, but now 20, 22 and in the larger ports 25 ft. are required. In addition to the ordinary silting in of harbors and rivers, larger vessels, both passenger and freight, of much deeper draught, are being built. Much additional dredging has been rendered necessary through the lowering of the water level, especially on Lake Huron. Although to some extent this is due to the diversion of the Chicago drainage canal, in all probability the main cause is to be found in the improvements which have been made in the Detroit River. Among the places where work has been carried on special mention may be made of the progress of the improvements under way at Fort William, Victoria Harbor, and Tiffin, Ont. At Fort William, access can now be had to the Grand Trunk Pacific Ry. 3,500,000 bush. elevator; the channel leading to the C.P.R. elevator at Victoria Harbor is 125 ft. wide and 1,600 ft. long, while the channel to the G.T.R. elevator at Tiffin has been completed to the required width and depth for its entire length. A new dredge—the Nereus—was acquired for the Maritime Provinces, and after being overhauled at Halifax, she was set to work at Bathurst, N.B. The dredging plant now owned by the Department consists of 42 dredges, six stone lifters, one snag boat and 21 tugs.

The principal expenditures on harbor and river works were made in Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Of the works in these provinces the more important have been:—The preparation of several additional shipping berths, the extension of the Sand Point wharf and the erection thereon of a warehouse at St. John, N.B.; the erection of a wharf at Pointe a Carcy, the preparation for slips on the St. Charles River, and building of a deep water wharf at Levis, Que.; the construction of a new western entrance to Toronto harbor, which, when completed, will consist of two parallel piers 220 ft. south of the present western entrance, having a length of 2,200 and 2,500 ft. respectively, between which there will be a depth of 18 ft. of water. For the maintenance of water levels, the principal work in hand is on the Ottawa River. One dam is under construction at the foot of Lake Timiskaming, a second at the outlet of Lake Kipawa, the plans for a third at Gordon creek, another outlet of Lake Kipawa, and plans are in preparation for a fourth at Lake la Quinze.

◆

Winnipeg—Edmonton Navigation.

The possibilities of the development of water transportation in the three prairie provinces has been receiving the attention of the Public Works Department. In the early pioneer days, prior to the advent of the railways, a number of flat-bottomed sternwheel vessels were built and operated on the Saskatchewan River with considerable success. Their operation covered a period from 1875 to 1886, when vessel carriage was gradually abandoned, it having been found cheaper to ship by rail. Very little consideration was given to the opening up of commercial waterways in the Northwest from that time until the fall of 1909, when the Department gave instructions that a careful study of conditions should be begun, and provision made to carry out the necessary surveys and investigations to enable a definite conclusion to be reached as to what was possible in that direction, and to form a fairly approximate estimate of the cost.

In the fall of 1909 a preliminary investigation was made of the Saskatchewan River between Lake Winnipeg and The Pas, a stretch of 146 miles, the most difficult portion to be improved. In the last 23 miles the fall is 101 ft., to improve which will necessitate the construction of two dams and five locks, giving a 9 ft. draught at low water as far as the end of Cedar Lake, which would be the head of deep water navigation and the point of transfer. The approximate estimate of the cost of these improvements is $3,000,000. An important feature in connection with the scheme outlined is that at one of the proposed dams a water power of some 80,000 h.p. would be created, which would be of immense importance in the establishment of local industries on the possible milling of wheat and grinding of pulp on the line of the projected railway to Hudson Bay.

Early in the summer of 1910 the investigation of the Saskatchewan River above The Pas was continued, and seven parties were placed in the field under the direction of L. R. Voligny. The work directed to be done consists of a reconnaissance survey of the river from The Pas to Edmonton, 752 miles, and four level parties, two transit parties, and one contour party have been engaged on it. Each level party set out to cover 188 miles of the river, to ascertain the accurate river slope; the transit parties undertook the necessary topographical and hydrographic work in portions of the river requiring special consideration. The greater part of the work of improvement will be required at La Colle falls, some 23 miles below Prince Albert, the work extending 12 miles below to The Forks, where the north and south branches of the Saskatchewan meet. This stretch of the river is very crooked and narrow, containing no less than 15 rapids, and it is the most difficult and dangerous part of the North Saskatchewan River to navigate. Other portions of the river requiring improvement will be the Cadotte, Nipawin and Tobin rapids. The work, which, it is hoped to complete during the season, is to complete the levels of 530 miles of the river, and the making of special local surveys to ascertain what wing dams or other structures will be necessary to procure a navigable channel. The Saskatchewan River is an alluvial stream of rapid flow, and is obstructed by shifting sandbars; the latter presenting the greatest impediment to navigation. Above Cedar Lake, the river seems to be adapted for only shallow draught navigation of from four to five feet. This, however, will be sufficient for vessels of the sternwheel type, and it is thought that the cost of securing navigation for such craft will not be very great.

An important link in this chain of water communication, says the Deputy Minister, has already been secured by the construction of the St. Andrews lock and dam, on the Red River, below Winnipeg, and 28 miles above Lake Winnipeg, which were formally opened for traffic July 14. This lock and dam afford, at periods of lowest water observed, uninterrupted navigation for vessels drawing up to nine feet of water between Winnipeg and points on Lake Winnipeg, which has an area considerably larger than that of Lake Ontario. The lock has an effective length of 200 ft. and a width of 45 ft., large enough for a vessel of 1,600 tons capacity. The maximum lift will be 21 ft. at the period of lowest water. The lock possesses all the latest features, including automatic self-balanced opening and filling valves, which are being used for the first time in Canada. The lift is obtained by the construction of a movable dam, consisting of a fixed substructure or dam of concrete and a series of steel truss bridges resting on piers, from which are operated a number of frames on which roll curtains of wooden laths. This movable dam is the first of its kind to be built on the continent. "With the development of navigation on the Saskatchewan," the Deputy Minister says in conclusion, "Canada would stand unique among the countries of the world in the matter of water transportation: 30 ft. navigation (soon to be 35) from the sea to Montreal, a distance of nearly 1,000 miles; 14 ft. from Montreal to Fort William, somewhat over 1,200 miles; 9-ft. navigation from Winnipeg to the head of Cedar Lake, and from there to the Rocky Mountains, from 4 to 5-ft. navigation, over a distance of 1,100 miles, a total of approximately 3,300 miles of actual inland waterway, traversing the greater part of the northern half of this continent, the only break in the chain being the 400 mile stretch from Fort William to Winnipeg."

In connection with the question of the building of a railway to Hudson Bay, the Department made an investigation to determine the possibility of establishing navigation on the Nelson River between Lake Winnipeg and Hudson Bay. The report shows that although perfectly feasible, it would be an undertaking of considerable magnitude, very much like the proposed Georgian Bay canal. This proposed waterway has a length of 440 miles, with a fall of 758 ft., whereas the Nelson River channel would be 430 miles long, with a a fall of 700 ft.

◆

The St. Lawrence Navigation Season.

The Montreal Harbor Commission revenue for the 1910 season was $404,233.13, against $350,883.65 for 1909. Of these amounts $256,500 was received from imports, $89,000 from exports, and $58,733.13 from local traffic, in 1910, against $202,500 from imports, $93,500 from exports, and $54,833.65 from local traffic, in 1909. There was an increase in the number and tonnage of vessels using the port, the figures being 747 vessels with a tonnage of 2,234,722 for 1910, against 669 vessels and 1,906,922 tonnage for 1909. The season opened Apr. 11, and closed Dec. 2, the steamboat Carleton passing through to Quebec on that date, while the last ocean-going vessel was the s.s. Bornu, on Dec. 1.

A number of improvements were completed during the year, the chief being the grain elevator opposite the Jacques Cartier pier, and an extension of the grain conveyor system. The elevator is 314 by 100 ft., with a height above wharf level of 220 ft., and with concrete foundations 23 ft. below the wharf level. It has a capacity for 1,772,000 bush., and can receive grain from seven cars at a time on each of the four tracks running through the elevator, making 240 cars a day of 10 hours. The reconstruction of the Victoria wharf, making it a high instead of a low level wharf, the elevation of the railway tracks from Bonsecoeurs market to Molson's creek, and a large amount of dredging work were also completed.

The C.P.R. reports that about 15,000 passengers were carried eastward on its vessels, and about 46,000 westward, a considerable increase, while in the freight department, 363,392 tons were carried, against 376,300 tons in 1909. The Allan Line carried 14,342 passengers eastbound and 62,785 westbound, against 14,843 eastbound and 37,141 westbound in 1909. In freight it carried 235,766 tons outward and 150,389 inward in 1910, against 251,850 tons outward and 127,541 inward in 1909. The Canadian Northern Steamships carried 9,428 passengers westbound and 4,135 eastbound, the two vessels run making seven round trips each. The White Star-Dominion Line carried about 15,000 more passengers than in 1909, and made an increase in its westbound freight business, but a decrease in eastbound traffic. The Donaldson and Thomson Lines, and Head Line also report considerable increases over previous seasons in westbound traffic, but the eastbound traffic has shown a slight decrease in each case.

C. P. R. LANDS

The Canadian Pacific Railway Company have 3,000,000 acres of selected lands for sale in Manitoba and Saskatchewan.

Our new, illustrated handbooks describe them fully and will be promptly sent free to any applicant.

Write at once for any of the following books—maps and price lists will accompany them:—

"The Heart of the Saskatchewan Valley."—Describes lands for sale in part of Western Saskatchewan.

"Where Wheat is King."—All about Central and South-eastern Saskatchewan.

"Western Canada."—An illustrated handbook of the Canadian West.

"Western Progress."—An illustrated monthly bulletin, presenting in concise form up-to-date information concerning agricultural and commercial conditions in Western Canada, and containing announcements regarding the Company's new towns.

Address Desk R.,
F. T. GRIFFIN, Land Commissioner, Winnipeg.
J. L. DOUPE, Asst. Land Commissioner.

CANADA NORTH-WEST LAND CO.

This Company has 525,000 acres of selected lands in Manitoba and Saskatchewan which offer excellent opportunities to settlers and investors who desire to secure good lands in well-selected districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

St. Lawrence and Chicago Steam Navigation Co.

This company has declared a dividend of 3% for the year 1910, payable Jan. 2, 1911, the reduction being attributed to the unsatisfactory earnings during the year.

Previous yearly dividends from 1901 to date have been as follows: 1901, 15%; 1902, 26 2-3%; 1903, 10%; 1904, 8%; 1905, 1906 and 1907, 10% yearly; 1908, 7%; 1909, 8%.

In 1909 the steamship earnings were $112,062.44, and interest $868.36, total, $112,930.80. The cost of management was $13,507.07, leaving net earnings of $99,423.73, deducting the 8% dividend, $68,800, left $20,623.73, which added to $102,383.55 brought forward Jan. 2, 1909, made a balance of $133,007.28 at credit of profit and loss Jan. 2, 1910.

◆

Canadian Marine Investigations.

An English marine paper has recently criticized the way in which official investigations into shipping casualties are conducted in Canada, especially in cases in which ships registered in the United Kingdom and officered by men holding Board of Trade certificates are concerned. It alleges that when a preliminary enquiry is ordered by the Government, the wreck commissioner goes aboard a vessel and holds a sort of informal enquiry, getting statements from officers and men, though not under oath. It further alleges that when the time comes for the real official enquiry to be held, the same official, who has already held the informal enquiry, is found to be sitting on the bench of the court, and, with the assistance of two assessors, acting as judge in the matter. The Mercantile Marine Association has taken the matter up in England, and, having referred it to the Board of Trade, that body asked to be provided with specific instances in which the irregularities complained of occurred. In reply, the association quoted the cases of the s.s. Aoeta and the s.s. Montezuma, and in both instances it is alleged that Capt. L. A. Demers, Wreck Commissioner, not only held the preliminary enquiry, but also afterwards acted as arbiter of the points in dispute.

The practice complained of is not of at all a serious nature, even if there is any valid objection at all which can be urged against it. The preliminary informal enquiry referred to is merely for the information of the Minister of Marine, to guide him as to whether an informal investigation should be held or not. As a matter of fact, it often happens that other competent officials are not available to make the preliminary enquiries. Possibly when they are available it would be better to have the informal enquiry and the later investigation in which judgment is given not both participated in by the same official, but there does not appear to be any evidence that any injustice has resulted from the practice complained of and the complaints has probably been made by some dissatisfied individual.

◆

Atlantic and Pacific Ocean Marine.

The Canadian Northern Steamships' s.s. Royal Edward, created another record recently, in arriving in Halifax, N.S., from Bristol, Eng., in 5 days and 10 hours.

The All-Red Steamship Co., of Montreal, is seeking Dominion legislation to empower it to operate vessels from any Canadian ports on the Atlantic and Pacific.

Press reports from the West Indies state that all the local Governments are opposed to the discontinuance of the direct steamship line with Great Britain, and the substitution of a line by way of Canada.

The steam tug Gopher, which has been built at Garston, Eng., for the C.P.R., for use in connection with its vessels while in the Mersey, recently underwent her trials there, with satisfactory results.

A St. John, N.B., press report states that the Allan Line Siberian, will shortly be offered for sale, and if not sold, she will be scrapped, together with a number of other Allan Line vessels. Her place on the Newfoundland service has been taken by the s.s. Numidian.

A. Piers, Manager C.P.R. steamships, left Canada for Liverpool, Eng., Dec. 20, after a conference with the company's officials, regarding the proposed additional vessels, for its ocean fleet. It is reported that the two vessels which the company has in contemplation will be placed in the Pacific service, and that construction will be commenced at once.

The Uranium Steamship Co. was recently charged at Halifax, N.S., with having wilfully and knowingly attempted to land 15 passengers in Canada, suf-

fering from trachoma. The Uranium Steamship Co., operates the Canadian Northern Steamships' s.s. Volturno, under charter.

With regard to the recent report appearing in the London, Eng., press, and copied to a considerable extent in Canada, that "the Grand Trunk Ry. of Canada are stated to have placed an order with a Glasgow ship builder for a fast and powerful steamer," we are officially advised that there is no foundation whatever for the report.

The White Star-Dominion Line's s.s. Laurentic, which recently arrived at Portland, Me., on her first western trip since the closing of the St. Lawrence, has been transferred to the Liverpool-New York route for the winter. The service between Great Britain and Portland, Me., via Halifax, N.S., is being continued by the s.s. Megantic and other of the company's vessels.

The Donaldson Line has awarded a contract for the building of another vessel, on the Clyde, Scotland, for its Canadian service. She will be 470 ft. long, 55 ft. wide, with accommodation for 300 cabin and 600 steerage passengers. She will be equipped with a wireless telegraph system, and all modern facilities for cold storage, and the rapid handling of cargo. It is expected that she will be ready for service by Jan 1912, when a weekly passenger service between Montreal and Glasgow will be inaugurated.

The Allan Line announces the purchase of the Holland-America Line's s.s. Statendam, which it has decided to rename Scotian, and which will replace the s.s. Pretorian on the Montreal-Glasgow route. The latter vessel will replace the Pomeranian on the London and Havre service. The Statendam was built at Belfast, Ireland, in 1898, and is equipped with two triple expansion engines, with cylinders 27½, 45½ and 75½ ins. diar., by 54 ins stroke, developing 1126 h.p., and driving twin screws. Her dimensions are, length, 515.3 ft., breadth, 59.8 ft., depth 23.8 ft.; tonnage, 10,491 gross, 6,701 register.

The Kosmos and Jebsen Steamship Cos. have announced their withdrawal from the British Columbia-Mexico service in connection with the Tehuantepec Ry., leaving the route clear for the Canadian Mexican Pacific Steamship Co., which was organized last year, and which has a Government subsidy for such service. This company is the successor of the Canadian Mexican Steamship Co., which operated the steamships Georgia and Lonsdale, under charter, on the route, for two years. Since the organization of the present company, with Capt. T. H. Worsnop as Manager, the s.s. Lonsdale has been purchased and the s.s. Henley has been chartered, both now being operated between Vancouver and Salina Cruz. Press reports state that the company is negotiating for the purchase of another vessel, owing to the increase in the traffic.

Maritime Provinces and Newfoundland.

Capt. D. McKinnon, a well known sailing captain, died at Halifax, N.S., recently aged 72.

The Department of Public Works will receive tenders to Jan. 4, for the building of an extension to the breakwater at Margaree harbor, N.S.

The Halifax Graving Dock Co. is reported to have decided to lengthen its dry dock by 50 ft., at an approximate cost of $400,000. This, it is stated, will enable the company to apply for an increased subsidy from the Government.

The s.s. Anticosti, which is being built at Sunderland, Eng., for the Dominion Steel Corporation charter, was launched

there recently. She has been specially designed for the steel trade, and is 389 ft. long by 52 ft. beam.

The St. John Steamship Co., recovered $120.30 from the Star Line Steamship Co., at St. John, N.B., Dec. 7, for breach of agreement and wharfage and dockage dues, and judgment was also entered for defendant on a counterclaim for $18.

The Dominion Government has placed the order for the construction of a steamboat for the lighthouse and buoy service in the St. Lawrence, at Collingwood, Ont. A full description of this vessel was given in our Nov., 1910, issue.

The Margaretville Steamship Co., has registered its steamship Margaretville, which was built at Margaretville, N.S., in 1910. Her dimensions are, length 93.3 ft., breadth 20.8 ft., depth 8.6 ft.; tonnage, 107 gross, 39 register She is equipped with engine of 19 n.h.p., driving a schew.

The Dartmouth, N.S. city council has decided to award the contract for the construction of a third ferry steamer, to Mackie and Baxter, Glasgow, Scotland, on either of two estimates, which the special committee may decide. The new vessel will be of the type, but on more up to date plans, of the ferry steamboat Chebucto. Larger propellers and a stronger shaft are to be used.

The Grand Falls Co. has been incorporated under the Dominion Companies Act, for the purpose of developing electric power at Grand Falls, N.B., to distribute power, and to carry on lumbering and other businesses in connection therewith, including the operation of steam and other vessels, or to hold shares in vessels or navigation companies. The capital is $1,200,000, and the offices at Grand Falls, N.B. The provisional directors are:—Sir Wm. C. Van Horne, H. S. Holt, Montreal; R. Proctor, Proctor, Vt.; G. F. Underwood, B. E. Kingman, New York City; J. Robinson, Millerton.

The Sydney, N.S., city council adopted a resolution, Dec. 9, to enter into an agreement with A. C. Ross, of Sydney, for the construction of a floating dry dock with a capacity for lifting vessels of at least 15,000 tons, at a cost of not less than $1,000,000; a ship repair and building shop and berth for man-of-war or merchant vessels up to 10,000 tons capacity, at a cost of not less than $750,000; a modern wrecking plant, at a minimum cost of $175,000. The city, on its part, agrees to assess the company on $100,000, exclusive of school and sewer rates for 20 years and supply water at 6c. per 1,000 gallons, and also to pay a bonus at the rate of 1½% on the cost, up to $1,500,000, including cost of site, each year for 20 years. The carrying out of the agreement is subject to the granting of a Government subsidy under the act granting aid in the construction of such works.

◆

Province of Quebec Marine.

The appeal in the name of W. J. Ray, against the judgment of the lower courts, that the agreement between the city of Quebec and the Levis Ferry Ltd., was drawn up according to the statute and the city bylaws, was heard during December.

The steamboat City of Toronto, plying on the Richelieu River, between Montreal and Chambly, which ran aground at Longue Pointe, towards the end of Nov., after being refloated was taken to the canal dry dock, where repairs will be undertaken during the winter.

Capt. H. St. G. Lindsay, Chief Examiner of Masters and Mates, recently made arrangements in Montreal for the establishment of a school of instruction there, and it is said that a room will be located for the purpose in the Technical School, now about completed.

A deputation from the Quebec Board of Trade waited on the Dominion Premier recently to urge that the dredging of the St. Charles River be undertaken at an early date, and that the Marine Department's Quebec depot be moved from the present site to the St. Charles River, and a wharf and new buildings erected there.

On the appeal of the Quebec and Levis Ferry Co., and W. J. Thompson, Manager of the Company, against the recent judgment condemning the company to a fine of $500, and W. J. Thompson to 48 hours imprisonment and a fine of $100, for contempt of court, the Judges of Appeal at Quebec, have decided that the fines must be paid, and the sentence of imprisonment has been quashed.

The Government dredge Rideau, which has been working on a channel through Sawlog Bay on the Rideau River, was taken off the work towards the end of Nov. for the season. When completed, the channel will reduce the distance between Poonahamalee locks and the Rideau ferry by about two miles. It is expected that the work will be finished early in the spring.

The Montreal Harbor Commissioners' programme for the winter includes the completion of negotiations for the construction of dry docks etc., the preparation and submission of plans for four additional sheds on the Tarte pier, and for the upper roadways and elevators on the upper floors of the permanent steel sheds, and the adjusting of some disputes with the city relating to the Elgin sewer, and police and fire protection at the wharf.

The annual trip to the island and outer ports of the Gulf of St. Lawrence, hitherto undertaken by the Government s.s. Montcalm, has, this winter been taken by the Government s.s. Montmagny. She sailed from Quebec, Dec. 9 with mails and supplies for Seven Islands, Clarke City, Ellis Bay, East Point, Anticosti, Harrington, and Magdalen Islands, and on completion of the trip, went to Halifax, where she was berthed for the winter.

The claim of the Canadian Electric Light Co., against the s.s. Crown of Aragon, for $10,000 for damages caused to its cable near Quebec, by the dragging of the vessel's anchor, was dismissed in the Quebec Admiralty Court, recently. The judgment declared that the company obtained permission to lay the cable at its own risk, and that the lowerering of the anchor was not only within the rights of the vessel, but in order to prevent a collision, it was a duty.

In reply to questions in the House of Commons, Dec. 5, relating to recent reports connected with the proposed dry dock at Levis, the Minister of Public Works stated that detailed drawings for the construction of a dry dock at Levis had been filed, but that the company's application for a subsidy was not, in accordance with the provisions of the statute, and it had been informed that the Government was ready, at any time, to enter into a contract with the company, under the terms of the Dry Dock Subsidy Act.

The Fraserville Navigation Co., which has been operating the steamboat Canada, on the Gaspe and Campbellton route under a contract with the Dominion Government, has gone into liquidation. In reply to questions in the House of Commons, Dec. 1, the Premier said the contract did not expire until 1912, and was for $15,000 a year for a full service. During 1909-10, there was deducted $2,125, and in the current year there had already been deducted for inefficient service $2,000. Complaints had been made as to the carrying out of the contract and the company had been notified that the conditions must be altered.

The Governor in Council has approved the Quebec Harbor Commissioners bylaw 109, in place of bylaw 100, which has been repealed. The new bylaw provides that the wintering tariff on vessels of every description shall be at the rate of ½c. a square foot, space to be measured by the registered measurements, where available, or by actual size. The wintering season will commence Dec. 1, each year, and will end, not

Lake Grain Shipments, 1910 Crop.

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped from the different elevators at Fort William and Port Arthur of the 1910 crop, from Sept. 1 to close of navigation, Dec. 6, 1910, with ports of destination. The last two figures in each column after the period, represent lbs.

LARGE MARINE REPAIRS EXECUTED BY CONTRACT

We can usually execute the repairs without removing the broken sections from their position. All our appliances are light and portable and may be brought to the job. The only outside power required is a small supply of compressed air for the operation of the preheating torch.

Quotations promptly rendered on receipt of a blue print or sketch showing exactly what is to be done.

Write for Pamphlet No. 20-N, which gives full information.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its present session, for an Act authorizing it to construct the following lines of railway:—

1. From a point at or near Wilkie on the company's Pheasant Hills Branch in a southerly and southeasterly direction to a junction with the company's Moose Jaw Branch in Township 30, Range 16 or 17, west 3rd Meridian, Saskatchewan.

2. From a point at or near Kerr Robert on the company's Moose Jaw Branch in a northeasterly and easterly direction to a junction with the line described in paragraph 1 in Township 38 or 39, Range 19 or 20, west 3rd Meridian, Saskatchewan, and for other purposes.

W. R. BAKER,
Secretary.

Dated at Montreal, 1st December, 1910.
Andrew T. Thompson,
Ottawa Agent.

NOTICE is hereby given that the Pacific Northern and Omineca Railway Company will apply to the Parliament of Canada, at the present session thereof, for an Act extending the time within which it may construct the lines of railway which it has been authorized to construct by chapter 90 of the Statutes of Canada, 1902, as amended by chapter 141 of the Statutes of Canada, 1906, and for other purposes.

W. H. BIGGAR,
Solicitor for applicants.

Dated at Montreal, this 26th day of November, A.D. 1910.

later than Apr. 30. Vessels berthing in the Louise dock, or other docks under the Commissioners' control, must have their positions assigned by the harbor master, and occupy the same at their own risk, and must not be cut out without consent in writing.

Revillon Bros., Ltd., is applying to the Dominion Parliament for re-incorporation under the name of Revillon Bros. Canada, Ltd., to carry on a general trading business.

La Compagnie Generale du Port de Chicoutimi has registered its steamboat Edward Alfred, which was built at Chicoutimi in 1910. She is a screw driven vessel with engine of 32 n.h.p. Her dimensions are, length 85.5 ft., breadth 21 ft., depth 7.5 ft.; tonnage, 139 gross, 51 register.

◆

Ontario and the Great Lakes.

C. Quackenbush, one of the oldest tug captains on the Welland Canal, died at Port Dalhousie, recently, aged 67. He had been engaged on tugs for 40 years.

During the past season, 2,656 vessel passages were recorded through the Welland canal. This is an increase of nearly 600 over the previous year, which was a record.

We are officially advised that there is nothing whatever in the report that the Merchants' Mutual Line will operate passenger vessels, between the head of the lakes and Montreal, next season.

The amount of grain received at Kingston, during the 1910 season was 14,953,418 bush., of which, 13,889,560 bush. were for Montreal. This is stated to be a season's record for the port.

Application is being made to the Ontario Legislature for confirmation of the city of Kingston's bylaw, passed Mar. 28, 1910, to partially exempt the Kingston Shipbuilding Co.'s property from taxation.

The Northern Navigation Co.'s s.s. Harmonic, during the past season, made 31 trips to the head of the lakes, and completed 41,200 miles, which is claimed to be a record.

The Toronto Ferry Co.'s tender for the lease of the ferry wharves, for the year, at $5,050, and the Turbine Steamship Co.'s tender for its wharf, at $2,000, have been accepted by the Toronto board of control.

The Montreal city council recently passed a resolution in favor of the proposed Georgian Bay canal and calling upon Parliament to carry out "this essentially national enterprise with the shortest possible delay."

The Hamilton, Ont., city council has petitioned the Minister of Public Works to widen and deepen the canal at the beach there, to allow of larger vessels passing through, thus cheapening rates and benefitting the city generally.

N. L. Martin & Co., as assignees of the Montreal River Transportation Co., in liquidation, will receive tenders to Jan. 10, for the assets of the company, consisting of five motor boats, one scow, one small boat, a quantity of lumber and supplies.

W. E. Bishop, General Manager, and E. Callaghan, Local Manager, Hamilton, of the Hamilton Steamboat Co., were each presented with a diamond and amethyst tie pin, recently, by the Toronto Police Amateur Athletic Association, in recognition of their support.

Press reports state that on the reopening of navigation, some changes will take place in the control of a number of docks, wharves, etc., whereby these will be transferred from the jurisdiction of the Public Works Department to that of the Marine Department.

The steam tug Despatch was towed into Port Bruce recently by the ferry steamboat Marquette and Bessemer No. 2, with 4 ft. of water in her hold. The tug sprang a leak, and the crew were about to abandon the boat, when the ferry sighted her and took her in tow.

The plans for the construction of a dry dock and shipbuilding plant at Owen Sound will shortly be submitted to the Government for approval, in connection with the application for a subsidy under the act granting aid for the construction of such public works.

Press reports from Port Arthur, state that the Canadian Northern Ry., intends spending about $300,000 in the extension of the coal handling plant there, next summer. It is said that additional unloading machinery, derricks and yard room will be provided.

Deputations connected with the various shipping interests concerned, waited on the Dominion Premier Dec. 12 and 13, to state their views on the construction of the proposed Georgian Bay canal and the enlarging of the Welland canal.

The steam tug Jean, owned in Amherstburg, was burnt there, Dec. 11. She was built at Buffalo, N.Y., in 1889, and was a screw driven vessel with engine of 4 n.h.p. Her dimensions were, length, 49 ft.; breadth, 12.4 ft.; depth, 4.4 ft.; tonnage, 21 gross, 14 register.

The Kingston Shipping Co., Kingston, has transferred its s.s. Prince Rupert from the British to the Canadian register. She was built at Dumbarton, Scotland, in 1908, and is screw driven, with engine of 170 n.h.p. Her dimensions are, length 249 ft., breadth 43 ft., depth 19.5 ft.; tonnage, 1908 gross, 1172 register.

The Great Lakes and St. Lawrence Transportation Co.'s steamboat John Sharples, which ran ashore at Gull Island shoals, near Cape Vincent, Lake Ontario, Dec. 8, was reported to be full of water and in bad condition, Dec. 13, and attempts at salving her were abandoned.

The Inland Lines steamboat Emperor was launched at Collingwood, Dec. 17. Her dimensions are: length 525 ft., beam 56 ft., depth, molded, 31 ft. She has been built of steel, with side ballast tanks and double bottom, and has been designed on the arch and web system of construction, with 30 cargo hatches.

The International Transit Co., Sault Ste. Marie, has recently purchased in the U.S., the steamboat Clansman, which it has registered in Canada, and re-named Bawating. The vessel was built in Detroit, Mich., in 1875, and is screw driven, with engine of 28 n.h.p. Her dimensions are, length, 110 ft., breadth 29 ft., depth 11.4 ft.; tonnage, 246 gross, 167 register.

A deputation from Kingston, headed by Hon. W. Harty, waited on the Minister of Railways and Canals, Dec. 8, to urge the building of dams along the Rideau Lakes to hold back the water for the dry season, for the betterment of navigation, and to ensure its perman-

Dividend Notice
Niagara Navigation Co., Ltd.

Notice is hereby given that a dividend of four per cent. (being at the rate of eight per cent. for the year) has been declared upon the Capital Stock of this Company, and the same will be payable on the 3rd of January, 1911. The transfer books will be closed from the 17th December to 31st December, 1910, both days inclusive. The annual meeting of the shareholders will be held on Tuesday, the 10th of January, 1911, at 12 noon, in the Board Room, Traders Bank Building, Toronto.

By order of the Board.

B. W. FOLGER,
General Manager.

Toronto, Nov. 28th, 1910.

Railway Construction.

Tenders will be received up to noon, January 2nd, 1911, for the construction of the road-bed and structures of the following sections of the Manitoulin and North Shore Railway:—

Crean Hill, mile 22.7, West of Sudbury, to connection with present line at Espanola.

Espanola South to a point at or near Mile 61.

Plans, Profiles and Specifications may be seen at the Office of the Chief Engineer, Sault Ste. Marie, Ontario, at the office of the Railway and Marine World, Toronto, or at the Offices of the "Canadian Engineer," at Montreal, Toronto or Winnipeg.

All tenders to be addressed to R. S. McCormick, Chief Engineer, Manitoulin and North Shore Railway, Sault Ste. Marie, Ontario.

The lowest or any tender not necessarily accepted.

Patent Rights for Sale.

PATENT ACT.—Take notice, that the undersigned are prepared to supply, at a reasonable price, sheet metal dumping cars for railroad contractors' use, described in Canadian Patent No. 116,297, or to grant anyone desiring to use the same a license to have the same manufactured for him at a manufacturing establishment in the Dominion of Canada. They are also prepared to receive offers for licenses to manufacture and sell under the same. Ridout and Maybee, Manning Chambers, Queen St. West, Toronto, attorneys for the Goodwin Car Company.

CRESOL CALCIUM.—Patent no. 115,933 for the preservation of Railroad Ties, Telephone and Telegraph Poles, Wood Paving Blocks, etc. For terms of royalty, etc., apply to Blagden, Waugh & Co., 4 Lloyds Avenue, London, E.C., England.

ence from the beginning to the end of the season.

The steam tug Saucy Jim, owned in Collingwood, was burned to the water's edge, about the end of Nov., 1910, at Christian Islands. She was built at Meaford in 1887, and was screw driven with engine of 16 n.h.p. Her dimensions were: length, 84 ft.; breadth, 16.6 ft.; depth 8 ft.; tonnage, 93 gross, 63 register. She was valued at $10,000.

The steamboat Alaska, owned by W. J. Pulling & Co., of Windsor, Ont., was destroyed by fire at Tobermory, at the end of Nov., where she was sheltering during a storm. She was built at Detroit, Mich., in 1878, and was screw driven with engine of 8 n.h.p. Her dimensions were: length, 165.2 ft.; breadth, 29 ft.; depth, 10.6 ft.; tonnage, 348 gross, 173 register.

The steamboat Winnanna, which was burned to the water's edge at Tobermory, Oct. 19, 1909, and subsequently raised and repaired, has been re-registered at Owen Sound, and her name changed, by order-in-council to Keenan. She was built at Midland, in 1907, and is screw driven, with engine of 75 n.h.p. Her dimensions are, length, 91.5: breadth 20.2; depth, 10.3; tonnage, 199 gross, 125 register.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for Nov., 1910, as follows: Superior, 601.69; Michigan and Huron, 579.83; Erie, 571.40; Ontario, 245.15. As compared with the average Nov. levels for the past 10 years, Superior was 1.19 ft. below: Michigan and Huron, 0.70 ft. below: Erie, 0.44 ft below, and Ontario 0.34 ft. below. An average fall of 0.2 ft. was anticipated during Dec.

The cribs for the extension of the dock at Sault Ste. Marie, for which $10,000 has been included in the estimates for the current year have been laid, and the work will be completed in the spring. The Government is being asked to undertake further extensions there, local shippers being of the opinion that the new western extension should be the head of a new western wing 250 ft. long, running parallel with the present dock, and that the basin which would be then enclosed, should be filled in.

The Wolfe Island township council decided, Dec. 9, to enlarge the carrying capacity of its steamboat Wolfe Islander, by lengthening her by 15 ft., and adding false sides. Electric lighting equipment, with search light, will also be added, the estimated expenditure being $7,000. The vessel, which was formerly known as Tom Fawcett, was built at Toronto in 1904, and is a paddle wheel steamer, with engine of 28 n.h.p. Her dimensions now are, length 118.6 ft., breadth 17.7 ft., depth, 6.8 ft.; tonnage, 224 gross, 98 register. The receipts of the ferry service for the season from Mar to Nov. 1910, were $9,377.35.

A deputation representing various municipal and marine interests, between Ottawa and Kingston, waited on the Minister of Railways and Canals, Dec. 8, to protest against the C.P.R. proposal to close a part of the Rideau canal in order to effect a new entrance to Ottawa. The deputation also asked that the canal be made with an 8 ft. draught. The Minister in reply, pointed out that the C.P.R. had not asked the Government to close the canal outlet, and without committing the Government, he said he would hesitate before giving his consent to such a proposal. He promised that the Government engineers would report as to the desirability of deepening the canal as suggested.

The bill to amend the Canada Shipping Act, which was dropped after being read a second time in the House of Commons, last session, was re-introduced by Mr. Edwards and given its first reading Dec. 1. The bill provides for the insertion of the word "Ontario" after the word "Quebec" in line two, par. 2 of par. c., subsec. one, sec. 477, chap. 113, of the Revised Statutes of Canada, 1906. The change proposed is in accordance with the wishes of the Dominion Marine Association, which represents practically all the vessels on the Great Lakes, and is intended to place the province of Ontario on a parity with the other provinces in respect of pilotage dues.

The Toronto city council special committee on water front improvements, received representations from the Board of Trade, Canadian Manufacturers' Association and Guild of Civic Art, early in Dec., relating to the proposed alteration in the control of the Toronto water front. It had previously been proposed to apply to Parliament to recognize the present commission, to enlarge its powers, and to place the whole of the water front under its control. After discussing the matter, the committee agreed to report to the council, that the proposed commission should consist of three members, appointed by the city council, and that the taxpayers be asked to vote, Jan. 1, whether they approved the scheme, or not.

The Inland Lines steamboat Dunelm, with a cargo of grain consigned to J. Richardson and Son, Kingston, went ashore at Isle Royale, Dec. 7, and, on account of the exposed position, and the state of the weather, all attempts to save either the cargo or the vessel have been given up, and she was abandoned to the underwriters, Dec. 14. She was built in Sunderland, Eng., in 1907, and was a screw driven vessel, with engine of 230 n.h.p. Her dimensions were, length 250 ft., breadth 43.2 ft., depth 23.5 ft.; tonnage, 2,319 gross, 1,481 register. She was one of the vessels formerly owned by R. O. and A. B. Mackay, Hamilton, who formed the Inland Navigation Co., which was absorbed last year by the Inland Lines, Ltd., controlled by Jas. Playfair, Midland. She was later in the month floated and taken to Port Arthur, for examination.

The new U.S. Lock at Sault Ste. Marie is progressing, and it is expected that the excavation for the lock pit will be completed early this year. The contract for the concrete will be let during the winter and work on this will be commenced in the spring. The MacArthur Bros. Co. has the contract for the western section of the approach canal and John Marsch is the contractor for the lock excavation. The work is under the direction of Col. C. McD. Townsend, U.S. Engineers, and L. C. Sabin is Assistant Engineer. This new lock (known as the Davis lock) will be 1,350 ft. long between the gates, 80 ft. wide and 24½ ft. deep below the level of extreme low water. It will be parallel with and adjacent to the two existing locks: the Weltzel lock (1881), 515 by 80 ft., with a depth of 16 ft., and the Poe lock, (1895), 800 by 100 ft., with a depth of 21 ft.

At a recent meeting of the Dominion Marine Association, a protest was made against the closing of the Ottawa end of the Rideau Canal, and a deputation was appointed to interview the Government on the matter. Aids to navigation were recommended, as follows: a light at the end of Indian Island: lighting and improvement of the Murray canal, improvement of the channel at Saltpoint, and it was decided to protest against the removal of the light from the False Ducks. Opposition will also be made to the application of the Canadian Light & Power Co., to take water from Coteau and Cedar Rapids. The Association also decided to ask the Department of Railways and Canals to provide special men to take lines from vessels entering the St. Lawrence canals, in order to prevent accidents to vessels and crews, and the Department of Marine will be asked to erect range lights near Baker's Point to improve the channel to Kingston Harbor. Consideration was also given to the question of improvements required at the entrance to the Soulanges canal at Coteau.

The contract for the construction of a steamboat for the Richelieu and Ontario Navigation Co.'s Saguenay line, has been placed in Glasgow, Scotland, by C. J. Smith, General Manager, who has recently returned from Great Britain. She will be a twin screw vessel with four cylinder triple expansion engines, supplied with steam by Scotch boilers, equipped with forced draught, and capable of steaming at 15¾ knots an hour. Her dimensions will be as follows, length over all from forward side of stem to after side of wale at main deck, 282½ ft.; length over stem and stern posts at main deck, 275 ft.; beam molded on frame, subject to change, 40 ft.; breadth of beam extreme over wales, 57ft. 10 ins.; breadth of beam at 10 ft. waterline, 39 ft.: depth of hull molded, at main deck, 15 ft. 10 ins. The dining room will be situated on the main deck, aft, with seating capacity for 100. The staterooms will all be arranged as outside rooms, with running water in each as in the Company's steamboats Rochester and Rapids Prince. There will be 12 parlor rooms with baths attached. The interior finish of the entrance hall will be panelled mahogany, the dining room, panelled in mahogany, oak or white enamel, cabins on promenade and gallery decks, in white pine or cypress and decoratively painted, cabins on hurricane deck, panelled in quartered oak, toilet rooms and bar room in hardwood, and the pilot house in quartered oak, while the floors will be laid with interlocking rubber tiling. The contract calls for the vessel to be delivered in Quebec by June.

Manitoba, Saskatchewan and Alberta.

The Prince Albert, Sask., city council is arranging for the construction of a dam and power canal, on the Saskatchewan River, near La Colle Falls, and is discussing a proposition to submit the matter to the Dominion Government, with a view to the joint carrying out of the work in connection with the proposed undertaking of the Government to establish a navigable waterway between Winnipeg and Edmonton. It is stated that the Government may be asked to pay half the cost of the dam and two-thirds of the cost of the canal.

B.C. and Pacific Coast Marine.

The C.P.R. is making arrangements to convert most of its Pacific coast fleet, during the winter months, into oil burners.

The C.P.R. s.s. Charmer is being thoroughly overhauled and will be partially re-built, during the winter and new boilers, which have been ordered, will be installed in the spring.

D. E. Brown and Macaulay, Ltd., is suing the Canadian Klondyke Mining Co. of Windsor, Ont., for $4,376.17, for marine insurance, scow hire, fees as forwarding agents, etc.

The C.P.R. s.s. Princess May is the first of the company's vessels to be converted into an oil burner. The other vessels of the fleet will be similarly altered as opportunity occurs.

The deal, whereby the Pacific Whaling Co.'s property has been transferred to the Canadian North Pacific Fisheries, Ltd., is said to have been consummated

Vancouver, B.C.

recently by the paying over by the latter of a cheque for $1,000,000.

The Grand Trunk Pacific Dock Co.'s dock and buildings at Seattle, Wash., recently completed, were officially opened for business, Dec. 3. An illustration and description of the property were published in our June, 1910 issue.

The North Vancouver city council decided Dec. 6, to submit a bylaw to the ratepayers, providing for the purchase of $80,000 stock in the North Vancouver Ferry Co., at par, the proceeds to be used in the completion of betterment works, now under way.

The report, recently current in Vancouver, that the G.T.P. Steamship Co.'s steamships Prince Rupert and Prince George will be converted into oil burners has been denied by local officials of the company who stated that the present system is quite satisfactory.

Press reports from Vancouver, state that it is probable that the G.T.P.R., will dismantle a number of old stern wheel steamboats on the Skeena River and transfer the machinery, boilers, etc., to Soda Creek or Quesnel, for use in the rebuilding of steamboats for use on the Fraser and Nechaco Rivers.

The Gilford Fish Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $150,000, to take over the Viner Fish Curing Co., Ltd.; to carry on a general fishing, curing and dealing business, and in connection therewith to own and operate steam and other vessels.

The Vancouver Springs and Indian River Park Co. is reported to have placed orders for the building of two passenger steamboats, one costing about $50,000 and the other about $12,000. The larger vessel will be arranged as an oil burner, and will be 123 ft. long, with a speed of 17 knots an hour, and the other, will be 80 ft. long.

The Queen Charlotte Islands Collieries Ltd., has been incorporated under the B.C. Companies Act, with a capital of $1,000,000, to carry on a general coal mining and dealing business, and in connection therewith to build, own and operate tramways, wharves, piers, steam and other vessels, and to act as carriers by land and water.

R, Curnew, New Westminster, owner of the steam tug Sendai, has sold his vessel to Alberni parties, for towing purposes on the coast. The Sendai was built at Vancouver in 1903, and is a screw driven vessel, with engine of 5 n.h.p. Her dimensions are length 37 ft.; breadth 9.8 ft.; depth 4.3; tonnage, 14 gross, 10 register.

The British survey ship Egeria, hav-

ing completed her work of surveying B.C. waters, all of which will now be undertaken by the Dominion Government's survey steamship Lillooet, has paid off her crew, and has been berthed for the winter. It is stated that she will probably be offered for sale. and that she may be purchased by the Government for use as a training ship.

Preparations have been commenced near Vancouver. for the dredging, next summer, of the First Narrows. The Marine Department's steam tug Newington, recently removed the beacon and installed a mechanical fog bell.

The Canadian North Pacific Fisheries, Ltd., registered under the Dominion Companies Act, with a capital of $2,500,000, and office at Toronto has been licensed to carry on its business in British Columbia, with Dr. L. Rissmuller, Vancouver, as its attorney

The s.s. Henriette, formerly owned by Mackenzie Bros., and during the past season, operated under charter by the G.T.P. Steamship Co., has been chartered by the Canadian Pacific Whaling Co., to make trips to Naden harbor, Virago Sound, at the north of Queen Charlotte Islands, conveying men and material for the construction of a new whaling station.

The Vancouver city council received tenders, Dec. 30, for a launch to be used to convey patients to and from the Isolation Hospital, opposite Barnet. The launch must be complete, and equipped with engine of not less than 40 n.h.p., which may be driven by either steam or gasolene. The approximate dimensions quoted are: length 50 ft., beam 12 ft., draught 3½ft.

The Standard Fish and Fertilizer Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $1.000,000, to take over the assets and business of the Pacific Coast Fisheries, Ltd.; to conduct a general fisheries business, and in connection therewith to own and operate steam and other vessels of all descriptions, wharves, docks, warehouses and fishing stations.

The Fort George Timber and Transportation Co., Ltd., has been incorporated under the B. C. Companies Act, with a capital of $200,000, to take over as a going concern the business of the Fort George Lumber and Navigation Co., Ltd., with its assets and liabilities, and in connection therewith to own and operate steam and other vessels, wharves, docks, piers, etc., and to carry on a general shipowning, navigation, stevedoring and carrying business.

The British Columbia Shipping Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $35,000. and office at Victoria, to build own and operate steam and other vessels, and to carry on a general shipping and navigation business. Press reports state that a vessel will shortly be ordered, 120 ft. long, with beam of 24 ft. and draught of 9 ft., on 340 tons displacement. The engines are to have about 240 n.h.p. to develop 10 knots an hour.

The vessel which the C.P.R. has ordered for its Pacific coast service, which was mentioned in our Dec., 1910, issue will be practically a duplicate of the recently arrived s.s. Princess Adelaide. Her dimensions will be:—Length between perpendiculars, 290 ft.; beam, 46 ft.; depth of hold, 17 ft., and she will have a speed of 16 knots an hour. On her arrival on the coast it is proposed to establish a service between Vancouver and Victoria three times a day, leaving each city about 10 a.m., 3 p.m., and 11.30 p.m.

The specifications for the building and laying out of the Department of Marine's lighthouse and buoy depot at Prince Rupert, tenders for which will be received to Jan. 3, include the erection of a buoy shed and machine shop, power house and reinforced concrete chimney, carbide store, storehouse, offices, dwellings, etc.; the installation of water and drainage systems, the storage of machinery delivered by the Department, and the erection of a travelling crane of 20 tons capacity. The depot will be located on the south shore of Casey Cove, on the west side of Prince Rupert harbor, and 2½ miles south of the wharf. The wharf, which it is proposed to build, will be 405 ft. long by 40 ft. wide, and 55 ft. wide for about 105 ft. of the length. It will consist of concrete piles, which will be carried up as columns, braced with horizontal and diagonal members, the tops of the columns being finished off at 126.93 ft. The contractor will be called upon to commence work within 30 days after the signing of the agreement, and the work must be completed and ready for occupation on or before Dec. 1.

◆

During Sept. and Oct., 1910, 10 employes were killed and 11 injured in the course of their work in connection with the navigation of Canadian waters. Of the fatalities, five were due to drowning, three to falling material and two to falls; while of the other accidents, four were due to machinery, three each to falls and to falling material, and one to being scalded.

The Steamboat Inspection Board reports to the Marine Department, that there were 1,978 steam vessels, of 440,819 tonnage, known to the inspectors, on the Dominion register, and 162 steam vesels of 238,227 tonnage, not on the Dominion register, inspected. during the year ended Mar. 31, 1910. The amount collected in fees from the Dominion registered vessels, was $6,469.60. Thirty-two casualties were reported during the year, and penalties were enforced in two cases of passenger overcrowding.

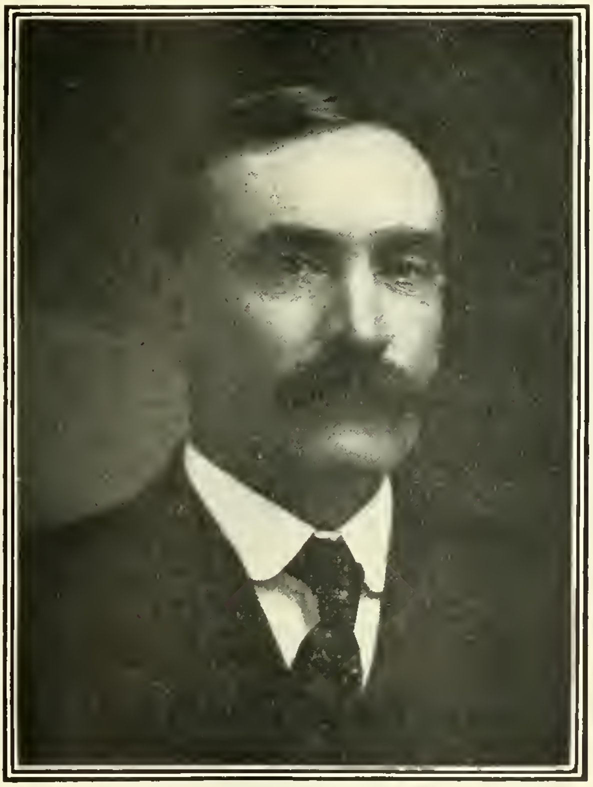
The Efficiency of Tools and Economy in Manufacture of Same.

By W. M. Townsend, Supervisor of Tools, Montreal Locomotive Works Ltd

I will endeavor to bring out, in the following, a few points relative to the making of cheap and efficient tools. Various kinds of milling machines are rapidly making their way prominent in removing surplus stock from machine and locomotive parts, hence the necessity of having durable milling cutters. To obtain an efficient milling cutter there are two points which are essential, namely, high speed steel and a spiral or helical cutting edge. The latter quality may not appeal to some, due to the fact that an inserted tooth cutter made from a mild steel body with a high speed steel blade inserted at an angle of about 12 degrees, answers fairly well. This, however, is a great mistake. To obtain a clean cut it is necessary to have a certain and constant angle of rake or lip to the milling cutter. This can be obtained only by having a helical or spiral cutting edge. To construct the milling cutter that will give the best results and still adhere to the principle of strict economy (the point which I wish to emphasize mostly in this paper), we must first of all consider its diameter. We will first speak of cutters having a diameter of over 6 ins. Keeping close to our principle of economy, we apply to the scrap heap for material; there we will find crop ends of billet steel sawn from the ends of driving axles, which make an ideal body for an inserted tooth high speed steel milling cutter. The scrap value of these crop ends is very small, hence the low cost for the body of the cutter. Now, to procure high speed steel for the blades in an economical manner (which if cut from the steel bar would cost 50c a pound), we collect all the broken and short high speed tools that cannot be further used on planers, shapers, lathes, etc. These are hammered into blades ⅝ x 1¼ x 5 ins. long. The cost of material for the blades is covered by the cost of labor in hammering out the steel plus its scrap value which is very small. So much for the economy in procuring material.

We will now turn our attention to the design, upon which depends the efficiency. The bodies, after having been bored, turned and faced, are milled with slots ⅝ in. wide, ¾ in. deep, 1½ in. apart, at an angle corresponding to a predetermined helix or spiral. The blades are then fitted and slightly caulked. The cutter is then set up on a universal milling machine, and the front of the blades milled spiral. This gives a constant angle of rake or lip from one end to the other. This insures an equal strain along the whole length of the blade. On the other hand, if the blades are merely put in on an angle and not milled spiral, the lip or rake of the cutter is irregular. It can readily be seen that from one end of the cutter to the centre there will be a decreasing lip, while from the centre to the other end of the cutter there will be an increasing drag. This causes an unevenness in the cut and also a tendency to break and pull out the blades on the drag side. So much for cutters having a diameter over six inches.

Inserted tooth cutters with a diameter much less than six inches are not practical, due to the fact that slot cut at an angle across the top of the cutter body would be very irregular in depth, hence the impossibility of holding the blade. Take for example a blank cutter body 5 ins. diameter 10 ins. long, cut a slot through the top at an angle of about 15 degrees, you would have a depth of about ¾ in. in the centre, while at either end there would be no depth to speak of. This can be avoided, however, by dividing the cutter into short sections, thereby lessening the unequal depth caused by cutting a slot at an angle to the axis of the cutter, but the high cost of this method does not warrant its adoption. The general practice, in making cutters of smaller dimensions, is to use carbon steel costing about 14c. a pound. This is altogether unnecessary and extravagant. Billet crop ends selected from high carbon billets such as are used for driving axles, pistons, and side rods, carefully hammered, outclass in every way the ordinary tool steel. In the first place, the cost, hammered to size, is about 1½c. a pound, as compared with 14c. a pound for tool steel. Secondly, they are tougher, and the teeth will not break when a heavy cut is put on, such as is the case with tool steel, and the cutting edge stands up equally as well. The success of this method of course depends upon the treatment of hardening. This, however, is very simple, and consists of carefully packing the tools to be hardened in a mixture of salt and raw bone, placed in an airtight box, which should be brought and kept to a heat of 1,00 deg. Fahr. from 24 to 48 hours, according to size, then drawn from the box and quickly immersed in running clear water. There is no need whatever of drawing the temper, the cutting edge has the correct hardness, while the body of the cutter remains very tough. The question that you would naturally raise at this point would be: How deep can cutters be hardened in this manner? A depth of ⅜ in. can be reached, or in other words, the cutter may be ground until the tooth is almost ground away, leaving no space for the chips to get away. When a cutter reaches this stage, it can be annealed, recut, and rehardened, as often as the thickness of material will allow, without affecting the quality of the cutter.

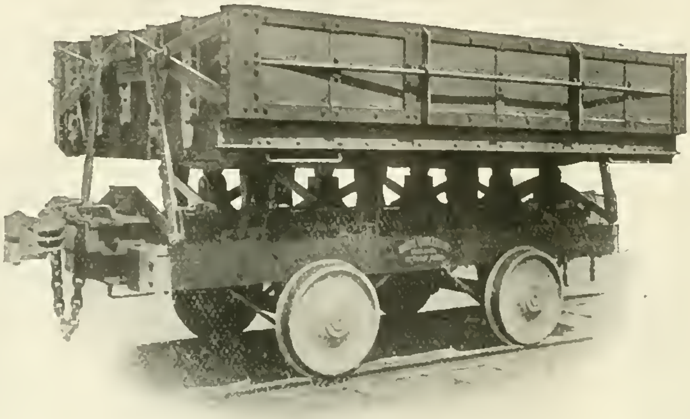


T. Kilpatrick,
Superintendent District 1, British Columbia Division, C.P.R.

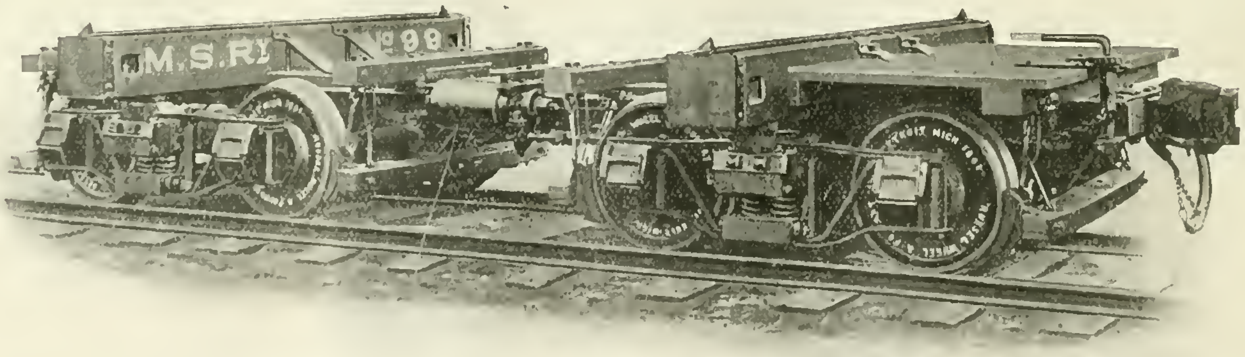
Some three years ago a test was made at our works to determine the advantage of using high speed steel cutters for a certain class of work, namely—milling out jaws of side rods, transmission bars, radius bars, combination levers, etc. It was found that the high speed steel cutters broke from the vibration and pressure brought to bear upon them, whilst cutters of the same design, made from billet steel case hardened, did the work very satisfactorily without breaking, running at the same speed and feed. What I have said so far regarding milling cutters refers to cutters used for straight milling. Cutters used for milling gears, taps, reamers, and irregular shapes should, in my opinion, be made from high speed steel.

In studying the efficiency and economy of tools, we must not forget to consider the quality and quantity of work required of them. We now come to tools such as are used on lathes, planers, shapers and slotters. There are many brands of high speed steel on the market at the present time, and I have tried almost all of them, but will not express my opinion regarding their merits, as it would make this paper appear

Russel Heavy Duty Dump Cars



The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

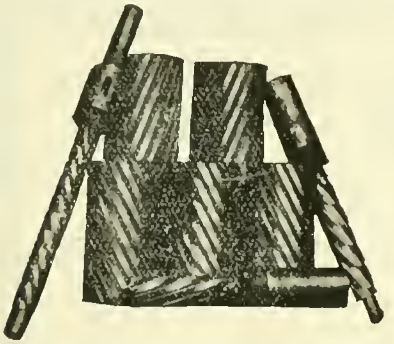

Fig. 1.—Illustrating depth to which cutter teeth may be ground, still retaining their proper hardness.

as an advertisement. I believe, however, that if we wish to ascertain which is the most efficient steel, we should give every brand an extensive trial, making an individual record of each, and determining which is the best, as compared to the price paid for it. Different shops have different materials to contend with and the formulæ used in the composition of steel differ, so that some brands are better for cutting one class of material, while other brands are better for cutting other classes of material. This is why I contend that each shop should test out every brand and see which is best adapted for its requirements.

High speed steel is an immense item in large machine shops, and great care should be exercised in order to avoid waste. A great saving may be made, by observing the following practice. In making finishing tools, instead of using a piece of high speed steel, say 1¼ x 2¼ x 15 ins. long, costing about $6, we go back to the old reliable, and use a piece of billet steel, leaving it as large as the tool post will admit, and weld a tip to it made of high speed steel. The finished cost of this tool is about one-eighth of the solid high speed steel tool and is just as efficient for these reasons: the billet steel is sufficiently strong to withstand the pressure brought upon it for a finishing cut. It does not require dressing any oftener than the solid tool, but it does require a little more care. I will explain a little more clearly how this tool is made. As stated before, we take a piece of high carbon billet from the scrap heap, and draw it out to the required dimensions. One end is then scarfed ready to receive the high speed steel tip which is wedge shaped. The toolsmith fits the two parts fairly well together before welding to ensure a neat weld. The parts after having been prepared are then heated, the tip being allowed to heat longer than the body, owing to the necessity of the former being of a much higher temperature than the latter to allow for welding. When both are at a welding heat they are quickly withdrawn, a piece of Lafitte welding compound is placed between them and hammered lightly together. The tool is then reheated, care being taken to place the nose of the tool in such manner that it will be most exposed to the fire. When the required heat is reached the tool is quickly withdrawn and placed between a former under a steam hammer and given a light sharp blow. In case of the tip being displaced it will not do to try and knock them into place again. The tip must be cut away and refitted, and a fresh piece of the compound used. The tool is then treated in the same manner as a high speed steel tool. These tools have been used until the tip has been ground right down to the weld. I would not advise making heavy roughing tools in this manner, as the billet steel body would not stand the pressure required by a roughing tool such as is used on a heavy planer. A tool of this description however, answers well when used on a lathe where the point does not project far from the tool post, also where the cut is continuous and not intermittent, as is the case on a planer. You can readily see where the saving comes in, if this method is only applied to finishing and lathe tools. Fig. 2 illustrates the preparation of parts for welding tool with high speed steel tip.

Twist drills made from carbon steel, with the exception of jobbers' drills, that is, drills up to ½ in. diameter, are almost a thing of the past, high speed steel drills having taken their place. The original design of the high speed drill was exactly the same as the ordinary carbon drill with the exception of the material used. This, however, has proven to be inefficient and expensive due to the following reasons: In the first place, to obtain proper results from a high speed drill, it is necessary to have adequate space to allow the chips to free themselves from the drill, as the flutes will soon choke up owing to the increased feed and the speed of the drill. The fluted high speed drill has not this advantage. It is expensive for this reason. To make a drill of this design, it is necessary to use a round bar of solid steel, cutting away 50% of it to form the flutes. Yet there are men who will tell you that this design of drill is the best and cheapest on the market.

I will now give my opinion as to which is the best high speed drill and the reasons why. A high speed steel drill with the twisted section about half way between the flat twisted section and the standard milled drill is the most efficient and economical, from the fact that it takes just one-third of the steel to make it, and efficient because of the adequate space for the chips to clear, thus preventing clogging and choking. The feed can be doubled, due to this advantage. I have found in my endeavor to reduce the cost of tools that in the average shop where locomotives and heavy machines are built, they have sufficient equipment to make efficient high speed drills with a saving from 10 to 50%. The same may be said of all kinds of taps, especially those used in boiler construction.

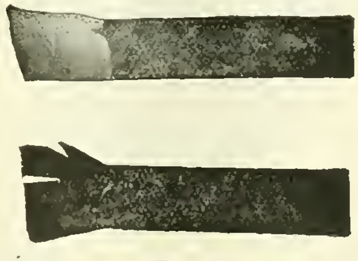

Fig. 2.

A few words may be said regarding reamers. There are many styles of straight reamers, all of which have their advantages, which leaves me nothing to say regarding them. Taper reamers are different in their action, however, inasmuch as the whole part of the reamer that comes in contact with the work is cutting equally, whereas, in the straight reamer, the extreme end is the only part that cuts, the rest of the reamer only acting as a guide. It is this difference of action that I now wish to discuss. In all railway shops there is a great amount of taper reaming to be done; this calls for a different class of reamer. Having visited some of the large locomotive works and enquired from others, I find that their practice is to use the straight fluted taper reamer—some of them have the teeth staggered, others equally spaced. I beg to state that this style of reamer is decidedly wrong. Reamers that are required to cut equally their full length of flute should be milled with a left hand spiral cutting edge, having an angle of about 20 deg.; the pitch or distance between the teeth should be about ¾ in., leaving ample space for the chips to clear, thus preventing clogging and tearing of the hole. The advantages of this style of reamer are: It takes about 30% less power to drive it; it never chatters; it never digs in; the tang does not twist off; the teeth do not break off; they are easy on crank shafts and can be driven with an air motor, where straight fluted reamers would stick. It may appear that I am claiming a little more than what is true, but these are actual facts that have been tried and proven. There are two reasons for the success of this style of reamer, namely, the spiral cutting edge which gives the reamer a shearing action instead of a straight drag (which must necessarily follow with a straight flute), also to the fact that the line of cut parallel to the length of reamer is divided, due to the angular cutting edge which is not parallel to the line of cut. The even and regular curl of chip made by this reamer will also convince you of the correctness of design. The cost of these reamers is a trifle less than the straight fluted reamers, on account of the fewer number of teeth to be cut. This applies generally to reamers having a diameter of 1½ ins. and under, with a flute of from 14 to 16 ins., standard taper 1-16 in. to 12 ins. Fig. 3 illustrates the difference of straight fluted and spiral fluted taper reamers.

A word or two may be said regarding reamers of large diameter, such as crosshead reamers both for piston and wrist pin fit. For cheapness and durability these may be made in the same manner as solid milling cutters, as mentioned in the previous part of this paper. Select a piece of high carbon billet from the scrap heap, have the forging well hammered, machine and caseharden, and you wil have a tool that is equal to the finest tool steel made. You will find that the cost will be about one-tenth of that of good tool steel.

There are many other items of interest whereby great savings can be made, but as our subject covers such a wide area, I must confine my remarks to one or two thoughts in general. An immense saving can be made by annealing all broken and worn-out tools, immediately they are out of service. This being done, they should be arranged in open bins or racks, so that when the foreman of the tool room requires material, he looks over his stock of annealed scrap (I mention annealed for the reason that very often a piece of scrap material is available, but it is necessary to wait while it is being an-

nealed) and very often finds exactly what he wants without drawing from the regular stock.

Another feature regarding economy, is the correct distribution. I mean by this that every man should have all the tools he requires and no more. I say this because it is a well-known fact that workmen have a habit of collecting and storing up under lock and key, all the tools they can possibly lay their hands on, for their own individual use. You can readily see that with this practice, if not watched and kept in hand, in large plants many thousands of dollars may be invested and nothing accomplished.

It is absolutely necessary in large plants to have a man who is fully acquainted with every detail of tool design, tool purchasing, and tool distribution, to properly effect a system which would result in efficiency and economy. This cannot be expected of the tool room foreman, as his duties confine him to the tool room. Under these circumstances the man appointed to perform the duties of economizing in cost, and designing efficient tools, should have the liberty, to watch all machine shop operations, and to have full supervision of tool room practices. This system is in vogue in some of the large locomotive works in the United States and one that I know of in Canada. This system, if adopted by some of the other large plants, would, I feel sure, bring about results worth noting.

The foregoing paper was read before the Canadian Railway Club recently.

◆

Interpretation of General Interswitching Order.

The Assistant Chief Railway Commissioner, D'Arcy Scott, prepared the following under date of Nov. 26, 1910:—In an application, dated Mar. 4, 1910, the Board is asked by the Canadian Pacific, the Grand Trunk and the Montreal Terminal Railway Companies for an order interpreting the provisions of order 4988, known as the General Interswitching Order, dated July 8, 1908. Counsel for applicants and representatives of the Montreal Board of Trade and the Canadian Manufacturers Association, were heard at Ottawa on June 22, 1910.

The object of having a general interswitching order is to make the rate for the performance of an interswitching service uniform on all railways under the Board's jurisdiction, no matter what the extent of the movement (provided it is within the limit mentioned in the order), or the time or labor required in performing it. The order enables the shipping public and the railway companies to know exactly what service must be performed as interswitching, how much the company that performs the service is to receive, and how much the shipper or consignee is to pay for it. At some points, on account of local conditions, the provisions of the order are not as advantageous to the railway companies as they are at others, and in some cases one railway company may have to do more than another to earn the toll; but such conditions may, to some extent, be inevitable under a general order made to apply everywhere; and there is a certain amount of reciprocity in the working out of the order which should even up matters between the railways. But the intention of the Board in passing the order was chiefly to benefit the public by establishing a uniform rate and conditions of service for interswitching. This is well described by the late Chief Commissioner Killam in his judgment in the London interswitching case, in which he said:—

"With the progress of invention, new enterprises are continually supplanting or injuring old ones to the ruin or loss of those interested in the former. Railways have not only directly affected in this way former modes of transportation, but they have also been instrumental in building up particular localities or enterprises at the expense of others. It has never been the policy of the law to afford compensation for losses thus occasioned. When the Legislature authorizes the construction of new lines of railway in competition with those formerly existing, this is not done with a view to benefit the promoters of the new lines or to injure those interested in the old ones, but solely for the public good.

"The provisions of the Railway Act which require railway companies thus to interchange traffic at connecting points are introduced, not for the purpose of benefitting one railway company at the expense of another, but solely in the interest of the public. The law cannot recognize anything in the nature of a good-will of the business of either railway company thus affected for which another should give compensation. In my opinion the division between railway companies of the joint rates for traffic thus interchanged should be made upon the principle of giving reasonable compensation for the services and facilities furnished by the respective companies in respect of the particular traffic thus interchanged, and not by reference to the magnitude of the business of one company or the other at particular points or the respective advantages which each can offer to the other there, or a comparison of the loss which the one is likely to sustain with the gain likely to accrue to the other from the giving of the facilities which the law requires."

From what I have said and quoted, I think it is abundantly clear that an order such as the one before us, which is applicable at practically all points of interchange and to all roads under our jurisdiction, must contain arbitrary provisions which may appear easier to apply in some places than in others, but which, nevertheless, must be enforced in the same manner at all points.

From a High Mechanical Authority.

H. H. Vaughan, Assistant to the Vice President Canadian Pacific Railway, Montreal, writes:—

"I consider the Railway and Marine World a very valuable publication. the occurrences on Canadian and "It presents all information about other railways in so complete a form that I consider it of the greatest value."

The feature of the order to which the applicants have chiefly addressed themselves is the provision which makes it applicable to any interswitching movement not exceeding four miles from the nearest point of interchange. To quote the application, the Board is asked "to define whether or not the term 'interswitching' as used in the order, embraces the carriage of traffic from one point outside to a point within a terminal involving the haulage of goods from a point of connection which is a station, to a terminal, within a distance of four miles": in other words, to say that what they recognize to be an interswitching radius of four miles in one place may be cut down to an actual one mile or two mile radius in another. The effect of this would be to destroy the equality of principles of the order, and open the door to the giving of an undue preference to one locality over another. The order clearly means what it says, four miles from the nearest point of interchange, and I cannot see that it was ever the intention of the Board to put any limitation on this four mile provision, and I do not think it would be wise for the Board to do so now.

Apparently some of the companies to which the order applies have not been complying with its provisions, but have collected larger tolls than they are entitled to. In such cases the courts of law provide a means for obtaining redress. The true meaning of the order, with regard to the four mile limit, was made clear to the companies by circular 15, issued by order of the Board on Jan. 21, 1910, which said:—

"The maximum interswitching distance is unqualified, and means, as stated, 'any distance not exceeding four miles . . from the nearest point of interchange,' regardless of the location of the point of interchange, or of station yard limits, or any other limits or boundaries."

That being the meaning of the order, and the railway companies having been by that circular told what the meaning was, there is really nothing now to interpret, and the present application should therefore be dismissed.

The other feature of the application relates to clause 10 of the order, the purpose of which was to protect the railway companies at points of interchange against possible misinterpretation by shippers, who might claim the substitution of the interswitching toll for the local tariff rate on a purely local movement of one company. I am unable to see how any railway company could read this clause any other than its true meaning, namely, that the interswitching toll of the company which performs the terminal service does not supersede or modify any local freight rate published by that company to apply to its ordinary or local freight traffic between any two of its own stations.

To dispose of a question which arose at the hearing, I would add that the order was not intended to apply, and is not applicable, to traffic loaded at a point on one railway and destined to a point on another railway within the same switching district, or within adjoining switching districts, covered by local switching tariffs to and from the point of interchange.

Commissioners Mills and McLean agreed with Mr. Scott, and Chief Commissioner Mabee appended the following memo: "In view of the opinions of the other members of the Board and that of the Chief Traffic Officer, I do not dissent from the above disposition of this matter."

In connection with the foregoing, the Board's secretary has issued a circular stating that in view of the fact that the tariffs of many railway companies are not in accordance with the general interswitching order no. 4988, it is directed by the Board that such variation from that order be removed and new tariffs published and filed without delay.

Sales Agents: The Canadian Fairbanks Co., Ltd. Offices: Montreal, Toronto, Winnipeg, Saskatoon, Vancouver, Calgary, St. John

STEAM RAILWAY STATISTICS FOR YEAR ENDED JUNE 30, 1910

The table given in our last issue showed the financial results of the operations of steam railways for the year ended June 30, 1910. The following table gives the percentages and the principal statistical information compiled by the companies. The table published last issue and the one given below contain all the information given prior to 1909 in our compilation of these statistics, but the columns have been rearranged so as to combine in the first table the financial and in the second the statistical information.

Name of Railway	Proportion of total passenger service train revenue of total earnings	Proportion of freight revenue plus switching revenue, &c., to total earnings	Revenue Train Mileage	Mileage of Non-Revenue Trains	Earnings per Train Mile	Passengers Carried	Passengers Carried One Mile	Passenger Earnings per Train Mile	Tons of Freight Carried	Tons of Freight Carried One Mile	Freight Earnings per Train Mile

$761.59 Saved
with Three Ounces of
Vanadium Steel

A two years' test of Vanadium against ordinary steel in a large railroad shop shows an actual saving of $761.59 on a single item—a flue cutter weighing three ounces. In one year 1,049 carbon steel cutters were used to cut 145,444 flues; in the next year 68 Vanadium steel cutters cut 152,578 flues. The average number of tubes cut with the carbon steel tool was 139, the average for the Vanadium steel, 2,244. The cost of the carbon steel cutter per hundred flues was 54c., compared with 1 6-10c. per 100 with the Vanadium steel tool.

This means that there has been a revolution in making steel. What we call steel is a relic of the past compared to the new Vanadium steel. In final cost Vanadium steel is the cheapest high duty metal known. In actual service it is the strongest, toughest, most elastic and longest lived steel that can be made.

In workability it melts, welds, rolls, forges, stamps and machines like ordinary steel. It is made in many types for many uses; you can buy it from any reputable steel maker; it costs less than ordinary steel, service considered.

Vanadium steel means safety, economy, vitality, strength and service. Specify it, use it, save money by it and guarantee your product and your profits on it.

Directions for making and heat-treating Vanadium steel and illustrated tests and uses sent free in our booklets.

February Birthdays.

Many happy returns of the day to—

S. A. Baker, Canadian Freight and Passenger Agent Chicago Great Western Ry., Toronto, born at Morrisburg, Ont., Feb. 1, 1877

B. H. Bennett, General Agent Chicago and North Western Ry., Toronto, born at Cobourg, Ont., Feb. 6, 1858.

F. L. C. Bond, Resident Engineer G.T.R., Montreal, born there Feb. 21, 1877.

T. Britt, General Fuel Agent C.P.R., Montreal, born there Feb. 3, 1871.

F. W. Churchill, C.P.R ticket agent, Collingwood, Ont., born in London, Eng., Feb. 6, 1853.

H. R. Charlton, General Advertising Agent G.T.R. and G.T.P.R., Montreal, born at St. John's, Que., Feb. 9, 1866.

F. W. Cooper, Resident Engineer C.P.R., London, Ont., born there Feb 16, 1880.

R. Crawford, Northwest Agent Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

E A. Evans, ex-Chief Engineer Quebec Ry., Light and Power Co., Quebec, born at Kensington, London, Eng., Feb. 26, 1855.

E. H. Fitzhugh, First Vice President G.T.R. and Vice President Central Vermont Ry., Montreal, born in Montgomery County, Mo., Feb. 1, 1853.

L. O. Genest, General Storekeeper C.P.R. Western Lines, Winnipeg, born at St. Henri, Levis County, Que., Feb. 16, 1856.

T. C. Hudson, Master Mechanic C N.Q.R. and Q. & L. St. J. Ry., Joliette, Que., born at Brockville, Ont., Feb. 20. 1873.

W. Jackson, C.P.R. ticket agent, Clinton, Ont., born there Feb. 4, 1860.

C. Gardiner Johnson, Lloyds' Agent for British Columbia, Vancouver, B.C., born at Dumblane, Perthshire, Scotland, Feb. 8, 1857.

R. S. Logan, Assistant to President G.T.R. and G.T.P R., Montreal, born at St. Louis, Mo., Feb. 13; 1864

D. C. Macdonald, City Freight Agent C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

D. MacPherson, Assistant Chief Engineer National Transcontinental Ry Commission, Ottawa, born at Bath, Ont., Feb. 2, 1858.

T. McNabb, Master Mechanic Alberta Ry. and Irrigation Co., Lethbridge, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNeillie, Superintendent District 2 Ontario Division C.P.R., London, Ont., born at Toronto, Feb. 23, 1874.

C. S. Maharg, Superintendent District 2 Alberta Division C.P.R., Calgary, born in Dufferin County, Ont., Feb. 4, 1867.

G. A. Montgomery, Superintendent Michipicoten Division Algoma Central and Hudson Bay Ry., Michipicoten Harbor, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent G.T.R., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

G. J. O'Dowd, City Freight Agent C.P.R., Quebec, born at Montreal, Feb. 4, 1874.

J. E. Proctor, District Passenger Agent C.P.R., Brandon, Man., born at Sarnia, Ont., Feb. 17, 1878.

A. H. Robinson, Superintendent Elgin and Havelock Ry., Havelock, N.B., born at Elgin, N.B., Feb. 2, 1862.

J. E. Robitaille, Accountant and Auditor Ha Ha Bay Ry., Chicoutimi, Que., born at Quebec, Feb. 17, 1870.

A. E. Rosevear, Assistant General Freight Agent G.T.R., Montreal, born Feb. 20, 1863.

H. H. Schaefer, Division Freight Agent Intercolonial Ry., St. John, N.B., born at Cologne, Germany, Feb. 10, 1848.

J. G. Scott, ex-General Manager Quebec and Lake St. John Ry., Quebec, born there Feb. 13, 1847.

G. Spencer, Superintendent District 1, Lake Superior Division C.P.R., North Bay, Ont., born in London, Eng., Feb 21, 1865.

H. E. Suckling, Treasurer C.P.R., Montreal, born at Gibraltar, Feb. 27, 1851.

Hugh Sutherland, Executive Agent Canadian Northern Ry., Winnipeg, Man., born at New London, P.E.I., Feb. 22, 1845.

Sir Wm. C. VanHorne, K.C.M.G., director C.P.R. and President Cuba Co., Montreal, born in Will County, Ill., Feb..

◆

J. Brown, C.P.R. city ticket agent Stratford, Ont., has been elected mayor of Stratford.

A Railway to Hudson Bay.

Referring to the reports current recently that Mackenzie, Mann & Co., contractors for putting in the foundations of the bridge over the Saskatchewan River at Le Pas, have abandoned the work having failed to find a suitable foundation after having bored to a depth of 250 ft., J. Armstrong, Chief Engineer, has stated that an excellent bottom had been found at less than 50 ft., and that the foundation work is being proceeded with. The foundations will be on solid hardpan, and piling will be unnecessary. The hardpan will be excavated to a depth of seven feet in order to get below any danger due from scouring, due to the rapid current.

Several meetings with the Dominion Government have been held for the discussion of the building of this line. Sir Wm. Mackenzie and Sir Donald D. Mann and other Canadian Northern Ry. officers had a conference with the Minister of Railways, Jan. 7, and it is reported that a preliminary agreement has been reached by which the Government will build the line, and the Canadian Northern Ry. will operate it at a rental of 3% on the cost, under substantially the same conditions as the G.T. Pacific Ry. is to operate the National Transcontinental Ry. The proposition has to be formally presented to the Government, and it will be brought before Parliament. (Jan. pg. 39.)

◆

Train Dispatching by Telephone.—The use of the telephone for the operation of trains is being extended over a considerable mileage of Canadian lines. The C.P.R. already has several lengthy lines in operation, and a proposition is under consideration for the installation of a telephone dispatching line between St. John, N.B., and McAdam Jct., on the Atlantic Division, during the current year, as well as on several sections of the Western lines. The G.T.R. is distributing wire for a telephone line in the vicinity of London, Ont., and the work is to be gone on with in the spring. The Michigan Central Rd. has ordered wire and instruments for the installation of a telephone circuit between Windsor and St. Thomas, Ont., for train operating purposes.

Railway Statistics for 1909-10.

In submitting his annual statistical report upon Canadian steam railways for the year ended June 30, 1910, J. L. Payne, Comptroller of Railway Statistics, refers to the prompt return of statistical schedules to the department, which has done much to expedite the heavy work of tabulation.

The figures give information as to the operations of 24,730.86 miles of railway, an increase of 626.69 miles over the mileage reported June 30, 1909. The total mileage reported does not include a considerable mileage in actual operation, but officially regarded as under construction. The Grand Trunk Pacific Ry., for instance, is conducting a regular passenger and freight service between Winnipeg and Edmonton, as well as a freight service between Fort William and the junction with the National Transcontinental Ry., and is using the latter line for freight traffic between the junction with the Fort William line and Winnipeg, not a mile of which is included in the 24,730 miles. There are some other mileages under construction, which are being operated over by construction trains, so that it may be assumed that 1,500 miles of additional lines are really available throughout the Dominion, although returned as technically unfinished. The term "under construction" is regarded as being too comprehensive. It covers the work of building the line from the preliminary survey to the driving of the last spike. Assuming, however, that construction implies the active prosecution of positive work toward a completed railway, it is estimated that at least 4,500 miles of line were thus under way on June 30, 1910. The distribution of railway mileage, with the increase for the year, by provinces, is as follows:—

	Miles.	Increase or Decrease.
Ontario	8,230.25	+1.14
Quebec	3,794.94	+132.00
Manitoba	3,220.62	+15.32
Saskatchewan	2,931.90	+300.56
British Columbia	1,832.28	+36.34
New Brunswick	1,521.65	−25.43
Alberta	1,488.42	+166.90
Nova Scotia	1,350.56	+0.3
Prince Edward Island	269.33	......
Yukon	90.91	.....
Total	24,730.86	626.86

The decrease in New Brunswick is due to the elimination of the Albert Southern Ry., which has not been operated for many years. During the year there were added 79.43 miles of second track, while yard track and sidings were increased by 393.47 miles. During the four years ended June 30, 1910, there has been an increase of 2,279 miles of main line, 476 miles of second track, and 1,063 miles of yard track and sidings. Combining all these there were at the date of the report 31,767 miles of track in the Dominion in actual operation.

The total of outstanding obligations was $1,410,297,687, of which $687,557,387 was represented by capital stock, $696,677,305 by bonds, $8,365,077 by miscellaneous obligations, $5,036,546 by income bonds, and $12,661,372 by equipment trust obligations. In an endeavor to work out an approximate idea of the capital per mile of line, it is pointed out that the old method was to add to the total of the stocks and other obligations the amount of the subsidies paid over, and to divide the sum produced by the total railway mileage. On this basis the capital liability of each mile of line on June 30, 1910, was $64,727. This figure is stated to be delusive, as both the capital liability and the mileage are exaggerated. The capital liability of lines absorbed by the larger companies is included twice, first as liability of the original company, and secondly in the capital of the purchasing company, issued to acquire the stock, while other lines are owned by mining companies, and there is no separate stock issue in respect of them. The amount to be deducted in respect of these lines is estimated at $226,298,988, thus reducing the aggregate capital liability to $1,183,998,699. As regards the mileage there are 2,043.84 miles of Government lines, against which there are neither stocks or bonds outstanding, and 75.36 miles of lines against which no capital liability can be assigned, thus leaving 22,612 miles of line against which a definite capital liability can be assigned. This will give an actual outstanding capital per mile of line of $52,361. It is impracticable to estimate the actual cost of Canadian railways, but an earnest effort is to be made by the Department during the current year to gather together whatever data is available under that head. The facts in relation to the Government lines are readily available, as follows:—

	Mileage	Cost.	Per Mile.
Intercolonial	1,450	$ 92,273,074	$63,636
Prince Edward Island	267	8,465,365	31,705
Temiskaming and N. Ontario	266	15,315,672	57,577
New Brunswick Coal and Ry.	58	1,964,640	33,873

The cash subsidies paid during the year ended June 30, 1910, amounted to $1,789,723, of which $1,382,192 was paid by the Dominion. $248,531 by the provinces, and $159,000 by municipalities. From 1876 to June 30, 1910, financial aid was granted as follows:—

Dominion.	
Cash subsidies	$ 78 410 272 58
Loans	25 576 533 33
Cost of lines handed over to C.P.R.	37 785 319.97
Paid to Quebec Government	5 160 053.83
Total	$146,932,179.71
Provinces.	
Cash subsidies	$ 32 787.030.16
Loans	2,750,030.00
Subscriptions to shares	300 000.00
Total	$ 35,837,060.16
Municipalities.	
Cash subsidies	$ 12 739 824.98
Loans	2 404 498.62
Subscriptions to shares	2,839,500.00
Total	$ 17,983,823.60

In addition land grants have been made as follows:—Dominion, 32,040,378 acres; Quebec, 13,324,950 acres; British Columbia, 8,119,221 acres; New Brunswick, 1,647,772 acres; Nova Scotia, 160,000 acres. The Quebec grants, in nearly every case, gave an option to the company to take 52c. an acre in lieu of the land, and as this has in most cases been taken advantage of, comparatively little land has been alienated. Within the last few years the system of aiding railway building by a Government guarantee of bonds has been adopted, and to date the Dominion and provincial Governments have guaranteed bonds totalling $127,336,357, distributed as follows:—

Dominion	$ 52,439 865
Manitoba	20 899 660
Alberta	25 743 000
Saskatchewan	11 999 000
Ontario	7,860 000
Nova Scotia	5,022,000
British Columbia	2 196,832
New Brunswick	700 000
Quebec	476,000
Total guarantees	$127,336,357

The number of passengers carried during the year was 35,894,575; the number carried one mile was 2,466,729,664, and the number of passengers carried one mile per mile of road was 99,742, representing an increase in the density of passenger traffic of 15,400. The number of passengers carried per mile of line was 1,451, an increase of 96 as compared with the year ended June 30, 1909. Since 1907 there has been an increase of railway mileage of 2,279 miles, while the number of passengers carried per mile of line has increased by but 20, showing that railway construction has proceeded more rapidly than has the development of passenger traffic. The average revenue per passenger per mile was 1.866 cents, a decrease of .055 cent. The number of passengers per train was 59, an increase of eight; the average passenger journey was 69 miles, as compared with 62 miles in the previous year. The average revenue per passenger—that is from ticket sales—was $1.282, an increase of .087 Passenger trains ran a total distance of 35,022,541 miles, or 2,726,811 miles more than in the previous year, and mixed trains ran 6,441,440 miles, as against 7,061,580 in the previous year. The earnings per passenger train mile—using the aggregate earnings from ticket sales, mails, express, baggage, etc., as one of the factors—were $1.277, against $1.150 in the preceding year.

The volume of freight traffic was 74,482,866 tons, a gain of 7,640,608 tons, or 11.4% over the tonnage carried in the previous year. The number of tons hauled one mile was 15,712,127,701, as compared with 13,160,567,550; the number of tons hauled one mile per mile of line was 635,321, a betterment in the density of traffic of 89,330 tons. The average revenue per ton per mile was .739c., against .728c. The revenue from freight was $116,229,894.06, an increase of 21.4%; this was equal to $4,699.76 per mile of line, an increase of $728.85 per mile. The average number of tons hauled per freight train was 311, an increase of 33 tons; the average number of loaded cars per freight train was 18.15, against 16.37; the average number of tons per loaded freight car was 17.13, against 16.98. The average haul was 211 miles, an increase in distance of 14 miles. The revenue freight train mileage was 50,184,108 (including 6,441,440 of mixed train mileage), against 40,304,900 miles. The mileage of loaded cars increased from 775,543,414 to 910,858,711 miles. The tonnage of the different classes of freight carried as compared with the previous year is as follows:—

	1910. Tons.	1909. Tons
Products of mines	26,152 022	23,931.061
Products of forests	13,068.940	11,595.007
Products of Agriculture	12,891.351	11,963.263
Manufactures	10,014.279	7,902,592
Unclassified	7,073.078	6,234.372
Products of animals	2,765,006	2 807,487
Merchandise	2,518,190	2.393.285

The ratio of operating expenses to gross earnings was 69.2, or 2.9 better than in the previous year and the lowest since 1902. The net earnings were $53,550,776.71, against $40,456,251.76, a betterment of 32.3%. These net earnings were equal to $2,165.85 per mile of line, while the gross earnings were $7,033.93. Twelve lines earned 97% of the net earnings, and 24 lines showed deficits or managed to merely make ends meet. The operating expenses were $120,405,440.42, against $104,600,084.43, an increase of 15.1%. The operating expenses represented $4,868.60 per mile of line, an increase of $528.07, while the cost of running a train one mile was $1.409. The distribution of operating expenses compare as follows:—

	1910.	1909.
Way and structures	$27,035,603.46	$21,153,274.46
Equipment	26,002 301.30	21,510,303.59
Traffic expenses	4,366,176.92	3,798 824.57
Transportation	58,928,170.74	54,284,587.41
General expenses	4,073,188.00	3,853,094.40

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Albert and Moncton Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway from Albert Mines in Hillsboro parish, via Hillsboro to Moncton, N.B., and a railway and general traffic bridge across the Petitcodiac River at Moncton. Pringle and Guthrie, Ottawa, are solicitors for applicants. (July, 1910, pg. 547.)

Alberta and Great Waterways Ry.—Among the acts passed last session of the Alberta Legislature was one providing that "any person or corporation claiming to have suffered damages in consequence of the passing of the act of forfeiture of the A. and G.W.R. Bonds Act," may file the same within three months with the Government, which will consider and report. Two claims were filed Dec. 20, one by T. K. Wright, for cutting and clearing about 20 miles of the right of way, and a second by a company for $10,000 worth of ties. The company's offices in Edmonton have been closed.

Two of the banks holding part of the proceeds of the bond issue have paid the money into court, but the third bank is going to fight the case, and has entered an appearance. The matter came before Justice Beck in chambers, Jan. 27, for the settlement of some preliminary questions.

The Dominion Government, on Jan. 9, seized the timber cut along the right of way for unpaid stumpage dues. (Jan., pg. 21.)

Alberta Central Ry.—The Board of Railway Commissioners has extended to July 1 the date by which the branch line at Rocky Mountain House, Alta., may be completed. (Dec., 1910, pg. 1013.)

Alberta Northwestern Ry.—A company with this title was incorporated by the Alberta Legislature in 1906, to build railways from Edmonton to Peace River, and from Edmonton to the International boundary, via Medicine Hat. It has been granted an extension of time for construction on several occasions, the latest being at the last session of the Legislature. (Dec., 1910, pg. 1013.)

Alberta Pacific Ry.—The Alberta Legislature, at its last session, changed the name of the Pincher Creek, Cardston and Montana Ry. Co. to that of the Alberta Pacific Ry. Co., and granted an extension of time for construction. A clause was inserted providing that a 30 mile section of the line has to be started at once. The annual meeting of the company was held at Pincher Creek, Alta., Jan. 2, when ordinary routine business was transacted. O. E. Culbert, Pincher Creek, is Secretary.

Plans for the projected railway from Pincher Creek to the International boundary are reported to have been approved by the Alberta Government, and it is said that further consideration is to be given to the plans for the line in the vicinity of South Kootenay Pass. (See Pincher Creek, Cardston and Montana Ry., Dec., 1910, pg. 1015.)

Alberta Western Ry.—The Alberta Legislature last session incorporated a company with this title to build railways in the province, with Lloydminster as a centre. The notice of application gave the proposed title of the company as the Lloydminster and Northwestern Ry., but it was changed to the above in passing through the Legislature. It is understood that the interests promoting this line are also behind the application being made to the Dominion Parliament for the incorporation of a company to build lines from Lloydminster to Fort McMurray, to Hudson Bay, to the International boundary at Milk River, Alta., and other points. (See Lloydminster and North Western Ry., Dec., 1910, pg. 1015, and Lloydminster to Fort McMurray, Jan., pg. 23.)

Algoma Central and Hudson Bay Ry.—The main line extends from Sault Ste. Marie to mileage 68, just beyond the crossing of the Chippewa River. From that point to the Montreal River the grade completed some years ago has been cleared up, and track will be laid, so as to get on with bridge construction over the Batchawana and Montreal rivers. Some grading was done beyond that point some years ago, and this is now being cleaned up and completed to Hawk Lake Jct., mileage 164.25. The route winds around between the Montreal and the Agawa rivers, and then follows the canyon of the Agawa River, keeping on the east bank, until clear of the canyon, and then proceeds in an almost straight line to Hawk Lake Jct., crossing the Michipicoten River, close to the mouth of the Shequamka River. From this point the line is under construction almost in a straight line to Hobon, on the C.P.R. transcontinental line, mileage 194.5. Track was laid in 1910 on the extension at the south end from mileage 69 to 81.6, and at the north end from mileage 170.5 to mileage 151.5, making altogether 31.6 miles of new track laid on the main line. Between Sault Ste. Marie and Hawk Lake Jct. there is only one short branch, at mileage 39.43, to the Superior Copper Mine.

From A Chief Engineer of Surveys and Construction.

Canadian Northern Pacific Railway,
Office of the Chief Engineer,
Vancouver, B.C., Jan. 4, 1911.

My Dear Burrows,—I am sending you today the information asked for on your new form, which makes it easier to keep you posted.

Knowing how much pains you always have taken to have your paper absolutely reliable, and considering the great amount of information interesting to railway men in all the departments which it always contains, I am glad to do what little I can to help. I feel that my subscription is quite inadequate to the value I receive in being kept in touch with all that is going on, connected with railways all over Canada, as well as with the men engaged in doing it.

Yours very truly,
T. H. WHITE.

The Michipicoten branch has been in operation for some years, and extends from Michipicoten Harbor, on Lake Superior to Hawk Lake Jct., about 20 miles, with the following spur lines: To Helen Mine, 1.96 miles; to Magpie mine, 9.08 miles; to Josephine mine, 0.96 mile. The spur to the Magpie mine was built during 1910, and an extension of 4.4 miles is being built. The O'Boyle Construction Co., Sault Ste. Marie, Ont., has the contract.

The Ontario Government is being asked to provide for an extension of time within which the lines under construction may be completed.

A Sault Ste. Marie press report states that two survey parties are shortly to be put in the field, to assist the one already at work on the location of an extension from Hobon, on the C.P.R., to a junction with the National Transcontinental Ry., a distance of 106 miles. (Jan., pg. 21.)

Atlantic, Quebec and Western Ry.—The Board of Railway Commissioners has authorized the company to open for traffic the portion of its line between Newport, mileage 35, and Grand River, mileage 51.5, and has approved plans for station buildings at St. Adelaide de Pabos, Grand River and Cape Cove, Que.

The Receiver in charge of the estate of the Charing Cross Bank, London, Eng., which was financing the construction of the line, is quoted as having stated that about 25% of the line to Gaspe had yet to be completed, and that the work would be continued during the present year. (Jan., pg. 21.)

British Columbia and Alaska Ry.—The President, J. Wolkenstein, and G. C. Moore, of New York, spent some time in Vancouver, B.C., in Dec., 1910. In an interview, the President stated that financial arrangements necessary for starting construction during 1910 had been completed, and that the company had secured power to build a line in Alaska, in continuation of the Canadian section. (Dec., 1910, pg. 1027.)

British Columbia and Alberta Ry.—See Northern Empire Ry.

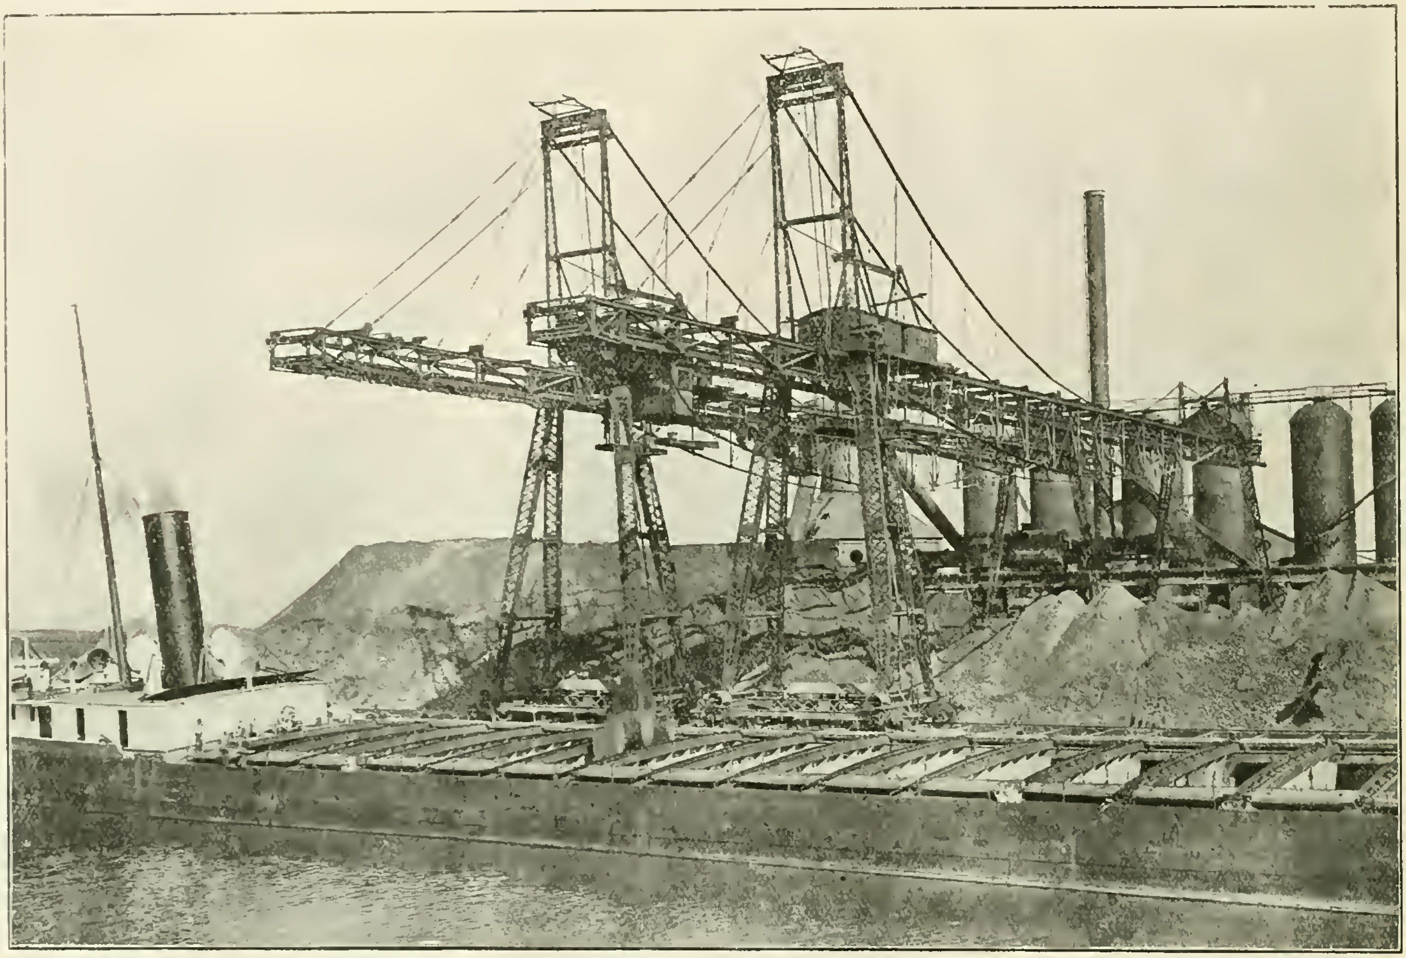
Burrard Inlet Tunnel and Bridge Co.—A proposition is under consideration by the city of Vancouver for taking $200,000 of shares in this company, towards the erection of a bridge across the Second Narrows of Burrard Inlet. The plans for the bridge have not been made public, but it is said that the span over the deepest part of the channel will be 150 ft. long, and have its bottom chord 35 ft. above high water at the highest spring tides; while there will be a 450 ft. span adjoining. The borings for the foundations show that it will only be necessary to clear away a few feet of deposit before reaching solid rock. (Jan., pg. 21.)

Canada and Gulf Terminal Ry.—The first section, extending from Ste. Flavie, on the Intercolonial Ry., to Matane, Que., 36 miles, was opened for traffic Dec. 29. A charter for building this line was originally granted to the Gaspesian Ry. Co. in 1883, but nothing was done. In 1902, the name of the company was changed to the Matane and Gaspe Ry., and a new charter obtained, and subsequently the name was changed to the C. and G.T. Ry. About two years ago the company was reorganized, and construction was started, the contract being let to H. Doheny, Montreal. Tracklaying was started May 7, 1910, and the completed section was taken over by the company for operation Dec. 7. The chief settlements secured by the line are Grand Metis, Little Metis, Sandy Bay, Riviere Blanche, Tessierville, and Matane, at which point the St. Lawrence is about 30 miles wide. The line is built to a high standard, and the track is laid with 80 lb. steel, with steel bridges over the larger rivers. The present rolling stock consists of three locomotives, two passenger coaches, 15 box cars, and 30 flat cars.

Surveys are being made for an extension from Matane easterly to Gaspe Basin, 178 miles, and it is proposed at an early date to have surveys made for an extension westerly from Ste. Flavie to St. Eleuthre, on the National Transcontinental Ry., about 100 miles. (Jan., pg. 21.)

Chestermere and Calgary Suburban Ry.—The Alberta Legislature at its last session incorporated a company with this title to build a railway to be operated by "electricity or by any other motive or mechanical power" from Calgary to Chestermere Lake, in tp. 24, range 28, west of the fourth meridian. E. F. Ryan, Calgary, Alta., was solicitor for the applicants.

Chibougamou, Que.—The report of the investigation into the resources of



FEDERAL FURNACE CO.'S TWO BRIDGE TRAMWAY.

THE BROWN HOISTING MACHINERY CO.

Engineers, designers and builders of hoisting machinery of all descriptions.

Branch Offices:

PITTSBURG AND NEW YORK

the Chibougamou district of Quebec, with a view to the building of a railway by the Quebec Government was laid before the Legislature Jan. 9. The Commissioners say that having weighed all the evidence collected "they cannot find the mineral deposits so far discovered are of sufficient merit to justify the spending of public money on the building of a railway as proposed from Lake St. John to Lake Chibougamou." (July, pg. 547.)

Chicago, Milwaukee and Puget Sound Ry.—There have been some purchases of large areas of land along the Fraser River, in the vicinity of Westminster Jct., reported recently, and it is stated that the purchaser is the C.M. and P.S. Ry. That company has secured a right of way for a line to the International boundary, and has been on the lookout for some time for a suitable property at deepwater in the vicinity of Vancouver for yards, warehouses, wharves and other terminal facilities. The reports state that the whole water front, from the Industrial cannery to Toby Island, a distance of two miles, has been purchased or is under option, that some 240 acres of other lands have been purchased, and that options have been obtained on about 300 acres additional. The reports further state that it is proposed to build a bridge across the river from Sunbury. (Jan., pg. 21.)

The Diamond Coal and Ry. Co. laid some additional switches at its collieries at Diamond City, Alta., during 1910, and has under construction an additional mile and a half of switches, also at the collieries. Its line extends from Diamond City to Kipp, Alta., on the C.P.R. (Nov., 1910, pg. 909.)

Dominion Central Ry.—The Dominion Parliament is being asked to extend the time for the construction of this projected railway authorized by chap. 90 of the statutes of 1904. The company desires to increase its bonding powers to $50,000 a mile. The application during the session of 1909-10 fell through. (Dec., 1909, pg. 881.)

The Empire Coal and Tramway Co.'s property and rights have been taken over by the Atlantic Coal Co., which has been organized under the Dominion Companies Act, with a capital of $290,000. The directors are: J. B. Shaffner, Halifax, N.S.; J. B. Sherry, Memramcook, N.S.; T. Nagle, P. M. O'Neill, S. E. Elkin, St. John, N.B.; J. H. Harris, Moncton, N.B.; W. S. Montgomery, Dalhousie, N.B. The colliery which the company is at present working is situated on the Maritime Coal, Ry. and Power Co.'s line, near Maccan, N.S., and it is not likely, therefore, that the company will undertake the building of any railway lines.

Essex Terminal Ry.—An additional mile of track between Walkerville and Windsor, Ont., was laid on this switching railway during 1910. No additional construction work is in hand or in contemplation at present. (Dec., 1910, pg. 1013.)

Ha Ha Bay Ry.—During 1910 the company laid 25 miles of new track, 20 miles being on the line from Chicoutimi to Bagotsville, Que., and five miles from Chicoutimi to Mathias station. A branch from the main line to Laterriere village, seven miles, is under construction, the contractors being Boulianne and Boulianne. Surveys are being made for a line from Mathias station to Roberval, on Lake St. John, 120 miles. J. F. Grenon, Chicoutimi, Que., is Chief Engineer.

The Quebec Public Utilities Commission has authorized the opening for traffic of the line between Chicoutimi and St. Alphonse, Que., 18.10 miles, subject to certain conditions as to the provision of safety switches, etc., and permitting a junction with the Quebec and Lake St. John Ry. at Chicoutimi, subject to an arrangement between the two companies. (Aug., 1910, pg. 627.)

Halifax and Eastern Ry.—A New Glasgow, N.S., press report says:—"It is now reported that the construction of a trunk railroad from Dartmouth to Guysboro via the Musquodoboit and St. Mary's Valleys, is to be abandoned, and the provincial government will make an effort to get the Dominion Government to build a spur of the Intercolonial into Musquodoboit and another from New Glasgow to Guysboro." (Jan., pg. 21.)

High River and Hudson's Bay Ry.—The Alberta Legislature last session incorporated a company with this title to build a railway as previously described. (Dec., 1910, pg. 1013.)

The Howe Sound and Northern Ry. is reported to be under construction from Newport, at the head of Howe Sound, B.C., in the direction of Pemberton Meadows. Some track is reported to have been laid, and the line is being used for logging purposes. A press report states that J. D. Nelson is engineer in charge of a party engaged in making a survey between Anderson and Seaton Lakes, and that the party started from some westerly point, and is working towards Lillooet. (Aug., 1910, pg. 627.)

Intercolonial Ry.—The lines under construction are:—A diversion of 8.28 miles from Nelson to Chatham, N.B., the contractors for which are Morrison and Clarke, Summerside, P.E.I., and a diversion of 9.2 miles between George River and Sydney Mines, N.S., the contractor for which is D. G. Kirk, Antigonish, N.S. (Dec., 1910, pg. 1015.)

International Ry. of New Brunswick.—The accounts of the province for the year ended Oct. 31, 1910, show that $43,000 was paid on account of the subsidy of this line. (Jan., pg. 23.)

Kamouraska and L'Islet Ry.—The Quebec Legislature is being asked to incorporate a company with this title to build the following lines:—From Ste. Anne de la Pocatiere to the Intercolonial Ry., southerly to the National Transcontinental Ry. in the parish of St. Perpetue, and on to a junction with the Quebec Central Ry. in L'Islet county; from Ste. Anne de la Pocatiere northerly to Pointe Riviere Ouelle, and on to the wharf there, making a junction with the Intercolonial Ry. branch line. A. Stein, Fraserville, Que., is attorney for applicants.

Kettle Valley Lines.—In addition to the powers previously announced as being applied for at the current session of the Dominion Parliament, the Kettle Valley Ry. is asking authority to build a railway to Allison or Princeton in the Similkameen Valley, B.C., and thence to the Granite Creek coal areas, near the junction of Granite Creek with the Tulameen River. Authority is also being asked to change the name of the company to the Kettle Valley Ry. Co.

The Board of Railway Commissioners has approved of the location of the extension of the line, now under construction, from station 0 to station 513, division 1A, west of Midway, B.C. The construction programme in Canada includes the building of about 250 miles of line, connecting up the existing line at Midway to Merritt, B.C., of which there are under contract a ten mile section from Midway to Rock Creek, which had been partially graded by the old Midway and Vernon Ry., and a 30 mile section from Merritt to the Coldwater summit. The contractors are L. M. Rice & Co., at Midway, and Macdonell, Gzowski & Co. at Merritt. Press reports in Dec. stated that track had been laid between Midway and Rock Creek, and that it was expected to lay a further ten miles by the end of the year, but we were advised, Jan. 6, that no track had been laid.

The United States end of the line is the Spokane and British Columbia Ry., which has in contemplation the building of a line from Republic, the present southerly terminus of the line, southerly to Spokane, Wash., 140 miles. (Jan., pg. 23.)

London and Port Stanley Ry.—The mayor of London, Ont., who, by virtue of his office, is President of the L. and P.S. Ry., in his inaugural address, Jan. 9, suggested that the question of the use of electricity as motive power be considered at an early date. This matter was of importance in view of the fact that the lease to the Lake Erie and Detroit River Ry. (Pere Marquette Rd.) will expire Jan. 1, 1914. (July, 1910, pg. 549.)

Manitoulin and North Shore Ry.—The extensions for which tenders are under consideration. will connect up the section completed between Sudbury and Crean Hill, Ont., and the 61 mile section under construction from Whitefish Bay to Little Current, on Manitoulin Island. The contract is being let in two sections, from Crean Hill, mileage 22.7, from Sudbury to Espanola, mileage 44.5, and from Espanola to mileage 61 at Whitefish Bay. The first of these two sections is on a revised location, and is some miles shorter than the route originally surveyed. The maximum gradient is 1.25, compensated at the rate of 0.04 per degree for curvature, the maximum curvature being 10 degrees. The bridge structures over the rivers and the large openings will be of steel on concrete abutments, but temporary timber structures will be erected. The location plans show that the line will trend southerly from Crean Hill, and run between the Spanish River, and the C.P.R. crossing that line west of Nairn Centre, and crossing the Spanish River some distance south of the C.P.R. The Vermillion River will be crossed west of the point where the Spanish River runs in, and the old location will be joined at Tullock Lake. The alternate location, starting from Crean Hill, will run through the northern portions of Denison and Drury tps., and southerly and westerly through Hyman and Baldwin tps. to Espanola, on the C.P.R., crossing that line and working southerly and easterly to Tullock Lake. From that point the line will run between Anderson and Loon lakes, past Raven Lake, crossing the northwest corner of the Indian reservation, and entering the reservation again south of Charlton Lake, to the Indian village at Whitefish.

A locomotive repair shop has been built at Clara Belle Jct., just outside of Sudbury, Ont. (Jan., pg. 23.)

The Michigan Central Rd. is building a bridge over the Welland Canal at Welland, Ont. It is a double track structure of the Baltimore truss centre bearing swing type, having a total length of 260 ft. centre to centre of end bearings, 35 ft. chords, 42 ft. chords on tower, and 31 ft. 8 in. centre to centre of trusses. Its weight complete is about 1,000 tons, and it will be swung by electric power. The foundations are of concrete, 0 ft. deep, using coffer dams, and the superstructure will be erected on falsework. Temporary trestles have been erected around the side of the old bridge to carry the traffic during the construction of the new bridge. The cost is estimated at $300,000. (Nov., 1910, pg. 911.)

Montreal and Northern Colonization Ry.—Application is being made to the Quebec Legislature to incorporate a company with this title to build a railway, to be operated by steam or electricity, from Montreal north and northwesterly, "up to a point to be fixed by engineers and approved by the Lieut.-

ROTARY SNOW PLOWS

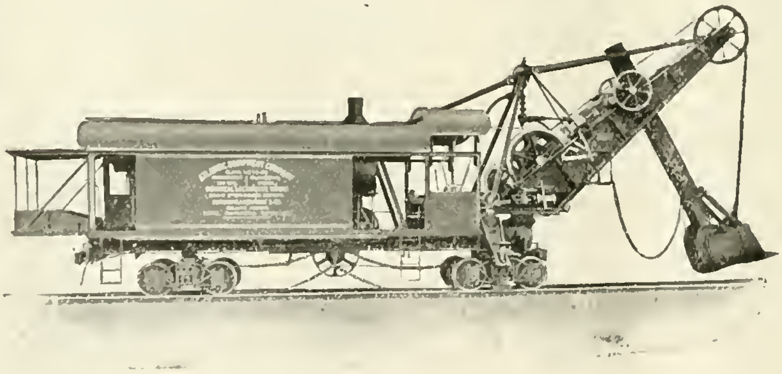
CANADIAN
PACIFIC
4241

Rotary Snow Plows have been in successful operation under the
most trying conditions for over twenty-five years.
They keep the road open.
Work with certainty and regularity.
Do not spread the rails.
Do not derail.

Heavy snowstorms and deep drifts increase operating expenses.
No snow too heavy or too hard for the Rotary.
No drift too deep.

THE NEW ATLANTIC STEAM SHOVEL

SIMPLE - STURDY



For heavy or light digging.
No chain troubles.
Few repairs.
Not top heavy.
Saves fuel.

MONTREAL LOCOMOTIVE WORKS, LTD.

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

Governor in Council." Geoffrion, Geoffrion and Casson, Montreal, are solicitors for applicants.

Montreal and Southern Ry. and Power Co.—The Quebec Legislature is being asked to incorporate a company with this title to construct "a steam or electric railway," from Caughnawaga, southwesterly to the International boundary near St. Francis, Que., "to develop water powers and electricity, and to construct an artificial canal along the Beauharnois canal." Geoffrion, Geoffrion & Casson, solicitors, Montreal, are solicitors for applicants.

Montreal Central Terminal Ry.—A proposition has been laid before the Montreal board of control by C. L. Armstrong and J. M. Shanly, civil engineers, on behalf of the company. The board promised to give consideration to the proposals if they were submitted in writing, and accompanied by plans. (July, 1910, pg. 549.)

Naas and Peace River Ry.—The British Columbia Legislature is being asked to incorporate a company with this title to build a railway to be operated by steam, electricity or other motive power, from the head of Nasoga Gulf, up the Naas River, the Kitmacool River, the Babine River, the Neel-Kit-Kwa River, the Nation River, the Pine River, and through the Pine River pass to the eastern boundary of the province, and such branch lines as may be desirable. A. Martin, Victoria, B.C., is solicitor for applicants.

Naas and Skeena River Ry.—The British Columbia Legislature is being asked to incorporate a company with this title to build a railway from Groundhog Valley, down the south side of the Skeena River to its junction with the Slan Geest River, following that river to the fifth cabin on the Yukon telegraph line, and westerly to above Blackwater Lake and down Blackwater River to the Naas River, thence along Naas River to Naas Bay, with a branch line from the junction of the Skeena and Carrier rivers to Blackwater River. Barnard and Robertson, Victoria, B.C., are solicitors for applicants.

New Brunswick Coal and Ry. Co.—The financial statement of the province for the year ended Oct. 31, 1910, showed that there had been expended by the Commission on repairs to the N.B.C. & Ry. Co.'s line, $3,297.45. (Dec., 1910, pg. 1015.)

Northern Empire Ry.—Suit has been entered by H. Roy, Ottawa, against the N.E. Ry. Co. and its associated company, the British Columbia and Alberta Ry., and the directors, for $25,000 damages for breach of contract. Roy is a civil engineer and was practically the owner of the two charters named. It is alleged that C. W. Patton, one of the defendants, undertook to organize a company, Roy to receive $15,000 cash and certain stock. (May, 1910, pg. 353.)

Pacific and Hudson Bay Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Kimsquit at the head of Dean channel on the Pacific coast, northeasterly following the Dean River, Sigutla Lake, Kwalchola Lake, the Entiaco River and the upper Nechaco River to Fort Fraser, thence northeasterly to Fort McLeod, thence across the Parsnip River, through Pine River Pass and along the Pine River to Coalbrook, and Dunvegan and along the Peace River to Peace River Landing, thence easterly, passing the headquarters of the Bear River to the Athabasca River and Fort McMurray, thence crossing the Athabasca River and following the Clearwater and Churchill rivers to a junction with the proposed railway to Hudson Bay, south of Washalowaka Lake, and thence to Churchill or Nelson, on Hudson Bay. W. F. Brougham, Vancouver, B.C., is solicitor for applicants.

Pacific Coast Mines.—During 1910 the company built a line from Fiddicks Jct., on the Esquimalt and Nanaimo Ry., to its mines near South Wellington, B.C., 1.8 miles, and has under construction a mile of line from the main line to the low level at Boat Harbor. Surveys have been made for a branch from Port McNeill to Suquach, seven miles. S. H. Reynolds, Victoria, B.C., is Managing Director. (Jan., 1910, pg. 23.)

Peace River Great Western Ry.—The Alberta Legislature at its last session incorporated a company with this title to build a railway from Edmonton to the Peace River Pass, crossing the Athabasca River at Holmes Crossing, and skirting the west end of Lesser Slave Lake. (Jan., pg. 23.)

Pincher Creek, Cardston and Montana Ry.—See Alberta Pacific Ry.

Prince Edward Island Ry.—There is under construction a branch line from Harmony to Elmira, 9.9 miles, the contractors for which are Whitehead Bros., Fredericton, N.B.

Tenders were received to Jan. 17 for the supply of 20,000 cedar ties, 20,000 hemlock ties, and for a quantity of switch ties.

Prince Rupert and Port Simpson Ry.—Press reports state that surveys have been made for a line from Port Simpson to Prince Rupert, B.C., 27 miles. The surveys are said to show two summits between the terminals, one at Georgetown of 300 ft., and the second close to Prince Rupert, of 240 ft. The gradient to the Georgetown summit will be one per cent., and the other 1.8%, with a 1.2% gradient coming back to the harbor. (Aug., 1909, pg. 575.)

Quebec and Great North Western Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build the following railways: from Port Arthur, Ont., easterly to New Liskeard, to some point between Baskatong Lake and Maniwaki, Que., and on to Quebec city from about 75 miles west of Maniwaki northerly to a junction with the National Transcontinental Ry., and southerly via the valley of the Coulonge River to Ottawa, Ont.; from New Liskeard to the National Transcontinental Ry. east of Lake Abitibi, Ont.; from New Liskeard southerly to Timiskaming station on the C.P.R. from Mattawa, from the point of crossing the Missinaibi River to Michipicoten on Lake Superior, Ont. Power is asked to build branches of the above, such branches not to exceed in any one case 25 miles. E. J. Daly, Ottawa, is solicitor for applicants.

Quebec and New Brunswick Ry.—Application is being made to the Dominion Parliament to extend the time for the building of this projected railway. (July, 1910, pg. 549.)

Quebec Central Ry.—Some little time ago the roundhouse at L'Enfant Jesus, Beauce county, was destroyed by fire, and when the company started to rebuild it the municipality filed a complaint with the Public Utilities Commission. The municipality objects to the continuance of the roundhouse, tank and shunting yard. The Chairman and the engineer of the Commission visited the place Dec. 22, heard what was urged by the municipality, and will report.

The company has under survey an extension of its St. Francis branch from St. Sabine road, to which track was laid in 1910, to Cabano, Que., about 100 miles, and from Scotts to Quebec Bridge, about 19 miles. (Jan., pg. 1015.)

Quebec, Montreal and Southern Ry.—The Dominion Parliament is being asked to extend the time for the completion of the lines authorized to be built by chap. 150 of the statutes of 1906. (Aug., 1909, pg. 575.)

Richmond, Magog and Stanstead Ry.—Application is being made to the Quebec Legislature to incorporate a company with this title to build a railway from Richmond to Magog, thence to Stanstead Plain, and branch lines, not to exceed 20 miles in any one case, together with power to build a bridge across the St. Francis River between Richmond and Melbourne. Hurd, Fraser, Macdonal and Rugg, Sherbrooke, Que., are solicitors for applicants.

St. John River Valley Ry.—The cost of the surveys made on behalf of the New Brunswick Government for the projected railway from St. John to Woodstock, during the past season, is given in the provincial accounts for the year ended Oct. 31, 1910, as $19,290.46. (Jan., pg. 23.)

Shaw Lumber and Ry. Co.—Application is being made to the Saskatchewan Legislature to incorporate a company with this title, having power, among other things, to build the following railway lines:—From Shaw siding in tp. 45, range seven, west of the second meridian, southwesterly for a distance of about 30 miles to timber berth 981; a branch line from the above, at the southwest corner of tp. 44, range eight, west second meridian, for a distance of 15 miles to timber berth 960, in tp. 43, range ten; and from Shaw's Siding for a distance of 30 miles, to timber berth 960, in tp. 49, range seven. The application is signed by T. Shaw, Regina, Sask.

Skidegate to Indian Village.—In connection with the application to the British Columbia Legislature for the incorporation of a company to build a line on Graham Island, connecting up the above points, it is to be noted that the terminal point is at Naden Harbor, where the whaling and fishing company, in which Mackenzie, Mann & Co.'s interests are prominent, is building. (Jan., pg. 23.)

The Sydney and Louisburg Ry. during 1910 built one mile of track on a new location in substitution for a mile of old location, and relaid 1.5 miles of the Sydney branch with 80 lb. steel. It has under survey a branch from Balls Creek to Limestone Quarry, 1.5 miles, and a branch from Morien station to Birch Grove Mine, 2.5 miles. C. M. Odell, Sydney, is Resident Engineer. (Jan., pg. 23.)

Temiskaming and Northern Ontario Ry.—One half mile of track between mileposts 60 and 60½ represents the total additional track laid during 1910, but a second track was laid between Cobalt and North Cobalt, Ont., five miles. The contractor was A. J. McGar. A branch from Iroquois Falls, near Matheson, into the Porcupine country, 32 miles is under construction. In a recent interview the Ontario Minister of Public Works, said the steel will be laid to Frederick House by the end of March, and it is expected to reach the Mattagami River by the end of the year. If the developments west of that point warrant, a bridge will be built across the river and the line continued to Godfrey.

Montreal press reports that the G.T.R. or the G.T. Pacific Ry. is negotiating with the Ontario Government for a lease of the line are denied by the Premier of Ontario, and the Chairman of the T. and N.O. Ry. Commission, but it is said that the G.T.R. wishes to secure running rights over it.

The Chairman of the Commission stated Jan. 13 that about eight miles of the right of way of the Porcupine branch had been cleared, that there had been 2.5 miles of grading done, and that about 22 miles of the right of way had been marked out. (Jan., pg. 23.)

Toronto Office: 702 TEMPLE BUILDING P. O. BOX 82

The Toronto, Hamilton and Buffalo Ry.'s Chief Engineer and the city engineer of Hamilton had a conference Jan. 10 with respect to the operation of the line by electricity. The Chief Engineer, in an interview, said he had been directed to prepare plans and estimates as to the cost of electrification of the entire line from Hamilton to Welland, and Hamilton to Waterford, but he could not say anything as to the company's intention. The city engineer, in a subsequent interview, said at one time the T.H. and B. Ry. carried all the local passenger traffic between Brantford and Hamilton, but that it now nearly all went over the electric line, known as the Brantford and Hamilton Ry. He was of opinion that the T. H. and B.R. has an idea of operating the Hamilton-Brantford section of the line by electricity, obtaining power from the Hydro-Electric station at Dundas. (Jan., pg. 25.)

Western Alberta Ry.—The Dominion Parliament is again being asked to extend the time within which the company may build the lines authorized by chap. 90 of the statutes of 1898, as amended by subsequent acts in 1900, 1903, 1905 and 1908. Smith and Johnson, Ottawa, are solicitors for applicants. (Jan., 1909, pg. 23.)

The Western Canadian Lumber Co. is building a logging railway in the Comox district of Vancouver Island. As the timber is being cleared the land is being taken up for agricultural purposes, and a general traffic over the line is expected to be developed. (See Comox Ry. and Logging Co., Aug., 1910, pg. 627.)

Winnipeg to Springfield.—The Manitoba Legislature is being asked to incorporate a company to build the following lines of railway, which may be operated by electricity or other motive power:—From Winnipeg through the municipalities of St. Paul, Kildonan and Springfield, and from St. Boniface through the same municipalities. A. E. Hoskin, Winnipeg, is solicitor for applicants.

York and Carleton Ry.—No advance was made during 1910 with the projected extension of the line from Ryan Brook to Napidoggan, N.B., the divisional point on the National Transcontinental Ry., a distance of 9.5 miles, previously reported. (June, 1909, pg. 453.)

◆

Accidents on Canadian Railways.

During the year ended June 30, 1910, 615 persons were killed and 2,139 injured on Canadian railways, against 505 killed and 2,186 injured in the previous year. Of these 524 were killed and 1,441 were injured as the result of the movement of trains. Those killed included 60 passengers, 214 employes, 175 trespassers, 74 non-trespassers, and one postal clerk, and those injured included 270 passengers, 926 employes, 148 trespassers, 77 non-trespassers, and 20 postal clerks. In accidents caused otherwise than by the movement of trains, two passengers, 81 employes, and eight postal clerks were killed, and nine passengers, 679 employes and 10 postal clerks injured. From the movement of trains one passenger in every 598,243 was killed and one in every 132,943 was injured. One trainman in every 199 was killed, and one in every 33 injured; one trackman in every 550 was killed, and one in every 98 injured; one switch tender in every 181 was killed, and one in every 65 was injured. Through accidents at highway crossings 63 were killed and 61 injured; 28 being killed and 45 injured at urban crossings, while 35 were killed and 16 injured at rural crossings.

Railway Freight Statistics.

The aggregate tonnage of freight carried by Canadian railways during the year ended June 30, 1910, was 74,482,866 tons, against 66,830,019 tons in the previous year. Of the total tonnage 42,279,812 tons originated on the home roads, against 36,075,101 the previous year, and 32,203,054 tons were received from other lines, against 30,754,918 tons the previous year. The following table gives the details for the various lines:—

Lever for Lifting Car Wheels on Axles.

Sometimes it is necessary to turn a pair of car wheels in the shop, and this is a difficult matter without some means of raising the flange of one wheel over the rail. A lever cut from an old piece of scrap hard wood, as shown in the sketch, will make the job easy. The hook is placed under the axle and the wheel is raised by pushing against the lever. As the height of axles varies, the lever should be made to fit the lowest, and a plank or board may be used under the lever to adjust it for higher axles.—U. A. Towle, Portland, Me.

Railway Lands Patented. — During Nov., 1910, letters patent were issued, covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	471.00
Canadian Northern Ry.	5,476.33
Canadian Pacific Ry. grants	1,116.838
Canadian Pacific Ry. grants, Souris Branch	252.00
Grand Trunk Pacific Ry.	326.26
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	800.00
Total	8,442.428

At the opening of the British Columbia Legislature recently, it was announced that among the new legislation proposed was a bill for the inspection of railway construction camps.

ADDITIONAL SAFETY AND ECONOMY IN

TRACK MAINTENANCE

has been proved by the use of Continuous, Weber and Wolhaupter base-supported rail joints—after fifteen (15) years' service, having a record of over **50,000 miles in use**—the extent of which is evidence of their excellence. Made in Canada.

National Transcontinental Railway.

In a recent interview at Montreal E. J. Chamberlin, Vice President and General Manager G. T. Pacific Ry., said the last spike of the line from Moncton to Prince Rupert would be driven early in 1913. Whether this prediction will be realized is a matter upon which more than one opinion is expressed, but the reports from all parts of the line indicate that the work is being pushed forward with the object of having the entire line in operation by the fall of 1913. It is stated that while perhaps 166 miles from Moncton westerly may be opened for traffic during the current year, it will be well into 1912 before the line is ready for traffic to Point Levis. The 166 miles referred to carries the line from Moncton to McGivney Jct., where it crosses the Intercolonial Ry. Canada Eastern section, and beyond this point, there is a very heavy piece of bridge work across the Salmon River valley, the structure being 4,000 ft. long and 200 ft. high. Considerable progress has been made on the several contracts for the rest of the distance between Salmon River and Point Levis, Que., some sections having been completed, with the exception of ballasting, and others requiring the erection of bridge superstructures, before further track laying or ballasting can be done, while on some other sections there is a small percentage of grading to be done. During 1910, track was laid on an additional 130 miles, on the sections in New Brunswick, and some 30 miles of track has been laid between the New Brunswick boundary and Point Levis, while altogether in the district east and west of the Quebec Bridge track was laid on 135 miles, to about five miles west of Weymontachene. On the section north of the St. Lawrence River, a good deal of ballasting has been done, and the substructures for a number of the bridges are ready for the steel work. On the next district, east and west of Cochrane, Ont., and easterly from Graham (Lake Superior Jct.), track was laid on 172 miles during 1910. This makes 437 miles of track laid during 1910, which added to the 565 miles laid to Dec. 31 1909, makes a total of 1,002 miles of track laid, leaving 801 miles of line on which track has to be laid between Moncton and Winnipeg.

Replying to questions in the House of Commons Jan. 11, the Minister of Railways said the work of the arbitration board constituted to determine questions as to overbreak, overclassification, etc., on the eastern division of the N.T.R., had been completed, with the exception of making the award. The time occupied by the first board of arbitrators—H. D. Lumsden, B. B. Kelliher and C. Schreiber, C.M.G., in investigating the matter was 39 days, and the second board, on which G. Grant succeeded H. D. Lumsden, spent 58 days upon the investigation. On the following day, Jan. 12, the Minister stated that he expected to be able shortly to lay on the table the report of the arbitrators. Press reports from Ottawa, state that the amounts disallowed aggregate $400,000 of which $275,000 is on the Lake Superior Division.

Tenders have been asked by the Commissioners for the demolition of the buildings at Champlain market, Quebec, the site for the station building.

A return made to the House of Commons, Jan. 16, with respect to the Quebec Bridge, showed that the old company did not take any steps to notify the guarantee company of the failure of the contracting company to carry out its contract, on the collapse of the bridge, and that the notice subsequently given by the Government was not the "prompt notice" ,which the terms of the bond called for. The Government is therefore unable to collect the $100,000 mentioned in the bond.

GRAND TRUNK PACIFIC RAILWAY.

During 1910 the company laid 335 miles of new line, exclusive of second track and sidings, distributed as follows: Branch lines in Saskatchewan;—northerly from Melville, mileage 17 to Canora; southerly from Melville, from Balcarres to mileage 48; from Young to mileage 25, on the projected branch to Prince Albert; total in Saskatchewan, 77 miles; and mileage 879 on main line to Prairie Creek, Alta., and Tofield-Calgary line, from Camrose to Red Deer River; total in Alberta, 158 miles, and from Prince Rupert to Copper River, B.C., 100 miles. The lines under construction include the remainder of the main line from Prairie Creek to Copper River, 665 miles, of which about 400 miles is not yet under contract; and the following branch lines:—Melville to Regina, from mileage 48 to Regina, 48 miles; from Regina towards the International boundary, to mileage 90; from Regina westerly to Moose Jaw, 45 miles; Young to Prince Albert, from mileage 25 to Prince Albert—87 miles; from Oban to Battleford, 48 miles; Tofield-Calgary line, from Red Deer River to Calgary, 121 miles; from Bickerdike, Alta., southwesterly, 59 miles. In addition to these lines, surveys are being made from mileage 90, southerly from Regina to the International boundary, 52 miles.

Provision is being made for the enlargement of the yards at Edmonton, Alta., an additional area of about 20 acres having been acquired. The construction on the main line is expected to make rapid progress during the year, special efforts having been made by the contractors to obtain men for the work from Europe during the winter. On the branch lines it is expected that track will be laid into Regina by about July, and that the extension westerly to Moose Jaw and southerly towards the International boundary, will have some miles opened for traffic by the end of the year. It is reported that some surveys have been made for a line from Wainwright, Alta., to Battleford, Sask. The line to Prince Albert is expected to be completed this season. In connection with the Tofield-Calgary line, no further track laying will be proceeded with until the bridge at Lignite is completed. The bridge will be over 1200 ft. long, and 125 ft. high. A good deal of the concrete work has been completed, and the steel gang is at work. It is expected that the bridge will be finished during the summer and that track will be laid into Calgary by the end of the year. The plans for the entry into Calgary have been filed and show a route crossing the Bow River, about 200 ft. north of the C.P.R. bridge, and on to the R.N.W.M.P. barracks between Sixth and Seventh sts.

A branch from Edson to the Brazeau River coal fields is under construction and recent reports state that the right of way has been cleared for 55 miles, and that the grading outfits have reached mile 36. Surveys for the line from Fort George to Vancouver, B.C., continue, but no definite statement as to construction has been made. Land for terminal purposes is reported to have been purchased in Vancouver, and a passenger and ticket office is being built at Victoria. (Jan. pg., 37.)

◆

The Canadian Ticket Agents Association has admitted the following as members: J. Connolly, C.P.R., Cornwall, Ont; T. C. Lockwood, G.T.R., Brighton, Ont.; R. A. Harrison, C.P.R., Dunnville, Ont.; L. J. Rivet, C.N.Q.R., Montreal; G A. Boyd, C.P.R., Sault Ste. Marie, Ont.; W. R. Thom, N.N. Co., Sault Ste. Marie, Ont.; H. W. Sanders, C.P.R., Stouffville, Ont.

G.T.R. Betterments, Construction, Etc.

The Southern New England Ry. obtained power to build a line in Massachusetts and Rhode Island, in 1910, to give the Central Vermont Ry., which is controlled by the G.T.R., an outlet at Providence. To reach this line the C.V. Ry. has running powers over a section of the Boston and Maine Rd. in Vermont. The control of the B. and M. Rd. has recently passed to the New York, New Haven and Connecticut Rd., and this line has withdrawn the privilege of running rights. As a result the C.V. Ry. has applied to the Vermont Legislature for permission to build a 50 mile line paralleling the B. and M. Rd. in the State, over which it now has running powers.

Ottawa-Toronto Line.—We are advised that while there is no question but what the G.T.R. will eventually have a direct line from Ottawa to Toronto, there is nothing in contemplation at present. Press reports referring to this matter state that the new line from Ottawa to Toronto, instead of passing through Coteau Jct., as at first planned, would run almost direct from Ottawa to Brockville, and pass through Perth and Smiths Falls.

Deviation at Barrie, Ont.—The Board of Railway Commissioners has authorized a deviation from the existing line in Vespra tp., and on lot 5 east of Bradford St., Barrie, Ont.

Toronto Belt Line.—The section of the old Belt Line from Fairbank Jct., on the Toronto-North Bay line, easterly to Yonge St., was reopened for traffic recently.

Waterdown, Ont.—The Board of Railway Commissioners has authorized the replacing of the bridge across the tracks at milepost 0.45, west of Waterdown station, Ont., by a steel structure.

Niagara Falls to London, Ont.—Press reports dated Jan. 11 stated that the G.T.R. "will begin double tracking the section from London to Niagara Falls, 204 miles, and used 100 lb. rails." The G.T.R. has been operating a double track line between Montreal and Chicago, Ill., via Hamilton, Brantford and London, except for a few miles in Michigan, and from Hamilton to Niagara Falls for some years. Within the last three years it has been laying 100 lb. steel on certain sections of the double track line, and using the 80 lb. steel taken up elsewhere. This work is to be done between London and Niagara Falls during the current year.

Superintendent Bowker stated Jan. 12, that the relaying of the double track between Niagara Falls and London, will be started Mar 15, three gangs being employed, one working from each end, and the third at some intermediate point. It is expected that the work will be completed by the end of the year. A. Cordasco, Montreal, will provide the labor.

Guelph, Ont.—The city engineer has approved the company's plans for improvements at its station. The building will have a frontage on the tracks of 120 ft., with a depth of 43 ft. Two subways and a foot passage way will be provided under the tracks adjacent to the station, and additional sidings will be laid on a strip of land adjoining the Jubilee Park.

Branch Line at Mount Bruno, Que.—An order has been issued by the Board of Railway Commissioners for the building of a branch or spur line to Mount Bruno station, Que.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings, expenses, etc., of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. & M.R. for Nov., 1910, and 1909, respectively:

GRAND TRUNK RAILWAY.

	1910.	1909.
Earnings	$2,989,500	$2,965,000
Expenses	2,340,100	2,209,000
Net earnings	$ 649,400	$ 756,000

CANADA ATLANTIC RAILWAY.

	1910.	1909.
Earnings	$ 176,700	$ 209,000
Expenses	138,800	143,000
Net earnings	$ 37,900	$ 66,000

GRAND TRUNK WESTERN RAILWAY.

	1910.	1909.
Earnings	$ 477,100	$ 492,000
Expenses	427,800	392,000
Net earnings	$ 49,300	$ 100,000

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1910.	1909.
Earnings	$ 202,200	$ 173,000
Expenses	136,000	123,500
Net earnings	$ 66,200	$ 49,500

Approximate gross receipts for Dec., 1910, $3,857,822, and for two weeks ended Jan. 14, $1,506,798, against $3,564,380 and $1,379,910 for same periods 1909 and 1910 respectively.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to Dec. 31:—

	1910.	1909.

Great Northern Ry. Lines in Canada.

Manitoba Great Northern Ry.—A letter was received by the Winnipeg city clerk Dec. 27, 1910, stating that construction would not be proceeded with on the proposed yards, etc., in Winnipeg, before the spring.

Kaslo and Slocan Ry.—A resolution has been passed by the Kaslo, B.C., Board of Trade, asking the B.C. Government to cancel the charter, owing to the company's failure to live up to its obligations.

Victoria and Sidney Ry.—A station building has been erected on Blanchard St., Victoria, B.C., replacing the public market building, which had been used for some time.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—J. J. Hill, on the occasion of his recent visit to Vancouver, B.C., said it would be impossible at present to fix a time when the line would be completed, but it was being built from both ends. The difficult section was that through the Hope Mountains, and the engineers had, after a great deal of trouble and many surveys, found a feasible route, without having to bore an eight mile tunnel. It was an expensive piece of construction, however, and it would take time and money to put it through. As to the Vancouver terminals, work would be started immediately on the filling in of the north and east shores of the head of False Creek, and when this was done, the laying out of yards and the erection of the station and other terminal buildings would be taken in hand. The plans for the reclamation of False Creek were submitted to the Vancouver city council, Jan. 6, and after having been approved will go to the Board of Railway Commissioners. (Jan. pg. 17).

◆

Atlantic, Quebec and Western Ry.—Quebec Oriental Ry., etc.—Notice was given in the House of Commons, Jan. 11, of a motion asking for copies of all correspondence of every description between the liquidators of the Charing Cross Bank or of A. W. Carpenter, or any one on their behalf, or any member of the government or official thereof, regarding the affairs of the A.,Q. & W. Ry., the Quebec Oriental Ry., or the New Canadian Co., Limited. Hon. R. Lemieux, Postmaster General, who returned from England Jan. 17, said there was no truth in the reports as to his connection with these railways, and it was his intention to make a statement on the subject in the House of Commons shortly.

Duty on Re-Rolled Steel Rails.

The Dominion Government passed an order in council, Dec. 23, 1910, stating that it being satisfied that a mill had been established in Canada, adapted and equipped for re-rolling in substantial quantities rails for railway tracks weighing not less than 56 lbs. per lineal yard when re-rolled, the customs duty specified in the Customs Tariff 1907, item 388a, be abolished upon publication of the order, and that thereafter all such rails, when imported, shall be subject to such duty as otherwise provided in the tariff.

Item 388a reads as follows:—

"Iron or steel railway bars or rails, which have been in use in the tracks of railways in Canada, and which have been exported from Canada and returned thereto after having been re-rolled, and weighing not less than 56 lbs. per lineal yard when re-rolled, and which are to be used by the railway company importing them on its own tracks, under regulations prescribed by the Minister of Customs. Provided that the value for duty of such re-rolled rails shall be the cost of re-rolling the same. Provided also that whenever the Governor in Council is satisfied that a mill adapted and equipped for re-rolling such rails in substantial quantities has been established in Canada, the Governor in Council may by order in council, to be published in the Canada Gazette, abolish the duty specified in this item, and thereupon all such rails when imported shall be subject to such duty as otherwise provided in the Customs Tariff."

Under the foregoing item the duty was 25%, being the same under the British preferential, the intermediate and the general tariff. By the abolition of that item, the duty will be under the British preferential tariff, $4.50 a ton, under the intermediate tariff $6 a ton, and under the general tariff, $7 a ton.

The mill referred to in the order in council is that of the Provincial Steel Co., Ltd., at Cobourg, Ont., of which A. L. Reading is Manager.

◆

Recent Alberta Legislation.

At the last session of the Alberta Legislature the following acts affecting steam and electric railways were passed:

Alberta and Great Waterways Ry.—Respecting alleged claims in connection with the company, and a second respecting the guarantee of the company's bonds.

Alberta Northwestern Ry.—Amending act of incorporation.

Alberta Pacific Ry.—Changing name of the Pincher Creek, Cardston and Montana Ry., and extending time for construction.

Alberta Ry. and Irrigation Co.—Providing for registration of a transfer of Galt Park from the company to the city of Lethbridge.

Alberta Western Ry.—Incorporation.

Chestermere and Calgary Suburban Ry.—Incorporation.

High River and Hudson Bay Ry.—Incorporation.

Edmonton Interurban Ry. — Incorporation.

Lacombe and Blindman Valley Electric Ry.—Extending time for building authorized lines.

Lacombe, Bullocksville and Alix Electric Ry.—Extending time for construction.

Peace River Great Western Ry.—Incorporation.

◆

The Canadian Society of Civil Engineers' Toronto Branch, at its annual meeting, Jan. 8, elected the following officers for the current year: Chairman, Prof. E. T. Haultain; Secretary, A. C. D. Blanchard; Executive Committee, T. C Irving, Jr., P. Gillespie, E. A. James, W. E. Douglas and G. G. Powell.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them

12504. Dec. 9.—Ordering G.T.R. to establish and maintain tri-weekly passenger service between Ste. Martine and Beauharnois, Que., effective Jan. 1, 1911; to remove weeds and other combustible matter from right of way between those points and provide station and agent at Beauharnois.

12505. Sept. 17.—Ordering city of Calgary, Alta., to repay C.P.R. half cost of building bridge over C.P.R. yard there.

12506. Sept. 15.—Dismissing C.P.R. application for approval of station location at Kipp, Alta.

12507. Dec. 12.—Authorizing city of St. Boniface, Man., to lay sewer under C.P.R. on Mission St.

12508. Dec. 16.—Authorizing C.N.O.R. to build bridge over Riviere des Milles Isles, between Two Mountains and Laval counties, at mileage 37.9, from Hawkesbury.

12509. Dec. 15.—Authorizing Ontario Hydro-Electric Power Commission to use its wires erected at eight points.

12510. Dec. 13.—Authorizing C.P.R. to build spur and siding for Lethbridge Collieries, Ltd., across road allowance on west boundary, s.w. ¼ sec. 21, and across said ¼ sec., and s.e. ¼ sec. 21, tp. 9, r. 22, w. 4 m., Alta.

12511. Dec. 16.—Authorizing city of St. Boniface, Man., to build Marion St. across C.P.R. Emerson branch.

12512. Dec. 15.—Ordering White Pass & Yukon Route and British Yukon Ry. to permit J. H. Conrad to load ore where he had previously been permitted to load it, at or near Caribou crossing, until application for siding is disposed of or same is built.

12513. Dec. 6.—Dismissing application of White Pass and Yukon Route for re-hearing as to order 11819, Sept. 7, 1910, re J. H. Conrad's complaint, alleging excessive freight rates charged by White Pass & Yukon Route on ores from Carcross to Skaguay and on mining machinery and camp supplies from Skaguay to Carcross.

12514 to 12516. Dec. 9.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across C.P.R. telegraph wires in Brantford tp., and Bell Telephone Co.'s wires in Wilmot and Etobicoke tps.

12517. Dec. 13.—Authorizing S. Hamilton, Amaranth tp., Ont., to lay pipe under C.P.R.

12518. Dec. 12.—Authorizing Niagara, St. Catharines & Toronto Ry. to erect trolley wires across M.C.R. and T.H. & B.R., in Welland, Ont.

12519. Dec. 12.—Authorizing C.P.R. to open for traffic its second track in Lambton, Ont., to east end of bridge over Etobicoke River, mileage 6.6 to 8.6.

12520. Dec. 10.—Ordering C.P.R. and C.N.R. to publish and file new freight tariffs, to take effect not later than Apr. 1, 1911, removing discrimination existing to points in Manitoba, Saskatchewan and Alberta, from Fort William, Port Arthur and points east, in favor of Winnipeg and other points in Manitoba, and against points west thereof, by reducing rates from Fort William, Port Arthur and points east to Regina, and Moose Jaw, Sask., and other points west of the said favored points.

12521. Dec. 13.—Authorizing C.P.R. to build three spurs for West Canadian Collieries, Ltd., at Bellevue, Alta.

12522. Dec. 12.—Authorizing C.N.R. to build across nine highways in r. 20, 21 and 23, w. 2 m., Sask.

12523. Dec. 16.—Authorizing C.P.R. to build two tracks across McKellar and Duncan Sts., Fort William, Ont.

12524. Dec. 13.—Authorizing C.N.R. to build bridge over Red Deer River, sec. 9, tp. 29, r. 20, w. 4 m., Alta.

12525. Dec. 12.—Ordering C.P.R. to provide means whereby water brought down by it on to the lands of Amos Morgan, situated on lot 1, con. 9, on the town line between Rawdon and Huntingdon, near Crookston, Ont., may be carried off.

12526. Dec. 16.—Authorizing C.P.R. to build two tracks across road allowance on east boundary of s.e. ¼ sec. 20, tp. 8, r. 14, w. 2 m., at Weyburn, Sask.

12527. Dec. 12.—Authorizing C.P.R. to build additional track across road allowance between n.e. ¼ sec. 2, tp. 17, r. 11, w. 3 m., and n.e. ¼ sec. 1, tp. 17, r. 11, w. 3 m., at Rush Lake, Sask.

12528. Dec. 14.—Authorizing Western Fuel Co. to lay pipe under Esquimalt & Nanaimo Ry., near Nanaimo, B.C.

12529. Dec. 16.—Extending to July 1, 1911, time within which C.P.R. may build spur across Jarvis St., Winnipeg.

12530. Dec. 12.—Authorizing G.T.R. to replace by iron bridge present bridge carrying highway between lots 8 and 9, con. 1, East Flamboro tp., over its tracks at mileage 3.77, west of Waterdown station, Ont.

12531. Dec. 12.—Dismissing application of city of Hamilton, Ont., for order directing T.H. & B. Ry. to provide protection at retaining walls built by company at east end of its tunnel on Hunter St.

12532. Dec. 12.—Approving proposed deviation of G.T.R. as already constructed between n.e. ¼ lot 21, con. 12, Vespra tp., and lot 5, east of Bradford St., Barrie, Ont.

12533. Dec. 12.—Amending order 10055, Mar. 22, 1910, by providing that gates at Tillson Ave. crossing, Tillsonburg, Ont., be operated day and night, cost to be borne, 10% by the town and 90% by the company.

12534. Dec. 12.—Authorizing C.N.O.R. to build branch in Trenton across certain streets and through Gilmour Door Co.'s property to junction with Central Ontario Ry.

12535. Dec. 12.—Authorizing Consumers Gas Co. to lay pipe under G.T.R. on Ellis Ave., Toronto.

12536. Dec. 17.—Authorizing Niagara, St. Catharines & Toronto Ry. to erect trolley wire across G.T.R. at Port Colborne, Ont.

12537. Dec. 17.—Authorizing N. St. C. & T. Ry. to erect trolley wires across G.T.R. at station 13.91 miles from Thorold, Ont.

12538. Dec. 16.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at lot 1, con. 3, Downie tp.

12539. Dec. 17.—Authorizing C.P.R. to open for traffic that portion of its Ingersoll Branch from Ingersoll Jct., mileage 0 to 4.8, Ont.

12540. Dec. 17.—Approving location of C.N.R. through tps. 46-44, r. 6-8, w. 3 m., Sask.

12541. Dec. 2.—Ordering C.N.Q.R. to provide platform and shelter for freight and passenger traffic at Pointe aux Trembles, which is to be made a regular stop for local trains between Joliette and Montreal, and also to afford facilities for handling express traffic.

12542. Dec. 9.—Authorizing railway companies to use Blaugas gas for lighting passenger cars, subject to certain conditions.

12543. Dec. 19.—Amending order 12444, Dec. 1, re application of W. Raymond, of Ste. Agathe des Monts, Que., regarding farm crossings.

12544. Dec. 19.—Recommending to Governor-in-council for sanction, lease entered into between New Brunswick Southern Ry. and C.P.R., Oct. 6, 1910.

12545. Dec. 16. — Authorizing Canadian Light & Power Co. to lay pipes under G.T.R. at Cote St. Paul, Que.

12546. Dec. 16. — Authorizing Canadian Light & Power Co. to erect wires across N.Y.C. & H.R. Rd. at Primeau Road, Que.

12547. Dec. 19.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.N.W. Telegraph Co.'s wires at lot 51, con. 2, Ancaster tp.

12548, 12549. Dec. 19.—Authorizing Canadian Light & Power Co. to erect wires across N.Y.C. and H.R. Rd.'s siding at Beauharnois, and near St. Louis River, Que.

12550. Dec. 19.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.N.W. Telegraph Co.'s wires at Mill St., Ingersoll.

12551. Dec. 17.—Authorizing C.N.R. to build spur from Russell to Fifth St. and between Van Horne and College Aves., Brandon, Man.

12552. Dec. 19.—Extending to July 1, 1911, time within which Alberta Central Ry. may complete branch at Rocky Mountain House.

12553. Dec. 19.—Ordering C.N.R. to build farm crossing at west end of station platform at Banning, Ont., to be completed, with the exception of gates, by Dec. 31, 1910, gates to be installed by June 1, 1911.

12554. Dec. 19.—Amending order 12500, Dec. 10, 1910, made upon application of C.P.R. regarding spur for University of Saskatchewan.

12555. Dec. 19.—Authorizing Walkerton & Lucknow Ry. (C.P.R.) to operate passenger trains over Hanover Portland Cement Co.'s narrow gauge railway at mileage 29.1, in lot 69, con. 2, north of Durham Road, Brant tp., at a rate not to exceed 10 miles an hour, Hanover Portland Cement Co.'s trains to be brought to a stop before passing crossing.

12556. Dec. 19.—Approving revised location of C.N.O.R., mileage 57.11 to 58.23, from Sudbury Jct.

12557. Dec. 17.—Approving C.N.O.R. drawing for one 24 I beam span at mileage 24.96, Pickering tp.

12558. Dec. 19.—Authorizing C.N.O.R. to build across Foster Ave., Belleville.

12559. Nov. 7.—Authorizing C.P.R. to build bridge 28.0 on its Muskoka section, Ontario Division.

12560 to 12563. Dec. 17.—Authorizing Ontario Power Co., Niagara Falls, to erect wires across Bell Telephone Co.'s wires at four points in St. Catharines.

12564. Dec. 20.—Authorizing Burrard Lumber Co. to build roadway across C.P.R. at mileage 123.53 from North Bend, B.C.

12565, 12566. Dec. 20.—Authorizing G.T.P. Branch Lines Co. to build across highway in s.w. ¼ sec. 36, tp. 26, r. 4, w. 2 m., and across highway in sec. 1, tp. 28, r. 4, w. 2 m., Sask.

12567. Dec. 17.—Authorizing Bell Telephone Co. to lay wires under Montreal Terminal Ry. at Dickson St., Parc Terminal, Que.

12568. Dec. 19.—Authorizing C.P.R. to build across highway at mileage 10.2, Lethbridge Branch, Alta.

12569. Dec. 12.—Dismissing application of city of Hamilton, Ont., for further protection at Main St.

12570. Dec. 19.—Ordering C.P.R. to install improved crossing signal bell at crossing of public road by Guelph & Goderich branch, between Moffatt and Corwhin stations, Ont., by Jan. 21, 1911.

12571. Dec. 20.—Authorizing G.T.P. Branch Lines Co. to divert road in sec. 21, tp. 30, r. 24, w. 4 m., Alta.

12572, 12573. Dec. 20.—Approving Atlantic, Quebec & Western Ry. plans for stations at Grand River and Cape Cove, Que..

12574. Nov. 28.—Authorizing C.N.R. to build across 48 highways west of principal meridian.

12575, 12576. Dec. 20, 19.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires in Middlesex tp., and G.N.W. Telegraph Co.'s wires in Brantford tp.

12577 to 12579. Dec. 20.—Authorizing Seymour Power & Electric Co. to erect wires across Bell Telephone Co.'s wires in Brighton tp. and Murray tp., Ont.

12580, 12581. Dec. 21.—Ordering G.T.R. to erect shelters at Barrytown and Quays, Ont., before June 1, 1911.

12582. Dec. 20.—Authorizing New Brunswick Southern Ry. to build spur across Prince William St., Nepean tp.

12583. Dec. 20.—Extending to May 20, 1911, time within which G.T.P.R. may construct shelter at Redford, Sask.

12584. Dec. 21.—Authorizing C.P.R. to use bridges 3.2, 4.1, and 5.0 on its St. Marys Branch, Ont.

12585. Dec. 21.—Approving C.N.O.R. Standard Passenger Tariff C.R.C. 89, Dec. 15, 1910, at 3c. a mile between all its stations.

12586. Dec. 19.—Authorizing C.P.R. to open for traffic that portion of its double track on its Broadview subdivision from mileage 0 to 8.2, being a diversion of line for improving alignment.

12587. Dec. 21.—Authorizing C.P.R. to build spur for Empire Sand & Gravel Co., Ste. Elizabeth parish, Que.

12588 to 12590. Dec. 20.—Authorizing C.P.R. to build spurs for Saskatchewan Cartage & Warehouse Co., Saskatoon; Burn Grain Co., Sedgewick, Alta., and Bitulithic & Contracting Co., Regina, Sask.

12591. Dec. 20.—Approving location and plans of Atlantic, Quebec and Western Ry. station at Ste. Adelaide de Pabos, Que.

12592. Dec. 19.—Authorizing G.T.R. to build spur for Love Brothers, Toronto.

12593. Dec. 20.—Extending to Sept. 30, 1911, time within which C.P.R. may build branch for the Provincial Reformatory, Guelph, Ont.

12594. Dec. 19.—Authorizing C.P.R. to build spur for Wilson Box Co., at mileage 13.41, north of its St. John section, N.B.

12595. Dec. 20.—Ordering that crossing of New Westminster Southern Ry. by Vancouver Power Co.'s tracks at Cloverdale, B.C., be protected by interlocking plant.

12596, 12597. Dec. 20.—Authorizing G.T.P. Branch Lines Co. to build across the highways in s.w. ¼ sec. 1, tp. 27, r. 4, and s.w. ¼ sec. 25, tp. 27, r. 4, w. 2 m., Sask.

12598. Dec. 20.—Extending to June 1, 1911, time within which Montreal Terminal Ry. may complete spur across Victoria Ave., Montreal East.

12599. Dec. 21.—Reporting to Governor-in-council for sanction, lease of St. Maurice Valley Ry. to C.P.R., dated Oct. 6, 1910, for 999 years.

12600. Dec. 21.—Amending order 4420, Mar. 6, 1908, which authorized junction of Essex Terminal Ry. with Lake Erie & Detroit River Ry., respecting protection.

12601. Dec. 21.—Authorizing Bethesda & Stouffville Telephone Co. to install telephone in G.T.R. station at Unionville, Ont., on party wire instead of private wire, as stipulated in agreement with G.T.R., June 28, 1909.

12602. Dec. 21.—Reporting to Governor-in-council for sanction lease of Kootenay Central Ry. to C.P.R., Oct. 6, 1910, for 999 years.

12603. Dec. 20.—Authorizing C.N.O.R. to erect telegraph wires across private wires at stations 149.31 and 151.09, York tp.

12604. Dec. 21.—Authorizing Ontario Power Co., Niagara Falls, to erect wires across C.P.R. telegraph wires at Frank St., St. Catharines, Ont.

12605. Dec. 20.—Authorizing Seymour Power and Electric Co. to erect wires across North American Telegraph Co.'s wires, Murray tp., Ont.

12606. Dec. 21.—Authorizing C.P.R. to build spur for Canadian Linderman Co., Woodstock, Ont.

12607. Dec. 21.—Authorizing G.T.R. to build two branches to St. Lawrence Pressed Brick & Terra Cotta Co., Laprairie, Que.

12608. Dec. 21.—Authorizing Ontario Hydro-Electric Power Commission to use its wires at lots 11-12, con. 2, Brantford tp.

12609. Dec. 21.—Extending for one month from Dec. 15 time within which T.H. & B.R. may file detail plan of gates to be installed at Wentworth St., Hamilton, Ont.

12610. Dec. 22.—Authorizing N. St. C. & T.R. to erect wires across G.T.R. 13.91 miles from Thorold, Ont.

12611. Dec. 22.—Authorizing Consumers Gas Co. to lay pipe under G.T.R. on Ellis Ave., Toronto.

12612. Dec. 22.—Authorizing Armstrong Cartage & Warehouse Co. to lay sewer under T.H. & B.R. and G.T.R. in Hamilton, Ont.

12613. Dec. 22.—Authorizing town of Blairmore, Alta., to lay pipes under C.P.R. at two points.

12614. Dec. 23.—Authorizing Stratford, Ont., Light & Heat Commission to erect wires across G.T.R. at Victoria Park.

12615. Dec. 23.—Authorizing village of Dundalk, Ont., to erect wires across C.P.R. at Grey St.

12616. Dec. 23.—Authorizing A. Doughty, Moulton, Ont., to lay pipe under G.T.R. in lot 5, con. 3.

12617. Dec. 23.—Certifying correction of range 23 to range 24 in plan approved under order 7934, Aug. 21, 1909 re G.T.P.R. construction in Edmonton, Alta.

12618. Dec. 23.—Certifying amendments in plan approved under order 11074 made upon application of G.T.P. Branch Lines Co., re location of its Melville-Regina Branch.

12619. Dec. 23.—Approving proposed reinforcement and strengthening of east abutment of G.T.R. bridge over public road east of canal at Ste. Anne de Bellevue, Que.

12620. Dec. 22.—Authorizing C.P.R. to build spur across s.e. ¼ sec. 17, tp. 11, r. 4, e. p. m.; n.e. ¼ sec. 8, tp. 11, r. 4, e. p. m., and road allowance between same, and three sidings from said spur, in Winnipeg, Man.

12621. Dec. 22.—Authorizing G.T.R. to build branch for Municipal Construction Co., Lochiel tp., Ont.

12622. Dec. 12.—Authorizing C.P.R. to build subway across Jane St., York tp., Ont.

12623. Dec. 24.—Authorizing C.P.R. to build additional track across Dominion Ave., Frank, Alta., and to build highway across its main line, the centre being about 523 ft. westerly along the main line from its intersection with east boundary of British Columbia Ave.

12624. Dec. 24.—Approving corrections in plan approved by order 7052, May 21, 1909, re the G.T.P.R. construction in North Alberta.

12625. Dec. 14.—Ordering Bell Telephone Co. to file tariffs applying same tolls within the present limits of Toronto, as now apply within the company's Toronto exchange limits for Toronto exchange services, to become effective not later than Jan. 1, 1911, and to be without prejudice to the company filing tariffs covering that section of the city, which was formerly West Toronto, continuing in effect tolls for local or limited service to those who do not desire the whole of the Toronto exchange service.

12626. Dec. 24.—Authorizing Ontario Power Co., Niagara Falls, to erect wires across G.N.W. Telegraph Co.'s wires at Frank and Queenston Sts., St. Catharines, Ont.

12627. Dec. 24.—Authorizing Canadian Niagara Power Co. to erect wires across Bell Telephone Co.'s wires at Jarvis St. and Central Ave., Bridgeburg, Ont.

12628. Dec. 24.—Authorizing Seymour Power and Electric Co. to erect wires across G.N.W. Telegraph Co.'s wires, Murray tp., Ont.

12629. Dec. 24.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at lot 6, con. A, London tp.

12630. Dec. 12.—Approving subject to certain terms, extension of Grand Valley Ry. in Brantford, Ont., except that portion on Marlborough St. between Murray and Clarence Sts., and ordering that crossings of G.T.R. on Nelson St.; Brantford & Hamilton Ry. on Murray St.; T.H. & B. Ry. on Cayuga St., and Western Counties Electric Co.'s canal, be protected by half interlocking plants to be installed by Grand Valley Ry., with the exception of the canal crossing.

12631. Dec. 24.—Extending to Mar. 5, 1911, time within which electric bell may be installed at C.P.R. crossing at Mechanicsville, Ottawa.

12632. Dec. 24.—Extending to Apr. 15, 1911, time within which electric bell may be installed at C.P.R. crossing at William St., Carleton Place, Ont..

12633. Dec. 24.—Authorizing C.P.R. to build spur for Burrard Grain Co., Baysland, Ont.

12634. Dec. 24.—Extending to Apr. 26, 1911 time within which electric bell may be installed at C.P.R. crossing, Lake Ave., Carleton Place, Ont.

12635. Dec. 28.—Approving C.N.O.R. location between Sydenham and Harrowsmith, mileage 159.70 to 162.27.

12636. Dec. 28.—Authorizing Kettle River Valley Ry. to build across road at station 223.60, subdivision 1a, west of Midway, B.C.

12637. Dec. 28.—Approving revision in grade of C.P.R. main line from mileage 65.63 to 69, Ops and Fenelon tps., Ont.; the revision in location from mileage 69 to 70.5, and location from mileage 70.5 to 72.88 in Lindsay, Ont.

12638. Dec. 28.—Approving location of Kettle Valley Lines from stations 0.00 to 513, division 1a, west of Midway, B.C.

12639. Dec. 24.—Authorizing Kilmer and Holland to lay pipe across C.P.R. from D.L. 186, known as Vancouver Heights, B.C.

12640. Dec. 21.—Authorizing Woodstock Gas Light Co. to lay pipe under C.P.R. at Tecumseh St., Woodstock, Ont.

12641. Dec. 28.—Authorizing Hamilton Cataract Power, Light & Traction Co. to erect wires across G.T.R. at con. 1, West Flamboro tp., Ont.

12642. Dec. 27.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at Mutual and Carnegie Sts., Ingersoll.

12643. Dec. 27.—Declaring that at present no further protection is necessary at C.P.R. Dundas and Church Sts. crossings, Etobicoke tp., Ont.

12644. Sept. 1.—Declaring conditions under which draw or swing bridge of Esquimalt & Nanaimo Ry. across northern arm of the harbor, Victoria, B.C., shall be operated.

12645, 12646. Dec. 28.—Authorizing Ontario Power Co., Niagara Falls, to erect wires across G.T.R. at two points in St. Catharines.

12647 to 12649. Dec. 28.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at two points in London tp., and in Brantford tp.

12650. Dec. 28.—Authorizing town of Galt, Ont., to erect wires across C.P.R. at Kerr St.

12651. Dec. 12.—Authorizing C.N.O.R. to build branch in Trenton, from south side of Dundas St., through Gilmour Door Co.'s property and to connect with its main line by transfer tracks running north and south between Meyers and Paul Sts., crossing James and Peter Sts.

12652. Dec. 20.—Ordering Bell Telephone Co. to maintain connection of D. Crozier, Merrickville, with A. Newsome, Kilmarnock, Ont.

12653. Dec. 28.—Rescinding order 12413, May 12, 1910, made upon application of G. Taylor, Winnipeg, re rates charged by C.N.R. on grain from Buchanan, Sask., to Headingly, Man.

12654. Dec. 12.—Approving revised location of James Bay & Eastern Ry. from mileage 7.46 to 9.93, from Roberval, Ouiatchouan Indian Reserve, and Ashuapmouchouan tp., Que.

12655. Sept. 20.—Declaring that application of W. S. Tilston Manager Montreal Board of Trade Transportation Bureau on behalf of Laprairie Brick Co., for order prescribing joint through rate of 3c. per 100 lbs. on brick from Laprairie to Mile. Que., falls within terms of General Interswitching Order, 4988, July 8, 1908.

12656. Dec. 29.—Authorizing Atlantic Quebec & Western Ry. to open for traffic that portion of its line between Newport Station, mileage 35, and Grand River Station, mileage 51.5, Que.

12657. Dec. 29.—Authorizing Seymour Power & Electric Co. to erect wires across G.T.R. between lots 8 and 9, con 1, Murray tp., Ont.

12658. Dec. 29.—Approving plans and specifications of Dauphinais drain, to be built across G.T.R. lands and track in Rochester tp., Ont.

12659. Dec. 28.—Authorizing C.P.R. to erect wires under the Orillia municipal power lines at five points in South Orillia tp., Ont.

12660. Dec. 30.—Authorizing Erindale Power Co. to erect wires across G.T.R. on Church St., Etobicoke, Ont.

12661. Dec. 30. — Authorizing Seymour Power and Electric Co. to erect wires across Central Ontario Ry. at lot 5, con. 2, Murray tp., 32½ miles from Picton, Ont.

12662. Dec. 29.—Authorizing G.T.P. Branch Lines Co. to build across seven highways in Saskatoon District, w. 2 m., Sask.

12663. Dec. 30.—Authorizing C.N.O.R. to build between lots 78 and 80, St. Eustache parish, Two Mountains county.

12664, 12665. Dec. 30.—Authorizing G.T.P. Branch Lines Co. to build across highway in s.w. ¼ sec. 30, tp. 32, r. 23, and across highway in s.w. ¼ sec. 5, tp. 33, r. 23, w. 4 m., South Alberta District.

12666. Dec. 30.—Approving changes of C.P.R. Regina, Saskatoon and North Saskatchewan branch.

12667. Dec. 30.—Extending to June 30, 1911, time within which Guelph & Goderich Ry. shall remove mound on southeast side of highway at crossing of road between cons. 9 and 10, Morris tp., Ont.., at mileage 62.5.

12668. Dec. 31.—Approving C.P.R. plan of 20 ft. arch at bridge 78.7, Toronto subdivision.

12669. Dec. 31.—Authorizing G.T.P. Branch Lines Co. to divert road in n.w. ¼ sec. 29, tp. 41, r. 21, w. 4 m., on its Calgary branch, Alta.

12670. Dec. 30.—Authorizing C.P.R. to build spur for C. C. Snowdon at Calgary Jct., Alta.

12671. Dec. 30.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.N.W. Telegraph Co.'s wires at Queen St., St. Marys.

12672. Dec. 31.—Authorizing Trenton Electric & Water Co. to erect wires across G.T.R. between Trenton and Belleville, at lot 28, con. 2, Sidney tp., Ont.

12673. Dec. 31.—Approving C.N.R. revised location through tps. 29 and 28, r. 23, w. 3 m., Sask., mileage 125.

12674. Dec. 20.—Declaring illegal, rates on finnan haddies, charged higher than third class, in less than carloads, and fifth class in carloads.

12675. Dec. 12.—Authorizing C.P.R. to change location of its line crossing Eramosa Road, Norwich St., and City lane, and approving location of proposed station, Guelph, Ont.

12676, 12677. Dec. 31.—Authorizing C.P.R. to build spurs for Imperial Oil Co., and Canadian Oil Co., in Calgary, Alta.

12678. Jan. 3.—Ordering G.T.R. within 48 hours to remove its tracks at east end of Richmond Road viaduct, Ottawa, and directing that it be liable to a penalty of $100 a day for every day it shall be in default in carrying out the order.

12679. Jan. 3.—Authorizing C.P.R. to build spur for Ontario Wind Engine & Pump Co. in Winnipeg, Man.

12680. Jan. 4.—Extending until June 30 time within which C.P.R. shall build spur for Great West Felt Co., Elmira, Ont.

12681 to 12683. Jan. 4.—Authorizing London, Ont.., Water Commissioners to erect wires across London and Port Stanley Ry. at two points, in city of London, Ont., and across G.T.R.

12684. Jan. 4.—Authorizing Canada Atlantic Ry. Co. (G.T.R.) to operate trains past southeast corner Somerset Street Bridge abutment, Ottawa, by a clearance of 3¼ ft.

12685. Sept. 23.—Ordering C.P.R. to publish and file, on or before Feb. 15, 1911 freight tariff placing the rates from Port Arthur and Fort William, Ont., to all stations intermediate to Winnipeg upon same relative scale, with due regard to mileage, as rates from Port Arthur and Fort William to Winnipeg; and further ordering that on or before same date it publish and file special town tariff of rates on general merchandise distributed from Kenora and Keewatin, Ont.

12686. Jan. 4.—Authorizing G.T.R. to build branch to Mount Bruno Station, Que.

12687. Jan. 4.—Authorizing C.P.R. to build spur for Riverside Lumber Co., Calgary, Alta.

12688. Dec. 1.—Authorizing Quebec Ry., Light & Power Co. to build branch from Beauport Station, in a northeasterly direction to Montmorency village.

12689. Dec. 2.—Ordering Montreal and Southern Counties Ry. to improve condition of right of way in Montreal South.

12690. Jan. 3.—Authorizing C.N.O.R. to take certain lands in Darlington tp. for diverting highway.

12691, 12692. Jan. 4.—Authorizing Ontario Hydro-Electric Commission to erect wires across Bell Telephone Co.'s wires, and M.C.R. at Concession St., Tillsonburg.

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.

THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R. R. and Niagara Falls.

Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Sleeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED" The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

CHICAGO

12693. Jan. 4.—Authorizing London, Ont., Water Commissioners to erect wires across G.T.R. at Clarence St.

12694. Nov. 11.—Authorizing city of Lethbridge, Alta., to maintain sewer under C.P.R. and Alberta Ry. and Irrigation Co.'s line at Galt St.

12695. Jan. 5.—Authorizing Canadian Northern Pacific Ry. to build under Esquimalt and Nanaimo Ry. near Parson's Bridge, Esquimalt District, B.C.

12696. Jan. 5.—Authorizing C.P.R. to build spur for Canadian Cooperage Mfg. Co., Smiths Falls, Ont.

12697. Jan. 7.—Authorizing town of Galt, Ont., to maintain drain under G.T.R. at James St.

12698. Jan. 7.—Authorizing W. J. Aikens, Dunnville, Ont., to lay main under G.T.R. on Hamilton Road, Cainsville.

12699. Jan. 3.—Rescinding order 11246, July 14, 1910, which authorized C.P.R. to build spur to G. F. & J. Galt's premises, Calgary, Alta., on application of J. I. Case Threshing Machine Co., Calgary.

12700. Dec. 12.—Authorizing C.P.R. to build additional track across Main St., Clive, Alta.

12701. Jan. 5.—Authorizing C.P.R. to join city of Toronto's industrial track on east side of River Don.

12702. Jan. 3.—Ordering C.N.O.R. to insert diamond in G.T.R., track at its Harwood Branch crossing, Cobourg, to be protected by interlocking plant, derails and home and distant signals

12703. Jan. 9.—Authorizing C.P.R. to change main line as located through Kamloops, B.C., and to cross Lorne St. with new location.

12704. Jan. 9.—Approving rebised location Georgian Bay & Seaboard Ry. (C.P.R.) from lot 6, con. 11, Thorah tp., at mileage 44.22, in a southeasterly direction to lot 17, con. 1, Eldon tp., at mileage 47.42, Victoria county, Ont.

12705. Jan. 9.—Amending order 12504 re inadequate train service by G.T.R. between Ste. Martins and Beauharnois, Que.

12706. Jan. 9.—Ordering C.N.R. to provide suitable highway crossings at highway between lots 5 and 6, Paipoonge tp., work to be completed by May 15.

12707. Jan. 4.—Authorizing Armstrong Cartage and Warehouse Co. to build sewer under T.H. & B.R. and G.T.R. in Hamilton, Ont.

12708. Jan. 9.—Approving plans of subway under C.P.R. at Broad St., Regina, Sask.

12709. Jan. 9.—Approving revised location of C.N.O.R. Shannonville Station grounds, Tyendinaga tp.

12710. Jan. 9.—Authorizing Saraguay Electric and Water Co. to erect wires across C.N.Q.R. at Broadway Ave., Montreal East.

12711. Dec. 30.—Authorizing Richmond municipal council, B.C., to lay pipes under Vancouver and Lulu Island Ry.

12712. Jan. 4.—Authorizing Montreal Park and Island Ry. to build branch to Dominion Bridge Co.'s yard, Jacques Cartier county, Que.

12713. Jan. 9.—Authorizing C.P.R. and C.N.R. to operate their trains over crossing in Camrose, Alta., without first being brought to a stop.

12714. Dec. 12.—Authorizing G.T.R. to expropriate lands required for diversion of highways at Raike's and Woodlands crossings, Oro tp., Ont.

12715. Dec. 12.—Approving location of proposed C.P.R. station at Guelph, Ont.

12716 to 12722. Dec. 6 to Jan. 9.—Authorizing C.N.O.R. to build between lots 20 and 21, lots 21 and 22, con. 2; lots 10 and 11, lots 11 and 12, and across and divert Stanley Ave., and across Metcalfe Road on lot 18, by overhead structure, Gloucester tp.

12723. Dec. 6.—Authorizing C.N.O.R. to build across Hurdman's Road, Nepean tp., subject to certain conditions.

12724. Jan. 10.—Ordering C.N.R., before May 1, to install proper crossing signs and cattle guards along its line between Lloydminster and Aberfeldy, and directing a fine of $25 a day for failure to do so.

12725. Jan. 10.—Authorizing city of Toronto to erect wires across G.T.R., the G.N.W. Telegraph Co.'s wires, and under Toronto and Niagara Power Co.'s wires.

12726. Jan. 10.—Authorizing Seymour Power and Electric Co. to erect wires across C.N.O.R. in lot 27, con. B, Brighton tp.

12727. Jan. 10.—Authorizing Weston village, Ont., to erect wires across G.T.R. at Weston Road.

12728, 12729. Jan. 10.—Authorizing Ontario Hydro-Electric Commission to erect wires across Bell Telephone Co.'s wires at lot 3, r. 2, Etobicoke tp., and across G.T.R. at Concession St., Tillsonburg.

12730. Jan. 10. — Authorizing Canadian Light and Power Co. to erect wires across C.P.R. at Lachine Canal, South Bank.

12731. Jan. 11.—Authorizing Quebec Ry., Light and Power Co. to erect wires across C.P.R. on Prince Edward St., Quebec.

12732. Jan. 11.—Authorizing city of Winnipeg to alter its wires across C.P.R.

12733, 12734. Jan. 11.—Authorizing city of Winnipeg to lay pipes under C.P.R. at Magnus and Pritchard Aves.

12735, 12736. Jan. 11, 10.—Relieving M.C.R. from further protection of crossing ½ mile south of ship yards, Niagara Division, and at Town Road crossing, Townsend Station, Ont.

12737. Jan. 10.—Approving location of Alberta Central Ry. from mileage 40 to 80 easterly from Red Deer.

12738. Jan. 11.—Authorizing Qu'Appelle, Long Lake and Saskatchewan Ry. to build across Short St. produced and Beaver St. produced, and to close and divert Government road allowance between secs. 3 and 4, tp. 44, r. 2, w. 3 m., Duck Lake, Sask.

12749. Jan. 10.—Approving plans of train shed for elevated passenger yard Union Terminal, Winnipeg.

12740. Jan. 11.—Authorizing Alberta Government to build highway across C.N.R. in sec. 11, tp. 38, r. 5, w. 3 m.

12741. Jan. 11.—Authorizing Tilsonburg, Lake Erie and Pacific Ry. to build spur to Ingersoll Nut Co.'s premises, Ingersoll, Ont.

12742. Jan. 11.—Authorizing C.P.R. to build additional main track across Main and Tupper Sts., Portage la Prairie, Man.

12743. Jan. 11.—Authorizing G.T.R. to build spur upon and across Thackeray St., Dickens St. and Carlaw Ave., Toronto.

12744. Jan. 11.—Authorizing C.P.R. to build spur for Pine Lumber Co., mileage 129.96, Chapleau Subdivision, Ont.

12745. Jan. 9.—Approving forms used in transmitting messages by C.P.R., G.N.W., Canadian Northern, North American, Western Union, Anglo-American, Marconi Wireless, and G.T.P. Telegraph Cos., and White Pass and Yukon Route for four months from date, or until further order.

Highway Crossings of Railways.—The statistical report of the condition of Canadian railways for the year ended June 30, 1910, shows that there were 20,012 crossings of highways, of which 1,187 were protected and 18,825 unprotected. Of the protected crossings, 161 were protected by gates, 345 by overhead bridges, 400 by subways, 147 by bells, and 134 by watchmen. There were 630 protected and 1,902 unprotected crossings in urban districts, and 557 protected and 16,923 unprotected crossings in rural districts.

The Cowan Construction Co. is applying to the Manitoba Government for an order changing its name to the Union Construction Co.

Reduction of Pullman Car Fares.

Upon the cases of G. S. Loftus vs. Pullman Co. being called for rehearing, the Interstate Commerce Commission decided Dec. 12 that the orders heretofore entered should be modified so that the maximum rate for a lower berth from St. Paul to Seattle shall not exceed $11, and for an upper berth, $8.80; from St. Paul to Chicago the upper-berth rate not to exceed $1.60; from St. Paul to Superior, the upper-berth rate not to exceed $1.25; and from St. Paul to Fargo or to Grand Forks, the upper-berth rate not to exceed $1.60.

In the cases of the State of Oklahoma intervener and the States of Kansas, Indiana and Arkansas vs. the Pullman Co. et al, the Commission on the same day made an order directing the Pullman Co. to fix rates upon upper berths not exceeding 80% of the rates applicable under its tariffs upon lower berths, whenever such lower-berth rate is $1.75 or over, and in cases where the lower-berth rate is $1.50, the upper-berth rate shall be fixed at a rate not to exceed $1.25. The reductions in lower berths which are proposed by the Pullman Co., not being involved in the complaints filed by the various states, have not been made the subject of an order by the commission.

Eastern Canadian Passenger Association.

At a meeting in Montreal Jan. 10, the following were elected for the current year:

Chairman.—E. O. Grundy.

Executive Committee—G. W. Vaux, W. Stitt, T. Henry.

Rules Committee.—G. W. Vaux, W. Stitt, G. Tombs, J. W. Hanley, C. Hartigan, F. F. Backus, W. H. Underwood, J. M. Lyons, Neil Mooney.

Secretary.—G. H. Webster.

◆

Railway Rolling Stock Statistics.

During the year ended June 30, 1910, the additions to the rolling stock of the various Canadian railways included 110 locomotives, 138 passenger cars, 1,934 freight cars, and 789 cars for the company's own service. On that date there were in service 4,079 locomotives, 4,320 passenger cars, 119,713 freight cars, and 8,648 company cars. In addition there are 71 locomotives and 1,729 cars under lease. The returns show 1,090 passenger, 2,601 freight, and 388 switching locomotives, a total of 3,989, or 90 less than the number of locomotives stated to be in service. The cars in the company's service consisted of 80 officers' and pay, 2,645 gravel, 127 derrick, 1,893 caboose, and 3,892 miscellaneous cars. The aggregate capacity of the cars of the various classes in freight service was 3,514,106 tons, of which 2,211,963 tons represented the capacity of the 75,983 box cars. The average capacity of box cars was 29.1 tons, against 27.6 tons in the year ended June 30, 1909. The tractive power of locomotives has also considerably increased within the same period. The available supply of rolling stock per 1,000 miles of line has been computed as follows:—Locomotives, 165; freight cars, 4,840; passenger cars, 174. The service performed by each freight car during the year was equivalent to the moving of 622 tons, equal to 55 tons better than the performance of the previous year. This increase is due to the use of heavier units and the steady extension of double trackage. Of the 132,681 cars of all classes, 125,831 were fitted with air brakes, and 128,321 with automatic couplers.

How to run in Transition Curves without Tables.

By C. P. Howard, M. Am. Soc. C. E.

There are a number of fieldbooks and tables for transition curves which are more or less satisfactory to those who use them, but an ordinary spiral of given length can be run in without fieldbook or tables.

When running in by transit the main thing is to put in the intermediate deflections with transit at one end. Beyond this it is only necessary to know a few important characteristics of the spiral (practically the cubic parabola within the limits of ordinary railway practice). The principal facts to be remembered are:

1. The total angle, 1, of spiral is equal to its length multiplied by half the degree of curve; that is, calling D the degree of the circular curve and L the length of the spiral 1=½ L D, or where L is in feet 1=L D/200.

2. The total deflection angle at the tangent end of spiral is one-third the total angle 1. At the curve end it is two-thirds; or Angle T=⅓ 1; angle C=⅔ 1.

3. Deflections from the tangent end to points on spiral are as the squares of their distances from tangent ends.

4. The middle point of spiral bisects the gap, p, between the P. C. and tangent.

EXAMPLE.—Approaching the curve from the tangent; degree of circular curve D=6° 00′; length of spiral L=240 ft.; P. C. of circular curve to be opposite station 38+20.

The ends of spiral by Principle 4 will be 120 ft. each way from the P. C., making the tangent end, S T, at 37+00 and the curve end, S C, at 39+40. Suppose we run it in by chords of any convenient length, say 6 chords of 40 ft. Then by Principle 1 the total angle 1 of the spiral is equal to 240 ft. of 3° curve=7° 12′. By Principle 2, with transit at S T the total deflection angle to S C, the curve end of Spiral, is T=⅓1=2° 24′. By Principle 3 the deflection for each intermediate chord point is to the total deflection as the square of its distance to the square of the whole distance. Taking the distance from S T in fractions of the total length we multiply 2° 24′ by $(1/6)^2$, $(1/3)^2$, $(1/2)^2$, $(2/3)^2$, and $(5/6)^2$ to get deflections to the intermediate chord points, making

37 S T	
+40	0° 04′
+80	0° 16′
38+20	0° 36′
+60	1° 04′
39	1° 40′
39+40 SC	2° 24′

With transit at S C and backsight on S T turn the angle C, or ⅔ I=4° 48′, to get on the common tangent to circular curve and spiral. That is all there is to it. If, however, it is desired to locate points at the even stations and +50's, the deflections would be figured similarly. The distances to intermediate points being 50, 100, 150 and 200, their deflections would be 2° 24′ multiplied by $(50/240)^2$, $(100/240)^2$, $(150/240)^2$, and $(200/240)^2$.

If we approach the spiral from the curve, we note another characteristic:

5. Starting at the curve end the spiral diverges from the circular curve produced the same as it does from the tangent produced when starting at the tangent end.

Therefore to get the deflections from the curve end of spiral we compute them the same as from the tangent end, except that we subtract them from the deflections of the circular curve produced instead of turning them from the tangent.

For instance, in the example above if we wish to run in the deflections from the curve end, we start with a tangent to the curve at S C, write out the deflections for the chord points on the circular curve produced, and subtract the deflections figured above thus:

Station.	Circular Curve.	Deductions.	Spiral.
37 S T	7° 12′	2° 24′	4° 48′
+40	6° 00′	1° 40′	4° 20′
+80	4° 48′	1° 04′	3° 44′
38+20	3° 36′	0° 36′	3° 00′
+60	2° 24′	0° 16′	2° 08′
39	1° 12′	0° 04′	1° 08′
39+40 S C			

Then having put in the spiral by deflections 1° 08′, 2° 08′, 3° 00′, 4° 48′, we move transit to tangent end, S T, and with backsight on S C, turn the angle T=2° 24′ to get on tangent.

The division of the spiral into equal chord lengths has the advantage of using the same deflections, no matter which way we run it, turning from the tangent in one case and from circular curve deflections in the other.

OFFSETS.—If it is desired to compute the offsets with the tangent, the following additional characteristics may be noted:

6. Offsets from tangent to points on the spiral are as the cubes of their distances from the tangent end. This is indicated by the name "cubic parabola." The distances may be taken approximately as measured on the centre line of spiral.

7. Offsets from the circular curve produced to points on the spiral are also as the cubes of their distances from the curve end of spiral, being the same as offsets from tangent to spiral for corresponding distances from the tangent end.

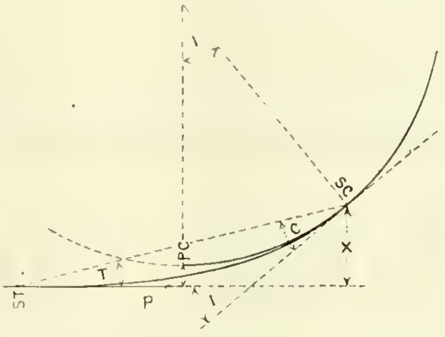

Diagram of Transition Curve.

8. The gap, p, between tangent and P C of the circular curve is one-fourth the offset, X, from tangent to end of spiral.

The main offset, X, at the end of spiral is evidently equal to the sine of the angle T times the long chord of spiral, and as the chord nearly equals the length of spiral, approximately:

X=L sin T ....(1)*

and by Principle 8 the gap, p, =¼X.

If the transitman happens not to have a table of sines with him, he need not worry, so long as he remembers the sine of 1° 00′. As the sines of angles are practically proportional for any probable value of T, he has simply to multiply T in degrees and decimals by .01745.

Occasionally, on location where the profile is rough, it may not be possible to see from one end of the spiral to the other. In this case, perhaps the simplest and easiest way is by offsets as follows:

Offset the distance p=¼X from tangent to P. C. of circular curve, or vice versa, and put in the points S T and S C at distances ½ each way. For points on the half-length of spiral next S T offset from the tangent, and for points on the other half offset from the circular curve.

For instance, in the preceding example the main offset is X=L sin T=240 sin 2° 24′=10.05, and p=¼ X =2.51.

The offsets from the tangent to spiral, according to the cubes of their distances from S T in fractions of L, are X multiplied successively by $(1/6)^3$, $(⅓)^3$, $(½)^3$, etc., making 0, 05, 0.37, 1.255, etc.; but we need only these three. The offsets from the circular curve for corresponding points and distances from S C are the same, namely, 0.05, 0.37, and 1.255, the last offset, 1.255 in each case being the offset to the middle point of spiral at the P. C. of circular curve. Added together they make the gap p=2.51.

Approaching the curve from the tangent, and reading up the page, curve being to the left, notes may be shown as follows:

Station.	Def.	Offseta.	
39+40°	3° 36′	S C,	0.0
39	2° 24′		0.05 R
+60	1° 12′		0.37 R
38+20°	Offset 2.51′ L to P.C 6° L (apiral 1.25′)		
+80			0.37 L
+40			0.05 L
37°		S T,	0.0

OTHER POINTS ABOUT THE SPIRAL.—If the gap, p, between P. C. and tangent is given, the length of spiral, L, may be obtained approximately by the rule of thumb.

$$L=371\sqrt{\frac{P}{D}}$$

taking L to the nearest foot.

A suggested length for spirals is: elevation of main curve in inches multiplied by speed in miles per hour.* A six-degree curve elevated 6 ins. corresponds to a speed of 39 mi. per hr. Multiplying this speed by 6, we would get a length of 234 ft.; or 258 ft. for 43 mi. per hr., which is 10% excess speed. Where practicable, longer spirals might be of some advantage in giving a longer run off for the elevation.

SUGGESTIONS AS TO TRACK CENTRES.—Attention should be called to the necessity for accurate instrumental work in running the track centres, and to the doubtful advantage of putting the points very close together. For instance, on a spiral 360 ft. long, one or two points may be 300 ft. or more from the transit. An error of ½ minute in deflection in that distance would throw the point off 0.00145 × 3=.043 ft. If the centres are 50 ft. apart, one centre off line that much would increase the middle ordinate of 100 ft. by the same amount, changing the degree of curve 0° 12′; but if centres are 25 ft. apart, it would change the degree of curve 0° 48′ for 50 ft., and perhaps give the trackman a poor idea of the transitman's ability, especially if the next centre and others are similarly off in opposite directions. However, if the transitman has any doubt of the accuracy of points at the far end of spiral, he may readily check back on one or two points with transit at the other end.

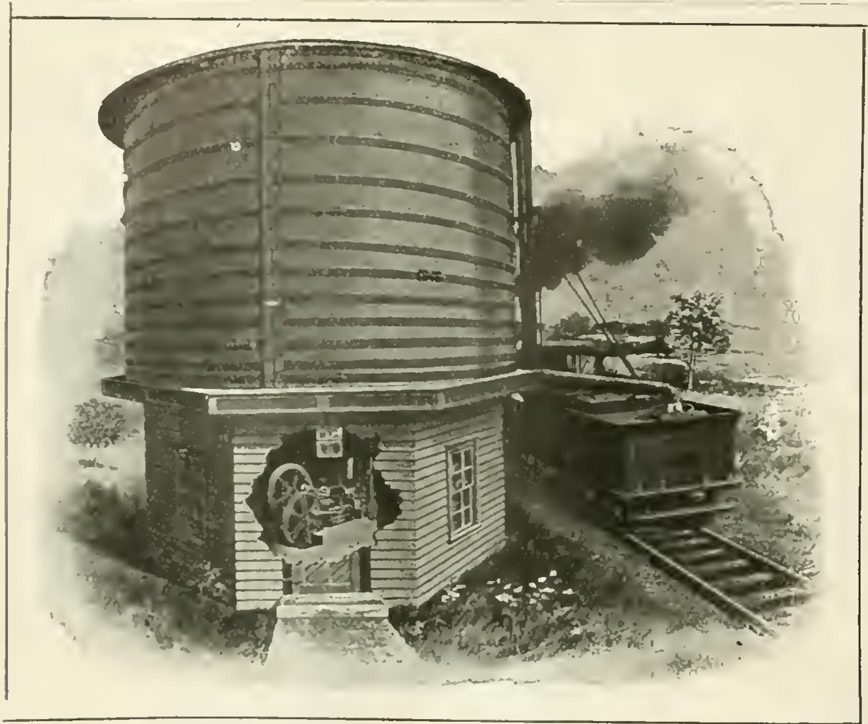
It may also be suggested as a good plan in running track centres between two hubs on a curve or spiral, that the chaining be done towards the instrnment

---

*The main offset X = L sin T is more correctly X = C sin T; C being the long chord of spiral, whence p = ¼ C sin T. The difference is hardly appreciable. The long chord of spiral is approximately that of a simple curve of same length whose degree of curve is half that of the main curve. The error in value of p, using L instead of C, for certain spirals of different lengths and degrees of curve is as follows:

Degree.	I.	Length L.	Error in p.
4°	7° 12′	360′	0.0027 ft.
6°	7° 12′	240′	0.0016 ft.
10°	10° 00′	200′	0.0038 ft.
10°	12° 30′	250′	0.0098 ft.

It will be observed that the error does not approach 0.01 ft., except for the 10° curve with total angle of 12° 30′.



SELF CONTAINED

WATER STATIONS

for

Railway and Town Water Works

The Power is supplied by a

Fairbanks-Morse Combined Gasoline Engine and Pump

Our Combined Gasoline Engine and Pump makes a very economical outfit for pumping water and one that in many places is the only practical solution for a steady, reliable water supply. The engine is easily started under no load by throwing out a clutch.

Fairbanks-Morse Gasoline Engines will provide a Reliable, Economical Power at all times, and can be depended upon to give satisfaction under the most trying conditions.

THE CANADIAN FAIRBANKS CO., LIMITED

Fairbanks Scales—Fairbanks-Morse Gas Engines—Safes and Vaults. Montreal, St. John, N.B., Toronto, Winnipeg, Saskatoon, Calgary, Vancouver

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto - - -	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto - - -	9.40 p.m.	Daily except Sunday.
Leave North Toronto - - -	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service.

SLEEPING CAR SPACE HELD

Toronto City Office, 16 King St. East

North Toronto Station **King Edward Hotel** **West Toronto Station**

so that any error in distance will fall at the instrument instead of at the far end, where the line of sight is at a considerable angle across the track.—Engineering News.

Robt. S. Beard, of Kansas City, Mo., writes in reference to the above:—Mr. Howard's article prompts me to submit a formula for the length of spiral, which I developed several months ago while converting tables of spirals into metric units for use in Mexico.

Using the following notation:

E=elevation of curve in inches.
g=gauge of track.
V=velocity in miles per hour.
v=velocity in feet per second$=\frac{22}{15}V$
D=degree of curve.
R=radius of curve.
L=Length of spiral in feet.

the formula for theoretical superelevation is,

$$E=\frac{g\,v^2\times 12}{32.16\ R}=\frac{g(\frac{22}{15}V)^2D}{32.16\times5730}\times 12$$

$$=.0001404\ DV^2g$$

$$=.000661\ DV_2 \text{ when } g=4 \text{ ft. } 8\tfrac{1}{2} \text{ ins.}$$

$$=.000689\ DV^2 \text{ for 85-lb. rail with } 2\ 9\text{-}16\text{-in head.}$$

$$=.000685\ DV^2 \text{ for 55-lb. rail with } 2\tfrac{1}{4}\text{-in. head.}$$

Prof. A. N. Talbot's formula, $E=.00069\ DV^2$, is based on the fact that the track level gauge is the width of the rail head wider than the track gauge.

The reports on spirals from all the main roads in the country to the American Railway Engineering and Maintenance of Way Association in 1909 brought out the fact that the maximum rate of attaining elevation on curves without discomfort to passengers is about 1⅛ in. per sec. on tangent and spiral, and according to the New York Central report by C. J. Parker, Prin. Asst. Engr., ⅝ in. per sec. where the runoff is on straight track (see pp. 420, 422, Part 1, Vol. 10 of the A. R. E. & M. W. Assoc. Proceedings).

Since the elevation of the curve is E inches, at the rate of 1⅛ inches per second it would take $\frac{E}{1\frac{1}{8}}$ or $^6/_7$ E seconds to attain the full curve elevation. The distance traveled in attaining this elevation would be $\frac{6}{7}$ E v feet.

Therefore the length of spiral,

$$L=\frac{6}{7}E\,v$$

$$=\frac{6}{7}\times.00066\ DV^2\times\frac{22}{15}V=.000830\ DV^3$$

$$=\frac{DV^2}{1200}$$

Calling a the rate of change of degree of curve in 100 ft.,

$$a=\frac{100\ D}{L}=\frac{120000}{V^3}$$

To find the formula for any other rate multiply the above formula by the inverse ratio of the new rate to the rate of 1⅛ ins. per sec.

The run-off rate of ⅝-in. a second requires that

$$L={}^7/_5\times.00083\ DV^3=.00116\ DV^3,$$

Using Prof. Talbot's formula for elevation, $E=00069\ DV^2$, and a rate of 1 in. per sec., the formulas are,

$$L=\frac{D\ V^3}{1000} \text{ and } a=\frac{100000}{V^3}$$

The value found from the above agrees with his recommended lengths of spirals for different speeds.

It is my opinion that the spiral should receive the same grade compensation as the curve with which it connects as a rough allowance for the extra resistance on the spirals due to the force required to twist the trucks, change the relative position of the cars, and attain the curve elevation.

W. G. Raymond writes from the Iowa State University as follows:—If the curve be laid in with six equal chords, the deflection for the first chord in seconds is the length of the chord in feet multiplied by the degree of the central curve, and the following deflections are 4, 9, 16, 25, and 36 times this.

If the curve be laid in with ten equal chords, the first deflection in minutes is the length of the chord stations multiplied by the degree of the central curve, and the following deflections are as before.

These are both approximate rules, but entirely good for spirals whose total central angles do not exceed 15°. Both rules are given in the subscriber's Railroad Field Geometry. The second rule is due to Jenks B. Jenkins.

Railway Rolling Stock Notes.

The G.T.R. has received the last consignment of 1,000 box cars, which were ordered in the U.S. last May.

The G.T. Pacific Ry. has received 162 flat cars, nos. 361438 to 361599, and 132 box cars, nos. 312325 to 312456, from the Canadian Car and Foundry Co., Montreal.

The G.T.R. has received 101 automobile cars, being the last consignment of 500, of which we have already given details, and which were ordered in the U.S.

The C.P.R., between Dec. 11 and Dec. 31, 1910, ordered 50 vans, 50 freight refrigerator cars, 50 passenger refrigerator cars and six D.10 locomotives, to be built at its Angus shops, Montreal.

The Algoma Central and Hudson Bay Ry. has ordered 10 superheater consolidation freight locomotives, weight in working order 194,000 lbs.; cylinders, 22½ in. by 28 in.; driving wheels 56 in. diar., from the Montreal Locomotive Works.

The Intercolonial Ry., between Dec. 17 and Jan. 18, placed the following replace orders at its Moncton shops: 50 steel frame box cars, 60,000 lbs. capacity; 50 wood box cars, 60,000 lbs. capacity; three colonist cars, 36 platform cars, 80,000 lbs. capacity.

The five second class and baggage cars, which the Canadian Northern Ry is having built by the Preston Car and Coach Co., Preston, Ont., will be 72½ ft. long over body, with inside finish of birch, lighted with acetylene gas, and equipped with six-wheeled trucks with journals 4¼ in. by 8 in., and Westinghouse air brakes, type P.M. 1612.

The C.P.R., between Dec. 11 and Dec. 31, 1910, received the following additions to rolling stock: Six horse cars, one first class car, two second class cars, four baggage and express cars, three flangers and three D.10 locomotives from its Angus shops, Montreal; 20 tank cars and six steel snow plows from the Canadian Car and Foundry Co., Montreal, and one rotary snow plow from the Montreal Locomotive Works.

Following are the chief details of the 250 steel underframe flat cars, which the Canadian Northern Ry. is having built by the Canadian Car and Foundry Co., Montreal:

Capacity	80,000 lbs.
Truck centres	31 ft. 2 in.
Length over end sills	41 ft. 0¼ in.
Width over side sills	8 ft. 10 in.
Height from rail over flooring	4 ft. 2¾ in.
Flooring	2⅜ in. ship lapped
Couplers	Janney 5 in. by 7 in.
Truck bolsters	Simplex
Brake beams	Simplex 6 in.
Journal boxes	McCord Mall. Iron
Journal bearings	M.C.B. lead lined
Truck springs	M.C.B. class C

Following are the chief details of the one eight-wheeled hump switching locomotive which the C.P.R. is building at its Angus shops, Montreal, as mentioned in our last issue:—

Weight in working order	188,000 lbs.
Weight of tender loaded	134,000 lbs.
Weight of tender, light	59,000 lbs.
Capacity, water	5,000 imp. gals.
Capacity, coal	12 tons
Heating surface, firebox	182 sq. ft.
Heating surface, tubes	2,305 sq. ft.
Heating surface, total	2,487 sq. ft.
Grate area	49 sq. ft.
Tubes, no. and diar.	349 2 in.
Boiler, type	Extended wagon top, radial stayed
Boiler pressure	200 lbs.
Wheel base, driving	15 ft. 10 in.
Cylinders	21 in. by 28 in.
Valves	11 in. piston
Driving wheels, diar.	52 in.
Axles, main	9½ in. by 12 in.
Axles, others	9 in. by 12 in.
Axles, tender	5½ in. by 10 in.
Brake	Westinghouse ET6
Lubricator	Detroit 21

Following are the chief details of the 10 six-wheeled switching locomotives which the C.P.R. is building at its Angus shops, Montreal, as mentioned in our last issue:—

Weight in working order	130,000 lbs.
Weight of tender loaded	90,000 lbs.
Weight of tender light	44,000 lbs.
Capacity, water	3,500 imp. gals.
Capacity, coal	10 tons
Heating surface, firebox	138 sq. ft.
Heating surface, tubes	1,406 sq. ft
Heating surface, total	1,544 sq. ft
Grate area	29 sq. ft
Tubes, no. and diar.	234 2 in.
Boiler, type	Straight top, radial stayed
Boiler pressure	200 lbs.
Wheel base, driving	11 ft. 6 in.
Cylinders	18 in. by 26 in.
Valves	11 in. piston
Valve gear	Walschaert
Driving wheels, diar.	52 in.
Axles, driving	8½ in. by 10 in.
Axles, tender	5 in. by 9 in.
Brakes	Westinghouse ET6
Lubricators	Detroit 21

Following are the chief details of the 10 six wheeled switching locomotives which the Canadian Northern Ry. is having built by the Canadian Locomotive Co., Kingston, Ont.:

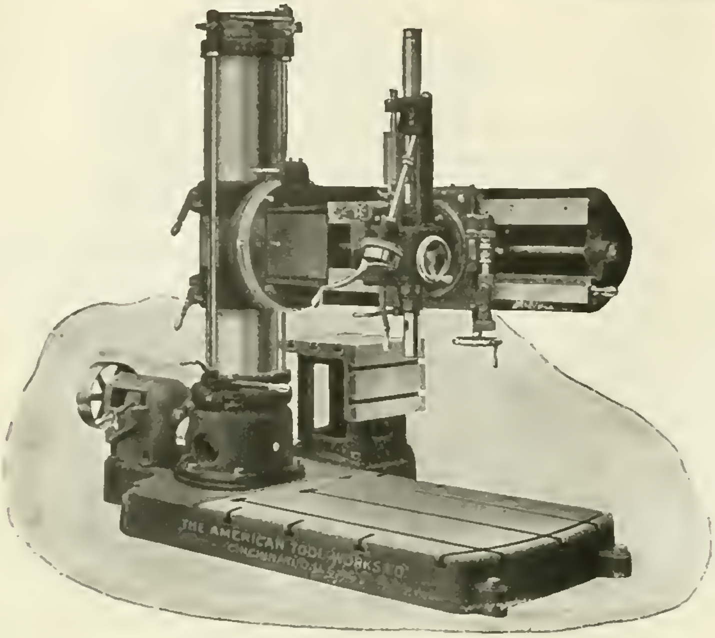
Weight in working order	123,000 lbs.
Wheel base of engine, rigid	11 ft. 0 in.
Wheel base, engine and tender	39 ft. 1 in.
Heating surface, firebox	131 sq. ft.
Heating surface, tubes	1,206 sq. ft.
Heating surface, total	1,337 sq. ft.
Driving wheels, diar.	50 in.
Driving wheel centres	Cast iron
Driving journals	8½ by 10 in.
Cylinders	19 by 26 in.
Boiler, type	Radial stayed
Boiler pressure	180 lbs.
Tubes, no. and diar.	223 2 in.
Tubes, length	10 ft. 5 in.
Brakes	Westinghouse American
Weight of tender loaded	86,000 lbs.
Capacity, water	3,500 imp. gals.
Capacity, coal	5 tons
Tank style	Sloping back
Truck	Arch bars with steel bolsters
Wheels, diar.	33 in.
Wheels, type	Steel tired
Journals	4¼ by 8 in.
Brake beam	Steel trussed

Following are the chief details of the six D.10 locomotives which the C.P.R. is building at its Angus shops, Montreal, as mentioned in our last issue:—

Weight on drivers	143,000 lbs.
Total weight	193,000 lbs.
Weight of tender loaded	134,000 lbs.
Capacity, water	5,000 imp. gals.
Capacity, coal	10 tons
Heating surface, firebox	180 sq. ft
Heating surface, flues	2,238 sq. ft.
Heating surface, total	2,418 sq. ft.
Heating surface, superheater	408 sq. ft.
Grate area	49 sq. ft.
Tubes, no. and diar.	240 2 in. 24 5 in.
Wheel base, rigid	14 ft. 10 in.
Wheel base of engine	26 ft. 1 in.
Wheel base, engine and tender	54 ft. 10¼ in.
Boiler, type	Extended wagon top
Boiler, pressure	200 lbs.
Superheater	Vaughan-Horsey
Staying	Radial
Cylinders	21 in. by 28 in
Driving wheels, diar.	63 in
Valve gear	Walschaert
Valve, type	11 in. piston
Axles, main	9½ in. by 12 in.
Axles, others	9 in. by 12 in.
Axles, tender	5½ in. by 10 in.
Axles, engine truck	6 in. by 10 in.

Following are the chief details of the 20 consolidation locomotives which the Canadian Northern Ry. is having built, as mentioned in our last issue:—

Tractive effort	45,000 lbs.
Weight in working order	215,000 lbs
Weight on drivers	190,000 lbs
Weight on leading truck	25,000 lbs.
Wheel base driving	16 ft. 6 in.
Wheel base, total	25 ft. 5 in.
Cylinders	Simple, 24 in. by 32 in.
Boiler, type	Extended wagon top
Boiler pressure	180 lbs.
Boiler, outside diar. of first ring	72 in.
Firebox, length and width	110 in. by 64 in.
Firebox plates, thickness, crown and back	tube ⅝ in. side 5-16 in.
Firebox, water space	Front 5½ in., sides and back 4½ in.
Tubes, no. and diar.	272 2 in
Valves	12 in. piston
Driving wheels, diar.	63 in.
Driving wheels, thickness of tires	3½ in.
Driving journals	10 in. by 14 in
Truck wheels, diar.	30 in.
Truck journals	6 in. by 12 in.
Tender, wheels, diar.	33 in.
Tender, journals	5½ in. by 10 in.
Capacity, water	6,000 imp. gals.
Capacity, coal	10 tons



THE ARM

of "American" Full Universal Radial Drill

IS RIGID

Rigidity of arm structure is absolutely essential to accurate drilling.

The arm of our newly designed Full Universal Radial Drill is equally as rigid as that of the "American" Plain Radial.

The Arm is made in the form of upper and lower tube sections bound together by a Double Wall of metal reinforced by heavy transverse ribbing.

The saddle is unusually wide and rigid, and can be firmly locked at any point along the arm by means of a powerful clamping device which binds together the double arm sections and saddle into a very compact unit.

This forms the best possible construction for resisting all torsional and bending strains.

The tapping attachment is located near the girdle of the arm and is operated by a lever on the head, conveniently placed for the operator.

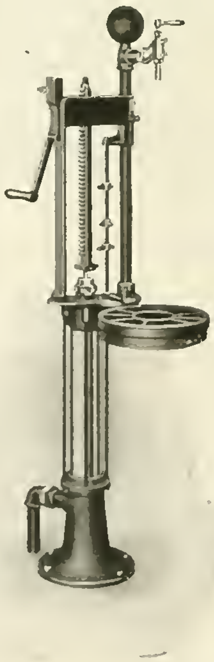
This is a valuable feature as it permits the use of More Literal proportions in the tapping attachment and also in the saddle mechanism.

The Head is Triple Geared and every gear in same is steel.

This new drill, without exception, is the very highest development of Full Universal Radial Drill Construction.

WILLIAMS & WILSON - - Montreal

Oil Storage in a Signal Tower



is not hampered by space limitations when the Bowser Outfit No. 126 is used. A floor space of less than two square feet is sufficient for the pump, and the tank is kept outside, buried underground near the track where it can be conveniently filled direct from supply cars. This outfit exemplifies the thoroughness with which every detail in

Bowser Oil Storage Systems

(adopted by nearly 150 railroads)

has been thought out and applied to conditions such as they exist. The pump can be adjusted to fill exactly different sized lamps, at a single stroke of the pump. An accurate half-gallon, quart or pint can also be discharged at each stroke, as may be desired.

Drop a postal for our Booklet No. 18, on railroad oil storage.

S. F. Bowser & Co. Ltd., 66=68 Fraser Ave., Toronto

MAINLY ABOUT PEOPLE.

E. B. Osler, M.P., left Toronto in the middle of January for a visit to Egypt.

E. Hickson, of the Intercolonial Ry. advertising department, died at Moncton, N.B., recently

H. McDonald, for a number of years engaged in contracting on the C.P.R., died at Ottawa. Dec. 30.

W. G Payton. C.P.R. baggage master, Vancouver. B.C., was presented with a gold watch by the local staff recently.

Mrs. Cunard, widow of the late Wm. Cunard, formerly of S. Cunard and Co., Halifax, N.S., died at Nice, France, recently.

F. C. Young, who was, at one time, Treasurer Quebec Central Ry., for a short period, died at Berlin, Ont., Jan. 11.

J. C. Hays, accountant in the C.P.R. ticket department, Montreal, died there, Jan. 11, after a three months' illness, aged 50.

A. Begg, who was a contractor on the Ottawa, Arnprior and Parry Sound Ry., now part of the G.T.R., died at Ottawa recently.

Mrs. Gormally, who died in Toronto, Jan. 17, aged 63 years, was widow of W. C. Gormally, at one time Superintendent Union Station, Toronto.

H. G. Kelley, Chief Engineer G.T.R., returned to Montreal from a short trip through Texas and the South West, early in January.

Mrs. G. R. Joughins, wife of the Superintendent of Motive Power Intercolonila Ry., Moncton, N.B., is seriously ill, at Dannsville, N.Y.

J. B. Marks, operator and ticket agent, M.C.R., at Windsor, Ont., pleaded guilty to the theft of $15 and a ticket to San Francisco, and was liberated on suspended sentence.

E. Pennington, President Minneapolis, St. Paul and Sault Ste. Marie Ry., sailed from St. John, N.B , Dec. 30 for a holiday trip to Europe.

G. McL. Brown, European Manager, C.P.R., London, Eng., and Mrs. Brown visited Canada in January, and sailed from New York for England Jan. 21.

D. T. Kyle has been appointed Assistant General Secretary of the C.P.R., centre of the St. John Ambulance Association Eastern Lines, with headquarters at Montreal.

C. M. Hays, President G.T.R. and G.T.P.R., responded to the toast of the railways at the annual dinner of the Canadian Manufacturers' Association, Montreal Branch, Jan. 9.

P. F. Weisbrod, C.P.R. Trainmaster, Brandon, Man., was presented with a gold watch by the passenger staff of the district at Winnipeg, on his transfer to Cranbrook, B.C.. recently.

Miss A E. Lanigan, daughter of W. B. Lanigan, Assistant Freight Traffic Manager Western Lines C.P.R., Winnipeg, was married there recently to E. D. McCallum.

R. M. Boyd, Commercial Agent Chicago, Milwaukee and Puget Sound Ry., and of the Chicago, Milwaukee and St. Paul Ry., at Seattle, Wash., is a native of Brockville. Ont.

Lieut.-Colonel Higinbotham, who died at Guelph, Ont., Jan. 9, was one of the principal promoters of the Wellington, Grey and Bruce Ry., now part of the G.T.R. system.

The engagement is announced of Miss Elma Reid, elder daugther of the late Robt. Reid, one of the National Transcontinental Ry. Commissioners, to Gordon Ingram, of London, Ont. .

G. E. Hyde, Chief Engineer St. Mary's and Western Ontario Ry.. was presented with an arm chair, by the congregation of Knox Church. St. Marys, Ont., on his leaving for Calgary, Alta., recently.

W. R. Cunningham, Superintendent Sleeping, Dining and Parlor Cars and News Service, Calgary, Alta., was presented with $100 by the department staff there, Jan. 5, on leaving Calgary for Montreal.

In connection with the report that C. G. Bowker, Assistant Superintendent G.T.R., London, Ont., had resigned to enter Lehigh Valley Ry. service, we are officially advised that there is no truth in the statement.

S. S. Underwood, chief draughtsman G.T.R. Car Department, Montreal, was presented, recently, with a fitted travelling bag, and a brooch for his wife, by the staff, on his leaving the service, to enter that of Taylor & Arnold, Ltd.

J. R. Gilhula, heretofore Trainmaster Pere Marquette Rd., St. Thomas, Ont., resigned the position, Jan. 20, when he left for St. Louis, Mo., where he has been appointed Superintendent Illinois Traction Co.

A. J. Grant has been appointed Superintendent of Construction Eastern Division C.P.R. Telegraphs, vice J. Townsley, retired, and S. L. Elliott has been appointed General Inspector Eastern Division.

E. L. Cousins, formerly Resident Engineer G.T.R.. Toronto, and now in charge of the railway work of the Toronto city works department, has also been appointed to take charge of the city bridge work.

W. B. Bulling, Assistant Freight Traffic Manager C.P.R., Montreal, has returned to duty after several months absence, principally in Europe, on account of ill health. W. M. Kirkpatrick, General Freight Agent (Through Freight) acted in his stead.

Toronto Mail.—It is pleasant to believe that the recent knighthoods are not inflating their recipients, and making them too aristocratic. In one instance. at least, it is clear that the rank is but the guinea stamp, and that

"A Mann's a Mann for a' that."

Sir William Mackenzie, President Canadian Northern Ry., has purchased a block of property on Queen St., West, Toronto, opposite University Avenue, which local reports wrongly stated, was to be used for the erection of new headquarters of the company.

J. W. Loud, Freight Traffic Manager G.T.R., and G. W. Stephens, Chairman Montreal Harbor Commission, have been elected President, and a member of the committee of management, respectively, of the Church of the Messiah, Montreal, for the current year.

E. E. Cain, who was some time, ago, Trainmaster Pere Marquette Rd., at St. Thomas, Ont., and later at Detroit, Mich., has been appointed Superintendent Wellston Division, Cincinnati, Hamilton and Dayton Rd., vice J. W. Anderson.

W. H. Grant, of Mackenzie, Mann and Co.'s Construction Department. who was Manager of Construction Portland Canal Short Line Ry., Stewart, B.C. has been much benefited by his stay at Mount Clemens, Mich., and has returned to headquarters at Toronto.

W. M. Heath. who died at Portage la Prairie, Man,. recently, was a river freighter in the early days of the settlement of the Northwest At one time he had among his employes J. J. Hill, now Chairman of the Board of Great Northern Ry.

J. P. Mabee, Chief Railway Commissioner. returned to Canada, Jan. 4, from Washington, D.C., where he had been in connection with the conference relating to the establishment of an international board for dealing with railway matters affecting Canada and the U.S.

H. W Williamson, who was for some years station agent and latterly chief freight clerk C.P.R. at Fredericton, N.B., has retired from active service. He started work at Fredericton station in Dec., 1869, and has remained there ever since under the different companies which have had control of the line.

C. L. Clarke, Bridge and Building Master District I, Atlantic Division, C.P.R., Fredericton Jct., N.B., was presented with a fur coat and cap, a gold headed cane, hand bag and $50, by a number of fellow employés, Jan. 3, on his retiring from active service.

J. S. Dennis, Manager C.P.R. Irrigatoin and Land interests in Alberta and British Columbia, was expected to return to Canada from Great Britain, at the end of January. During his visit, he lectured before the Royal Geographic Society in London, Edinburgh Glasgow, and at other points.

Sir Geo. C. Gibbons, whose name was included in the list of New Year honors granted by the King, is Chairman of the Canadian Section of the International Waterways Commission, and was especially identified with the negotiations leading up to the Boundary Waters Treaty between Canada and the U.S.

X. H. Cornell, who has been appointed Inspector of Transportation, Toledo, St. Louis and Western Rd., and Chicago and Alton Rd., Chicago, Ill, was, from 1903 to Nov. 30, 1909, consecutively, Chief Dispatcher, Train Master and Master of Transportation Western Division G.T.R., Durand, Mich., which last position he resigned to become Chief Supervisor Michigan Car Demurrage Supervising Bureau.

J. T. B. Caron, whose appointment as a member of the Government Railways Managing Board, was announced in our last issue, was born at Garneau, Que., Nov. 29, 1869, and was educated in Ontario public schools and Laval University, Quebec, where he obtained the A.B. degree in 1894. He subsequently practised law at Osgoods Hall, Toronto, and was called to the bar in 1898. He took a prominent part in the elections in Eastern Ontario, and was elected to the House of Commons in 1907, and was a candidate in L'Islet county in 1908, when he was defeated.

H. D. Annable. Export Freight Agent C.P.R., New York, who died there, Jan. 10, was born at Ottawa, Aug. 6, 1871, and entered C.P.R. service in 1891, since when, he was to 1892, in the Freight Department at Ottawa; 1892 to 1898, in Freight Department, Montreal; 1898 to 1901, Travelling Freight Agent; 1901 to 1903, Foreign Freight Agent, London, Eng.; 1903 to Apr. 1910, General Freight Agent. London, Eng.; in April, 1910, he was appointed Export Freight Agent at New York, which position he held up to the time of his death. W. G. Annable, General Passener Agent C.P.R. Atlantic Steamship Service, is a brother.

Sir Donald D. Mann, on whom a knighthood was conferred Jan. 1, was born at Acton, Ont., Mar. 23, 1853. In his earlier years he was chiefly connected with the lumber trade, and became a contractor for the construction of a portion of the C.P.R. in 1880, working between Whitemouth and the Selkirk mountains. He entered into partnership with Wm. Mackenzie in 1886, since when they have been associated in contracting, and later in the building up of the Canadian Northern Ry. system. Among the positions held by him are: Vice President Canadian Northern Ry., Winnipeg Electric Ry., President North Star Mining Co., Director Dominion of Cana-

Frederick Passmore Gutelius, who has been appointed General Superintendent Eastern Division C.P.R., Montreal, was born at Mifflinburg, Pa., Dec. 21, 1864, and graduated from Lafayette College as civil engineer, in 1887. He entered railway service in 1888, since when he has been consecutively, to 1892, Assistant Engineer and Assistant Supervisor Pennsylvania Rd., Pittsburg, Pa.: 1885 to 1898, General Superintendent Columbia and Western Ry.; 1898 to 1900, Superintendent C.P.R., Nelson, B.C.; 1900 to 1902, in various positions in the C.P.R. Engineering Department; 1902 to Mar. 1906, Engineer Maintenance of Way, C.P.R., Montreal; Mar., 1906, to Sept. 15, 1908, Assistant Chief Engineer Eastern Lines Montreal; Sept. 15, 1908, to Dec. 30, 1910, General Superintendent Lake Superior Division, C.P.R., North Bay, Ont.

E. W. Duval, whose appointment as Superintendent District 1, Saskatchewan Division, C.P.R., Moose Jaw, was announced in our last issue, was born at Toledo, Ohio, June 5, 1885, and entered railway service July 1, 1902, since when he has been, to June 1, 1905, in Superintendent's office, C.N.R., Winnipeg; and at Port Arthur, Ont.; June 1, 1905 to Jan. 2, 1911, successively, secretary to General Superintendent Central Division C.P.R., Winnipeg; chief clerk to Superintendent District 2, Central Division, C.P.R., Winnipeg, assistant chief clerk to General Superintendent Central Division C.P.R., Winnipeg; chief clerk to General Superintendent Western Division C.P.R., Calgary, Alta.; chief clerk to Assistant General Manager and later to General Manager Western Lines C.P.R., Winnipeg; and Trainmaster C.P.R. terminals, Calgary, Alta.

Miss Grace Mackenzie, daughter of Sir William Mackenzie, President Canadian Northern Ry., was married to Comte Jacques de Lesseps, at St. James Church, Spanish Place, London, Eng., Jan. 25. The bride was attended by her sisters, Mrs. W. W. Beardmore and Miss Ethel Mackenzie, and her cousin, Miss Mabel Meagher, Gilbert Griffin acting as train bearer. Among those present at the ceremony were Sir William and Lady Mackenzie, J. M. Mackenzie, Mrs. Grantham, W. W. and Mrs. Beardmore, Scott and Mrs. Griffin, R. M. and Mrs. Horne Payne, Mrs. Meagher, Lord Strathcona, etc. A reception was subsequently held at Claridge's Hotel, and later the bride and groom left for Upper Egypt, where the honeymoon will be spent. On their return it is probable that they will reside in Paris, France.

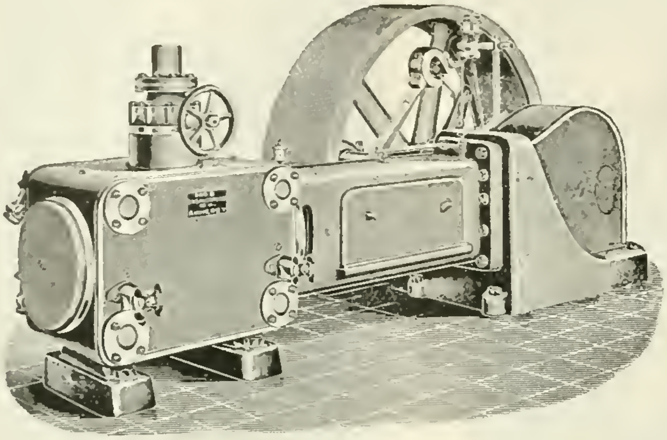
"No other man knows the Canadian West any better than Wm. Whyte knows it; there is some reason to doubt whether any other man knows it as well. He has been standing guard over C.P.R. interests at Winnipeg for a quarter of a century, and Winnipeg is by common consent the gateway of the West. During these 25 years he has filled the positions of General Superintendent of the Western Division, Manager of the lines west of Lake Superior, Assistant to the President, Second Vice President and Vice President. He has seen the C.P.R. system develop into one of the greatest railway systems in the world, and he has had much to do with promoting that development. He has seen the process of settlement going on, slowly at first, but quite rapidly in recent years, and he has watched with intelligent and sympathetic interest the evolution of the great agricultural industry."—Toronto Globe.

Wm. Bunton, G.T.R. city ticket agent, Peterboro, Ont., died at Toronto, Jan. 17, of Bright's disease. He was one of the best known of ticket agents on the continent, and was a most active member of the Canadian Ticket Agents Association, in which he had been a member of the executive committee, Vice President, and President. The funeral took place at Burlington, Ont., Jan. 19, a special car being provided from Toronto. The following acted as pall bearers: B. H. Bennett, General Agent Chicago and North Western Ry.; A. J. Taylor, Canadian Freight and Passenger Agent Chicago, Milwaukee and St. Paul Ry.; H. G. Thorley, Passenger Agent International Mercantile Marine Co.; H. F. Bradley, Agent Allan Line; J. D. McDonald, District Passenger Agent G.T.R.; C. E. Horning, City Passenger and Ticket Agent G.T.R., of Toronto.

Sir Thomas Tait, on whom a knighthood was conferred, Jan. 1, was born at Melbourne, Que., July 24, 1864, and entered railway service Sept. 1880, since when he has been, to July, 1881, clerk G.T.R. Audit Department; July to Oct., 1881, clerk in office of Assistant to President Chicago and Grand Trunk Ry.; Oct., 1881, to Apr., 1882, clerk in G.T.R. Solicitor's Office, Belleville, Ont.; Apr. to Oct., 1882, clerk General Manager's office, G.T.R.; Oct., 1882 to Sept. 1886, private secretary to Vice President and General Manager, C.P.R.; Sept., 1886, to May, 23, 1887, clerk General Traffic Manager's office, C.P.R.; May 23, 1887, to Feb. 1, 1889, Assistant Superintendent C.P.R., Moose Jaw, Sask.; Feb. 1, 1889, to Mar. 12, 1890, Superintendent Ontario Division C.P.R., Toronto; Mar. 12, 1890, to Mar. 1, 1893, General Superintendent Ontario and Quebec Division, C.P.R.; Mar. 1, 1893, to May 3, 1897, Assistant General Manager C.P.R.; May 3, 1897, to Apr., 1901, Manager C.P.R. Eastern Lines; Apr., 1901, to Mar., 1903, Manager of Transportation, C.P.R. He sailed from Vancouver for Australia, May 1, 1903, having received the appointment of Chairman of the Victorian Railway Commissioners, which position he resigned in Sept. 1910.

J. G. Sullivan, who has been appointed Assistant Chief Engineer Western Lines, C.P.R., was born at Bushnell's Basin, N.Y., Jan. 11, 1863, and graduated C.E. at Cornell University, June, 1888. He entered railway service July, 1888, since when he has been, to Mar. 1889, rodman Great Northern Ry., U.S.; Apr., 1889 to Aug., 1890, rodman, instrument man and assistant engineer Spokane Falls and Northern Ry., Aug., 1890, to May, 1893 assistant engineer Great Northern Ry., U.S. coast lines; July 1893, to Feb. 1894, assistant engineer Alberta Ry. and Coal Co.; July to Oct., 1894, section foreman Northern Pacific Ry.; Oct., 1894 to Apr., 1895, locating engineer, Butte, Anaconda and Pacific Ry.; Apr. to Dec., 1895, Division Engineer, Kaslo and Slocan Ry.; Dec., 1895, to Feb., 1901, locating and reconnaissance engineer and engineer in charge of construction Columbia and Western Ry.; Feb., 1901, to Sept. 1905, Division Engineer Construction Department Western Lines, C.P.R.; Sept.

ROBB CORLISS ENGINES



Have the Armstrong-Corliss valve gear, which will operate at a higher speed than the ordinary releasing gear.

This valve gear does not depend on springs or dash pots for closing and runs without noise.

The wearing parts of the valve gear are enclosed in a casing and run in oil so that friction is reduced to a minimum.

1905, to Feb. 1907, Assistant Chief Engineer Panama Canal; Feb. 1907, to Sept 15, 1908, Manager of Construction Eastern Lines, C.P.R., Toronto; Sept. 15, 1908 to Jan. 1, 1911, Assistant Chief Engineer Eastern Lines C.P.R., Montreal. He was elected a member of the American Society of Civil Engineers in 1899, and is also a member of the Canadian Society of Civil Engineers.

Capt. Alex. Gray, late master of the Hudson Bay Co.'s auxiliary steamship Pelican, died at his residence, Fairleigh, Sutton, Eng., recently, aged 70. He was a native of Peterhead, and gained an unrivalled experience of Arctic navigation while engaged in the whaling industry with his brother, Capt. John Gray, who was known as the "Prince of Whalers." On Feb. 1, 1871, Capt. Alex. Gray entered the H.B. Co.'s service as commander of the s.s. Labrador, and besides delivering cargoes to, and collecting returns from, the company's posts along the coast of Labrador and Ungava, he prosecuted the Greenland seal fishery until that portion of the company's trade was relinquished in 1881. He served one more voyage in the Labrador, and resigned in 1883 to resume the pursuit of the leviathans of the Arctic deeps in the s.s. Erik, in which he held a large interest. In 1888 the H.B. Co. purchased the s.s. Erik, and the year 1891 saw Capt. Gray reinstated in the service as her commander. With the exception of the year 1905, when he commanded the s.s. Discovery (Capt. (Scott's Antarctic ship) on a voyage to James Bay, Capt. Gray served as master of the s.s. Pelican from 1901 to the date of his retirement on May 31, 1909, having made 30 of the most arduous voyages to the inhospitable and uncharted shores of Labrador and Hudson's Bay. —Canadian Gazette.

Sir William Mackenzie, whose name was included in the recent list of New Years honors, was born at Kirkfield, Ont., Oct. 30, 1849, and was educated at the public and Lindsay Grammar schools. His first connection with railway work, was as contractor for the construction of the Victoria Ry., now the G.T.R. Middle Division, and upon completion of this, he took contracts for building various portions of the C.P.R., carrying out considerable construction work in the Rocky Mountains. A partnership with D. D. Mann, commencing in 1886, was responsible for other railway construction, including the Calgary and Edmonton Ry., Qu'Appelle, Long Lake and Saskatchewan Ry., the C.P.R. short line through Maine, and in 1896 was commenced the 100 miles of the Lake Manitoba Ry. and Canal Co.'s line, from which has grown the Canadian Northern Ry. system of today. Among the positions held by him are: President Canadian Northern Ry., Toronto Ry., Toronto and York Radial Ry., Toronto and Niagara Power Co., Winnipeg Electric Ry., Sao Paulo Tramway, Light and Power Co., Monterey Ry., Light and Power Co., and Chairman and President Rio de Janeiro Tramway, Light and Power Co., Vice President Electrical Development Co. of Ontario, Director Canadian General Electric Co., Central Canada Loan and Savings Co., Dominion Securities Corporation, Imperial Life Assurance Co. of Canada, Manufacturers Life Assurance Co., National Trust Co., North Star Mining Co., and Shawinigan Water and Power Co. He is a member of the York, Toronto, Albany, National and Hunt Clubs, Toronto, and the Rideau Club, Ottawa.

J. W. Leonard, who has been appointed Assistant to the Vice President, C.P.R., Montreal, was born at Epsom, Ont., 1858. He entered railway service, 1872, since which his record has been: 1872 to Aug., 1877, telegraph operator and agent, Midland Ry. of Canada; Aug., 1877, to Dec., 1878, agent Victoria Ry.; Dec., 1878, to Mar., 1880, assistant manager, same road; Mar. to June, 1880, assistant to General Superintendent Credit Valley Ry.; June, 1880, to Nov., 1883, General Passenger Agent same road; Nov., 1883, to May, 1884, Master of Transportation, Ontario and Quebec Ry.; May, 1884, to Mar., 1887, Superintendent C.P.R., at Toronto; Mar., 1887, to Mar., 1890, Superintendent Kamloops; Mar., 1890, to Mar., 1893, Superintendent lines east of Montreal, same road; Mar., 1893, to April, 1901, General Superintendent Ontario and Quebec Division, same road, Toronto; April, 1901, to Mar., 1903, General Superintendent Western Division same road, Winnipeg; Mar. to April, 1903, General Superintendent Central Division, same road, Winnipeg; April, 1903, to Jan. 1904, Assistant Manager, C.P.R. lines west of Lake Superior, Winnipeg. After some months spent in travelling, Mr. Leonard was elected President Guelph and Goderich Ry., and in Feb., 1905, was appointed Manager. of Construction, C.P.R. lines in Ontario, and in Oct., 1905, Assistant General Manager, C.P.R. Eastern Lines, in charge of maintenance of way and operation, and also of the construction of new lines in Ontario, which combined positions he held until the appointment of J. G. Sullivan as Manager of Construction Eastern Lines, leaving him solely to the duties of Assistant General Manager Eastern Lines in charge of maintenance of way and operation to Feb. 1908, when he was appointed General Manager Eastern Lines in charge of maintenance of way and operation, with office at Montreal.

◆

Canadian Sleeping Car Rates.

On Dec. 29 the C.P.R. issued a local standard passenger tariff of sleeping car tolls, which was filed with the Board of Railway Commissioners, the Board ordering that the same be spoken to in Montreal on Jan. 23. The tariff, to become effective Feb. 1, provides the following rates for lower berths in standard sleeping cars; east of Calgary, Macleod and Edmonton, 6 mills a mile; west of Calgary, Macleod and Edmonton, 8 mills a mile. Any fraction of 25c. less than 12½ cents to be thrown off, and anything above 12½c to be charged at 25c. Minimum charge for lower berth, $1.50. A scale is given for upper berths, drawing rooms and compartments, from which the following are selected as examples. The regular drawing room contains a double section, and a single section, or a single berth, with toilet. A compartment contains two double berths:

Lower Berth.	Upper Berth.	Drawing Room.	Compartment.
$ 1.50	$ 1.25	$ 6.00	$ 5.00
2.00	1.60	7.00	6.00
3.00	2.40	11.00	8.50
4.00	3.20	14.00	11.50
5.00	4.00	18.00	14.00
6.00	4.80	21.00	17.00
7.00	5.60	25.00	25.00
8.00	6.40	28.00	22.50
9.00	7.20	32.00	25.50
10.00	8.00	35.00	28.00
11.00	8.80	39.00	31.00
12.00	9.60	42.00	34.00
13.00	10 40	46.00	36.50
14.00	11.20	49.00	39.50
15.00	12.00	53.00	42.00
16.00	12.80	56.00	45.00
17.00	13.60	60.00	48.00
18.00	14 40	63.00	50.50

For parlor car seats the rates are, east of Calgary, Macleod and Edmonton, ½c. a mile, and west of those points ⅔c. a mile, adding sufficient when necessary to make the fare end in 0 or 5. The minimum charge for seats is 25c. For drawing room the charge is six times the seat fare, not exceeding the charge for drawing room in night service between the same points.

In tourist sleeping cars the berth charge is 50% of standard berth fare, adding sufficient, when necessary, to make tourist berth fare end in 0 or 5. The minimum charge for lower or upper berth is $1.

The Canadian Northern and Grand Trunk Pacific Rys. filed similar tariffs for points east of Macleod, Calgary and Edmonton, their lines not being in operation further west for sleeping or parlor car traffic. The Pullman Co. did not file a tariff, but tariffs were filed by the lines over which Pullman cars operate in Canada, the Grand Trunk, Michigan Central, New York Central lines and other roads.

The new tariffs were approved by the Board of Railway Commissioners in Montreal Jan. 24. Chairman Mabee said they were the first effort to put sleeping and parlor car rates on a scientific basis, that they would do away with the complaints in regard to the charges for lower and upper berths being the same, and that they would make a general reduction in rates, although in some cases there might be increases. The railway companies justified the higher rates west of Macleod, Calgary and Edmonton by the extra cost of hauling cars through the mountains. Chairman Mabee said the Commission hesitated in approving the higher western rates, but did so, as the companies wanted to put the new tariffs in force on Feb. 15, it being understood that the question might be reopened, when the general question of lower railway rates in the west came up for consideration.

◆

C. N. Ry.—G. T. Pacific Ry. Terminal.

The President, Vice President and other officers of the G.T. Pacific Ry. were in Toronto Jan. 4, conferring with Canadian Northern Ry. officers as to terminal facilities. The conference lasted two days, and it is stated that an arrangement is being made for the operation of joint terminals for the lines at various points in the west along the same lines as that under which the G.T. Pacific Ry. is to use the terminal station now nearly completed at Winnipeg. It is said that all the joint terminal facilities will be operated by a joint board representing both lines. Referring to the conference on his return to Winnipeg Jan. 11, E. J. Chamberlin, Vice President and General Manager G.T.P.R., said the matter would be handled by a terminal board at Winnipeg, Regina and Edmonton. This statement was confirmed as to Winnipeg and Edmonton by M. H. McLeod, General Manager C.N.R., Jan. 14.

◆

St. Leonards—Van Buren Bridge.—The commissioners having charge of the building of a bridge across the St. John river to connect St. Leonards, N. B., and Van Buren, Me., have been considering the offer of certain residents of the latter place to provide sufficient funds to strengthen the bridge so as to carry railway traffic. The Attorney-General for Maine has expressed an opinion that the State voted a subsidy for the building of a highway bridge, and that the funds cannot be used for anything else.

The Winnipeg Bridge and Construction Co., Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $60,000 and office at Winnipeg, to carry on a general contracting business, including works connected with railways, tramways, telegraph and telephone lines, bridges, wharves, docks, piers, etc., and in connection therewith to own and operate steam and other vessels, and to carry on a general transportation business. The incorporators are John, James and F. Frankman, Minneapolis, Minn.; J. LaCour and K. Scheel, Winnipeg.

The JOHN INGLIS COMPANY, Limited

ENGINEERS AND BOILERMAKERS
14 Strachan Ave., Toronto, Canada

C.P.R. Betterments, Construction, Etc.

Blomidon to Canning Wharf.—A survey has been made for a spur from the Dominion Government wharf at Canning, N.S., on the Dominion Atlantic Ry. Cornwallis branch, to Blomidon.

St. John Improvements.—A question has been raised in connection with the deed of transfer to the C.P.R. of certain shore rights at Carleton, St. John, N.B. The company does not agree to a clause providing that the land is to be used for railway purposes only.

New Brunswick Southern Ry.—This railway was merged in the Atlantic Division, C.P.R.. Jan. 15, and is being operated as part of District 1. The Board of Railway Commissioners has authorized the building of a spur across Prince William St., Nepean tp.

St. Maurice Valley Ry.—Commencing Jan. 15, the St. Maurice Valley Ry., from Three Rivers to Shawinigan Falls, Que., has been operated as part of District 3 Eastern Division C.P.R.

During 1910 the C.P.R. built an extension from Shawinigan Falls to Grand Mere, 5.2 miles.

Orford Mountain Ry.—An extension of this railway from Mansonville, Que., to the International boundary, between Quebec and Vermont, 3.6 miles, was completed during 1910.

Montreal.—In connection with the application of the city to the Quebec Legislature for an amendment of its charter, etc., notice is given by E. Belanger that he will apply for the insertion of a clause protecting certain rights in the case of the works authorized by the contracts between the city and the C.P.R., June 30, 1905, and Jan. 7, 1910.

Mile End Station.—The new station at Mile End, Montreal, was expected to be ready for occupation Jan. 20. The building is of brick on concrete foundations, and is similar in design and layout to that recently completed at North Parkdale, Toronto.

St. Lawrence Boulevard.—The subway under the C.P.R. at the head of the St. Lawrence Boulevard, Montreal, is reported to be practically completed. The subway is about 900 ft. long and 60 ft. wide. At the lowest point it is 15 ft. below the street level. The roadway provides space for a double track electric railway, two roadways for general traffic, and two sidewalks. The steel superstructure carries four tracks.

Place Viger Improvements. — The Board of Railway Commissioners has authorized the building of a temporary bridge to carry Notre Dame St., Montreal, over the tracks leading to Place Viger terminals, pending the erection of a permanent bridge.

Georgian Bay and Seaboard Ry.—The line under construction from Coldwater Jct. eastward to the Toronto-Montreal line at Bethany Siding, will be 75.88 miles long. The line from Victoria Harbor, on Georgian Bay, to Coldwater Jct., on the Toronto-Sudbury line, is completed, and is being used for traffic. During 1910 the company laid 1.46 miles of terminal tracks at Victoria Harbor. The Board of Railway Commissioners has approved the proposed change in location of the line in Orillia, of revision in grade from mileage 65.63 to 69 in Ops and Fenelon tps., revision in location from mileage 69 to 70.5, and location from mileage 70.5 to 72.88 in Lindsay, Ont.

The total length of the line from Coldwater Jct. to Bethany Siding is 80 miles, and the contract of the Toronto Construction Co., which company was building the section out of Coldwater easterly, is reported to have been extended to cover the whole line. G. S. Deeks, representing the company, stated Jan. 4, that 17 miles of grading had been completed, and the whole line was expected to be ready by Dec. 31.

The revised location of the line from mileage 44.22 southeasterly to mileage 47.42 in Victoria county, has been approved by the Board of Railway Commissioners.

Lambton-Islington Second Track, etc.—The Board of Railway Commissioners has authorized the use for traffic purposes of the second track from Lambton to the east end of the bridge over Mimico River, mileage 6.6 to 8.6. The abutments have been built for a bridge across this river, and the second track has been laid west to the junction with the Mimico spur line, 2.64 miles, built during 1910, and for some distance beyond, altogether 3.2 miles from Lambstate that in connection with the plans ton. It is understood that the second track will be laid as far as Cooksville, mileage 14.4, during the year.

Toronto to Windsor.—Press reports state that in connection with the plans for the improvement of C.P.R. connections in and around Toronto, it is proposed to build a new line, either in whole or in part, from Cooksville to London, to avoid the gradients and curvature on the existing line. Whether there is anything in the report or not, a survey party has been at work, starting from near the crossing of Dundas St., east of Cooksville station, and proceeding westerly since Jan. 2. During the last four years several survey parties have been at work for the C.P.R. in that section.

South Ontario Pacific Ry.—The House of Commons Railway Committee approved the application for an extension of time for the building of a line from Guelph Jct. to Hamilton, Ont., about 16 miles. An effort was made to obtain a promise from the company's representative that the line would be built at once.

Guelph Station, etc.—The Board of Railway Commissioners has authorized a change in the location of the line crossing Eramosa road, Norwich St., and City lane, and approving the location of the proposed station at Guelph, Ont.

Spur Line at Guelph.—The Board of Railway Commissioners has extended to Sept. 30 the time within which the spur line to the Provincial Reformatory at Guelph, Ont., may be built.

Stratford, Ont., Entrance.—The railway committee of the Stratford city council had under consideration the question of the entrance of a C.P.R. line into the city, Jan. 17, in order that it may be in a position to meet the company's engineers, who are expected shortly.

Tillsonburg, Lake Erie and Pacific Ry.—St. Marys and Western Ontario Ry.—The Board of Railway Commissioners has authorized the opening for traffic of that portion of the Ingersoll branch from Ingersoll Jct., mileage 0 to 4.8. This piece of line was built during 1910, and the official report gives the location and mileage as Code Jct. to Ingersoll, 4.68 miles. Ingersoll was the terminal of the old T., L.E. and P. Ry., and Code Jct. is the point where the St. Marys and Western Ontario Ry. joins the C.P.R. main line. By the building of this line a direct connection is given between Port Burwell and St. Marys, instead of the previous connection via Woodstock.

Nipigon to Savanne, Ont.—Press reports state that there is under consideration a plan for building a cut off starting from Nipigon and joining the main line again near Savanne, Ont., which will effect a saving of nearly 50 miles. The building of this cutoff would do away with the necessity of through traffic, being carried via Fort William during the winter. F. R. Reed, of the C.P.R. engineering staff, Winnipeg, is reported to be in charge of a party locating a route. Since the foregoing was put in type we have been officially advised that the reports quoted are unfounded.

Port Arthur, Ont.—Following the removal of the street railway tracks from John St. to Bay St., by the Commission, the C.P.R. will lay an extensive system of side tracks for the new warehouse district on John St.

Western Lines, Improvements and Extensions.—The work to be done on the Western lines during the current season includes not only very extensive betterments of existing lines, enlargement of yards and facilities, but the laying of about 100 miles of second track, and the construction of about 400 miles of new lines.

The line between Port Arthur and Fort William, Ont., about four miles, will have a second track, and the poling yard at Fort William, which was laid out about seven or eight years ago, is to be rearranged as a gravity yard, with a view of taking advantage of the gradient in the movement of cars.

Owing to the large increase in the size and power of locomotives and their consequent greater hauling capacity, the present passing tracks are being found to be too short. In order to accommodate these longer trains additions to passing tracks aggregating 40 miles will be built during the year. The general improvement of the lines will be continued, and during the year 150 miles of the Manitoba and North Western Ry. will be relaid with the standard 85 lb. steel; the yards at Regina, Moose Jaw and Medicine Hat will be enlarged, and new steel bridges will be built across the South Saskatchewan River at Medicine Hat, across the Bow River at the first crossing east from Calgary, twin bridges will be built at the second and third crossings west of Calgary, and across the Elbow River at Calgary. The superstructures of the present structures will be utilized elsewhere.

The second track work which has been completed from Winnipeg to Portage la Prairie, will be completed to Brandon this year, some 80% of the grading having already been done. From Moose Jaw, a second track is to be built easterly to Pasqua, seven miles, and westerly to Caron, about 16 miles. Two rock crushing plants will be built on the Pacific Division to supply rock ballast for the lines there.

The new lines which will be built during the year are as follows:—The completion of the branch from Estevan, Sask., northwesterly to a junction with the line westerly from Weyburn, at Forward, Sask., 35 miles.

The extension of the line from Weyburn from its present terminal for 20 miles westerly.

From Moose Jaw southwesterly for 35 miles towards a junction with the line from Weyburn westerly.

From Swift Current southeasterly for 45 miles towards a junction with the last mentioned line.

From Swift Current northwesterly for 35 miles.

From the present terminus of the branch northwesterly from Moose Jaw for 35 miles, with a view of meeting an extension of 60 miles, which is to be built easterly from Castor, the present terminus of the Calgary and Edmonton Ry. Lacombe branch.

From Wilkie, on the Pheasant Hills branch, a line is to be built for about 32 miles northwesterly into the Cut Knife district, and southerly a branch is to be built to Tramping Lake, and down each side of the lake, a distance of 25 miles.

The Carmangay branch is to be completed to Okotoks, 26.5 miles.

FLANNERY BOLT COMPANY, Frick Building, Pittsburgh Pa.

An additional 40 miles will be built on the Kootenay Central Ry.

The year's construction also includes an addition to the Royal Alexandra Hotel at Winnipeg, but we are advised that it has not been decided whether this will be done by the addition of two or three stories or by a new wing.

Teulon Extension.—Track was laid during 1910 on the extension of this branch, from Komarno to Arborg, Man., 25.6 miles.

Winnipeg-Brandon Second Track.—A second track has been laid from Rugley Jct., at Winnipeg, to Portage la Prairie, Man., 53.6 miles, and grading has been completed for a second track from Portage la Prairie to Brandon, Man., 77.5 miles. Track will be laid on this mileage during the present year.

Tilston, Westerly.—The company has under construction a line from Tilston, Man., the present terminus of the Broomhill branch, for 3.21 miles to the Manitoba boundary, and for a further 22.5 miles in Saskatchewan.

Forward Branch.—This branch line starts at Weyburn, Sask., and had its terminus in Forward, 26 miles. During 1910 track was laid on a further 26 miles, passing through Amulet, mileage 44, and having its present terminus at Ogema, mileage 52. It is understood that the intention is to carry this line to Lethbridge, Alta.

Estevan Northwesterly.—A line is under construction from Estevan, Sask., northwesterly 20 miles. This will affect a junction with the line being built westerly from Weyburn in the direction of Lethbridge, Alta.

Tantallon, Northwest.—The Dominion Parliament is being asked to authorize the building of a line from near Tantallon, on the Pheasant Hills Branch, to Craven, on the branch line northerly from Regina, Sask., 145 miles. This will run midway between the main line and the Pheasant Hills branch.

Regina, Bulyea, Colonsay, Sask.—A branch is under construction from Regina to Craven, where it divides, one line effecting a junction with the Pheasant Hills branch at Bulyea, mileage 194, and the other effecting a junction with the Pheasant Hills branch at Colonsay, mileage 293. Track was laid during 1910 as follows: Regina northerly, 20.6 miles; Bulyea, south, 12.4 miles; Colonsay, south, 50 miles, and grading was reported to have been completed on the following additional distances: Bulyea, southerly, 6.9 miles; Colonsay, southerly, 58 miles.

Outlook, Castor, Macklin.—The Outlook branch starts from Moose Jaw, Sask., and runs northwesterly for 119 miles to Outlook, whence it is under construction to a junction with the Calgary and Edmonton Ry. Lacombe branch, now terminating at Castor, Alta., and with the extension of the old Manitoba and North Western Ry., which connects with the Calgary and Edmonton Ry. branch from Wetaskiwin, at Macklin, mileage 492. Track has been laid from Macklin, southeasterly for 148.6 miles. At Outlook a viaduct is being built across the Saskatchewan River valley, over which connection will be made between the two sections of the line. It has not yet been determined when the section from near Eagle Lake to Castor, Alta., will be proceeded with.

The Langdon Branch starts from Calgary Jct., and was extended from Inverlake to Acme, Alta., 34.1 miles, during 1910, and it is intended to extend it to a junction with the Calgary and Edmonton Ry., south of Red Deer. A branch running easterly from Irricana is under construction for a further 36.9 miles.

Carmangay to Aldersyde.—The Carmangay branch, at present extending from Kipp to Carmangay, Alta., 28 miles, is being extended to Aldersyde, 56 miles.

West Canadian Collieries.—The Board of Railway Commissioners has authorized the C.P.R. to build three spurs for the W.C.C. at Bellevue, Alta.

Kootenay Central Ry.—A duplicate of the lease of the K.C. Ry., now under construction, to the C.P.R., has been deposited with the Secretary of State at Ottawa. The line is projected from Wardner, on the Crow's Nest Pass Branch, to Golden, on the transcontinental line, and the section under construction is from Wardner to Fort Steele, 24.9 miles.

Hotel at Balfour, B.C.—A contract is reported let to C. W. Sharpe, Winnipeg, for the erection of a hotel at Balfour, near Nelson, B.C. The building will be of three stories, on a concrete and stone foundation, with a frontage of 205 ft., and a depth of 105 ft. It is expected to be completed this year.

Westminster Jct., B.C.—We have been advised that while the executive officers have given some consideration to the provision of additional yard accommodation at the Pacific coast, it has not bought 1,800 acres of land at Westminster Jct. for this purpose, as recently reported. It is too early to state just what will be done in providing the increased accommodation necessary.

Port Moody Spur Line.—During 1910 the company completed the building of a 3.5 mile spur line at Port Moody, B.C.

Esquimalt and Nanaimo Ry.—The total length of the extension of this line from Wellington to Alberni, B.C., is 57.8 miles. The first section, from Wellington to Cameron Lake, 30 miles, has recently been opened for traffic. The remaining distance, from Cameron Lake to Alberni, is under construction, and is expected to be opened for traffic during the year. On the old portion from Victoria to Nanaimo, a branch of 3.3 miles, to the Wellington Camp, was built. An extension to the water front at Nanaimo is under consideration. Surveys for this work have been made by H. J. Cambie, Vancouver.

Work on the clearing of the branch line to Cowichan Lake is reported to be under way, the contractors, Moore and Pethick, having completed the clearing of five miles of the right of way.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—During the year 1910, 240.33 miles of new track were laid on five different lines, as follows: from Lawlor to Plummer, Minn., 168 miles; cutoffs Wisconsin, Spencer, Minneapolis, 62 miles; from Ironhub to Deerwood, 4.61 miles; from Cuyuna to Crosby, 3.92 miles; from Crosby to Ironton, 1.80 miles.

Press reports state that surveys have been made for an extension from Frederick, Wisc., to Duluth, Minn., about 60 miles, and that the company is planning extensive additions to its yard accommodation at Superior, Wisc., for handling ore from the Cuyuna range. (Jan., pg. 33.)

Railway Companies and Commutation Tickets.—A bill has been read a first time in the House of Commons, on motion of A. C. Macdonell, M.P., having for its object the amendment of the Railway Act, with reference to the issue by railway companies of commutation or suburban mileage tickets. The object is to put the issue of these tickets under the same supervision as other tickets with regard to the obligation not to discriminate against persons or localities.

A bill respecting the load line on ships, in the same terms as the Plimsoll Act, was introduced into the House of Commons, Jan. 20.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Robt. W. Hunt and Co., Montreal, have issued a booklet on the proper use of concrete and reinforced concrete.

S. S. Underwood, for many years chief draughtsman G.T.R. Car Department, Montreal, has been appointed Sales Manager for Taylor and Arnold, Ltd., Montreal.

The Baldwin Locomotive Works, Philadelphia, Pa., has issued a calendar for 1911 illustrating various types of locomotives for passenger and freight service.

The Baldwin Locomotive Works, Philadelphia, Pa., has issued record 68, dealing with Mallet articulated locomotives and giving data and illustrations of 13 of them built at the works.

The Halifax city council has granted the Nova Scotia Car Works, successors to the Silliker Car Co., a loan of $125,000 at 4%; a 5,000,000 gall. water supply for 20 years and exemption from taxation for the same period.

The Consolidated Car Heating Co. has issued catalogue 10, describing and illustrating its buzzer system designed for signalling conductors and motormen on trolley cars. It operates directly from the trolley voltage and does away with all dry batteries.

The Goldschmidt Thermit Co. is applying to the Dominion Parliament to authorize the Commisioner of Patents to receive payments of the further partial fees for the second and third terms of six years each, and to extend patent 86085, for a process of joining metal pieces, for such further terms.

Williams and Wilson, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $250,000 and office at Montreal, to take over the business at present carried on by Williams and Wilson there, and to carry on the general business of manufacturing, importing and dealing in machinery and supplies. The incorporators are A. R. Williams, Toronto; F. C. and W. A. Wilson, M. B. Bronstetter, E. Kingsland, Montreal.

The Dearborn Drug & Chemical Works which has distributed its feed water Treatment and lubricants through an agency in the Phillippines for the past two years, have decided to open their own branch office and warehouse in Manilla, and has placed F. O. Smolt in charge, under the supervision of E. C. Brown, Manager of company's foreign department. Mr. Brown has spent most of the past two years in Japan, China and the Philippines, investigating steam plant and railway conditions and has made selling connections at Tokyo, Tientsin, Hongkong, and Shanghai.

According to the Insurance Age, the work of railway trainmen in the U.S. is not the most dangerous occupation. It seems that the highest percentage of fatality is found among the fishermen of Gloucester, Mass., where it is nearly 12% of the total number employed. For the decade ending in 1907, the mortality percentage among railway men was about 8%. The number of deaths due to accidents of occupation among all wage earners annually in the U.S. is between 30,000 and 35,000; the non-fatal accidents exceed 2,000,000.

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

Canadian Northern Ry. Construction, Etc

Canadian Northern Quebec Ry.—The Board of Railway Commissioners has ordered the company to provide a platform and shelter for freight and passenger traffic at Pointe Aux Trembles, Que.; to fence its property and tracks at Hochelaga terminals, and instal various protective devices along its line in Montreal. The company's application to build an elevated line to connect its tracks with the lines of the Montreal Harbor Commission has been referred to the Board of Railway Commissioners.

James Bay and Eastern Ry.—The Board of Railway Commissioners has approved the revised location from station 405-48 to 536-44, mileage 7.46 to 9.93, from Roberval, Que.; and authorized the crossing and diversion of the public road at stations 726-50 and 605-63 on the Indian Reserve, Lake St. John county.

Canadian Northern Ontario Ry.—The Board of Railway Commissioners has authorized the building of the line from near Hawkesbury, towards Montreal, between lots 78 and 80, St. Eustache parish, station 1848-80; and the building of a bridge over Riviere des Milles Isles, between Two Mountains and Laval counties, mileage 37.9 from Hawkesbury.

Track has been laid altogether upon 71.7 miles of the Toronto-Ottawa line as follows: mileage 0 to 44.6, 44.6 miles; mileage 69.4 to 71.7, 2.3 miles; and mileage 71.8 to 96.6, 24.8 miles.

The Board of Railway Commissioners has authorized the building of the line across Hurdman's Road, Nepean tp., subject to certain conditions. The route plans for the section of the Toronto-Ottawa line between Deseronto and Portland, came up for consideration before the Minister of Railways, Jan. 10, when representatives from Newboro, Westport and other points attended and pressed their views as to the location. The Minister promised to give consideration to what had been said before approving the plans. The Board of Railway Commissioners has authorized a junction with the G.T.R. Harwood branch in Cobourg; and the building of a branch line in Trenton to connect with the Central Ontario Ry., and certain transfer tracks also in Trenton; to carry the line across Foster Ave., Belleville; to use five piers for the bridge across the Moira River at Belleville; and has approved the location of the line between Sydenham and Harrowsmith, mileage 159.70 to 162.27.

The Minister of Railways, Jan. 12, decided to refer to the Board of Railway Commissioners the application for approval of the location of the Toronto end of the line, from Macpherson Ave., to Rosedale Heights. Speaking in reference to this and other railway matters, Sir Donald D. Mann, Vice President C.N.R., said Jan. 12: "The C.P.R. is already handling business out of North Toronto, and before very long we will also be operating trains through there. Now, suppose the C.P.R. built a big passenger station there, and did not want the Canadian Northern, or any other company in the same terminal, and suppose we built a station, as we probably will do in the course of a few years, and in return for an arrangement in the present Union Station we allowed the G.T.R. to use the C.N.R. terminal in North Toronto, it could be done. The C.N.O. line to Ottawa, now under construction, of course, will be connected up with North Toronto, but just where has not been decided as yet, but north of East Toronto, the line passes within half a mile of the G.T.R. main line between Toronto and Montreal. All that would be necessary, you see, would be to construct a line across that half mile or so, and G.T.R. trains could swing to the north there and so continue on over the C.N.O. lines into North Toronto. But remember, I do not propose to utterly abandon the Union Station. It should also be kept in operation. Just how I would not say at present, but it seems to me that in the summer it would be the proper station from which all passenger business connecting with the steamboats should be handled. If all the roads concerned agree on that point I do not see what would be placed in the way by any other interest. It may be, however, that they could not do that, for I am not sure on that point. But, under the scheme I have suggested here as one way of handling the problem, the bulk of the through trains, at least, would be sent across the north end of the city."

The contract for the bridge on the Toronto-Trenton section at Trenton, has been let to S. Henderson, and work was started on the substructure Jan. 1. There will be two abutments and nine piers in from 12 to 19 ft. of water. Five cofferdams have been put in place, and 4ft. of concrete work done in each. It is expected to have the substructure completed in March.

A Hamilton press report states that another plan for the entrance of the company's lines into Hamilton is under consideration. This involves a line at the back of Dundurn Park, with a viaduct across the city to James and Strachan sts, where a station would be built.

The branch line from Udney, on the Toronto-Sudbury line to Atherly Jct., Ont., has been extended from mileage 5.71 to Atherly Jct., 1.69 miles, during 1910.

Irondale, Bancroft and Ottawa Ry.—During 1910, an extension of three miles was built to connect the old terminus at Mud Creek, Ont., with the Central Ontario Ry., to enable the two lines to be worked under the same management. The point of junction with the C.N.O Ry. is at York River.

Central Ontario Ry.—Track has been laid on the extension to Whitney, from station 1355 to 1620, five miles, and the remaining 12 miles is under construction. The work is being done by the company.

Canadian Northern Ry.—Application was made recently to the Minister of Railways for approval of the route map for the projected line from Nipigon to Port Arthur. In 1908, a route map showing an entrance into Port Arthur was approved, but the present map shows a new location in that city along the waterfront. The city authorities object to this route on account of the shipbuilding and other industries along the water front. The route map was approved, subject to certain questions reserved for the decison of the Railway Commissioners.

Application is being made to the Board of Railway Commissioners for authority to build a spur line from Rue de Meuron, westerly to Tache Ave., St. Boniface.

During 1910, in addition to completing a cut-off, of 9.75 miles, near Kakabeka, Ont., the company laid 521.96 miles of new line, on 10 branch lines. The Oak Point branch line was completed for a further distance of 96.84 miles to Gypsumville, Man., the Greenway branch was carried 12.90 miles west of Adelpha, Man.; the Hallboro branch was completed to Beulah, 6.15 miles; on the Rossburn branch, 16.46 miles of track were laid west of Stornaway, Sask.; on the Maryfield branch, 88.81 miles of track were laid westerly from Lampman, Sask.; on the Goose Lake branch, 49.90 miles were laid westerly from Kindersley, Sask.; track was laid from Prince Albert to Shellbrook, Sask., 16.13 miles; on the Jack Fish Lake branch, track was laid from 22.9 between North Battleford to Meots, Sask.; between Shellbrook and Big River, Sask., on the Crooked Lake branch, 56.95 miles; and on the Vegreville-Calgary line, from Ryley to Red Deer River, Alta., 155.23 miles. These lines represent 115.89 miles of additional branch lines in Manitoba, 250.84 miles in Saskathcewan, and 155.84 miles in Alberta.

Plans for the extension of the line into the Brazeau River coal fields, from Stettler, on the Vegreville-Calgary line, westerly, have been approved by the Alberta Government. The question of the building of this branch line came before the Dominion authorities, and the plans were not approved, but the company subsequently obtained an act for the construction of the line from the Alberta Legislature.

Canadian Northern Pacific Ry.—The first section of this line to be put under construction was one of 57 miles, from New Westminster Bridge to Popkum, B.C., the contract having been given to the Northern Construction Co., Vancouver. This contract was extended to cover an additional 20 miles from Popkum to Hope. The rest of the line from Hope to Yellow Head Pass, 425 miles, is under survey, the whole work being in charge of T. H. White, Chief Engineer. The grading is expected to be completed to Popkum by July 1, and that it will be so far ahead by March 1, that track laying will be started. The clearing of the 1,000 acre tract at Port Mann, is reported to be about one-fifth completed. The contractors for this work are Moore and Pethick.

In a recent interview, Sir Donald Mann said the company was preparing to make an early start on the numerous tunnels to be driven along the banks of the Fraser River between Yale and Kamloops. These will run from 700 to 2,700 ft. in length, aggregating 2.25 miles. It is expected that work will be prosecuted from both ends of each tunnel, and that the gangs will work in three shifts, so that the driving may be continuous.

Vancouver Island.—A contract for the building of the first section of the projected C.N.R. lines on Vancouver Island has been let to Grant, Smith & Co. The contract calls for the clearing, grubbing, fencing, grading, bridging, trestle work and masonry work from mileage 4.7 westerly from Victoria to mileage 25. The plans filed with the B.C. Government show that location surveys have been completed to Cooper Cove on Sooke Inlet, 25 miles from Victoria. The gradient is kept below 1.5%, and the curvature is not excessive. There are no exceptional engineering difficulties on the section, but there is a good deal of heavy rockwork for about 12 miles about mileage 17. A preliminary location survey has been made to mileage 90, from Victoria, at the west end of Cowichan Lake. (Jan., pg. 13.)

The Duluth, Winnipeg and Pacific Ry.'s extension, southerly through Minnesota to Duluth, is well under way. The work of putting up the steel bridges is going on, and it is expected to have the line completed this year. During 1910, there were laid about 25 miles of track on the extension out of Virginia Lake towards Duluth.

Minnesota and North Wisconsin Ry., Etc.—Press reports recently credited C.N.R. interests with having acquired a line running from International Falls. to Little Fork River, Minn., and the M. and N. W. Ry. running from Scanlan to Norwanna, on the first mentioned line, but we are officially advised that there is no truth whatever in the report.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for Nov. 1910, $40,194, against $52,211 for Nov. 1909. Cumulative net profits for five months ended Nov. 30, 1910, $148,687. Railway traffic receipts for Dec. 1910, $26,577, against $28,432 for Dec. 1909. Cumulative traffic receipts for six months ended Dec. 31, 1910, $186,164.

Algoma Central and Hudson Bay Ry.—There is being offered on the Paris, France, market, $3,000,000 new first mortgage 5% bonds of this company at 463.50 francs per 515 franc bond

Canadian Pacific Ry.—At the recent meeting of the Board, in Montreal, it was decided that in view of the position of the land account, and of the other extraneous assets of the company, the distribution from these sources, commencing with the payment of the next quarterly dividend, will be at the rate of 3% per annum, instead of 1%, as heretofore.

Canada Southern Ry.—The city of St. Thomas, Ont., is applying to the Legislature for authority to enter into agreements, from time to time, with the Canada Southern Ry. Co. and the Michigan Central Rd. Co., for the payment of a certain annual sum in commutation of its taxes on right of way, yards, lands, buildings and structures lying north of Wellington St.

Cumberland Ry. and Coal Co.—A meeting of shareholders will be held in Montreal Feb. 15, to authorize the directors to issue bonds for $3,000,000, secured by a trust mortgage on all the assets, present and future. The shareholders will also elect directors, pass bylaws, and transact such other business as may be done at a special general meeting.

Dominion Atlantic Ry.—Gross earnings for Nov., 1910, $99,000, against $112,021 for Nov., 1909; aggregate gross earnings for five months ended Nov. 30, 1910, $687,806, against $723,844 for same period 1909.

London and Port Stanley Ry.—The receipts for the first nine months of 1910 were $13,800.52, made up as follows: rental, $7,500; interest as rental, $1,947.45; percentage of earnings, $4,353.07. The disbursements were $333.96, against which was set $125 received for sale of an old shed at Port Stanley, leaving net disbursements of $208.96. This makes the net receipts $13,591 56. There was $2,500 due as rental, which, together with the percentage of earnings, will bring the total income for the year to $18,000, the same as in 1909. The report was adopted, and the board will in the ordinary course turn over the cash to the London city treasurer.

Maritime Coal, Ry. and Power Co.—At the last meeting of directors it was stated that the railway as well as the electric part of the company's undertakings showed greatly increased earnings.

New Brunswick Southern Ry.—A duplicate of the lease of the line to the C.P.R. dated Oct. 6, 1910, has been deposited with the Secretary of State at Ottawa.

Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.—The order for the service of writ and statement in the action of Russell against Greenshields to recover $1,250,000 damages, has been set aside. The action has to do with some dealings with the Q., L.L. and S. Rd. and S. Co.'s land grant, in which the plaintiff and defendant were interested, and Russell alleges that Greenshields received a secret profit out of the settlement, which Russell says in his statement "was based on a breach of his duty by the defendant as such partner" in assenting to the arrangement.

Quebec and Lake St. John Ry.—Traffic receipts for Dec., 1910, $48,525.52, against $42,578.67 for Dec., 1909. Aggregate receipts for twelve months ended Dec. 31, 1910, $608,979.88, against $593,562.78 for same period 1909. The mileage operated during both years was 285, the earnings per mile being $2,145.12 in 1910, and $2,089.21 in 1909.

Quebec Central Ry.—Press reports recently stated that the New York, New Haven and Hartford Rd. were negotiating for a controlling interest in the Q.C.R. In connection with this report J. H. Walsh, General Manager, stated in an interview that the British shareholders were well satisfied with the prospects of the company, and would not dispose of their interests.

Quebec Central Ry.—Gross earnings for Nov., 1910, $84,197.44; expenses, $59,557; net earnings, $24,640.44, against $84,875.51 gross earnings; $59,838.06 expenses; $25,037.45 net earnings for Nov., 1909. Aggregate gross earnings for five months ended Nov. 30, 1910, $545,881.49; expenses, $352,052.69; net earnings, $193,828.80, against $498,036.93 aggregate gross earnings; $325,508.78 expenses; $172,528.15 net earnings for same period 1909.

Quebec Southern Ry.—F. D. White, Rutland, Vt., and the estate of the late H. A. Hodge, Greenwich, Conn., have entered suit in the Connecticut courts to recover $2,500,000 damages against R. Sutro, W. Seward Webb and others who were associated with them in a transaction involving the purchase of the Q.S R. White and Hodge were interested prior to the Sutro-Webb interests acquiring the line, and it is alleged that the failure of the company to meet its obligations in Mar., 1904, was the result "of the acts of the defendants and others who conspired with them." and that the subsequent sale under an order of the Exchequer Court, caused the plaintiffs damage to the amount claimed.

Red Mountain Ry.—The discharge of a mortgage given by the company July 1, 1896, to the Manhattan Trust Co., to secure an issue of debenture stocks, has been deposited in the office of the Secretary of State at Ottawa.

St. Maurice Valley Ry.—A duplicate of the lease of the line to the C.P.R., dated Oct. 6, 1910, has been filed with the Secretary of State, Ottawa.

Temiscouata Ry.—Profit for Oct., 1910, $4,897, against $4,835 for Oct., 1909; cumulative profit for ten months ended Oct. 31, 1910, $39,668, against $44,934 for same period 1909.

◆

Regulations re Passenger Car Lighting.

The Board of Railway Commissioners passed the following order, 12542, Dec. 9:—

1. The gas generally known as Blaugas may be used for the purpose of lighting railway passenger cars, upon and subject to the terms and conditions following, namely: The gas to be used in tanks below cars similar to those now in use for storage of Pintsch gas and Commercial acetylene gas; the tanks to be tested and tight at 300 lbs. pressure to the square inch, and stand such tests without distortion. Provided that in the case of railway companies having in use at the date of the issue of this order tanks tested to a pressure not exceeding 294 lbs. to the square inch, it shall be sufficient that the said tanks be tested and tight at 290 lbs. pressure to the square inch and stand such test without distortion. The maximum working pressure to be 150 lbs. to the square inch. Every gas tank attached to a railway car to have six three-eighths holes drilled in it, to be countersunk seven-eighths inch in diameter and one-eighth inch deep, in which brass disc shall be tinned and soldered; the disc to stand a pressure of 200 lbs. to the square inch and tanks to be placed on the cars with disc side up. Holes to be located as described in sketch attached.

That in addition to the foregoing, every gas tank attached to a railway car must be equipped with an extra heavy stud valve, securely fastened to every such tank.

That the equipment necessary for the installation of the said system be provided with: a pressure gauge with a dial reading either from 1 lb. to 300 lbs., or reading by atmosphere from zero to 15 atmospheres, to show the exact pressure of gas carried. A recharging valve attached to the charging station hose. A regulating valve, to reduce the pressure of gas contained in the tank before it enters the main line piping or the lamps on the car.

That all piping between the regulating valves and stud-valves be of extra heavy, seamless steel or iron tubing; and that all elbows or tees be of extra heavy material, provided that heavy flange brass fittings may be used in lieu of such equipment.

That the high-pressure piping and fittings be carefully threaded before being screwed together; the pipe thread to be carefully tinned after being screwed up, and the piping to be sweated to the fittings.

That standard tubing be used to connect the low-pressure side of the regulating valve with the lamps of the cars, and that a main-line cock, to turn on and off the gas, be placed on the inside of each car, in a convenient and conspicuous location.

That, in order to locate leakages, soap suds be used, and that lighted matches or torches be not used for this purpose.

That printed regulations defining and explaining the use of the system, be posted inside of each car, in close proximity to the main-line cock; and that a tank stud-valve key, a main-line cock key, and such other keys as may be necessary for the use and operation of this equipment, be supplied to and always carried by, every conductor and brakeman while on duty in charge of any train or cars provided with this equipment, and that the regulations required by this section be posted up, state that such keys are in the possession of the conductor and each brakeman on the said trains or cars. That every car lighted by this system be placed under the charge of a competent and reliable employe of the railway company using such system—every such employe to be specially instructed in regard to the proper working and operating of the said system.

◆

Taxation of Railways.—For the year ended June 30. 1910, Canadian railways paid $1,792,648.83 in taxes, an increase of $211,312.24 over the previous year. Of this, 121,933.17 represented outside operations. The amounts collected in the different provinces were:—Ontario, $747,004.78; Quebec, $337,490.05; British Columbia, $220,687.32; Saskatchewan, $161,575.45: Manitoba, $92,476.48; Alberta, $87.423.93; Nova Scotia, $16,762.66; Yukon, $5,896.64; New Brunswick, $1,298.35: Prince Edward Island, $100.

The Kingston and Cape Vincent Stage Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $3,000. and office at Kingston, Ont., to carry on the business of forwarding mails, express goods, passengers and freight, between Kingston, Ont., and Cape Vincent, N.Y., and intermediate places. The provisional directors are H. E. Richardson, W. Aubin, T. Mills, Kingston; W. Horne, Wolf Island tp., Ont.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

Rates on Sugar Beets.

12435. Oct. 14.—Re Michigan Sugar Co. of Croswell, Mich., under secs. 315, 317 and other provisions of the Railway Act, for an order directing the Chatham, Wallaceburg & Lake Erie Ry. to adopt a tariff that will provide for the carriage of sugar beets over its line at a rate that is not excessive, and that does not discriminate against the applicant in favor of any other person or company: It is ordered that the application be dismissed. And it is further ordered that any joint tariff to cover this traffic to be moved during 1911 from points on the C.W. & L.E.R. to Croswell, higher than the joint tariff at present in force, shall be filed and published, so as to be effective not later than May 1, 1911.

Rates on White Pass and Yukon Routes

12512. Dec. 15.—Re complaint of J. H. Conrad, alleging excessive freight rates charged by White Pass & Yukon Route on ores from Caribou to Skagway, and on mining machinery and camp supplies from Skagway to Caribou: It appearing that the White Pass & Yukon Route and the British Yukon Ry. have refused to permit applicant to load ore, as has been hitherto permitted, and upon counsel for applicant undertaking to forthwith make an application for the construction of an industrial siding at or near the point in question, it is ordered that the W.P. & Y. Route and the B.Y.R., their officers and agents, do permit the applicant, his servants and agents, to load ore for shipment upon the line of the said railway companies at or near the point at which the applicants, his servants and agents, had been permitted by the railway companies in the past to load the said ore, upon the lines of the said railway companies at or near Caribou Crossing, until the application for the said industrial siding is disposed of or the same is constructed. 2. That the said railway companies, their officers or agents, shall be liable to forfeit and pay a penalty of one hundred dollars ($100.00) per day for each and every day that the applicant, his servants or agents, are not permitted to load ore at the point in question where the like privilege has been granted to the said applicant, his servants or agents, in the past.

Rates from the East to Saskatchewan.

12520. Dec. 10.—Re application of city of Regina, Sask., under sec. 314 and 339 of the Railway Act, for order directing reduction in rates on classes 1 to 10 on goods shipped from Eastern Canada to Regina. Upon hearing the application at Regina and Winnipeg on Nov. 8 and 15, 1909, in the presence of counsel for the applicant, the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railway Companies, the Moose Jaw and Winnipeg Boards of Trade being represented, and upon the report of the Chief Traffic Officer of the Board, it is ordered that the C.P.R. and C.N.R. publish and file new freight tariffs, to take effect not later than April 1, 1911, removing the discrimination at present existing in the tariffs to points in Manitoba, Saskatchewan and Alberta, from Fort William, Port Arthur and points east thereof, in favor of Winnipeg and other points in Manitoba, and against points west thereof, by reducing the rates from Fort William, Port Arthur and points east thereof, to Regina and Moose Jaw and other points west of the said favored points.

In the case of the Edmonton Board of Trade vs. the Canadian Pacific and Canadian Northern Railways, the Chief Commissioner gave the following decision under date of Dec. 21, 1910:—"This case is governed by the order made in the Regina Board of Trade case. That order required the companies to remove existing discrimination by reducing rates from Fort William and Port Arthur to Regina and other points west of the favored points. The latter were the points that enjoyed rates upon the Winnipeg basis. To comply with that order rates to Edmonton must be reduced as asked in this complaint. This follows without the necessity of issuing a formal order, unless requested by applicants."

Grain Rates from Buchanan, Sask.

12653. Dec. 28, 1910.—Re order 12413, May 12, 1910, made upon the application of G. Taylor, of Winnipeg, and declaring that under the Canadian Northern Ry.'s tariff applying to a shipment of grain by complainant from Buchanan, Sask., to Headingly, Man., the rate properly chargeable was 17c. per 100 lbs. Upon the report of the Board's Chief Traffic Officer that his recommendation that complainant was entitled to a refund of 1c. per 100 lbs. on the said shipment was based on a new tariff issued by the C.N.R. subsequent to the shipment, and that the rate charged was in accordance with the tariff in effect at the time of shipment. It is ordered that order 12413, May 12, 1910, be rescinded.

Rate on Brick, Laprairie to Mile End.

12655. Sept. 20. 1910.—Re application of W. S. Tilston, Manager Montreal Board of Trade Transportation Bureau, on behalf of the Laprairie Brick Co., Ltd., for an order prescribing a joint through rate of 3c. per 100 lbs. on brick from Laprairie to Mile End, Que. Upon hearing the application in the presence of counsel for the C.P.R. and G.T.R., it is declared that the application falls within the terms fo the general interswitching order 4988, July 8, 1908.

Rates on Finnan Haddies.

12674. Dec. 20, 1910.—Re application of Maritime Fish Corporation of Digby, N.S., complaining of increased rates charged by Dominion Atlantic Ry. on shipments of finnan haddies between Digby, N.S., and St. John, N.B. It is ordered that in the present Canadian Classification no. 15, finnan haddies are included in the description "Salted, dried or smoked fish," which, when shipped in bundles or boxes, is rated 3rd class in less than carloads, and 5th class in carloads, and that any rates charged for the carriage of finnan haddies, in bundles or boxes, higher than 3rd class in less than carloads, and 5th class in carloads, as shown in the tariffs published and filed, are unlawful.

White Pass and Yukon Ry. Rates.

12783. Jan. 18.—Re order 7246, June 16, 1909, made upon application of Board of Trade of Dawson, Yukon, directing the British Yukon Ry., the British Columbia Yukon Ry. Co., the Pacific and Arctic Ry. and Navigation Co., and the White Pass and Yukon Ry. to file with the Board (1) tariffs of the companies tolls covering all through traffic received at Skagway and destined to White Horse, or to any intermediate point or points between the International boundary line between Alaska and British Columbia, upon the line of railway, and White Horse; (2) covering all through traffic received at any point or points upon the railway line between White Horse and the said International boundary, and destined to Skagway. And re the tariffs filed in pursuance thereof:

It is ordered that the Joint Freight Tariff C.R.C. 9, giving the rates charged by the respondent companies on the various descriptions of freight traffic specified therein between Skagway, Alaska and White Horse, Yukon, and intermediate stations in B.C. and Yukon Territory, be disallowed. That the one-way passenger fares published in the respondent companies Joint Passenger Tariff C.R.C. 3, to apply between Skagway, Alaska, and stations in B.C. and Yukon Territory to and including White Horse, be disallowed; and the respondent companies be directed to substitute therefor joint tariffs of freight and passenger tolls based on a reduction of at least one-third in each case from the freight and passenger tolls shown in the tariffs, which are hereby disallowed, the substituted tariffs to become effective not later than April 1, 1911, the reduced freight and passenger tolls to be the maxima to be charged by the respondent companies between Skagway and the said stations. And it is also ordered that freight and passenger tolls (if any) now existing, lower than the tolls hereby ordered, shall not be increased by reason of this order.

Nova Scotia Steel and Coal Co., Ltd.

Following is a return of the company's output for 1910 and 1909, the figures showing a considerable increase in the past year:

	1910.	1909.
Iron ore mined	537,000	460,387
Coal mined	845,000	813,453
Limestone and dolemite...	75,000	74,407
Coke made	90,000	87,816
Pig iron made	66,000	57,676
Steel ingots cast	75,000	64,210
Steel billets cogged	59,000	52,931
Bars and plate rolled ...	49,000	45,090
Axles forged	38,000	27,703
Shipments finished steel and forgings	60,200	58,515
Average number employes.	5,276	4,450
Steamers employed	18 to 20	15 to 20
Tons freighted	1,000,000	925,000

◆

Loading on Industrial Sidings.—In reference to the joint circular issued by railways in the Maritime Provinces, Quebec and Ontario, on Oct. 15, 1910, stating that on and after Jan. 1, 1911, the practice of loading less than carload freight on industrial sidings would be discontinued, another circular has been issued stating that in view of the number of requests which have been received from shippers and others, to postpone the effective date of this regulation, and in order that all concerned may complete arrangements for compliance therewith, the effective date thereof is postponed until July 1.

The Engineers Club of Montreal has decided to enlarge its club house on Beaver Hall Square, at a cost of $92,500, the increase of the membership to 425 having rendered the present premises too small. The plans, which have been accepted, provide for an almost complete remodelling of the present buildings, the construction of a new dining room and billiard room, new card rooms, additional bed rooms, and a ladies dining room and reception room, a library and reading room. When completed it will be one of the finest club buildings in Canada. Nearly $20,000 is also to be expended for new furniture, fittings, etc.

The Shepard Morse Lumber Co., Ottawa, has received one four wheel locomotive from the Montreal Locomotive Works.

The Canadian Quarries and Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $2,000,000, and office at Ottawa, to carry on a general construction and quarrying business, and in connection therewith to build, own and operate wharves, docks, canals, tramways, sidings, steam and other vessels, and other transportation facilities. The incorporators are J. Black, R. T. Mullin, Montreal; S. Bilsky, G. C. Hurdman and J. O. Carss, Ottawa.

ATTENTION, MASTER CAR BUILDERS!

The M. C. B. rules of interchange provide for the use of THE STEEL BACK BRAKE SHOE on your freight equipment.

The use of OUR STEEL BACK SHOE will mean a saving in brake shoe maintenance, brake heads and brake beams.

THE STEEL BACK BRAKE SHOE is an economy on all railway equipment.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Ry.—G. H. Shaw, heretofore Traffic Manager, Winnipeg, has been appointed General Traffic Manager, with jurisdiction also over the allied lines: Canadian Northern Ontario Ry., Canadian Northern Quebec Ry., Quebec and Lake St. John Ry., Inverness and Richmond Ry., Halifax and South Western Ry., Duluth, Rainy Lake and Winnipeg Ry., and the Canadian Northern Steamships, Ltd. Office, Toronto.

G. D. Lindsay has been appointed Travelling Freight Agent, Toronto, vice C. H. Green, transferred to Hamilton, Ont., as advised in our last issue.

J. H. McKinnon, heretofore Travelling Passenger Agent, Toronto, has been appointed Commercial Agent, vice W. E. Dunn, resigned. Office, St. Paul, Minn.

W. A. Kirkpatrick, heretofore in the General Superintendent's office, Winnipeg, in charge of matters concerning transportation, has been appointed Operating Inspector, reporting to the General Superintendent, Winnipeg.

D. Robinson has been appointed Sleeping and Dining Car Agent, vice J. S. McKay, resigned. Office, Prince Albert. Sask.

E. P. Davis, K.C., heretofore Counsel for C.P.R. at Vancouver, has been appointed Counsel and Solicitor C.N.R. for the B.C. mainland. Office, Vancouver.

Canadian Pacific Ry.—A. E. Griggs has been appointed Bridge and Building Master District 1, Atlantic Division, vice C. L. Clarke, superannuated. Office, Fredericton Jct., N.B.

The New Brunswick Southern Ry., having been taken over by the C.P.R., it will be operated as the Shore Line subdivision of District I, Atlantic Division. W. B. Brown, Chief Dispatcher and Trainmaster District 1, has supervision of same, with office at St. John, N.B.

N. E. Lister, heretofore Roadmaster N.B.S. Ry., has been appointed Assistand Roadmaster District 1, C.P.R., acting under J. A. Miller, Roadmaster at McAdam Jct.

J. N. Currie, heretofore Bridge and Building Master N.B.S. Ry., has been appointed Assistant Bridge and Building Master, acting under A. E. Griggs, Bridge and Building Master, Fredericton Jct., N.B.

A. W. Horsey, heretofore District Master Mechanic, Districts 2 and 4 Eastern Division, Smiths Falls, Ont., has been appointed District Master Mechanic District 1, vice D. L. Jones, transferred to the Atlantic Division. Headquarters, Farnham, Que.

On Jan. 1 a circular, signed by Sir Thos. G. Shaughnessy, was issued, appointing J. E. Schwitzer, theretofore Assistant Chief Engineer Western Lines, Winnipeg, to be Chief Engineer of the company, with office at Montreal. Mr. Schwitzer left Winnipeg Jan. 8 to assume the duties of his new position, but was taken ill whilst en route, and died of pneumonia, at Montreal, Jan. 23. The appointment of a successor is not likely to receive consideration for some time to come.

J. W. Leonard, heretofore General Manager Eastern Lines, in charge of maintenance and operation, has been appointed Assistant to the Vice President. Office, Montreal. Mr. Leonard will, it is said, principally attend to matters arising between the company and its maintenance and operating employes on its eastern lines, especially as regards wages and other terms of employment.

F. P. Gutelius, heretofore General Superintendent Lake Superior Division, North Bay, Ont., has been appointed General Superintendent Eastern Division, vice C. Murphy, appointed General Superintendent of Transportation. Office, Montreal.

F. W. Ellingwood is reported to have been appointed superintendent in charge of construction of the Windsor St. station, and also the Place Viger terminal, Montreal.

T. Collins, Assistant Superintendent District 2, Eastern Division, is reported to have been appointed also Assistant Superintendent District 4, Eastern Division, vice R. W. McCormick, transferred to Farnham, Que. Office, Smiths Falls, Ont.

J. M. Burke, heretofore District Master Mechanic District 1, Atlantic Division, Brownville Jct., Me., has been appointed District Master Mechanic Districts 2 and 4, Eastern Division, vice A. W. Horsey, transferred. Headquarters, Smiths Falls, Ont.

J. G. Taylor, heretofore Superintendent District 1, Alberta Division, Medicine Hat, has been appointed General Superintendent Lake Superior Division, vice F. P. Gutelius, transferred to Montreal. Office, North Bay, Ont.

A. R. Holland, conductor, has been appointed acting Trainmaster at District 1, Manitoba Division, during the absence of H. J. Coffin, acting as Relieving Superintendent District 2, Saskatchewan Division, at Saskatoon, Sask. Office, Kenora, Ont.

When the appointment of J. E. Schwitzer, as Chief Engineer, was made on Jan. 1, it was also announced that he would be succeeded as Assistant Chief Engineer Western Lines, by J. G. Sullivan, theretofore Assistant Chief Engineer Eastern Lines. Consequent on Mr. Schwitzer's fatal illness, Mr. Sullivan did not leave for Winnipeg, as intended, but we were advised Jan. 27 that he would go there early in February.

A. Doull has been appointed Roadmaster Ignace subdivision District 1, Manitoba Division, vice J. Esselmont, transferred to the Pacific Division. Office Kenora, Ont.

In announcing the appointment of T. Fawcett, as General Fuel Agent Western Lines, Winnipeg, in our last issue, we gave his previous position as Trainmaster at Calgary, Alta. This should have read, Paymaster.

R. Lockhart has been appointed Assistant Superintendent Sleeping, Dining and Parlor Cars and News Service, Manitoba Division, vice S. A. Simpson, promoted. Office, Winnipeg.

H. E. Haanel has been appointed Trainmaster District 3, Manitoba Division, vice P. F. Weisbrod, transferred. Office, Brandon, Man.

H. J. Coffin, Trainmaster District 1, Manitoba Division at Kenora, Ont., has been appointed acting Superintendent District 2, Saskatchewan Division, during the absence of E. L. Chudleigh, Superintendent, on leave. Office Saskatoon, Sask.

S. A. Simpson, heretofore Assistant Superintendent Sleeping, Dining and Parlor Cars and News Service, Manitoba Division, Winnipeg, has been appointed Superintendent same service, Saskatchewan Division, vice R. H. Pierce. Office, Moose Jaw, Sask.

W. G. McPherson, has been appointed Night Locomotive Foreman at Moose Jaw, Sask., vice H. Bealle, who has been given a position as hostler there.

J. McQuarrie, heretofore shop foreman, Medicine Hat, Alta., has been appointed Locomotive Foreman, Sutherland Sask., vice M. W. Boucher, transferred to Hardisty, Sask.

A. S. Dawson has been appointed Chief Engineer in charge of surveys, designs and construction of the irrigation project and establishment of all standards for renewals and betterments distributing system Office, Calgary, in maintenance of completed canals and Alta.

A. J. Macdonnell has been appointed Assistant Superintendent Sleeping, Dining and Parlor Cars and News Service, Alberta Division. Office, Calgary, Alta.

H. McDonald, heretofore fitter in Lethbridge shops, Alta., has been appointed shop foreman there, vice M. A. Cardell, transferred.

M. A. Cardell, heretofore shop foreman at Lethbridge, Alta., has been appointed shop foreman at Medicine Hat, Alta., vice J. McQuarrie, appointed Locomotive Foreman at Sutherland, Sask.

M. W. Boucher, heretofore Locomotive Foreman, Sutherland, Sask., has been appointed Locomotive Foreman, Hardisty, Alta., vice W. G. McPherson, assigned to other duties.

J. Daem has been appointed Assistant Roadmaster, Rogers Pass, B.C. This is a new position. He will particularly attend to the snow service at Rogers Pass and vicinity reporting to Roadmaster Nicholls at Revelstoke.

M. K. McQuarrie has been appointed Resident Engineer District 1, British Columbia Division, vice J. P. Forde, resigned. Office, Revelstoke.

P. F. Weisbrod heretofore Trainmaster District 3, Manitoba Division, Brandon, has been appointed Trainmaster, District 3 Alberta Division, vice J. A. Kennedy, assigned to other duties. Office, Cranbrook, B.C.

J. Esselmont, heretofore Roadmaster Ignace subdivision, District 1, Manitoba Division, Kenora, Ont., has been appointed Roadmaster Cascade subdivision, Pacific Division, vice H. Vollans, assigned to other duties. Office, Vancouver, B.C.

C. L. Williams has been appointed General Agent, Passenger Department, Pittsburgh, Pa.

T. G. Orr, Travelling Passenger Agent, Pittsburgh, Pa., has resigned.

The company has opened its own office in Paris, France, at 1 Rue Scribe, in charge of Augustus Catoni, as agent, who will report to the General Freight Agent and the General Passenger Agent, London, Eng., with regard to freight and passenger matters respectively.

Grand Trunk Pacific Ry.—H. H. Hansard has been appointed Assistant Solicitor. Office, Winnipeg.

R. J. Foreman, heretofore chief clerk Freight Department, Winnipeg, has been appointed Assistant General Freight Agent. Office, Winnipeg.

Jas. Gorman, heretofore Inspector of Dining and Sleeping Car Service, Winnipeg, has been appointed Superintendent of Dining and Sleeping Cars, reporting to the General Passenger Agent. Office, Winnipeg.

Grand Trunk Ry.—H. M. Gain has been appointed Passenger Trainmaster, Eastern Division, to supervise the movement of passenger trains. He will report to, and receive his instructions from, the Superintendent. No change will be made in the present practice of making reports to Assistant Superintendents and Trainmasters. Office, Montreal.

S. L. Trusler, heretofore Assistant Trainmaster at Hamilton, Ont., has been appointed Passenger Trainmaster Middle Division, to supervise the movement of passenger trains. Office, Toronto.

W. J. Little, heretofore conductor, has been appointed Passenger Trainmaster Northern Division, to supervise the movement of passenger trains. Office, Allandale, Ont.

H. W. Matthews, has been appointed Passenger Trainmaster, Western Division, to supervise the movement of passenger trains. Office, Detroit, Mich.

Intercolonial Ry.—W. E. Barnes, heretofore Roundhouse and Locomotive Inspector, Moncton, N.B., has been appointed acting Master Mechanic, Eastern Division, vice J. Stewart, assigned to other duties. Office, Moncton, N.B.

A HISTORY OF THE PAY-AS-YOU-ENTER CAR

AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., 100; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., 5; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 25; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co. Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Ry., Rockford, Ill.; Cairo Street Ry. & Lt. System, 6; Des Moines City Railway, Iowa, 12; Macon Ry. & Lt. Co., Macon, Ga.; Virginia Ry. & Power Co.; Columbia Elec. St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

Bromley, General Coal and Ore Agent, Cleveland, Ohio, H. M. Griggs, Assistant General Coal and Ore Agent, Chicago, Ill., W. C. Lewis, Division Freight Agent, Chicago, Ill., to Niles, Mich., and Joliet Division, Chicago Ill.; J. H. Brown, Division Freight Agent, Leslie to Bay City, Mich., Mackinaw Division and branches, and Midland Division, Bay City, Mich.; G. C. Ransom, Division Freight Agent, stations east of Detroit and St. Clair Rivers, and St. Clair to Lenox, Mich., inclusive, Buffalo, N.Y.; E. A. Treadway, Division Freight Agent, South Bend, Ind., to St. Joseph, Mich., Kalamazoo to South Haven, Mich., Allegan to Yorkville, Mich., Jackson to Grand Rapids, Mich., and Jackson to Rives Jct., Mich., Grand Rapids, Mich.

L. W. Landman, heretofore General Passenger Agent Lake Erie and Western Rd., Indianapolis, Ind., has been appointed General Passenger Agent M.C.R. vice O. W. Ruggles, assigned to other duties on account of ill health. Office, La Salle St. Station, Chicago, Ill.

New Brunswick Southern Ry.—See Canadian Pacific Ry.

New York Central Lines.—E. F. Major has been appointed City Ticket Agent, Montreal, vice A. F. Gogo, transferred.

Pere Marquette Rd.—W. K. Tasker, Superintendent of Telegraphs, is reported to have been appointed Superintendent Canadian Division, vice J. S. Pyeatt, transferred to the Grand Rapids Division, Mich. Office, Detroit, Mich.

R. S. Black, heretofore chief dispatcher, Detroit, Mich., is reported to have been appointed Trainmaster Canadian Division, vice J. R. Gilhula, resigned. Office, St. Thomas, Ont.

Reid Newfoundland Co.—A. Spence, heretofore Chief Dispatcher, has been appointed Travelling Auditor. Headquarters St. John's, Nfld.

G. Cobb has been appointed Chief Dispatcher, vice A. Spence, promoted. Office, St. John's, Nfld.

Rutland Rd.—A. F. Gogo, heretofore city ticket agent New York Central Lines, Montreal, has been appointed Travelling Passenger Agent, R. Rd., vice J. M. Ferris, resigned. Headquarters, 220 St. James St., Montreal.

Temiscouata Ry.—J. H. Walsh, heretofore Vice President Temiscouata Ry., and General Manager Quebec Central Ry., has been elected President Temiscouata Ry., vice F. Grundy, deceased. The position of Vice President has been left vacant.

Temiskaming and Northern Ontario Ry.—T. Ross, heretofore acting Master Mechanic, has been appointed Master Mechanic. Office, North Bay, Ont.

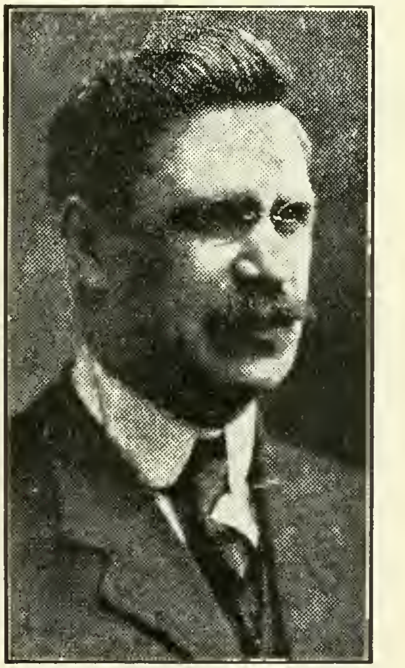
Wabash Rd.—Jno. Maloney, heretofore station passenger agent, has been appointed General Agent Passenger Department, Buffalo, N. Y., vice G. D. Maxfield, promoted.

G. D. Maxfield, heretofore General Agent Passenger Department, Buffalo, N.Y., has been appointed District Passenger Agent, Indianapolis, Ind., vice R. G. Thompson, promoted.

The Montreal St. Ry. has asked the city council to appoint special constables to see that the city bylaws respecting slow moving traffic are enforced. The company complains that on account of slow moving traffic keeping to the tracks, considerable delay is occasioned in the operation of cars, with consequent annoyance to passengers.

Death of J. E. Schwitzer.

Inexpressibly sad was the death of J. E. Schwitzer, B.A.Sc., M. Can. Soc. C.E., in Montreal, Jan. 23, of pneumonia. On Jan. 1 Sir Thomas Shaughnessy issued a circular announcing his promotion from Assistant Chief Engineer of Western Lines to the Chief Engineership of the whole system, with office at Montreal. Mr. Schwitzer left Winnipeg Jan. 8 for Montreal, with Vice President Whyte, who went for his annual appropriation conference with the President, the estimates for which had been prepared by Mr. Schwitzer. Very soon after their arrival in Montreal Mr. Schwitzer was taken ill and was taken to the Royal Victoria Hospital Jan. 16. At first it was thought he was suffering from typhoid, but later it was diagnosed as pneumonia. Mrs. Schwitzer was sent for and reached Montreal only a few days before he died.



He was born at Ottawa, Ont., Apr. 19, 1870. During his undergraduate days and at intervals of private practice and general survey and engineering work, he was engaged in the following railway works: 1888, rodman on location of Vaudreuil and Ottawa Ry. and Lake Temiskaming Colonization Ry.; 1889, assistant engineer of construction Lake Temiskaming Colonization Ry.; 1891 to Feb. 1892, assistant Engineer on location and construction Ottawa and Gatineau Ry.; July 1893 to Jan. 1894, assistant engineer in charge of location and construction, Ottawa, Arnprior and Parry Sound Ry.; Feb. 1894 to Dec. 1906, in addition to continuing the same position, he was engineer in charge of Central Counties Ry. from South Indian, for Canada Atlantic Ry., and on surveys Hull Electric Ry.; July 1899 to Nov. 1900, engineer in charge of construction C.P.R. yards at Rat Portage, Ont.; Nov. 1900 to Nov. 1901, assistant engineer in charge of maintenance of Way, C.P.R., Winnipeg; Nov. 1901 to Mar. 1903, Resident Engineer C.P.R., Winnipeg; 1903 to Feb., 1907, Principal Assistant Engineer, C.P.R., Winnipeg; Feb., 1907 to Jan. 1, 1911, Assistant Chief Engineer, Western Lines, C.P.R., Winnipeg. He was entertained to dinner at Winnipeg Jan. 6, by a number of the officials, on his leaving for the east.

Mr. Schwitzer's death has caused the greatest regret, not only in C.P.R. circles, but through the engineering profession generally and especially in the west, where he has been so well known for a number of years. Sir Thomas Shaughnessy said:—"It is impossible to put into words the great loss the company has sustained in the death of Mr. Schwitzer, but it is even harder to speak of the loss to his personal friends, who have watched his progress. Personally and officially I can say that he cannot be replaced."

The funeral took place at Ottawa, Jan. 27, when a special train from Montreal was provided. A number of officials of the system attended, including several from Vancouver, Winnipeg and other western points. At the various C.P.R. offices throughout the Dominion flags were flown at half mast, and the room in which the Canadian Society of Civil Engineers was holding its annual meetings, in Winnipeg, was suitably draped.

Passenger Meetings at Rochester.

For the first time in the history of the Niagara Frontier Summer Rate Committee, the Great Lakes and St. Lawrence River Rate Committee, and the International Water Lines Passenger Association, they held their annual meetings in Rochester, N.Y., in January. Usually the meetings have been held in Buffalo, N.Y., Niagara Falls, Ont., Toronto or Montreal. The rate clerks of all the lines east of a line drawn through Buffalo and Pittsburg convened under the direction of Jas. Morrison, Secretary of the Niagara Frontier Rates Committee, on Jan. 17 and 18, and agreed on rates to all interested points. These rates will be tendered to all lines west of Buffalo, for basing purposes. On the afternoon of Jan. 17 the Great Lakes and St. Lawrence River Rate Committee met and revised the rates in which the water lines and rail lines were jointly concerned.

The International Water Lines Passenger Association, comprising 46 water transportation companies—practically all the representative lines of Canada and the U. S., met Jan. 19. W. M. Lowrie, retiring President, was presented with a gavel, the head of which, bound with a silver band, is a piece of live oak from the Merrimac, which was sunk by the Monitor in Hampton Roads. The handle was made from one of the stanchions of the duplicate of the original of Robert Fulton's Cleremont, which was in collision with the duplicate of Henry Hudson's Half Moon at the Hudson-Fulton Exhibition.

The three associations elected officers as follows:—

NIAGARA FRONTIER RATE COMMITTEE.—Chairman, D. N. Bell, A.G.P.A., Pennsylvania Rd.; Secretary, J. Morrison, Chief Rate Clerk, C.P.R.

GREAT LAKES AND ST. LAWRENCE RIVER Rate Committee elected the following:—J. de C. Hepburn, Assistant Manager, Ontario & Quebec Navigation Co.; Secretary, J. Morrison, Chief Rate Clerk C.P.R.

INTERNATIONAL WATER LINES PASSENGER Association:—President, T. Henry Traffic Manager Richelieu & Ontario Nav. Co.; Vice President, A. A. Heard, General Passenger Agent Champlain Transportation Co.; Secretary, M. R. Nelson, Northern Steamship Co.; Executive Committee, J. A. Allaire, G.P.A., Hudson Navigation Co.; L. G. Lewis, G.P.A., Detroit & Cleveland Navigation Co.; J. J. Cheeseman, Traffic Manager U.S. & D.T. Co.

The meetings in Jan., 1912, will be held in Detroit, Mich.

The International Ry. of New Brunswick has received one 10 wheeled locomotive from the Montreal Locomotive Works, of which we have already given details.

Steam Railway Track Laid in 1910.

In accordance with our usual practice circulars asking for a return showing all track laid on new lines, or extensions or branches of existing ones during the year ended Dec. 31, 1910, were sent to all Canadian railways, and to U. S. railways having lines in Canada. The returns show that there were laid by 22 railways, 1,869.24 miles of track, against 1,588.47 miles in 1909, and 1,505.95 miles in 1908. The following table gives the details of mileage of track laid on different lines by the various companies. No return has been received from the Halifax and South Western Ry., and while the figure given is estimated, it is practically the actual mileage laid. The mileage laid by the different lines is as follows:—

	Miles.	Miles.
ALGOMA CENTRAL AND HUDSON BAY RY.		
Main line, mileage 69 to 81.6	12.6	
Main line, mileage 170.5 to 151.5	19.0	
Magpie Branch, Michipicoten Division	5.4	
		37.00
ATLANTIC, QUEBEC AND WESTERN RY.		
Grand River to Ainse a Beaufils	14.5	
Near Ainse a Beaufils to Barachoils	8.5	
		23.00
CANADA AND GULF TERMINAL RY.		
St. Flavie to Matane, Que.		36.00
CANADIAN PACIFIC RY.		
Mansonville, Que., to Intefnational boundary	3.60	
Shawinigan Falls, Que., to Grand Mere	5.20	
Islington, Ont., to Mimico	2.64	
Code Jct., Ont., to Ingersoll	4.68	
Victoria Harbor, Ont., terminal tracks	1.46	
Teulon, Man., extension	25.60	
Regina, Sask., northerly	20.60	
Bulyea, Sask., south	12.40	
Forward, Sask., westerly	21.80	
Colonsay, Sask., south	50.00	
Macklin, Sask., aoutheast	86.20	
Langdon, Alta., northerly	34.10	
Irricana, Alta., eaaterly	18.30	
		286.58
CANADIAN NORTHERN ONTARIO RY.		
Toronto-Ottawa Line—		
Mileage 0 to 44.6	44.60	
Mileage 69.4 to 71.7	2.30	
Mileage 71.8 to 96.6	24.80	
		71.70
CANADIAN NORTHERN RY.		
Oakpoint branch, Man.	96.84	
Greenway branch, Man.	12.90	
Hallboro branch, Man.	6.15	
Rossburn branch, Sask.	16.46	
Maryfield branch, Sask.	88.81	
Gooselake branch, Sask.	49.90	
Prince Albert-Battleford line, Sask.	16.13	
Jackfish Lake branch, Sask.	22.59	
Crooked Lake branch, Sask.	56.95	
Vegreville-Calgary branch, Alta.	155.23	
		521.96
CENTRAL ONTARIO RY.		
Station 1355 to 1620		5.00
ESQUIMALT AND NANAIMO RY.		
Parksville to Cameron Lake, B.C.		12.00
ESSEX TERMINAL RY.		
Walkerville to Windsor, Ont.		1.00
GRAND TRUNK PACIFIC RY.		
Mileage 17 to Canora, Sask.)		
Young to mileage 25)	77.00	
Balcarres to mileage 48)		
Camrose to Red Deer River		
Mileage 879 to Prairie Creek, Alta.	158.00	
Prince Rupert to Copper River, B.C.	100.00	
		335.00
HA HA BAY RY.		
Chicoutimi to Bagotsville, Que.	20.00	
Chicoutimi Jct. to Mathias, Que.	5.00	
		25.00
HALIFAX AND SOUTH WESTERN RY.		
Middleton Jct. to Nictaux, N.S.		4.00

Between Moncton, N.B., and N.B. boundary	130.00	
Between Quebec boundary and five miles west of Weymontachene, Que.	135.00	
East and west of Cochrane, Ont., and east of Graham, Ont.	172.00	
		437.00
NORTHERN NEW BRUNSWICK AND SEABOARD RY.		
Nepisquit Jct. to Bathurst Iron Mines		16.90
PACIFIC COAST COAL MINES.		
Fiddicks, B.C., to Coal mines		1.80
PORTLAND CANAL SHORT LINE.		
Stewart to Bear River		4.00
QUEBEC CENTRAL RY.		
St. Justine to St. Sabine, Que.		4.30
TEMISKAMING AND NORTHERN ONTARIO RY.		
Mileage post 60 to 60.5		0.50

Of this mileage 1,651.34 miles were laid in connection with three systems, as follows, the second column showing the mileage laid by the same lines in 1909:—

	1910.	1909.
National Transcontinental Ry.	437.00	312.00
G.T. Pacific Ry.	335.00	309.00
	772.00	621.00
Canadian Northern Ontario Ry.	71.70	90.49
Canadian Northern Quebec Ry.	.....	28.10
Canadian Northern Ry.	521.96	303.05
	593.66	421.64
Canadian Pacific Ry.	286.58	323.84
Total of the three systems	1,651.24	1,376.48

Divided by provinces the track laid during the year compares with that laid in 1909 as follows:—

	1910. Miles.	1909. Miles.
Saskatchewan	518.84	487.80
Alberta	365.63	373.17
Ontario	308.98	288.63
Quebec	232.10	171.24
New Brunswick	180.40	87.00
Manitoba	141.49	136.23
British Columbia	117.80	74.40
Nova Scotia	4.00	.....
	1,869.24	1,588.47

The Canadian Northern Ry. completed a revision of location on the main line near Kakabeka, Ont., the new line having a length of 9.75 miles.

The C.P.R. also laid 3.2 miles of second track between Lambton and Islington, Ont., and 53.6 miles of second track between Rugby Jct., and Portage la Prairie, Man., a total of 56.8 miles. The C.P.R. subsidiary company in the United States, the Minneapolis, St. Paul and Sault Ste. Marie Ry. laid 240.33 miles of new track, as follows: Lawlor to Plummer, Minn., 168.00; Ironhub to Deerwood, Minn., 4.61 miles; Cuyuna to Crosby, Minn., 3.92 miles; Crosby to Ironton, 11.80 miles; cutoffs, Wisconsin-Spencer, Minneapolis, 62.00 miles.

The Diamond Coal and Ry. Co. laid 1.5 miles of switches at the collieries, and connecting with its seven mile line to Kipp, Alta., laid in 1910.

The Sydney and Louisburg Ry. built a mile of new location in place of an existing mile of its main line, which has been abandoned.

The Temiskaming and Northern Ontario Ry. laid five miles of second track between Cobalt and North Cobalt.

◆

Paul J. Myler, Vice President Canadian Westinghouse Co., Hamilton, has been elected President of the Ontario Motor League.

Lt.-Col. H. H. McLean, M.P., Vice President St. John, N.B., Railway, who is to command the Canadian Coronation contingent, is granted the honorary rank of colonel, and transferred to the reserve of officers, his term of command having expired.

The Railway Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $10,000, and office at Montreal, to carry on the business of contractor for the erection, construction, repair, etc., of public works, etc., and to conduct any business germane to the same. The incorporators are G. V. Cousins, O. B. MacCallum, S. T. Mains, P. F. Brown, and W. R. Ford, Montreal.

The North Shore Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $10,000, and office at Montreal, to carry on a general engineering and contracting business, and to build, purchase or otherwise acquire and operate steam and other vessels. The incorporators are C. G. Greenshields, E. R. Parkins, W. Taylor, R. Brodeur and J. M. Montle, Montreal.

The Farewells to Thomas Tait.

Australian papers recently received show that the week preceding the departure of Thomas Tait (he was not then Sir Thomas) from Australia was filled with functions, etc., arranged in his honor, the whole forming a demonstration rarely accorded to any railway official. The Victoria State Government gave a large luncheon for him at the Parliament House, the Premier presiding, and he was entertained at largely attended dinners at the Australian and the Melbourne Clubs. A large gathering of representatives of the manufacturing, shipping, mining, and general commercial interests, headed by the President of the Melbourne Chamber of Commerce, bade him farewell at Mensie's hotel, the principal officers and heads of departments of the State railway service presented him with an address and an album containing their portraits, and representatives of all branches of the service gave him an oil portrait of himself, which he handed over to the Victorian Railway Institute, and with a rose bowl for Mrs. Tait. On the last days he attended at his office over 600 of the staff awaited his arrival in the corridor of the general offices and cheered him. Mr., Mrs. and Miss Tait sailed from Melbourne Nov. 30, on the s.s. Otranto for India, en route to Canada. They were seen off by a large number of officials, business men and personal friends, their cabins being banked up with flowers.

The Melbourne Argus of Dec. 1 said: "After having filled the onerous and responsible position of Chairman of Railway Commissioners for seven and a half years, Mr. Tait left Victoria yesterday amid practically unanimous expressions of appreciation and good will. That he should have felt impelled to leave Victoria while still in the prime of his strength and capacity, after having thoroughly familiarized himself with our conditions and requirements, and qualified himself to render even greater services, is to be regretted."

Business Opportunities in Western Canada.—The C.P.R. Industrial Department has just issued a new edition for 1911 of its list of manufacturing and business opportunities in Western Canada. The present edition contains 136 pages of information regarding towns on the C.P.R. lines west of Port Arthur, with an index to towns, and another to industrial requirements. Special reference is made in the introduction to the towns which will be reached by new branches to be opened this spring. The names of over 50 towns are given on these seven new lines in Saskatchewan and Alberta. A list of water powers is given in the last four pages, but it is stated that the same is incomplete, as no complete survey has yet been made of the water powers in the central west. There are 70 water powers on the list, which are estimated to develop 4,174,500 horse power, and of these only a dozen have been developed to any extent, the total horse power utilized being about 105,000; while half a dozen more are being developed. The officer in charge of the compilation of this book, and the distribution of information regarding opportunities is J. F. Sweeting, Industrial Agent, Winnipeg.

The Canadian Society of Civil Engineers held its 25th annual meetings at Winnipeg, Jan. 24-27, during which time visits were paid to the city's power plant at Point du Bois, National Transcontinental Ry. shops, and other points of interest.

Toronto taxpayers voted Jan. 2 on a bylaw to raise $1,527,293 by debentures to build and equip a street railway on certain streets in newly annexed portions of the city.

Fuel Consumption on Railways.

During the year ended June 30, 1910, 6,252,054 tons of fuel were used on Canadian railways. Despite the fact that the mileage run was considerably greater, this volume of fuel was actually 547,094 tons less than for the preceding year. The returns do not disclose any particular reason for this surprising result. Following is a concise statement of the fuel consumed by the various classes of locomotives, together with the mileage:—

CLASS OF LOCOMOTIVE.	COAL.		WOOD.		TOTAL.	Miles run.
	Anthracite.	Bituminous.	Hard.	Soft.	Tons.	
	Tons.	Tons.	Cords.	Cords.		
Freight	73	3,585,221	1,136	22,255	3,597,541	47,239,088
Passenger	376	1,628,383	742	14,405	1,636,454	34,758,088
Mixed	4,128	383,009	521	2,418	388,693	8,211,350
Switching	323	617,025	72	5,817	620,308	15,581,077
Special.	....	9,051	....	23	9,063	229,872
Total	4,900	6,222,689	2,471	44,918	6,252,054	106,019,475

NOTE—One and one-half cords of hard wood and two cords of soft wood, calculated as one ton of coal.

The total cost of the fuel was $18,570,393, of which $16,832,817 was charged to road locomotives and $1,737,576 to yard locomotives. The cost of fuel in the year ended June 30, 1909, was $17,544,449. The consumption and cost of fuel per 100 miles run was:—

	Tons.	Cost.
Freight	7.62	$22.48
Passenger	4.71	13.89
Mixed	4.73	13.95
Switching	3.98	11.74
Construction	3.94	11.62

Montreal Telegraph Co.

The following report was presented at the 64th annual meeting, at Montreal, Jan. 13. The company's property, valued at $2,151,823.85, is operated and maintained by the Great North Western Telegraph Co., and guaranteed by the Western Union Telegraph Co., under an agreement for 97 years from July 1, 1881, under which payment of dividend is also guaranteed.

ASSETS.

Telegraph lines in Canada and U.S.	$1,625,890.00
Telegraph cables in Canada and U.S.	33,487.39
Telegraph offices in Canada and U.S.	212,500.00
Real estate in Montreal, Ottawa, Quebec, Toronto	279,946.46
Cash accounts receivable, bonds and other securities and real estate (not included in agreement with G.N.W.)	141,564.12
	$2,293,387.97

LIABILITIES.

Shareholders' capital		$2,000,000.00
Excess in value of property operated by the G.N.W. Tel. Co. over shareholders' capital		151,823.85
Dividend 186, payable Jan. 15, 1911	$ 40,000.00	
Unclaimed dividends, etc.	1,246.74	
Contingent fund	100,317.38	
		141,564.12
		$2,293,387.97

◆

The Michigan Railroad Commission has issued a general order to all railway companies doing business in the State, that they must equip their lines with a modern block signal system without delay. It is reported that the companies intend to oppose the order.

During Nov. 1910, 23 employes were killed and 26 injured in the course of their work on Canadian railways. Of the fatalities, 12 were due to being run over, four to being caught between cars, two to being burnt, and one each to a collision, to drowning, to a fall, to electricity and to falling material, while of the other accidents, seven each were due to being caught between cars and to falls, four each to falling material and to being run over, two to collisions and one each to being scalded and to exposure.

Too Late for Classification.

Alsek and Yukon Ry.—The Dominion Parliament is being asked to extend the time for the building of the authorized line. Lewis and Smellie, Ottawa, are solicitors for applicants. (July, 1909, pg. 473.)

Alberta Ry. and Irrigation Co.—A special meeting of shareholders will be held in London, Eng., Feb. 22, to authorize the directors to enter into an agreement with the C.P.R. for the purpose of selling or leasing the company's railways, lands, works, undertakings, franchises, rights, etc.

Alberta Central Ry.—The Board of Railway Commissioners has approved location plans of route from mileage 40 to 80, west of Red Deer, Alta. (Dec. 1910, pg. 1013.)

Atlantic, Quebec and Western Ry.—During 1910 track was laid on 23 miles, distributed as follows: from Grand River to Anse a Beaufils River, 14.5 miles; from third crossing of Anse a Beaufils to Barachois, 8.5 miles. The sections under construction, which it is expected will be completed during the current year are: from Anse a Beaufils River to third crossing of Anse a Beaufils, 4.5 miles, and from Barachois to Douglastown, 19 miles. The work is being done by the New Canadian Co., New Carlise, Que. (Jan., pg. 21.)

Dominion Development Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the mouth of the Naas River on the Portland Canal, easterly along the Naas and Omineca rivers to Peace River, along that river to Peace River Landing, and through Alberta, Saskatchewan and the N.W.T. to Fort Churchill or Port Nelson, or both, but not running south of the 55th parallel in Alberta and Saskatchewan. A. T. Thompson, Ottawa, is solicitor for applicants.

Hudson Bay and Pacific Ry.—In an interview in Ottawa, Jan. 10, the mayor of Prince Albert, Sask., said:—"Preliminary surveys have been completed for the road 120 miles from Prince Albert, and actual work will be started inside of a month. The route will be from Prince Albert almost straight to Churchill, and connections will be made from Prince Albert with Edmonton and Calgary. It will not be in any way antagonistic to the government road, as two railways are not too many for the country's almost untapped resources. It is a British company, backed by British capital, and the people of Prince Albert are hoping for great things from it." (Nov., 1910, pg. 911.)

Hudson's Bay, Peace River and Pacific Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Port Nelson, northerly to Fort Churchill, on the western shore of Hudson Bay, thence westerly between the 58th and 60th parallels to Fort Vermilion on Peace River, southwesterly to Fort St. John, westerly and northwesterly to Laurier pass, thence westerly and southerly, but keeping north of the 56th parallel, to the Naas River, and along that river to the Pacific ocean at Port Simpson, B.C. It is desired to have authority to build branch lines from Fort St. John to Edmonton, Alta.; from the Cochrane River southerly and southwesterly to Prince Albert, Sask. H. W. Adcock, Winnipeg, is solicitor for applicants.

Little Nation Ry.—Action has been entered in the Ontario courts by C. Niabon, Sanborn, N.Y., to recover $17,500, which he alleges is his share of commissions paid to J. C. Kelly for the sale of the franchise of the L.N. Ry. and some timber limits. (Sept., 1910, pg. 727.)

Liverpool and Milton Ry.—A contract under the act relating to aid granted to certain railways has been entered into between the company and the Dominion Government, for the building of seven miles of line from Liverpool to Milton, N.S. A line between these places has been in existence for some years, and the granting of this aid will enable the line to be brought up to the standard of the Halifax and Southwestern Ry., with which it connects. (Oct., 1910, pg. 827.)

Portland Canal Short Line Ry.—Speaking at Vancouver recently, the Premier of British Columbia said the P.C.S.L.R., as originally chartered and projected, was practically completed and in operation. It was originally an individual enterprise of Sir Donald D. Mann, but it was about to assume much greater proportions, and the revised plans of Mackenzie, Mann and Co. looked to the "ultimate conversion of this line into a fourth transcontinental system for Canada." The line would be renamed, at the approaching session of the Legislature, in accordance with the enlarged plans, and it had been officially intimated that no government aid would be asked. (Jan., pg. 23.)

The Quebec Oriental Ry. is the title under which the lines known as the Baie des Chaleurs Ry., Atlantic and Lake Superior Ry., and the Atlantic, Quebec and Western Ry. are being operated. The lines in operation start at Matapedia, on the Intercolonial Ry., and extend to Grand River, Que., 152.10 miles. This shows the completion of an additional 17.05 miles in 1910. The line is under construction to Gaspe.

Reid Newfoundland Co.—Surveys for the branch line to Trepassey, are being made. A locating party has reached Ferryland, and a second party has started from Trepassey. It is expected that the surveys will be finished by March 31, and that construction will be started in the summer. (Jan., pg. 23.)

◆

Dominion Railway Subsidy Contract.—Under the act granting aid to certain railways, the Dominion Government has entered into a contract with the Liverpool and Milton Ry. for the building of a seven mile line from Liverpool to Milton, N.S.

Canadian Steel Foundries Ltd., has been incorporated under the Dominion Companies Act, with a capital of $5,000,000, and office at Montreal, to carry on the businesses of iron masters, steel makers and converters, colliery proprietors, iron founders, etc., and in connection therewith to build, own and operate roads, tramways, railway sidings, water courses, wharves, steam and other vessels, etc.

Notice has been given in the House of Commons of the following resolution: That whereas it is stated that on Canadian railways last year, one trainman in every 199 was killed, and one in every 33 was injured, in the opinion of this House it is the duty of the Government to cause a most thorough investigation to be made, as to the facts and conditions, as a result of which some means may be devised for the better protection of railway employes, and of preventing so great a loss of life and so great and frequent accidental injury.

DEARBORN TREATMENT RELIEVES THE WORST WATER CONDITIONS

During this season of scant rainfall and low water supplies, with correspondingly increased quantities of alkali salts in the water, Dearborn Treatment is indispensable to Railroads operating in alkali water districts.

On a railroad where the water conditions are worse than they have been for many years, and it was necessary to wash boilers at the end of every trip, the mileage has been increased, with the use of Dearborn Treatment, to eight trips between washouts.

The saving in boiler washing expense alone will pay for the treatment, without considering the greatly increased efficiency of the locomotives.

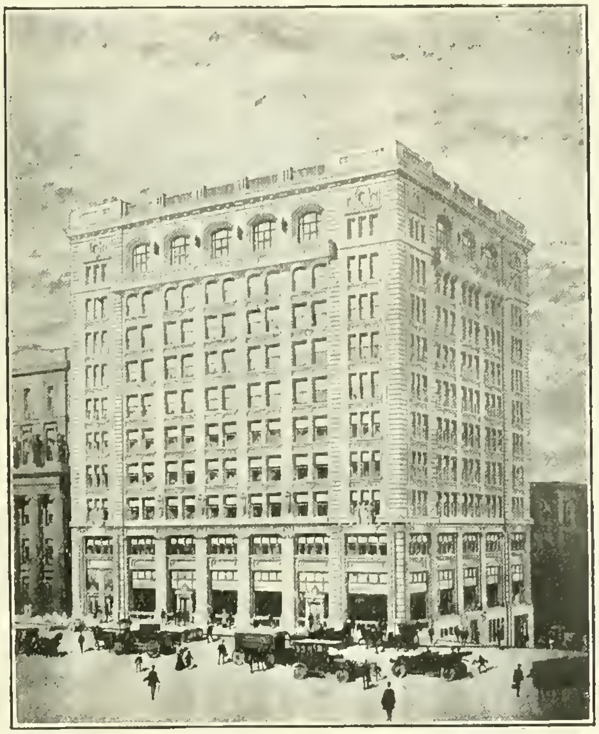
DEARBORN DRUG & CHEMICAL WORKS
ROBERT F. CARR, President
General Offices, Laboratories & Works - - Chicago

Dominion Express Co's. Montreal Building.

In Montreal, large commercial and high office buildings are replacing the older structures on St. James St., and on the very sites where once stood small houses and shop buildings, handsome and gigantic steel framed structures are fast becoming evident. On the corner of St. James and St. Francois Xavier Sts., the most important part of these busy thoroughfares, and on the site of that old landmark, the St. Lawrence Hall, adjoining the comparatively new banking premises of the Royal Bank of Canada, very extensive preparations are being made for the erection of what promises to be a fine and imposing structure for the Dominion Express Co., an illustration of which is given on this page. The erection of such a huge edifice in granite and terra cotta cannot fail to impress one as being a distinct and noteworthy step in the progress of commercial activity in Montreal, and apart from its size, the excellence of its appointments throughout will ensure its success as a business project.

The lower portion of the building, which includes the two main stories on St. James St. and the basement on the third side, will be in light coloured granite, treated with enriched pilasters and entablature, allowing the maximum amount of light for the ground floor offices, which are to be occupied wholly by the Dominion Express Co. and the C.P.R. as steamship and general ticket offices. At the ends of both the important fronts, special rusticated features will terminate the pilaster treatment, these features running the full height of the building, and in one of these will be placed the handsomely carved main entrance doorway to the building. Crowning this doorway will be a large granite cartouche embodying the company's arms, the figures being actually life size, and beside this main entrance will be two other entrances to the ticket offices from the street level.

The superstructure in white glazed terra cotta, will be very simply but effectively treated, the complete height of the eight stories above the granite work, with the ornament of conventional character set under each window, and above this, long balconies will break out, overhanging both St. James and St. Francois Xavier Sts., and large foliated and decorated openings will indicate a complete change in the treatment of that portion of the work below. This variation will mark the change from the typical office floors to the elaborately arranged apartments of the Montreal Club, whose future quarters are to be located in this building. The whole structure will give the impression of dignity and refinement, and the large windows on all sides will ensure very well lighted and bright business offices averaging 350 to 400 sq. ft. Each of these offices will be arranged for subdivision into private offices, and each will have an individual lavatory cabinet, apart from the general toilet rooms on each floor for men and women. The whole building will be heated on the vacuum system by steam and will have a very efficient system of mechanical ventilation. In each office will be an automatic temperature control device and a vacuum cleaning connection. The entrance hall and the upper halls will be treated in marble, and the stairs and elevator shafts will be enclosed in grilles and wired glass for fire protection. At the east end of the corridors an enclosed fire escape stair will lead down to St. Francois Xavier St., thus avoiding the dangers of the exterior iron fire escape now so much in use.



The suite of very large and comfortable rooms on the top floors devoted to the Montreal Club will be composed of billiard, reading, reception, dining, private dining and cloak rooms, richly finished in quarter cut oak and decorative plaster work, and over a portion of this floor will be a mezzanine storey, where the ladies' dining room, the club kitchen and service quarters will be located. and above this again, on the roof, will be an enclosed and heated pergola, which in summer will be used as a roof garden.

The whole of the basement on the front will be given up to a very large and well equipped restaurant and its culinary appurtenances, having an entrance from St. Francois Xavier St. and at the rear will be located the express storage rooms, with freight entrances from Fortification Lane, and a third class ticket office for the C.P.R. opening off St. Francois Xavier St. The sub-basement will be given up to machinery of every description for the various needs of such a building, and besides the heating plant there is a ventilating apparatus, ice-making plant and a system of water filtration. Ice water will be on tap in every office in the building.

Very extensive operations are being carried on to secure a proper bed for the foundations of this immense structure and owing to the uncertain nature of the soil, concrete caissons are being sunk to a depth of 86 ft. below the St. James St. level and excavations made under air pressure. The completed building is to be handed over to the proprietors on April 1, 1912, so that the tenants will have a month in which to get comfortably settled in their offices. Edward and W. S. Maxwell, of Montreal, are the architects, and P. Lyall & Sons, Ltd., the contractors.

◆

"Shop Kinks" is the title of an instructive book of 393 pages, compiled by R. Grimshaw, M.E., New York. It is a selection of notes on a great variety of mechanical subjects, collected by him from various sources. If information is desired as to how something in the mechanical way may be done a little differently and with the best results, a reference to the index of subjects will give the reference to a "kink" or "wrinkle" that has been found useful in some shop of established reputation. The publishers are the Norman W. Henley Publishing Co., 132 Nassau St., New York, and the price is $2.50. It can be obtained through the Railway and Marine World's book department.

An Ottawa dispatch says the contract for a marine depot at Prince Rupert has been awarded to the Pacific Construction Co., Vancouver, B.C., for $150,000.

The wireless telegraph station, which has been erected at Port Arthur, Ont., has been completed, and was recently opened for service, messages being received from stations on the Atlantic coast, 1,200 miles distant.

The Canadian Coal and Coke Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $15,000,000, and office at Montreal, to carry on a general mining business, and also that of iron founders, metal smelters, etc., and in connection therewith to build, own and operate wharves, warehouses, piers, docks, railway switches or sidings, etc.

The arbitrators have assessed the damages at $18,500, in the action brought against the C.P.R. by the estate of G. Vandyke, for damage to standing timber by fires caused by sparks from the company's engines. The action, which was heard by the District Court at Portland, Me., was for $155,000 damages. Other actions, in which the damages aggregate $500,000, are pending in the court, arising out of the same series of fires.

The amendments to the Civil Code, passed last session of the Quebec Legislature, given in our July, 1910, issue, which required transportation companies operating in the province to adopt the French language, in addition to the English, in printing tickets, time tables, etc., came into effect Jan. 1. It was anticipated that there would be considerable opposition on the part of the companies, especially those operating under Dominion charters, as the provincial jurisdiction is, at least, questionable, but the law is being complied with generally. One test case was entered in the early days of the year, but it is, apparently, not being pressed.

Among the Express Companies.

S. T. Percy, at one time agent Canadian Ex. Co. at Woodstock, Ont., died at Port Huron, Mich., Jan. 8.

The Dominion Ex. Co. has been licensed to carry on its business in British Columbia, with head office at Vancouver, and R. Hulme, Superintendent, as its attorney.

The Board of Railway Commissioners has ordered the Canadian Northern Quebec Ry. to provide facilities for the handling of express traffic at Point aux Trembles.

J. J. Murray, heretofore secretary to the President and General Manager Dominion Ex. Co., has been appointed Superintendent of the Southern Division Dominion Ex. Co., with office at Toronto, vice D. J. McFeggan, deceased.

The House of Commons railway committee is considering a bill to compel express companies to make an annual return of all unclaimed money held in whatever form, such amounts to be subsequently turned over to the Government as trustee. It was explained that in the case of the loss of express orders, such publicity might lead to the recovery of the money, and that the bill would place the express companies in the same relation to the Government as the banks.

Judgment was delivered at Regina, Sask., recently in the case of the city against the Dominion Ex. Co. for the payment of a municipal tax. The company claimed that as it paid a provincial tax, it was under the terms of the Corporation Tax Act, and therefore exempt from municipal taxes. The judgement is to the effect that all corporations doing business in the province and subject to the Provincial Corporation Act, except railways, are liable for a business tax, also.

Reports from New York, Jan. 20, state that as the result of a conference between officials of Canadian and U. S. express companies, it was decided that a reduction in through rates between all stations in the U. S. and a number of offices in Canada, would go into effect shortly. It is stated that some of the Canadian companies have held back on account of the extra work involved at the International boundary, on account of the Customs regulations, should any reduction come into force. One of those present at the conference is reported to have said that under the new plan charges between all offices, when shipments were handled by more than one company, would be the same as though handled by one company, thus effecting a radical reduction in charges on all shipments to or from what are known as exclusive offices. At present, when shipments are handled by two or more companies, where joint rates are not in effect, the charge is made equal to the sum of the local charges of each company handling the shipment.

The Board of Railway Commissioners, after an enquiry, extending over a considerable period, has delivered a lengthy judgment on the question of the tariffs of express companies doing business in Canada, and, in effect, orders:—1. That there shall be four standard mileage basing scales, viz.: a—On all lines east of and including Windsor and Sudbury, excluding the T. and N.O.R. b—On all lines west of Sudbury to and including Sault Ste. Marie, Ont., Crows Nest, B.C., Canmore and Thornton, Alta.; also north of and including North Bay, Ont. c—On all lines west of and including Crows Nest, Canmore and Thornton, to the Pacific coast, and to Vancouver Island transfer ports. d—Vancouver island. 2. That the mileage groupings of b, c and d be assimilated to those of a, so there shall be no overlapping. 3. That the basis of a do not exceed $3, of b $5, c $6, for the 900-1,000 mile group. In Vancouver Island the mileage groups should be harmonized without increasing the rates. 4. On inter-division traffic which is not subject to the Sudbury basing schedule, the higher or highest standard mileage scale as applied to the through mileage shall govern in either direction. 5. Between points east of Sudbury and points west thereof, through rates may continue to be made by adding to the local tariff east of Sudbury the special basing tariff west thereof at present in use provided that the through rates are less in all cases than the sum of the tariff rates to and from Sudbury, and are not greater than the higher standard tariff as applied to the through mileage from the point of origin to destination. On inter-division traffic between points north of North Bay, and points east, south and west thereof, the proportional rates north of North Bay shall be the same as west of Sudbury, subject to the same provisions. It also rules that joint rates must be put into effect between all points not modified by competition, which shall be constructed on the basis of at least 10% off the lowest combination of merchandise rates between the same points, regardless of point of interchange, to apply in both directions, the minimum charge to be similarly constructed, unless joint minimum charges are specifically provided in the classification. Other items dealt with include graduate charges for small packages, the limits of delivery service, forms of contract, etc.

◆

In response to questions in the House of Commons, Jan. 18, the Minister of Agriculture, stated that the contract for the quarantine steamer Alva, which recently arrived at Halifax, was placed at Dartmouth, Eng., with the lowest tenderer, for $22,630, the highest tender being for $39,850.

The Marconi Wireless Telegraph Co. is proceeding against another company in London, Eng., for infringing its patents in relation to wireless telegraphy. So that the details of the mechanism and its workings can be brought clearly to the notice of the judges in the case, a complete installation has been erected in court by special permission of the Government.

Grain Elevator Notes.

The Maple Leaf Milling Co.'s elevator at Brandon, Man., was destroyed by fire, Jan. 19. Estimated damage, $75,000.

A meeting of the shareholders in the Montreal Grain Elevating Co., Ltd., in liquidation, was held at Montreal, Jan. 19, when the accounts of the winding up were submitted for confirmation.

The Alberta Pacific Elevator Co., Calgary, Alta., is reported to have purchased an additional 1,000 ft., making 1,600 ft. in all of water frontage on the north bank of the Fraser River, between Pitt River and Hammond station, on the C.P.R. It is stated to be the intention to erect a large elevator and warehouses there.

The final draft of the Government bill for dealing with terminal elevators, provides that the Government shall have the right to take over and operate as public utilities all such elevators, but the exercise of the right shall be left to the discretion of the cabinet, and that a commission shall be created, consisting of three members, to supervise all elevators.

The case brought against the Thunder Bay Elevator Co. by the Dominion Warehouse Commissioner, for making incorrect returns of the grain in its elevator on a specified date in 1909, was dismissed by the Winnipeg magistrate recently on the ground that prosecution should have been commenced within six months of the alleged offence. New charges were subsequently laid against the company for similar alleged offences during the latter part of 1910.

◆

The London, Ont., city engineer has ordered the London St. Ry. to install plainer night signs on its cars, the signs at present in use, being, it is claimed, indistinct.

An Ottawa dispatch says a special estimate of $3,000,000 is to be submitted to Parliament to make a start on the Georgian Bay canal as a government work.

The honorary treasurers of the King Edward VII. Memorial Statute Fund, Montreal, have acknowledged the receipt of $279.70, subscribed by members of the various C.P.R. office staffs located in Montreal.

The Railway Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $10,000, and office at Montreal, to carry on a general contracting business. The incorporators are, G. V. Cousins, O. B. MacCallum, S. T. Mains, P. F. Brown, and W. R. Ford, Montreal.

The C.P.R. telegraph line between Regina and Saskatoon, Sask., is reported completed, so that messages, which, since the taking over of the Prince Albert line by the C.N.R., have been forwarded to the north, via Winnipeg, will now be dealt with over the new line, which has been erected in connection with the C.P.R. Regina-Bulyea branch.

Electric Railway Track Laid in 1910.

The circular which we issue annually, asking the various electric railway companies for information as to new track laid during the calendar year, is not so promptly responded to in some instances as is that issued to steam railways. In the following table, which is approximately correct, returns are given from 14 electric railways, showing that 101.47 miles of new track were laid during 1910, against 57.50 in 1909. The figures in the cases of the lines preceeded by an asterisk are estimated, or have been obtained from sources independent of the company's replies to our circulars. Following are the individual figures:—

	Miles.	Miles.
Berlin and Waterloo St. Ry.		
Water St. to Albert St.		1.00
*British Columbia Electric Ry.		
Extensions of lines in cities	13.28	
Cloverdale to Chilliwack	51.40	
		64.68
Cape Breton Electric Co.		
Thompson's Corners to 1st Mine		.60
*Grand Valley Ry.		
Extensions in Brantford, etc.		3.50
Hull Electric Co.		
C.P.R. station to Chelsea Road toll gates		0.84
Montreal and Southern Counties Ry.		
St. Lambert to Longueuil	3.50	
Longueuil to wharf	1.00	
		4.50
*Montreal Street Ry.		
Various extensions		1.90
*Moose Jaw Electric Ry.		
Main St. tracks		2.50
*Niagara, St. Catharines and Toronto Ry.		
Welland to Port Colborne		7.00
*Ottawa Electric Ry.		
Various extensions		1.00
Quebec Ry. Light and Power Co.		
Quebec County Ry.'s line, Maple Ave., Que., to Sillery		2.33
Sherbrooke St. Ry.		
Lennoxville to Sherbrooke		3.00
Toronto Ry.		
Harbord St. line	1.40	
Wilton Ave. line	1.04	
Adelaide St. line	.74	
		3.18
Winnipeg Electric Ry.		
Extensions, spurs, intersections		5.44

Electric Railway Statistics for 1909-10

The number of reporting electric railway companies increased from 48 to 52 during the year ended June 30, 1910. The Comptroller of Railways Statistics states that the classification and schedules which were made effective in 1908 are now thoroughly understood by the officials, and that as the work proceeds satisfactory and helpful statistics may be counted on. The city of Edmonton, which put its line in operation in 1909, did not report. Following is a comparison of the mileage for the past two years:—

	1910 Miles.	1909 Miles.
1st main tracks	1,049.07	988.97
2nd main track	242.39	215.05
Total main track	1,291.46	1,204.02
Sidings, etc.	91.39	83.62
Total computed as single track	1,382.85	1,287.65

There were added 60.10 miles of first main track, and 95.20 miles of total track The capital obligations of the various companies were $102,044,979, of which $58,653,826 was reported as stocks and $43,391,153 as funded debt. In the previous year the total capital obligations was reported at $91,604,989. The subsidies received from governments and municipalities amounted to $493,346.

The gross earnings from operation were $17,100,789.48, of which $16,821,376.74 was reported as car earnings, and $279,412.74 as miscellaneous earnings. The gross earnings showed an increase of $2,275,852.93 over those of the previous year. The operating expenses were $10,139,070.30, or 59.29% of gross earnings. The deductions from income included $1,311,953.65 for taxes, $1,449,152.48 for funded debt; $156,546.16 interest on floating debt, and $36,106.97 for miscellaneous deductions, a total of $2,953,759.26, against $2,198,306.48 for the previous year. Fourteen companies reported deficits amounting in the aggregate to $1,544,892.65.

The companies carried 360,964,876 pay and 99,227,824 transfer passengers, and 852,294 tons of freight. The total car mileage was 65,249,166, against 60,152,846 in the previous year. The freight car mileage of 889,561 is included. There were added to the rolling stock 245 cars, and on June 30, 1910. the rolling stock consisted of 1,795 closed cars, 994 open cars, 337 combination cars, 282 freight cars, 25 mail, express and baggage cars, seven combination freight and passenger cars, and 349 miscellaneous cars, including work cars, snow plows, and sweepers.

The number of employes was reported to be 11,390, their aggregate salaries and wages being $6,316,777.20. During the year 95 persons were killed and 2,538 injured, against 68 killed and 2,139 injured in the previous year. Of those killed 14 were passengers, 13 employes, and 68 others, while of those injured, 1,595 were passengers and 227 employes. An average of one passenger was killed for every 25,783,205 carried, and one injured for every 226,310 carried.

◆

Pay-as-you-leave Cars.

The London, Ont., Street Ry. is operating pay-as-you-leave cars. For several years the company's cars, which are of the original design of side-aisle cars, have been closed at the front end during the winter by the stoves, so that passengers have to get both in and out at the rear end. When passengers get on the car and stop on the rear platform the conductor takes the fare-box and collects the fares as before, but if the passengers do not stop on the platform but go inside the car, the conductor stands just inside the door with his fare-box located in a bracket and collects the fares as the passengers leave the car. In the case of a crowded car, it saves the conductor from crowding up through the passengers to collect the fares, and then crowding to the back end again, and another advantage claimed is that the conductor is always at the back end of the car to properly handle passengers getting on and off. The conductors must, of course, take notice whether any of the passengers from whom he may have collected fares on the platform afterwards go into the car. This, however, the passengers very seldom do, but if they do, it is claimed the conductor should have no trouble remembering that they have paid their fare. This conditions is certainly nothing like so bad for a conductor to overcome as the old method where the conductor would collect the fares on the back platform, go into the car collecting fares, picking up new passengers, who mixed in with the old ones in the car, and whose fares he would later have to go around and pick out.

It is admitted that this method is not quite so good as the straight pay-as-you-enter or pay-as-you-leave system, but taking all local conditions into consideration, it is contended that it is the most suitable for London.

The company has some cars equipped with folding gates at the back platform which are operated by the conductor from his position just inside the car These gates, it is claimed, have the advantage of making it absolutely impossible for persons, especially women, to get off before the car stops, in which case it would clearly be the fault of the conductor, he not being able to offer the old excuse of being up in the car collecting fares at the time. The disadvantage of the gates, however, is that active passengers who like to jump on and off the cars cannot do so and become disgruntled. and if the conductor does open the gate for them while the car is moving, the company might be more liable for any accident that should happen.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Nov. 1910, $355,292; working expenses $201,891; net operating earnings $153,401; renewal funds $25,417; net earnings $127,984; approximate income from investments $20,000; net income $147,984, against $244,520 gross earnings; $157,880 working expenses; $86,640 net operating earnings; $16,394 renewal funds; $70,246 net earnings; $16,500 approximate income from investments; $86,746 net income for Nov. 1909. Aggregate gross earnings for five months ended Nov. 30, 1910, $1,602,414; net earnings $670,628, against $1,211,692 and $541,042 for same period 1909.

Halifax Electric Tramway.—Railway receipts for Dec., 1910, $17,563.76, and for two weeks ended Jan. 14, $7,600.10, against $16,110.26, and $6,991.77 for same periods 1909 and 1910 respectively.

London St. Ry.—Gross earnings for Dec., 1910, $23,887.90; expenses, $16,974.12; net earnings, $6,913.78; deductions, $2,441.75; net income, $4,472.03, against $21,674.21 gross earnings; $15,469.06 expenses; $6,205.15 net earnings; $2,441.75 deductions; $3,763.40 net income for Dec., 1909. Aggregate gross earnings for 12 months ended Dec. 31, 1910, $256,278.48; expenses, $182,191.68, net earnings, $74,086.80; deductions, $28,750; net income, $45,336.80, against $243,359.39 gross earnings; $169,830.44 expenses; $73,528.95 net earnings; $28,887.56 deductions; $44,641.39 net income for same period 1909.

Montreal St. Ry.—Passenger earnings for Dec., 1910, $371,691.09; miscellaneous earnings, $5,583.08; total earnings, $377,274.17; operating expense, $235,209.36; net earnings, $142,064.81; city percentage on earnings, $17,005.37; interest on bonds and loans, $15,384.22; rental leased lines, $552.50; taxes, $4,700; total charges, $37,642.09; surplus, $104,422.72; expenses per cent. of earnings, 62.34, against $333,155.21 passenger earnings; $4,407.97 miscellaneous earnings; $337,563.18 total earnings; $212,006.44 operating expenses; $125,556.74 net earnings; $15,599.94 city percentage on earnings; $14,382.01 interest on bonds and loans; $198.62 rental leased lines; $4,000 taxes; $34,480.57 total charges; $91,076.17 surplus; 62.80 expenses per cent. of earnings, for Dec., 1909. Aggregate total earnings for three months ended Dec. 31, 1910, $1,130,060.17; operating expenses, $668,401.32; net earnings, $461,658.85; total charges, $101,653.23; surplus, $360,005.62, against $1,026,441.40 aggregate total earnings; $586,878.97 operating expenses; $439,562.43 net earnings; $96,344.84 total charges; $343,217.59 surplus for same period 1909.

Montreal St. Ry.—A dividend of 2½% for the quarter ended Dec. 31, 1910, has been declared, payable to shareholders of record on Jan. 13, and holders of share warrants in redemption of coupon series 9a, on Feb. 1.

St. John's (Nfld.) St. Ry.—Gross earnings for 1910, $35,085. The lines are owned and operated by the Reid Newfoundland Co.

St. Thomas Street Ry.—Application is being made to the Ontario Legislature, by the city council, for power to borrow various sums of money, and it is stated that the city's debt is $734,648.28, exclusive of the $50,000 bonds of the Street Ry. guaranteed by the city. The line was taken possession of by the city several years ago on default being made, and is being operated at a loss.

The city treasurer reported that $2,300 was required to meet the expenses for the year ended Dec. 31, 1910, and that $7,031.51 was due for power.

Toronto Ry.—During 1910, the city received from the company, $83,040.58 for mileage and $596,297.35 percentage on earnings, a total of $679,337.93. Since 1892, the first year of the franchise, the amount paid to the city, has grown from $120,373.38.

Toronto Ry.—A dividend of 1¾% for the quarter ended Dec. 31, 1910, has been declared.

Winnipeg Electric Ry.—Gross earnings for Nov. 1910, $341,560; operating expenses $171,539; net earnings $170,021, against $252,231 gross earnings; $125,713 operating expenses; $126,518 net earnings for Nov. 1909. Aggregate gross earnings for 11 months ended Nov. 30, 1910, $2,914,059; net earnings, $1,466,980, against $2,340,202 and $1,171,445 for same period 1909.

The Brockville Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Brockville, Ont., to carry on a general contracting business, including the construction of railways, canals, dry docks, dams, elevators, wharves, bridges, and excavating and dredging works. The incorporators are W. S. Buell, J. H. Botsford, G. H. Mallory, I. M. Braniff, and A. O'Donahoe, Brockville, Ont.

Internations Contracting Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000,000, and office at Winnipeg, to treat timber or articles into the manufacture of which, timber enters, with oils, chemicals, etc., for the preservation thereof; to carry on a general contracting business, including the construction of wharves, docks, locks, piers, bridges, tramways, etc; to carry on a general engineering business for the manufacture of steel, iron, railway rolling stock, ships and vessels of all descriptions, grain elevators, etc., and with power to operate steam and other vessels for the carriage of passengers and freight. The incorporators are R. L. Miller, E. W. Peters, S. H. Green, E. R. Chapman and M. T. Hunter, Winnipeg.

BLAUGAS

Blaugas is a very rich oil gas (1800 B.T.V.) invented some years ago by Professor Blau in Germany. It is liquefied under pressure, filled into steel bottles and sent everywhere.

By means of an expander system his high pressure gas is transformed into gas of low pressure ready for use in houses, cars, stations, factories, lighthouses, etc.

All the customer has to do is to exchange empty bottles for full ones. Otherwise the service is the same as if you were connected with the city gas mains.

Blaugas is extensively used for lighting, cooking, water heating, and for industrial purposes, such as brazing, ironing, calandering, singeing.

Blaugas is the safest gas known; 3 times safer than city gas and 17 times safer than acetylene.

NOTHING BETTER AND SAFER FOR CAR LIGHTING.

YOU CAN GO ANY DISTANCE, AS YOU CAN EASILY CARRY ALONG A SPECIAL SUPPLY OF BOTTLES IN THE BAGGAGE CAR.

Blaugas solves the problem of having gas everywhere and not run short, even when snowbound. Blaugas is the best thing for railway station lighting.

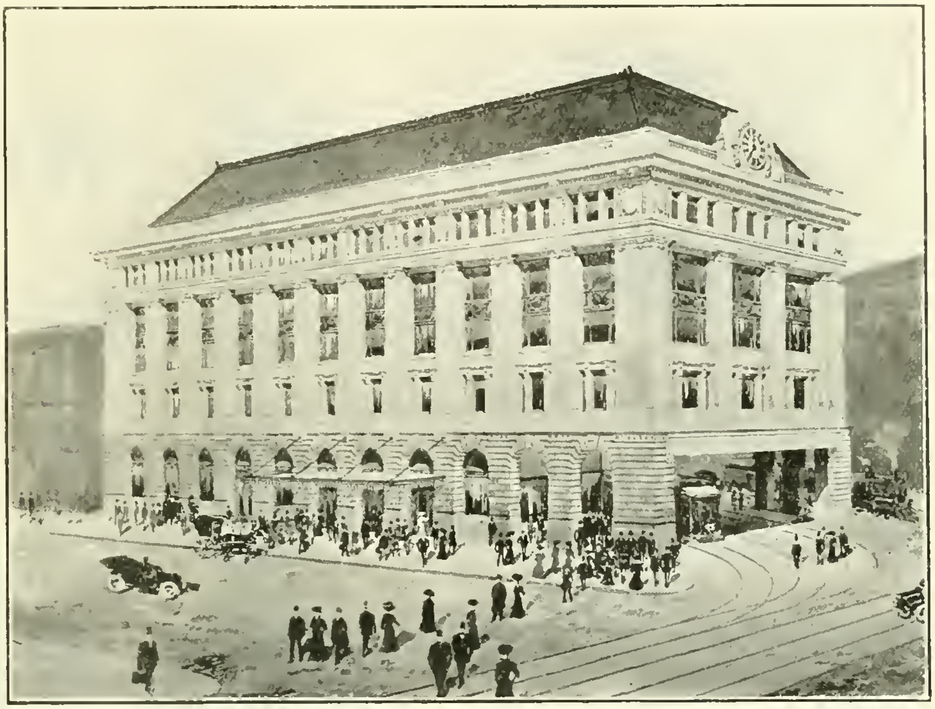
BLAUGAS COMPANY OF CANADA
Limited
27 McGill College Ave., Montreal

B. C. Electric Railway Company.



British Columbia Electric Railway Co.—Proposed new general offices and interurban station at Vancouver.

Following are extracts from the annual report for the year ended June 30, 1910, presented at the annual meeting in London, Eng., Dec. 19:—

For the twelve months the gross receipts show an increase of $730,492, or 31%, and the net earnings, including income from investments and subsidiaries, and after charging renewals, show an increase of $176,341, or 19% over the preceding year. From June 30, the close of the financial year under review, up to Oct. 31, 1910, there has been a still further increase in gross earnings of $279,950, or 29%, and in net earnings of $77,281, or 17%. The following charges have been made against the revenue account of the year:—

				£	s.	d.
Provision for renewals maintenance (from which £15,242 4s 2d has been deducted for adjustments and expenditure on renewals during year)				46,425	18	10
Special provision against depreciation in value of certain obsolete steam plant				3,000	0	0
Bonus to employes				11,333	0	0
Amount added to capital amortization fund				2,098	16	3
The net profit for the year, after making the above deductions, amounts to				198,869	13	7
Add balance brought forward last year				7,061	2	11
				205,930	16	6
Deduct—						
Interest on debentures and debenture stock to June 30, 1910	£59,478	14	5			
Dividenda already paid—						
On 5% cumulative perpetual preference stock for year ended June 30, 1910	25,000	0	0			
On preferred ordinary stock for year ended June 30, 1910	30,000	0	0			
On deferred ordinary stock for 6 months to Dec. 31, 1909	24,000	0	0			
				138,478	14	5
Leaving available for further distribution and reserves				£ 67,452	2	1
From this the directors have decided—						
To recommend the payment of a dividend on the deferred ordinary stock at the rate of 8% per annum for the six months to June 30, 1910, making 8% for the year	£24,000	0	0			
To transfer to reserve fund	37,845	6	0			
				61,845	6	0
To carry forward to next account				£ 5,606	16	1

There has been deducted from the reserve fund £18,531 9s. 7d., representing the difference between the net amount realized by, and the par value of £530,000 4¼% debenture stock, issued in Feb., 1910, and there has been added to the reserve fund £39,584 4s., representing the premium on £500,000 new capital, less expenses, issued in Sept., 1909. After the transfer now recommended by the directors as above, the reserve fund will amount to £235,000.

The number of lamps in use at June 30, 1910, was 439,315, an increase for the year of 92,289. The number of passengers carried during the year was 34,476,804, an increase for the year of 9,293,065. The commercial conditions at present existing in Vancouver and the prospects for the future have been carefully examined by the directors, who are pleased to report that the information at their disposal, obtained from reliable sources, indicates the existence of a sound basis for the undoubted prosperity which at present prevails throughout the whole province and gives promise of its continuance in the future.

The rapid development of the territory, and the great increase in the population of the cities served by the company, have made it necessary for your directors to give the most careful consideration to the question of the future supply of power, and in this connection J. Buntzen, one of the directors, undertook a special mission to British Columbia to investigate the entire situation and consider on the spot the recommendations previously received from the management. Early in 1910 it was decided to increase the capacity of the auxiliary steam plant in Vancouver, which provides for sudden temporary demands for extra power and a reserve in case of a breakdown on the transmission line or at the hydraulic plant. The work of increasing the capacity of the water power installation at Lake Coquitlam has also been continuously pushed forward, as has also the new water-power installation at Jordan River, near Victoria. A scheme has been sanctioned by your directors by which the power supply of the company can be gradually increased to meet any possible demands of the future. The addition to the Vancouver steam plant was satisfactorily completed in April last, and it is confidently expected that the enlargement of the Coquitlam water tunnel and the new Jordan River plant will be completed early in 1911. The other plans include the gradual development of the company's water powers at Chilliwack and Jones Lake, and the systematic proportionate increase of the auxiliary steam plant. Altogether, the plans provide a total ultimate supply of about 200,000 continuous horse-power.

The Fraser Valley line was formally opened from New Westminster to Chilliwack, 65 miles, by the Prime Minister of British Columbia, on Oct. 3, 1910. The road and electrical equipment have been constructed in a permanent and efficient manner, and the freight and passenger traffic already secured is very satisfactory. A considerable mileage of preliminary track has, during the year, been replaced by heavy permanent construction, and extensions, aggregating about 21 miles, have been constructed, or are in process of construction, in the territory between Vancouver city and New Westminster city and the Fraser River estuary. These branch lines are required to give necessary transportation facilities to the inhabitants of this district, which is developing with great rapidity, and, although they are not expected to prove immediately remunerative, your directors are satisfied they will, in the course of a few years, prove valuable sources of revenue. In addition to the foregoing, the company has incurred considerable expenditure as a result of the extension of the lighting branch, the provision of increased rolling stock, particularly for the Fraser Valley line, and further land, buildings and electrical equipment rendered necessary by the growth of the business. Your directors view with particular satisfaction the completion of the Fraser Valley branch and the approaching completion of other extensions, and of the Coquitlam water tunnel and the Jordan River water-power plant, as for the past two years during construction a very large sum has been unremuneratively locked up in these enterprises, which may be expected to contribute substantially to the company's revenue for the future.

The directors have again pleasure in expressing their appreciation of the very satisfactory services rendered by the management and staff in British Columbia.

The following expenditures on capital account were made during the year:—

Rolling stock	$ 374,221.64
Railway extensions and track improvements	643,915.90
Lighting extensions	193,040.96
Power extensions	61,438.90
Steam plant	401,947.98
Lands and buildings	110,916.92
Electrical machinery	98,791.24
Extending light and power system under municipal charter	41,610.61
North Vancouver—rolling stock, metres, transformers and initial installations	27,611.08
New Westminster and Eburne—electrification of line	39,861.47
Fraser Valley branch—rolling stock	194,543.30
Sundries	75,548.46
	$2,263,448.46

TALK ABOUT YOUR INVESTMENTS

Here is what one Railroad has done with Booth Water Softeners

Increased the life of fireboxes—stay bolts and radial stays, 75%

Reduced boiler repairs 40%
Reduced fuel consumption 20%

Increased hauling capacity—due to absence of leaky flues and stay bolts

Locomotives make from 400 to 500 miles between washing boilers

CAN YOU BEAT IT?

That's only half the story, too. Haven't room to tell it all here. Write us for the rest

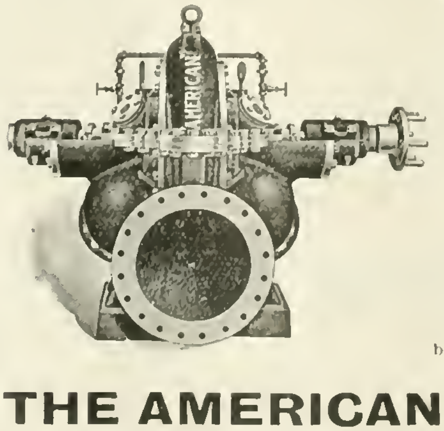
"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

The Street Car Situation in Toronto.

The Ontario Railway and Municipal Board gave judgment Jan. 19 in the case of the City of Toronto vs. The Toronto St. Ry. Co. respecting the bylaws in regard to the pay-as-you-enter system and the prohibition of smoking. "The opinion of the Board" was read by the Chairman, J. Leitch, K.C., the other members of the Board, Vice Chairman A. B. Ingram and H. N. Kittson, dissenting, and holding that two rear doors are necessary, one for entrance and one for exit; the Chairman holding that the company has the right to decide as to whether one door or two shall be provided at the rear. The Chairman, being of the opinion that the question is one of law, his judgment prevails over those of the other two commissioners.

In the discussion with counsel which followed the reading of the judgment it developed that the case might be carried to the Court of Appeal, the Chairman expressing himself in favor of that course and adding that he could appear before the court and state his position. In view of the importance of the case the judgments are given in full.

The following is Chairman Leitch's judgment: This is an application to rescind by-law 36, of the Toronto Ry. Co. respecting closed motor and trailer cars, which was sanctioned by the Board, Dec. 2, 1910; or in the alternative, to suspend the operation of the by-law until such time as the company put proper pay-as-you-enter cars into service, and for an order directing the company to supply such cars of such character and dimensions, and within such time as the Board may order. The applicants also ask for an order directing the company to discontinue the use of trailers on their street railway system within six months and requiring the company to construct on its cars compartments for the use of smokers. This matter first came before the Board on Dec. 9, and was adjourned until Dec. 19. After hearing the evidence of several witnesses the Board further adjourned the hearing for one month from Dec. 19, in order that the Board's experts might have an opportunity of examining p.a.y.e. cars in cities in the U.S. and Canada, and observe their operation.

The Board delegated one of their engineers, J. F. H. Wyse, and D. M. Campbell, Manager and Car Constructor, Preston Car and Coach Co., to inspect the p.a.y.e. cars in operation in other cities of Canada and in several cities in the U.S., and to report their recommendations as to the changes and alterations that the company should make in their cars, and the equipment they would have to provide in order to instal an up-to-date p.a.y.e. system. The experts, accompanied by Vice Chairman Ingram, visited Cleveland, Buffalo, Rochester, Montreal and Ottawa, and after their return to Toronto, made a careful inspection and investigation of the p.a.y.e. and other cars now in operation here. The experts have advised the Board that there is no standard p.a.y.e. car suitable for all places and all conditions; that the style of car adopted in different cities depends upon local requirements and the opinion and inventive genius of the car constructor; and the system being comparatively new is in a transition state and is being modified and improved from time to time, as experience renders it necessary and advisable. There is one thing certain, however, and that is that the p.a.y.e. system is a vast improvement upon the old method of collecting fares by passing around the box.

The company's by-law 36, which the Board sanctioned, is necessary and proper for the operation of a modern p.a.y.e. system. Had it not been so designed, and had not the company a considerable number of p.a.y.e. cars in commission, the Board would not have sanctioned it. Now that the company have determined to instal the new system and to adopt a modern method of collecting fares, the first question, which lies at the threshold of this application, is as to whether or not the Board have power to make an order directing the company to make their p.a.y.e. cars of such character and dimensions as the Board may seem proper. Sec. 17 of the Act incorporating the Toronto St. Ry. Co., 55 Vict., chap. 99, provides that the fare of every passenger shall be due and payable on entering the car, and any person refusing to pay the fare when demanded, and refusing to quit the car when requested, shall be liable to a fine of $10 with costs. Sec. 116 of the Ontario Railway Act, 1906, provides that the fare or toll shall be due and payable by every passenger on entering the car or other conveyance, and every passenger who refuses to pay his fare may, by the conductor of the train and the train servants of the company, be expelled from and put off the car with his baggage, at any usual stopping place, or near any dwelling house, the conductor first stopping the train and using no unnecessary force. By subsec. 2 this section is made expressly to apply to street railways. By both of these Acts, the fare is due and payable by the passenger on entering the car, and he is liable under the first mentioned act, if he refuses to pay his fare or to quit the car when requested, to a fine of $10, and under the second act is liable to be expelled from the car. Neither of these acts fixed the method by which the fare is to be demanded and collected. Heretofore the passenger has been presented with a fare box after entering the body of the car. The company want to change this system and substitute for it a stationary p.a.y.e. box, fixed in a rear end vestibule, in which the passenger will be required to deposit the fare before he enters the seated part of the car. Now that the company are departing from their former method of collecting fares, have passed their by-law 36, and are adopting a different practice and require different equipment and appliances in order to make the change of system workable, the Board are of the opinion that, under and by virtue of the Ontario Railway and Municipal Board Amendment Act, 1910, they have power and authority to determine the proper and adequate practice, equipment and appliances, necessary for the p.a.y.e. system.

The experts, complying with the Board's instructions to inspect the cars in use and to observe the operation of the p.a.y.e systems in other cities, and after a careful and exhaustive examination of all types of Toronto cars, both those that have been changed and those that have not been changed, and after taking into consideration the traffic conditions that exist in Toronto, have made the following recommendations:

1. That rear vestibules on all cars intended or the collection of fares by the p.a.y.e system should be enclosed, except over the steps.

2. That the length of the rear platforms should be governed by the style of car, and its seating capacity, i.e.:

A. Car bodies 18 to 22 ft. in length (both sizes inclusive) should have a minimum rear platform length of 56 ins. clear inside, measured longitudinally, with a minimum step length of 39 ins.

B. Cars having bodies of 22 and under 28 ft. in length should have a minimum rear platform of 62 ins. clear inside, measured longitudinally, with a minimum step length of 44 ins.

C. Cars having bodies 28 to 32 ft. in length (both sizes inclusive) should have a minimum length of rear platform of 68 ins. clear inside, measured longitudinally, with a minimum step length of 48 ins.

D. Cars having bodies over 32 ft. in length should have a minimum rear platform of 74 ins., clear inside, measured longitudinally, with a minimum step length of 54 ins.

3. That the platform fare box now in use by the Toronto Ry. Co., or an approved one of similar design be used on all cars intended for the collection of fares by the p.a.y.e. system.

4. That an upright be placed near the centre of each step opening, extending from the floor to the ceiling, which can be used as a grab handle, the spacing from the car body to be left to the discretion of the company. That the grab railings now in use on the ends of the car be retained in their present location. That a similar grab railing be placed all around the interior of the rear vestibule. That at the discretion of the company a grab railing be put on the fare box.

5. That in all cars intended to be used for the collection of fares by the p.a.y.e. system, there shall be one door in the rear end bulk head on the devil strip side for entrance, and one door on the street side for exit, or in lieu of the two doors there shall be one reasonably large door on the devil strip side, the minimum width of which should not be less than 36 ins. In the event of two doors being used there shall be a dividing rail to separate the flow of in-going and out-going traffic.

The experts report that one large door on the devil strip side has advantages over the two-door system, but as the two-door system has given good satisfaction in other cities, they give it as their opinion that either system would be satisfactory. They also recommend that the system now in operation of entering cars by the rear door and leaving by the front should be continued.

The Board adopts the said recommendations of the said experts, and determines that the same are reasonable, safe, proper and adequate regulations, practices, equipment, and service for a p.a.y.e system, and for the cars of, and for the transportation of passengers by the Toronto Ry.

The Board are of the opinion that the company have the right to select and adopt either a single door or two doors between the rear vestibule and the body of each motor car. Where the opinion of the experts is equally divided as to whether one door or two doors is the better plan, the company has the right to select whichever plan they choose.

The Board are of opinion that all the company's motor cars should be changed into p.a.y.e cars with all reasonable dispatch; that each car should be put in commission as soon as finished; that the whole system should be completed in 18 months from this date; and that such changes and equipment should be subject to the direction and inspection of one of the Board's engineers. The sketch hereto annexed shows the arrangement of the rear end vestibule. The p.a.y.e system will not apply to cars when they are changed into what are known as summer cars.

The Board further suspends the operation of by-law 36, but the same shall automatically take effect upon each motor car of the Toronto Ry. system, when and as soon as each car is equipped as aforesaid to the satisfaction of the Board's engineer.

In view of the congested conditions that exist in Toronto, the Board declines to order the company to discontinue the use of trailers or to construct its cars with compartments for the use of smokers. To do otherwise, at least until such time as the new lines and cars ordered by the Board in May, 1907, are completed, would only intensify and aggravate the congestion.

In the event of the decision being reversed by the Court of Appeal on any of the questions of law involved in this opinion, the Board reserves further consideration and direction, and the question of costs, and the experts' fees and expenses.

A formal order can issue in terms of this opinion to be settled by the Secretary in case the parties differ.

Vice Chairman A. B. Ingram, gave the following dissenting judgment: Accompanied by five experts, I have investigated the p.a.y.e system in Cleveland, Buffalo, Rochester, Montreal and Ottawa, where traffic conditions are similar to those prevailing here. I find that in all these cities, except Ottawa, the companies have a separate entrance and exit at the rear end of each car on which the p.a.y.e system is used. Ottawa has tried one door at the rear end, but is now constructing all its new cars with separate entrance and exit at the rear end. In addition to the experts who accompanied me, I have consulted with traffic and car building experts, in all the above mentioned cities and find that, as a matter of practical car building, the Toronto Ry. cars can be altered by the extension of the platform and putting in or installing a separate entrance and exit at the rear end of each car, and properly stepped and vestibuled. My investigations have convinced me that, where the p.a.y.e system is in use, a separate entry and exit are necessary at the rear end of each car. If the Toronto Ry. desire to adopt the p.a.y.e system, they should be directed to instal a separate entrance and exit at the rear end of each car, and to supply a proper vestibule, suitably heated, for the adequate protection of the conductor. Having regard to by-law 36, of the Toronto Ry. Co., this by-law does not appear to me to be suitable for cars having two rear doors. I think, therefore, that the company should apply to the Board, on notice to the city, for approval for a new by-law to replace by-law 36.

I regret that my opinion does not agree with that of the Chairman in these particulars, but I cannot arrive at any other conclusion after my personal investigations of the working of the p.a.y.e system.

The other member of the Board, H. N. Kittson, also dissented as follows: I regret that in this matter my opinion differs in some respects from that of the Chairman as set forth in the judgment which he has read. I have had the privilege of consulting with the Vice Chairman who, accompanied by a number of experts, visited a number of cities in the U.S. with a view of investigating the working of the p.a.y.e system in these cities where the conditions were closely similar to those existing in Toronto. These investigations have shown that it is practical to so alter the cars here that the rear platforms can be extended and that a separate entrance and exit can be installed, that is to say, that two doors can be used at the rear end of the car. In Cleveland, Buffalo, Rochester and Montreal there have been installed, and there are now in use cars that have two doors at the rear end for the p.a.y.e system, and the Ottawa Electric Ry. Co., having previously operated their cars with one large door in the rear, are now profiting by their experience and are constructing all the new cars with two doors at the rear end. I am aware that altering the present cars in use by the Toronto Ry. Company so as to make them up to date p.a.y.e cars will involve considerable expense, but, as the company has, of its own initiative, applied for leave to use the p.a.y.e system, I am of the opinion that in Toronto the practice and system which have been tested and proved by actual experience and trial to be the best, should be adopted. I concur in the judgment of the Chairman in the main, excepting

INTERNATIONAL LIBRARY OF TECHNOLOGY

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. that, in my opinion, two doors are absolutely necessary at the rear end of the cars if the p.a.y.e system is to be enforced. I further dissent from the view expressed by the Chairman that the company have the right to select and adopt either a single or a two-door system at the rear end of each car. The Chairman sets forth that, under the Act of 1910, the Board has power and authority to determine the proper and adequate practice, equipment and appliances necessary for the p.a.y.e system. In that view, the Board has the right to order the installation by the company of separate entrances and exits on all cars where the p.a.y.e system is enforced, and I am, therefore, of opinion that this Board should order the company, within a reasonable time, to alter their cars so that a separate entrance and exit at the rear end will be installed before the p.a.y.e system can be permitted on such cars.

The city is proceeding against the company on a charge of maintaining a common nuisance, the grand jury returning a true bill at the Assizes, Jan. 10, to the following effect:

"That the Toronto Ry. Co. unlawfully neglected and unlawfully omitted to take reasonable precaution to avoid danger to human life in the operation of its cars in Toronto, by having in its charge and under its control and by maintaining and operating cars that were not of the most approved design for service and comfort, and by neglecting to provide proper or approved fenders, guards, or appliances, lights and signals, to avoid danger to human life, to be attached to the cars, in consequence whereof the lives, safety, health, property, and comfort of the public, as well as foot passengers, as also other subjects of our Lord the King, were endangered."

◆

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—During 1910 the company added about 76 miles to its lines, the additions to the lines in Vancouver and suburbs representing 13 miles, and the new Fraser Valley line about 63 miles.

Work has been started on the new station in New Westminster, and preparations are being made for the building of additional stations on the Fraser Valley line. A new right of way has been acquired near Sapperton for a section of the Vancouver, Fraser Valley and Southern Ry., and permission has been granted for the laying of temporary spur tracks to some gravel pits opened up for ballast purposes. (Jan., pg. 71.)

Calgary Municipal St. Ry.—The city council has entered into contracts for materials, etc., for the building of an additional 22 miles of line on the streets of Calgary, Alta., exclusive of second track. The work is to be proceeded with in the spring, and it is expected to get through with it by Nov. 1. A new power house is being erected at a cost of $125,000. The equipment will consist of a 1,200 h.p. Babcock and Wilcox boiler, 1,200 h.p. Robb-Armstrong engine, and a 900 k.w. generator. (Dec., 1910, pg. 963.)

Cape Breton Electric Co.—The question of an extension of the line from Sydney to New Waterford, N.S., was discussed at the meeting of the city council Jan. 16, and a committee was appointed to confer with the company. (Jan., pg. 71.)

Central Canada Ry. and Power Co.—Application is being made to the Manitoba Legislature for construction powers in addition to those conferred by chap. 56 of the statutes of 1905. The company is asking for power to build a railway from Winnipeg on St. Boniface northeasterly to the Winnipeg River in tp. 17, 18 or 19, and thence to the northern boundary of the province, with branch lines to a point on Lake Winnipeg to be approved of by the Lieut.-Governor-in-Council. Fisher, Wilson, Battram and Hamilton, Winnipeg, are solicitors for applicants.

A Winnipeg dispatch, Jan. 17, says the company's solicitors state that the enterprise is not controlled by any of the other railway interests, that the company has no offices in Winnipeg, but a number of citizens are interested in it, and that if parliamentary sanction is given to the undertaking, the railway mentioned in the application will be the first piece of construction.

Dunnville, Wellandport and Beamsville Electric Ry.—The Ontario Legislature is being asked to authorize the company to extend its projected line from Fenwick to Welland, Ont., and for an extension of time for the building of the already authorized lines. (April, 1910, pg. 310.)

Edmonton Interurban Ry.—An act incorporating a company with this title to build a system of electric railways radiating from Edmonton, Alta., was passed last session of the Alberta Legislature. (Dec., 1910, pg. 1065.)

Frontier Electric Co.—Press reports Jan. 12 state that a company with this title proposes to build an electric railway from Buffalo to Niagara Falls, N.Y., for which plans have been filed with the clerk of Erie county. Other reports state that it is proposed to connect up this line with the Niagara, St. Catharines and Toronto Ry. by means of a bridge across the Niagara River. Capt. G. Shepard, Niagara Falls, N.Y., is President of the company.

Grand Valley Ry.—The Board of Railway Commissioners has approved, subject to certain terms, the extension of the line in Brantford, Ont., and directed that certain crossings of the G.T.R. and of the Toronto, Hamilton and Buffalo Ry. be protected. (Dec., 1910, pg. 1067.)

Great Falls Power Co.—Selkirk Electric Ry.—Suburban Park Ry.—By an act passed last session of the Manitoba Legislature the company, notwithstanding the fact that it had not complied with the provisions of the provincial Railway Act, was declared not to have forfeited its charter of incorporation, and was given an extension of time within which to build its line of railway. In the title the act is described as being to amend "chap. 61 of 1 and 2 Edward VII, and chap. 54 of 62 and 63 Vict." The first of these acts is that incorporating the Great Falls Power Co., passed in 1902, and having power to build an electric railway from Winnipeg to Selkirk, and to the Winnipeg River, with such other branch line or lines in other directions outside Winnipeg, as may be decided upon by the directors, to any other point or points in the province outside of Winnipeg, provided that no line from Winnipeg to Selkirk be built during the currency of the charters of the Selkirk Electric Ry., and the Winnipeg, Selkirk, and Lake Winnipeg Ry., but this restriction is not to apply to any renewal of either of these charters. The latter of the acts referred to is the one passed in 1899 incorporating the Suburban Park Ry., with power to build an electric or steam railway from St. Boniface to St. Norbert, with a branch to Ste. Anne; to cross any bridge from St. Boniface to the boundary of Winnipeg; a line from St. Norbert to the boundary of Winnipeg, or to acquire running rights over any existing lines between these points, and a line in St. Boniface, and from there along the east side of Red River to Elm Park.

Guelph Radial Ry.—Application is being made to the Ontario Legislature to extend the time for the construction of the various lines authorized to be built, and to ratify an agreement with the People's Ry. with respect to the building of the lines of that company in Guelph.

A bylaw authorizing the extension of the line into St. Patrick's Ward was passed by the taxpayers Jan. 2. (April, 1910, pg. 311.)

Hamilton, Caledonia and Port Dover Ry.—The Ontario Legislature is being asked to incorporate a company with this title to build a system of electric railways from Hamilton to Port Dover, and through the townships of Ancaster, Barton, Glanford, Seneca, Oneida, Walpole, Townsend and Woodhouse, and serving the villages of Caledonia, Hagersville and Jarvis. G. Lynch-Staunton, Hamilton, is solicitor for applicants.

A press dispatch states that it is proposed to build a power house at Caledonia, where the projected line would cross the G.T.R.

The Hamilton and Caledonia Ry. Co. made surveys for a line from Hamilton to Caledonia in 1902, J. W. Tyrrel, of Hamilton, being in charge. In 1903 it obtained additional powers and changed its name to the Hamilton, Caledonia and Lake Erie Ry. Nothing further has been done, and the company is regarded as extinct.

Hamilton, Waterloo and Guelph Ry.—The Dominion Parliament is being asked to authorize the company to issue preference stock.

It was reported to the Hamilton city council Jan. 19, that the company had until Dec. 31, 1911, to build the projected line to Galt, and until Dec. 31, 1912, to extend it to Guelph. (Jan., pg. 71.)

Imperial Traction Co.—R. T. Harding, Stratford, Ont., representing the promoters of this company, was in London, Ont., Jan. 16, to explain the plans to the city council. The line is projected to start at Niagara Falls, and cover the whole of western Ontario, extending to Sarnia and Grand Bend, over 200 miles in all. Brantford, Sarnia and other corporations along the proposed route have been asked to endorse the project. The provisional directors include L. B. Howland, Toronto; R. Miller, Ingersoll, Ont.; G. M. Reid, London, Ont., and S. W. Nay, Listowel, Ont. (Jan., pg. 23.)

Lacombe and Blindman Valley Ry.—An extension of time was granted last session of the Alberta Legislature for the building of this projected electric railway from Lacombe along the valley of the Blindman River. (Dec., 1910, pg. 1069.)

Lacombe, Bullocksville and Alix Electric Ry.—The Alberta Legislature last session extended the time within which this projected electric railway may be constructed. (Dec., 1910, pg. 1069.)

Lake Erie and Northern Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Port Dover through Simcoe and Waterford to Brantford, northerly through in operation over it at an early date. (Jan., pg. 73.)

Montreal Street Ry.—The Quebec Legislature is being asked to amend the company's acts in various particulars, including increasing the number of directors. (Jan., pg. 73.)

Montreal Terminal Ry.—The Board of Railway Commissioners has extended the time within which the company may complete its spur across Victoria Ave., Montreal East. (May, 1909, pg. 367.)

Moose Jaw Electric Ry.—About 2.5 miles of track was laid upon this line during 1910. This mileage will be completed for operation during the summer, and additional track will be laid.

A writ has been issued against the

Paris to Galt, with a branch line from Paris or Glenmorris to Ayr, Ont. Brewster, Muirhead and Heyd, Brantford, Ont., are solicitors for the applicants.

W. P. Kellett, heretofore Chief Engineer Grand Valley Ry., Brantford, is acting as Chief Engineer, and in an interview Jan. 5, said the new line would be a standard steam line for electric use, with a maximum gradient of 1%, on which heavy electric locomotives would be used with regular trains of cars for freight traffic. The provisional directors named in the application are: W. S. Brewster, M.L.A.; J. Muir, W. D. Schultze, R. E. Ryerson, Brantford, and H. Douly, Simcoe, Ont.

Manitoba Radial Ry.—Application is being made to the Dominion Parliament to extend the time for the building of the line authorized by chap. 105 of the statutes of 1907, as amended by chap. 103 of the statutes of 1909. (July, 1909, pg. 523.)

Moncton Tramway, Electricity and Gas Co.—It is stated that the gas wells in Albert county have been so satisfactory to date that the company will be in a position to pipe a supply into Moncton, N.B., at an early date. Under the agreement with the city, the company has undertaken to build a system of street railways coincident with the introduction of natural gas for power and lighting purposes. The city council was notified Jan. 7 that it was expected to start construction Mar. 26. (Jan., pg. 73.)

Montreal and Southern Counties Ry.—The Board of Railway Commissioners has ordered the improvement of the condition of the right of way in Montreal South.

The electrifying of the Central Vermont Ry. branch to Chambly and Richelieu, recently taken over by the company, is approaching completion, and it is expected that a car service will be put

Ottawa Agent.

Opportunities for Industries
AND
Townsites in Western Canada

The Industrial and Townsite Department of the CANADIAN NORTHERN RAILWAY is prepared to furnish valuable information to, and will co-operate with, Homeseekers, Manufacturers, and Wholesale and Retail Merchants, in all lines of business who are seeking locations.

The entire line of the Canadian Northern Railway runs through the great wheat belt of Western Canada, where practically every acre can be put under cultivation. There is no waste land, and nowhere are crops more certain and markets more accessible.

The Canadian Northern is opening numerous new towns, where there are good openings for merchants, mechanics and professional men—some splendid opportunities for young men to get started in life.

In no section are there better educational advantages, greater social opportunities, or more healthful climatic conditions. Values are low compared with other sections of the country with like conditions and soil. If you are seeking any kind of location, write

city and the company by a citizen, with a view of getting the bylaw granting the franchise set aside, on the ground that it is ultra vires, and to obtain an injunction to restrain the company from proceeding with construction. (Jan., pg. 73.)

Nanaimo, B.C.—The proposition submitted to the taxpayers, Dec. 31, for a franchise for an electric railway in the town, was defeated by 329 votes to 236. (Dec., 1910, pg. 1067.)

The Niagara, St. Catharines and Toronto Ry.'s extension from Welland to Port Colborne, Ont., was reported completed Jan. 15. (Nov., 1910, pg. 965.)

North Midland Ry.—A bylaw authorizing the city to guarantee $200,000 of the company's bonds was passed by the taxpayers of London, Jan. 2. (Jan., pg. 73.)

Ottawa and Kingston Electric Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build an electric railway from Toronto to Ottawa, via Brockville, Ont. Press reports state that construction will be started in May. (Jan., pg. 73.)

Ottawa and St. Lawrence Electric Ry.—We are informed that the representative of a very strong British construction company has recently gone over the line, and has been given an option on the charter, etc., which it is expected will be taken up, in a short time. The preliminary agreement provides for the starting of work during the present year.

A. H. N. Bruce, Chief Engineer of this line, is also acting as Chief Engineer of a company which is applying to the Dominion Parliament for a charter to build from Ottawa to Kingston and other points. We are advised that the project is likely to be linked up with the O. and K.E. Ry. (Jan., 1910, pg. 59. See also Ottawa and Kingston Electric Ry.)

People's Ry.—Application is being made to the Dominion Parliament to declare the company's works and undertakings to be for the general advantage of Canada, for power to extend the lines already authorized to be built in various directions; to increase the capital stock to $5,000,000; to extend the time for building the lines already authorized, and for other purposes. The additional lines for the construction of which authority is asked are: From Arthur to Flesherton, with branches to Meaford, Owen Sound and Collingwood; a line from Owen Sound, via Meaford and Collingwood, to Midland; from Woodstock, via London, Strathroy, Alvinston, and Petrolia to Sarnia; from Woodstock, via Norwich, Otterville, Waterford, and Simcoe, to Port Dover; from Waterford, via Hagersville and Caledonia to Hamilton; from Otterville to Tillsonburg, via Aylmer, and from St. Thomas to Port Stanley; from Stratford, via Mitchell, Seaforth and Clinton, to Goderich; from St. Thomas, via London, Lucan, Woodham, Kirkton, Mitchell, Monkton, Atwood, Listowel, Harriston and Mount Forest, connecting with another of the projected lines in Grey county; from Guelph to Hespeler and Puslinch Lake. The company also asks various powers as to elevators, water powers, etc. Pringle and Guthrie, Ottawa, are solicitors for applicants.

Bylaws granting franchises and authorizing the subscription to various amounts of the capital stock of the company were passed by the taxpayers of Fergus, Proton and Garafraxa, Jan. 2.

A Guelph, Ont., press report states that negotiations are in progress with a large construction company to undertake the building of the line. (Jan., pg. 73.)

Port Arthur and Fort William Electric Ry.—A bylaw has been passed by the citizens of Port Arthur, Ont., authorizing the removal of the street railway tracks from John St. to Bay St., at a cost of $10,000.

The Fort William city council is applying to the Ontario Legislature for various powers, including authority to issue debentures, without obtaining the previous consent of the ratepayers, for the purpose of raising the street railway's proportion of the cost of paving and macadamizing streets in the city. (Jan., pg. 73.)

Quebec and Island of Orleans Ry.—Application is being made to the Quebec Legislature to confirm the privileges already accorded and grant an extension of time for construction. It is also desired to have power to build the line on the mono-rail principal. P. Corriveau, Quebec, is secretary. (April, 1909, pg. 311.)

Quebec and Saguenay Ry.—Application is being made to the Quebec Legislature to extend the time for constructing the lines authorized by chap. 55 of the statutes of 1906, and the extensions subsequently authorized.

A London, Eng., dispatch, Jan. 5, stated that R. Forget had arranged with British capitalists to provide funds for starting construction on this projected line. (Jan., 1910, pg. 59.)

Quebec County Ry.—Application is being made to the Dominion Parliament to sanction a deed transferring to the Q.C. Ry. a certain portion of the lines of the Quebec Ry., Light and Power Co., which transfer has been approved by the shareholders of each company. (See Quebec Ry., Light and Power Co.)

Quebec Ry., Light and Power Co.—The Board of Railway Commissioners has authorized the building of a branch from Beauport station northwesterly to Montmorency village, Que.

An agreement has been reached with the Quebec city council, by which the line will be extended to Lesage Ave. by May 15, and the work done on Plamondon St. by June 1.

The company's hotel, Kent House, Montmorency, was recently reopened after being enlarged and redecorated. (Dec., 1910, pg. 1067.)

Simcoe Ry. and Power Co.—Application is being made for the approval of the Governor-in-council of the plan and site of the company's high tension transmission line across Matchedash Bay, at Waubaushene, Ont., the plans of which have been deposited in the registry office at Barrie, Ont., and in the offices of the Georgian Bay Lumber Co., Waubaushene, Ont. (Sept., 1910, pg. 783.)

Timiskaming, Ont. — The Dominion Government is asking Parliament to vote $50,000 towards the erection of a bridge to connect the provinces of Ontario and Quebec, near Timiskaming, Ont. A proposal to have the bridge sufficiently strengthened so as to enable an electric railway to be operated over it has been made. Such a line would connect up Cobalt, Haileybury and other Ontario towns with Ville Marie, Que.

St. John Ry.—We are advised that the St. John, N.B., city council is being asked to grant the company permission to extend its car lines from the foot of Brussels St., to Loch Lomond Road, about 0.6 of a mile, and the township municipality is being asked to grant permission for the extension of this line along the Loch Lomond road to the cemetery by the back road, 0.4 mile, and from the Loch Lomond road along the Crouchville road to the Old Loch Lomond road, 1.6 miles. It is only proposed to build the first two lines and 0.6 of a mile of the last mentioned line during the current year. (June, 1910, pg. 497.)

Toronto.—The Toronto city council is applying to the Ontario Legislature for confirmation of certain bylaws and also for the following powers: Confirming and validating the notice given to the Toronto and York Radial Ry. of the intention of the corporation to acquire that portion of its line running from Sunnyside to Long Branch Park; declaring that the corporation may acquire the line under the provisions contained in the agreement, dated Dec. 23, 1890, made with the old Toronto and Mimico Ry., and under the provisions of the Railway Act of 1887, notwithstanding the repeal of that act; authorizing the acquiring of the line as from Dec. 23, 1911, under certain conditions, and authorizing the raising of money by debentures to purchase the line. It is also desired to have authority to extend the line easterly along the Lake Shore Road and Queen St., so as to connect with the Toronto Ry., and to be enabled to make agreements with the Toronto Ry. for the interchange of cars and traffic, and for running rights over the Toronto Ry. to St. Lawrence Market or other points in the city.

The taxpayers, Jan. 2, by 14,592 votes to 4,758, authorized the council to raise $1,157,293 by debentures for street railway construction in the city. Several notices of motion have been made at meetings of the council subsequently held, but nothing further has been done.

Toronto and York Radial Ry.—Application is being made to the Ontario Legislature to authorize the company to build lines and branches between its present termini in different parts of the city of Toronto, to which it is at present authorized to build, and for power to build additional lines as follows: From the Toronto and Scarboro Division to Markham; from Sutton, on the Metropolitan Division, to Pefferlaw.

The new bridge over Mimico creek on the Lake Shore road has been completed. The building of the bridge, which is on a private right of way, has enabled the company to cut out some curves on this section of the line.

A private right of way is being acquired for a section of the Metropolitan Division, at Woodlawn Ave., Toronto. (Dec., 1910, pg. 1069.)

Toronto Interurban Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title to build a line from Toronto to Barrie, Ont. Ritchie, Ludwig and Ballantine, Toronto, are solicitors for applicants.

Toronto Ry.—The city engineer has recommended the city council to call upon the company to lay a double track line on Danforth Ave., from Broadview to Greenwood Ave., and on Greenwood Ave., from Gerrard St. to Danforth Ave. (Oct., 1910, pg. 877.)

Toronto Suburban Ry.—The Ontario Legislature is being asked to authorize the company to extend its line from some point on its authorized line to Guelph, to Milton, and to extend its Guelph line to Berlin, Preston, Hespeler, Galt and Hamilton; to increase its capital stock, to issue bonds for terminals, and to extend the time for the construction of the previously authorized lines. (Aug., 1909, pg. 609.)

Winnipeg Electric Ry.—The track mileage of the lines in Winnipeg was increased during 1910 by 5.44 miles.

A new power house is to be erected at a cost of about $500,000 at the foot of Mill St., for the purpose of generating power by steam, for distribution in the city. This announcement has been made as a result of the recent decision of the courts as to the rights of the company to distribute power from Lac du Bonnet in the city. Leave has been granted to carry the case to the Imperial Privy Council, as neither the company nor the city is satisfied with the decision of the Court of Appeal. (Nov., 1910, pg. 965.)

SPECIFY NATHAN PRODUCTS

Over 40 years' experience and unequalled manufacturing facilities enable us to furnish our goods at prices which meet all demands. All our products are made of the best material. Read the list:

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

Electric Railway Notes.

H. C. Johnson has been elected President of the Toronto Ry. Employes Union for the current year.

The Winnipeg Electric Ry. has issued orders forbidding conductors and motormen to wear "union" buttons while on duty.

W. P. Kellett has resigned his position as General Manager Grand Valley Ry. to become Chief Engineer of a proposed electric line, to be called the Lake Erie and Northern Ry.

W. Rae, Inspector of Tramways for British Columbia, has ordered the Nelson St. Ry. to equip its cars with air brakes, and to purchase an additional car.

The Toronto and York Radial Ry. is applying to the Ontario Legislature to authorize it, among other things, to run its cars on Sundays to and from any city of more than 50,000 inhabitants.

E. Daganais, R. Fournier and R. Blake, clerks in the Montreal St. Ry. offices, were charged, Jan. 11, with conspiracy to defraud the company by tampering with conductors' fare boxes. The two first pleaded guilty and the third, not guilty.

The British Columbia Electric Ry. commenced a mail service, by arrangement with the postal authorities, between New Westminster and Chilliwack, Jan. 11. No arrangement has as yet been made as regards mail matter for intermediate points.

The Quebec Ry., Light and Power Co. is reported to be in the market for eight pay-as-you-enter double truck steel motor cars, eight double truck trailer cars, 10 single ended open car bodies, and 25 box cars, including trucks.

The Winnipeg city council is to consider a bylaw requiring the Winnipeg Electric Ry. to operate an all night service and a full service on Sundays. It is also considering a proposal to build a tunnel route across the city in order to relieve the congestion of traffic on the city lines.

The Montreal board of control has adopted a recommendation of the legislation committee, that in all streets on which a street car line exists, the company or individual exploiting these tramways, shall pay one-third of the cost of the pavement of the street, and shall maintain the pavement during its franchise.

A statement purporting to emanate from the city hall, Montreal, claims that the Montreal St. Ry. is indebted to the city to the extent of $70,000, its share of the cost of snow removal, which it refuses to pay, as the city did not handle the work in a businesslike manner, and that in consequence much money was wasted.

A deputation of labor men from various parts of the province waited upon the Premier of Quebec, at Quebec, Jan. 20, and referred, among other things, to the use of running boards and air brakes on street cars. In reply, the Premier said that the question of the abolition of running boards from street cars was one that might be referred to the Public Utilities Commission, as the one relating to the use of air brakes had already been.

The last distribution of profits to the employes of the British Columbia Electric Ry., under the plan adopted in 1902, by which one-third of the net profits, after paying 4% dividend on the common stock, was set aside for division among the employes, has been made, when cheques for $57.31 were handed out to those of the employes entitled to them. The plan was abandoned at the men's initiation, as they preferred an increase of pay to a share in the profits.

A point of law was raised in Montreal, Jan. 11, in a claim for the death of a child through being knocked down by a Montreal St. Ry. car. After proving the death of the child, the case was rested on the claim that the onus lay with the company to prove that it was not liable, a precedent being cited in the case of Doucet against the Shawinigan Falls Co., when the judge stated that there was a presumption against the owners of a thing which caused an accident, that it was their fault. Judgment was reserved on the point raised.

The new rules, drawn up by the British Columbia Government, for the regulation of interurban tramways, went into effect Jan. 1. They deal with train rules, time tables, signals, the movement of trains by time table or train order, dispatching system and train order forms, train rules for both double and single track, standardization of time, limitation of running time and all varying conditions of track, grade, etc.; automatic block system, station protecting signals, flag stop signals, interlocking signals, etc. A penalty of $100 fine or three months imprisonment attaches to each violation of a rule. The rules for the operation of electric lines in cities are under consideration, and it is expected they will be put in force shortly.

Telegraph and Cable Matters

The Maritime Telegraph and Telephone Co. paid its second quarterly dividend of 1½%, Jan. 3.

The Canadian Northern Telegraph Co. is extending its office accommodation at Brandon, Man., owing to its largely increased business.

S. S. Dickenson, General Superintendent Commercial Cable Co., New York, who died there recently, was for some years Superintendent at Hazel Hill, N.S.

A. Harris has been appointed Telephone Inspector C.P.R. Telegraphs Manitoba Division, Winnipeg, vice W. R. Jones, transferred to the British Columbia Division.

The Dominion Government wireless telegraph station at Ikeda Head, Queen Charlotte Islands, B.C., has been completed, and one at Lone Tree Point is under construction.

The Western Union Telegraph Co. has completed the erection of a copper wire between Halifax and North Sydney, N.S., and an additional no. 8 iron wire between North Sydney and Glace Bay.

F. E. Camp, heretofore Telephone Inspector C.P.R. Telegraphs, Revelstoke, B.C., has been appointed Inspector of Telegraphs there, covering the main line, Field to Kamloops, and Kootenay lines.

W. R. Jones, heretofore Telephone Inspector C.P.R. Telegraphs Manitoba Division, Winnipeg, has been appointed Telephone Inspector British Columbia Division, with headquarters at Revelstoke, vice F. E. Camp.

The Commercial Cable Co. has extended its ocean mail services, which have been adopted in New York, to St. John and Halifax. By this means the public can, up to the last moment, connect with the outgoing mail.

The Board of Railway Commissioners has approved the forms used in transmitting messages by the C.P.R., White Pass and Yukon Route, Great North Western, Canadian Northern, North American, Western Union, Marconi Wireless and G.T.P. Telegraph Cos. for four months from Jan. 9, or until further order.

A board of conciliation, consisting of Judge Barron, Stratford, Ont., chairman; J. H. Gillman, Brockville, Ont., representing the Government Railways Managing Board, and J. G. O'Donoghue, Toronto, on behalf of the men, has been appointed to enquire into alleged grievances of I.C.R. train dispatchers and telegraph operators.

The Commercial Cable Co. has declined the proposal of the city of St. John's, Nfld., regarding a location within the city limits, on account of the refusal to exempt the company from a special tax. The company is prohibited from doing business in the island by its contract with the Government, and proposed to establish a city office connected with its cables for the Government convenience.

The Western Union Telegraph Co., by the acquisition of control of the Anglo-American Cable Co., will take over the Prince Edward Island telegraph service, and also part of the Newfoundland service, which will be added to the district having its headquarters at St. John, N.B. Press reports state that a number of new lines will be erected in New Brunswick.

It is reported that the British Postmaster General has accepted the cable companies' proposal in connection with a half-rate arrangement for deferred messages. It is stated that the arrangement will not come into force for some time, as the British Government will have to obtain the consent of other cable companies and some of the European Governments.

The number of wireless telegraph stations along the coasts of Canada is 24. Of these, 15 are on the Atlantic coast and along the Gulf of St. Lawrence, the former being operated, under arrangement, by the Marconi Wireless Telegraph Co. Those on the Pacific coast, which have been in full operation since last June, dealt with 18,469 messages in four months from that date.

Alien Captains on Inland Steamboats.

The recent decision of the U. S. Government to enforce the regulation requiring that all masters of U. S. steamboats must reside in the United States, has been followed by the refusal of licenses to a number of captains living in Canada in the winter, on the ground that they are not U. S. citizens. Press reports state that the general question will probably be taken up by the Minister of Marine, and that it will form the basis of some negotiations respecting the status of mariners in Canada and the U. S. in this regard.

The Canada Shipping Act, 1910, cap. 113, sec. 75, reads: "Examinations may be instituted in Canada for British subjects or for persons domiciled in Canada for at least three years, who intend to become masters or mates of ships trading on the inland waters of Canada, or on the minor waters of Canada, or on coasting voyages, or who wish to procure certificates of competency or service. Foreign subjects serving in ships registered in Canada and trading on the inland waters of Canada, or on the minor waters of Canada, or on coasting voyages, shall be deemed to be domiciled in Canada while so serving."

In 1908 an amendment was made to the foregoing section, by the addition of the following clause: "The Minister may refuse to admit to the examinations mentioned in the two preceeding sections any person domiciled in Canada who is a subject or citizen of a country in which British subjects do not enjoy similar privileges in respect to such examinations."

The foregoing extracts from the Revised Statutes of Canada indicate that the Minister of Marine has power to reciprocate in similar cases where masters of Canadian vessels, not being Canadian citizens, are concerned.

◆

St. Lawrence & Chicago Steam Navigation Co.

The following report was presented at the annual meeting in Toronto, Jan. 20:

The season of 1910 has been one of the worst in the history of lake commerce. The high rates on iron ore and the marvellous growth in lake traffic for the past few years has stimulated the building of lake vessels, until their number and carrying capacity is considerably in excess of the present needs of commerce. Rates have, therefore, ruled very low for the entire season, grain having been carried in Oct. from the head of the lakes to Buffalo at ⅞ and ¾ of a cent per bushel, equivalent to a rate of about 10c per ton on coal. In addition to the low rates the low depth of water at Sault Ste. Marie reduced the carrying capacity of our three largest steamers nearly 10%, while the cost of fuel and provisions has increased materially. Our boats have had no serious accidents during the season.

The question of the cost of marine insurance on lake veessels has become a very serious one, the rates having been advanced by the underwriters in 1909 about 20% over 1908, and again advanced about 20% in 1910 over the high rates of 1909, until this item amounted in 1910 to a charge against our boats of 7% on the capital stock. Your directors realizing the importance of this matter in view of the excessive competition among lake vessels, decided in 1909 to try the experiment of carrying 25% of the risk against stranding and collision, while insuring full against total loss, with the result that we have $13,802.30 still at credit of contingent fund out of a total of $20,483.46 charged to the boats in two years, after charging the fund with its proper share of all accidents for that time. A resolution will be submitted to you by which you will be asked to authorize your directors to operate the steamers without insurance until the underwriters offer a reasonable rate and policies of insurance which will protect us. as the present form of policy is faulty and virtually enables the underwriters to repudiate many just claims if they see fit, besides charging against the vessel $500 on every accident, which shuts out small damage claims.

The lengthening of the steamer G. R. Crowe was successfully accomplished last winter, and she has given very satisfactory service.

The directors from the earnings of the season have paid a dividend of 3% on the capital stock, and, after providing for same, have carried forward $3,035.61 to the credit of profit and loss, making a balance at the credit of that account of $136,042.89.

PROFIT AND LOSS.

Balance forward, Jan. 2, 1910		$133,007.28
Steamships' earnings	$42,760.86	
Interest	69.20	
		42,830.06
		$175,837.34
Salaries, taxes, office rent, directors and auditors' fees, etc.		$ 13,994.45
Dividend 3%, payable Jan.. 3, 1911		25,800.00
Balance carried forward		136,042.89
		$175,837.34

Assets.

Five steamers: Algonquin, Iroquois, W. D. Matthews, G. R. Crowe, E. B. Osler	$1,000,000.00
Insurance unexpired	13,000.00
	$1,013,000.00

Liabilities.

Capital	$ 860,000.00
Accounts payable	92.00
Contingent fund	13,802.30
Dominion Bank	3,062.81
Balance of profit and loss carried forward	136,042.89
	$1,013,000.00

The report was unanimously adopted, as well as the following resolution:—"In view of the present excessive rates charged by the underwriters and the unsatisfactory form of policy of insurance given, and with the experience of the past two seasons, when the total of all accidents to the company's steamers is less than $32,000, against premiums paid of over $110,000, the shareholders believe the company should, and hereby authorize the directors to operate the steamers without insurance until, in their opinion, the underwriters grant reasonable rates and a satisfactory form of policy to cover the steamers, either in whole or part."

The directors who were re-elected for the current year are:—President, W. D. Matthews; Vice President and Secretary, J. H. G. Hagarty; Managing Director, A. A. Wright; other directors, Jas. Carruthers, Capt. S. Crangle, G. R. Crowe. C. S. Gzowski, E. B. Osler, M..P.

Vessels Removed from the Register.

The following vessels were removed from the register, during Nov. 1910, for the reasons assigned, Steam, Argosy, Lunenburg, N.S., 84 tons, stranded; Aurora, St. Andrews, N.B., 183 tons, broken up; Cecebe, Toronto, 8 tons, broken up; Chicoutimi, Toronto, 70 tons, out of existence: City of Stratford, Toronto, 3 tons, out of existence; Clara, Toronto, 8 tons, broken up; Curlew, Toronto, 3 tons, dismantled; Devenish, Toronto, 2 tons, no information obtainable; Douglas, Toronto, 4 tons, no information obtainable; Edith, Toronto, 1 ton, no information obtainable; Erastus Wiman, Toronto, 36 tons, burnt; Florence, Toronto, 2 tons, broken up; General Wolseley, Toronto, 70 tons, broken up; H. L. Lovering, Toronto, 38 tons, out of existence; Huron, Toronto, 56 tons, broken up; Hygeia, Toronto, 1 ton, no information obtainable; Inter Ocean, Toronto, 98 tons, broken up; Jubilee, Toronto 2 tons, out of existence; Lake Joseph, Toronto, 19 tons, broken up; Mabel, Toronto, 8 tons, dismantled; Maggie Mason, Toronto, 38 tons, wrecked; Minden, Toronto, 3 tons, broken up; Minnie Wade, Toronto, 6 tons, no information obtainable; Pochahantos, Toronto, 20 tons, out of existence: Queen, Toronto, 5 tons, no information obtainable; Ripple, Kingston, Ont., 10 tons, wrecked; Sarama, Toronto, 1 ton, out of existence; Sea Flower, Toronto, 5 tons, no information obtainable; Silver Wing, Toronto, 2 tons, no information obtainable; Startled Fawn, Toronto, 17 tons, no information obtainable; Stella, Toronto, 5 tons, broken up; Sutton Belle, Toronto, 4 tons, dismantled; Toronto Belle, Toronto, 12 tons, no information obtainable; Undine, Toronto, 15 tons, no information obtainable; Viola, Toronto, 46 tons broken up; Vivid, Toronto, 35 tons, no information obtainable; Zephyr, Toronto, 11 tons, wrecked. Sailing, A. E. Moore, Digby, N.S., 11 tons, broken up; Alouette, Chatham, N.B., 10 tons, broken up; Bruin, Toronto, 104 tons, out of existence; Coral Leaf, Parrsboro, N.S., 374 tons, transferred to West Indies; Coronet, Toronto, 24 tons, no information obtainable: Cygnet, Toronto, 27 tons, broken up; Cyprus. Toronto, 6 tons. no information obtainable; Davidson, Ottawa, 150 tons, broken up; Estelle, Yarmouth, N.S., 15 tons, burnt; F. J. Boswell, Ottawa, 153 tons, broken up; Garfield White, Parrsboro, N.S., 99 tons, sunk; Harry, Ottawa, 166 tons, broken up; Ingonish, Sydney, N.S., 16 tons, transferred to Newfoundland; J. B. Blanchard, Ottawa, 150 tons, broken up; James, Ottawa, 153 tons, broken up; James Cunningham, Ottawa, 176 tons, broken up; John M. Plummer, Halifax, N.S., 83 tons, wrecked; Janett, Halifax, N.S., 32 tons, wrecked; Levi Crannell, Ottawa, 157 tons, broken up; Lithophone, Toronto, 14 tons, out of existence; Maggie, Maitland, N.S., 35 tons, wrecked; Margaret Leonard, Digby, N.S., 37 tons, foundered: Merle, Toronto, 11 tons, sold to foreigners; Mildred M. Bell, Lunenburg, N.S., 54 tons, transferred to Newfoundland: Mink, Toronto, 19 tons, out of existence; Minnie. Toronto, 63 tons, out of existence; R. S. McKenzie. Ottawa, 154 tons, broken up; Rockland, Ottawa, 136 tons, broken up; Stella, Toronto, 5 tons, broken up, and the following were removed during Dec., 1910:—Steam, Acadia, Ottawa, 354 tons, broken up; Beatrice B., Ottawa, 43 tons, dismantled; Bismarck, St. John, N.B., 10 ton, broken up; Clyde, Ottawa, 26 tons, dismantled; Conqueror, Toronto, 17 tons, out of existence; Crusader, Ottawa, 2 tons, wrecked 20 years ago; Cuba, Hamilton, Ont., 599, converted into a sailing vessel; Despatch, Goderich, Ont., 22 tons, broken up; Favorite, Toronto, 24 tons, out of existence; Flora, Ottawa, 4 tons, broken up; G. H. Notter, Ottawa, 9 tons. burnt; Gypsie, Peterboro, Ont., 2 tons, broken up; Helena, Toronto, 9 tons, out of existence; Hubert Larkin, Quebec, 33 tons, broken up; Ida, Ottawa, 6 tons. broken up; Kate Murray, Toronto, 2 tons, out of existence; Kenneth, Brockville, Ont., 2 tons, broken up; Ladas, Toronto, 37 tons, out of existence; Lizzie, Ottawa, 8 tons, broken up; Naiad, Ottawa, 6 tons, burnt; Northern Light, Ottawa, 267 tons, broken up; Onaniche, Ottawa, 1 ton, burnt; Pierreville, Sorel, Que., 76 tons, wrecked; Pilot, Toronto, 48 tons, burnt; Ptarmigan, New Westminster, B.C., 155 tons, broken up; Wanda, Kingston, Ont., 4

tons, dismantled. Sailing:—Alphonse Pierre, Quebec, 29 tons, out of existence; Argentina, Chatham, N.B., 12 tons, broken up; Charming Lass, Charlottetown, P.E.I., 67 tons, wrecked; Conductor, Windsor, N.S., 1,063 tons, sold to Brazilians; Dawn, Chatham, N.B., 12 tons, broken up; Emaroy, Ottawa, 79 tons, out of existence; Emery Bailey, Windsor, Ont., 47 tons, wrecked; Emile, Quebec, 55 tons, out of existence; Frank Russell, Toronto, 283 tons, out of existence; Genser, Quebec, 44 tons, out of existence; Gertie, Windsor, N.S., 45 tons, sunk; George Manly, Toronto, 284 tons, out of existence; Hiram, Ottawa, 134 tons, broken up; Hiram Benson, Toronto, 275 tons, out of existence; Humming Bird, Halifax, N.S., 17 tons, supposed to have been lost; John Cuzner, Ottawa, 46 tons, broken up; John Loughrin, Ottawa, 36 tons, broken up; Midnight, Halifax, N.S., 66 tons, sunk in collision; Omega, Windsor, N.S., 199 tons, wrecked; Phillippe, Ottawa, 154 tons, broken up; Preference, Windsor, N.S., 243 tons, abandoned at sea; Rover, Ottawa, 74 tons, broken up; Rupert, Lunenburg, N.S., 78 tons, transferred to Newfoundland; Sea Nymph, Halifax, N.S., 77 tons, wrecked; Shepherd Boy, Ottawa, 62 tons, reported sunk; Sir Hector, Kingston, Ont., 183 tons, broken up; Violet, Halifax, N.S., 12 tons, broken up.

Montcalm-Kron Prinz Olaf Collision.

The following judgment was recently delivered by Capt. L. A. Demers, Wreck Commissioners, and concurred in by A. Reid, Port Warden and Surveyor to Lloyds' Register, Montreal, as Assessor, in the case of the collision of the Government s.s Montcalm, and the s.s. Kron Prinz Olaf, near Channel Patch in the St. Lawrence River, Sept. 24, 1910:

The Court having carefully weighed the testimony adduced finds that L. Thivierge, pilot in charge of the Kron Prince Olaf, displayed a gross lack of knowledge of the recognized laws of navigation of the channel and is guilty of culpable errors of judgment by coming in contravention with the afore enumerated articles of the rule of the road, and in consequence the Court hereby condemns him to a fine of $200, payable in four monthly payments. The Court further holds that P. A. Nelson, master of the Kron Prince Olaf, deserves censure for his failure to be in readiness on deck to advise his officers while navigating in narrow water, and also that M. Toftdahl, mate of the Kron Prinz Olaf, showed gross lack of judgment and of good seamanship both before and at the time of collision, and as both master and mate, are possessors of Norwegian certificates with which this Court has no jurisdiction to deal, it is hereby suggested that their conduct be reported to the Norwegian Board of Trade as being deficient in the proper management of their vessel. Regarding the movements of the Montcalm, the Court accepts them as proper from when the Kron Prinz Olaf's lights were first observed up till the moment the latter vessel sounded the two blast signal for a second time, from which juncture the Court holds that Pilot A. Lachance in charge of the Montcalm was guilty of an error of judgment by failing to stop and go full speed astern. No pilot, master or officer in charge of the bridge must take for granted that a certain action or movement may be performed by another vessel, but must at once himself adopt such measures as will eliminate elements of doubt and apprehension, but as the aforementioned error of judgment of which A. Lachance is guilty is not of a culpable nature, the Court desires to admonish him to be more careful in the future. A word of warning is also given the Master, who must bear in mind that the presence of a pilot on a bridge does not relieve him of his responsibilities as Master and that in the event of the pilot performing an action or issuing an order contrary to good judgment, it is his duty to interfere and assert his authority.

The Levis Ferry Limited.

This company has four boats for the ferry service between Levis and Quebec City, all of which were built by G. T. Davie & Sons, at their Levis yard, within 10 months. Work on the two summer boats, Lauzon and Levis, was begun in Jan., 1910, and they were running May 1. They are 150 ft. long and 27 ft. beam, their engines being 52 nominal horse power. The winter icebreaking boats, Plessis and Colomb, were commenced in July, 1910, and finished ready for operation Nov. 25. They are 120 ft. long by 35 ft. beam, web framed throughout, built of ¾ in. steel plates. They have triple expansion engines 128 nominal h.p. Both summer and winter boats are fitted throughout with electricity, the winter boats having powerful search-lights. All four boats are screw propelled and equipped for both passenger and freight service. The accompanying illustrations show one of the summer boats, Lauzon, and one of the winter ones, Plessis, prior to launching.

◆

Niagara Navigation Company, Ltd.

Following is the report for the year ended Nov. 30, 1910, presented at the annual meeting in Toronto, Jan. 10:—

As authorized at the last annual meeting, Yonge St. dock, Toronto, has been purchased, and the cost thereof added to the dock property owned by the company. The debenture account has been increased by $105,000, which with cash on hand, was applied to cover cost of Yonge St. dock.

The character of the company's business requires a very high standard of service. To maintain this standard and provide for prospective increase of traffic, it may be necessary in the near future to add a new steamer to the fleet. The steamers and all the properties have been fully maintained.

After providing for the dividend, interest on debentures, writing $25,000 off steamer values, and placing $25,000 to renewal and betterment fund, the balance to credit of profit and loss account stands at $141,317.30.

The Levis Ferry, Ltd., Summer steamboat Lauzon before launching.

Public Works Dredge for B. C.

The dredge which has been built for the Dominion Government to be used in widening Burrard Inlet, Vancouver, B.C., is of the bow well bucket ladder type, constructed of steel and built under Lloyds' rules to Class A1 steel dredger, special survey, and has the following principal dimensions: Length between perpendiculars, 199 ft.; breadth moulded, 36½ ft.; depth moulded, 13½ ft. The driving gear and bucket chain is designed for dredging hard ground; the buckets are 24 cub. ft. capacity, with solid cast steel backs and links the cutting lips and all wearing surfaces are of manganese steel. The gearing for driving the chain, which is of cast steel, is arranged to give two speeds which are suitable for the material to be dredged. The bucket ladder is suspended on an independent shaft, works in an iron bow well and is capable of cutting the dredge's flotation and dredging to a depth of 50 ft. The dredging machinery and bucket chain are designed for dredging 1,000 tons of free material per hour. Shoots are provided on each side of the dredge to deliver the spoil as required, and are worked by independent steam gear. All the necessary mooring and warping winches are of the most powerful design for dredging in rapid currents.

The dredge is propelled by two sets of compound surface condensing engines, and the speed on trial trip in deep load conditions was 10 knots. The engines are arranged to drive direct on the screw shafting or to operate the dredging machinery. Steam is supplied by two Scotch boilers having a working pressure of 120 lbs.

The dredge was built in Scotland, the order being placed through John Reid & Co., Montreal. She was launched on Nov. 7, 1910, and sailed on her long voyage around the Horn on Nov. 17, and should arrive at her destination in the latter part of February.

Dominion Marine Association.

At the annual meeting in Montreal, Jan. 20, the reports of the executive committee and the committee on aids to navigation were adopted and several important resolutions were passed.

The Association declared itself opposed to the present system of examination of masters and mates, and recommended that the examination papers should be prepared at Ottawa, printed there and sent under seal to the examiner, not to be opened until the commencement of the examination, that examinations be held at stated dates and ports, and that as some parts of the examinations are oral, two examiners should sit together.

It was decided to recommend that all improvements or changes in navigable waters be made by the Dominion Government only, and solely with a view to the improvement of navigation, that only such water powers be developed as can be done without injury to navigation, and that before any further concessions are granted a comprehensive scheme should be developed by the Government.

That the Cataraqui bridge at Kingston, Ont., be raised and the harbor dredged.

That the Dominion Government be requested to keep all canals open on Sundays.

The report that the Gibraltar light on Toronto Island was to be discontinued elicited the remark from A. A. Wright that any captain who could not make Toronto harbor without the aid of that light should be sailing a stone boat behind a yoke of oxen.

The term of office of H. H. Gildersleeve, Northern Navigation Co. of Ontario, L. Henderson, Montreal Transportation Co., F. Plummer, Canadian Lake Transportation Co., and J. Playfair, Inland Lines, Ltd., who were elected in 1909 to serve for two years, having expired, Messrs. Gildersleeve and Henderson retired, Messrs. Plummer and Playfair were re-elected for three years, and E. E. Horsey, Lake Ontario and Bay of Quinte Steamboat Co., and J. E. McLurg, Algoma Central Steamship Lines, were elected for three years to fill the two vacancies. The other members of the executive committee are:—Elected in 1909 for three years, one year yet to serve, A. B. Mackay, Inland Navigation Co.; S. A. Calvin, Calvin Co.; J. W. Norcross, Mutual Steamship Co.; D. Murphy, Ottawa Transportation Co.; elected in 1910, two years yet to serve; H. W. Richardson, H. W. Richardson & Sons; J. P. Cavanagh, Ogdensburg Transportation Co.; W. F. Wasley, Muskoka Lakes Transportation and Hotel Co.; G. B. Green, Upper Ottawa Improvement Co.

The officers were re-elected as follows:—President, F. Plummer; First Vice President, J. S. Playfair; Second Vice President, D. Murphy.

The executive committee's report dealt very fully with the Association's work during the year, the following being extracts therefrom, with summaries of the less important matters:—

Pilotage Dues.—The bill introduced in the Commons last session on behalf of the Association to provide for the inclusion of Ontario in the list of provinces enjoying exemption from the compulsory payment of pilotage dues, came up for its second reading and was referred to the standing committee on marine and fisheries. The Association counsel attended with witnesses when this committee considered the matter in Ottawa, and was successful in getting the bill through the committee. Unfortunately, the committee's report was not taken up in the house before Parliament prorogued, although no opportunity was lost to urge its presentation. At the instance of the Association the bill was again introduced early in the present session, and has led the Department to consider the matter seriously and to propose the introduction of a Government measure. The terms of this measure were discussed at a meeting called by the Minister of Marine in Montreal on Dec. 22, 1910, at which the Shipping Federation of Canada, and this Association were represented. The Shipping Federation presented strong opposition to the proposals of this Association, but ultimately the following conclusions were arrived at: Firstly, the pilotage charge for entering and moving in Montreal harbor will be discontinued; if necessary, by amendment of the statute. Secondly, the Minister considers favorably a suggestion, concurred in by the Shipping Federation, that provision be made for examinations for masters and mates to qualify as pilots in the districts of Montreal, Quebec, etc., similar to the provision now made by sec. 487 regarding other districts. Thirdly, the Minister favorably considers a suggestion, made by this Association and ultimately agreed to by representatives of the Shipping Federation, that sec. 435 be put in operation and second-class pilots appointed accordingly from among the apprentice pilots, and that the employment of these men on certain conditions be permitted on vessels from the lakes. Fourthly, the Minister strongly favors the construction of a second ship channel where necessary between Montreal and Quebec, for the use of lighter draught vessels such as those from Ontario.

The Minister is preparing a bill and hopes to submit the draft measure to representatives of this Association, of the Shipping Federation and of the Pilots Association, early in the year, with a view to having the amendment of the statute made during this session. In the meantime the pending bill of this session, may reasonably be permitted to stand, and its sponsor has been asked to await developments.

U. S. Tonnage Tax and Canadian Harbor Masters' Dues. — Representations made by the Association and supported by the Lake Carriers Association, secured the passage of the bill by the U. S. Congress, which became effective at the opening of navigation in 1910. The reciprocal arrangement was then completed by the repeal of the order-in-council of 1909, which reimposed harbor masters' dues in Ontario on vessels from the U. S.

U. S. Corporation Tax.—Members of the Association carrying freight or passengers from or to ports in the U. S. are subject to this tax of 1% on the net income over $5,000 received from business transacted and capital invested within the U. S., and also requires the filing annually of a statement showing the amount of this net income. Much correspondence has taken place regarding the application and interpretation of this law, and probably no two companies have adopted exactly the same method of determining the amount of their "business transacted" within the U. S. Apparently the department charged with the collection of the tax has not arrived at satisfactory conclusions as to the method of computation in the case of companies foreign to the U. S., for the request for rulings in the matter, made on behalf of the Association, has elicited only ambiguous and unsatisfactory replies. Attention is called to the penalties provided for failure to make up and file the required annual statements before the dates named in the statute.

Power Development in Navigable Waters.—The proposals of the Long Sault Development Co. and of the St. Lawrence Power Co. were considered at the last annual meeting of the Association, and a committee was appointed to join a conference in Montreal of the various interests opposed to the proposals and to attend the session of the International Waterways Commission in Toronto. It was further resolved that if the full information and plans promised were not forthcoming at the session, details should be demanded and that in any event an adjournment should be asked to permit consideration after the plans were submitted. At the conference in Montreal it was arranged that each interest should present its own case, but that all should join in an effort to obtain the plans and an adjournment for further consideration. The subsequent session of the Commission in Toronto was largely attended and the Association's Counsel and A. A. Wright presented the Association's objections and claims. The Dominion Conservation Commission, the Ontario Hydro-Electric Commission, and various public and private interests, including the Richelieu and Ontario Navigation Co., the Calvin Co., and others, were also heard in opposition to the scheme. An opposite view was taken by certain other members of the Association interested in the transportation of freight on the St. Lawrence, and their views were presented by F. Plummer, who expressed the belief that the proposed undertaking would be advantageous to vessel interests. The Commission took no action beyond undertaking again that the plans would be produced; and it is understood that the question stands for consideration by the new International Commission, for the appointment of which legislation is pending in Parliament.

The application for incorporation of the St. Lawrence Power Transmission Co., although only for transmission rights, met with strong opposition in the house, as its incorporators were largely identical with the promoters of the power development plans, and was only put through after many amendments in the bill and considerable limitation of the company's powers.

A bill introduced on Dec. 14, 1910, in the U. S. Congress to provide for the erection of dams for water power and other purposes in the St. Lawrence near Long Sault Island, was referred to the Committee on Rivers and Harbors in the House of Representatives, and a public hearing was arranged by that committee in Washington for Jan. 9, 1911, of which your committee received due notice, with an invitation to have a representative attend. It was resolved that no action be taken by the Association in the meantime in regard to this bill, as the proposed legislation is expressly subject to the approval of the proper authorities, and the International Commission will doubtless hold further public enquiry in the matter. Your committee recommend, in view of the conflict of opinion within the Association, that the annual general meeting should consider the question and decide whether any and, if so, what further action shall be taken by the Association on the whole question.

The Canadian Light and Power Co. applied for leave to withdraw more water from Lake St. Francis by the Beauharnois canal, and written protests were made on behalf of the Association to the Premier and the Ministers of Railways and Canals, Marine, and Public Works, as soon as the matter became known. Counsel waited upon the ministers later, and an appointment was made for the hearing of all parties. At that hearing it developed that compensating or remedial works were proposed to maintain levels and protect navigation, but a strong protest was made on behalf of the Association against such methods and against further similar power concessions on the St. Lawrence on the ground that experience proved that navigation interests were not always protected; and a plea was also made for better recognition of the admittedly correct doctrine that navigation interests are to be the first considered.

A. A. HEARD, G.P.A., Albany, N.Y.

An important point in favor of the contentions of the Association was developed at this meeting by the complaint of the Cedars Rapids Manufacturing and Power Co., that, by reason of their existing rights in the Cedar Rapids, the Government could do nothing to alter the flow down these rapids without their consent and proper indemnities being given. The Minister of Canals admitted that there might be something in this Association's contention that the Government was losing control of the river. The Ministers finally agreed to require submission of the plans to an engineer for this Association, and H. Holgate, C.E., was named. Later, in a written memorandum, your Counsel submitted the Association's views maintaining the position of absolute opposition to the proposals and at a meeting of the committee this protest was ratified and confirmed, and it was also resolved that a committee consisting of Messrs. Henderson, Plummer and Smith, should interview Mr. Holgate and ascertain his views and the nature of his recommendations before the Association commit itself to acceptance of his services and advice.

Great Lakes Protective Association.—Canadian Lake Protective Association.—At the last annual general meeting of the Great Lakes Protective Association, in Detroit, your Counsel was appointed to represent Canadian owners upon the advisory committee of that Association, and during 1910 he attended all except two out of the dozen meetings which that committee has held at Cleveland. The failure of the Canadian representative to secure support in an effort to bring one of the principal functions of the Great Lakes Protective Association into operation and discipline masters guilty of apparently careless navigation, was a large factor in the discussion that led to the formation of an organization in Canada for that and other purposes. The Canadian Lake Protective Association has been organized among the owners of steel built bulk and package freight boats of British and Canadian register trading on the lakes and St. Lawrence, and proposes to exercise control over the methods of navigation of the boats owned by its members. Rules for masters and engineers have been framed and will be enforced by a committee duly appointed. It is believed that this organization will justify the formation of a preferred class of underwriting risks and bring about a substantial saving in the cost of insurance for its members. At the date of this report some 80,000 or 90,000 net registered tons of vessel property of the class named are enrolled in the new Association. The formation of this Association, and the question of cheaper marine insurance and the adoption of means to justify a decrease in premium rates, have occupied the attention of the grain section throughout the year. Doubtless the readiness with which owners have entered the new organization is an indication of a general intention to try to make a better record in the matter of disasters on the lakes. At one of the last meetings the consensus of opinion, with the exception of only one or two owners, was in favor of asking for no extensions of cover beyond the date Nov. 30, fixed by underwriters for last sailings on the lakes. Your representative so reported to the committee of the Great Lakes Protective Association, and the opinion was concurred in.

Terminal Elevators.—Considering this vexed question, the last annual meeting adopted the recommendation of the executive committee in favor of the complete abolition of the system of Government supervision and certificate in weighing grain into vessels, being driven to this alternative by the intimation from the Department of Trade and Commerce that the application of the system to unloading as well as loading ports could not be hoped for. The bill introduced by the Minister of Agriculture to give effect to this recommendation was not enacted, having no further consideration in the house after its first reading, nor is it known whether the measure will be introduced again at the present session. The subject should have the attention of your new committee in 1911.

Later in 1910, at a meeting of the grain section of the Association, it was resolved to ask the Government to take over and operate the terminal elevators, and a recommendation was made accordingly to the Minister of Trade and Commerce and other members of the cabinet. From time to time in the course of interviews with members of the Government, this recommendation has been discussed and the idea has developed that while ownership might not be possible, supervision might in some way be undertaken. Your committee fully appreciate the action of the Government during the past season in holding an investigation into affairs at the Canadian loading ports, and the assistance rendered by the grain exporters of the country in bringing this about is cordially recognized. There is no doubt that this enquiry resulted in a very substantial improvement of conditions. Recently, and since the pressure of the large delegation of western grain growers has brought the matter under immediate discussion, the Premier has intimated the intention of the Government to take control of the situation, a bill is being introduced and the appointment of a commission to control the operation of the terminals is probable at an early date; and having regard to the work of the railway commission and similar bodies, it may reasonably be hoped that a practical remedy for many existing troubles is thus close at hand.

The Lake Shippers' Clearance Association has had one complete season's operation, but unfortunately conditions were such in the season of 1910 that results can scarcely afford a fair or complete test. The consensus of opinion is that the organization has proved distinctly beneficial, and while there are of course individual instances of dissatisfaction, on the whole dispatch in loading has been much improved; and from a variety of causes, including not only the operation of this system, but also the investigation on the part of the Government, discrepancies in weight have not been so heavy or so frequent. The question of the rates charged for loading at one, two or three or more houses remains to be considered, and it has been felt by some that at least the fixed rate of 10c. for any number of houses more than two will require revision. This Association applied for detailed information so that the question might be intelligently discussed, and considerable correspondence ensued, but the request was made in the end that the matter should be allowed to stand until next year, so that the records might be more complete.

Charges for Trimming Grain Cargoes.—A committee was appointed at the last annual meeting to endeavor to arrange a satisfactory schedule of rates with trimmers at Fort William and Port Arthur and to try to carry out the recommendations on record regarding the installation of trimming spouts on all loading elevators. This committee went to Fort William and there made a three-year agreement with the trimmers for the adoption of a schedule of graded charges, and this schedule has now been in force and adhered to throughout the past season. The possibility of installing trimming spouts was also investigated, and the question was discussed with the management of the various elevators, with some hope of improvement, but without material results, at least up to the present date. Your committee believes that the installation of these spouts should be made compulsory, and recommends that if the authorities do not undertake to make provision for this in the law, private legislation should be introduced on behalf of the Association, as in the case of the Pilotage Bill.

Welland Canal. — The unanimous adoption of the report of the last executive committee by the annual meeting at Ottawa in Jan., 1910, left this association pledged to the support of the proposal for an improved Welland canal in accordance with many previous resolutions and recommendations. Nevertheless, in view of an existing division of opinion and the belief on the part of some members of the associaton that the building of the new canal would bring heavy U. S. tonnage into competition with the Canadian tonnage for which the present canal is adapted, this association has not been officially represented at the hearing of any of the delegations which have met the Government this year to urge the commencement of the undertaking, and your counsel when he has appeared has done so on behalf of the Kingston Board of Trade. The only question left open now by the announcements made by the Government is the time at which the work shall commence.

Rideau Canal.—Active measures were taken on behalf of this association in opposition to the C.P.R. plans for entrance into Ottawa over the bed of the Rideau canal. The proposals involved the closing of the last mile of the canal and the utilization of this space for railway station, yards and sidings. The usefulness of the canal for through traffic between the Ottawa River and Lake Ontario was threatened with destruction, but nevertheless the proposals seemed to meet with serious consideration. Protests were filed on behalf of the association with the Department of Railways and Canals and with the Railway Commission. Later the association joined in the support of a movement to increase the value of the canal by provision for the maintenance of water levels throughout the season of navigation, and in Nov. last authorized members of the association joined a delegation of some 60 or 70 representatives of municipalities and organizations interested in this waterway and assisted in the presentation to the Minister of Railways and Canals of the claims made for protection and improvement. This delegation received a very favorable hearing and was not only practically assured that the C.P.R. application would not be granted, but was also promised an immediate survey of the route with a view to making it navigable at all seasons, at least to the full draft for which the locks are adapted.

Sault Ste. Marie Lock.—The recommendations of the last annual meeting for the building of a new lock on the Canadian side at Sault Ste. Marie and for the posting at suitable points of the available depth of water in the present lock and for better control of the valves in operating the lock, were laid before the Department, but your committee is unable to report what consideration they received.

Handling Lines at Canal Entrances.—Your last committee's report named the various locks and entrances at which the Department, through its ex-Deputy Minister, M. J. Butler, had arranged to take lines from vessels, and also the points at which the association desired additional men. In spite of the good progress apparently made, your committee has now to report with regret that men were taking lines this season at only two points, namely, the head of the Soulanges and the lower entrance of Farran's Point canal. This condition of affairs was reported by the association to the Department some time be-

fore the close of navigation, and the urgent need of assistance in the matter was pressed upon the Department's attention. The Department has, however, vouchsafed no explanation beyond acknowledging the letters.

Soulanges Canal.—Recommendations have been made by the association at various times during the season for an early undertaking of the improvement of the entrance at Coteau in accordance with previous recommendations and investigations; and for concrete retaining walls or other preventive works in the stretch above lock 4 to half a mile east of the Delisle River, to obviate the tremendous difficulties that would be entailed if the banks, on account of the nature of the soil, should collapse, as they have done on another occasion. The committee can only report acknowledgment of the receipt of some of these recommendations.

Lachine Canal.—The signal lights on lock gates recommended by the last executive committee were installed.

Cornwall Canal. — Improvement of the end of the bank at the eastern entrance was recommended, but no action or consideration promised.

Morrisburg Canal.—The committee believe that improvement of the upper entrance is desirable, because entrance is impossible in the current, and in time of low water, as in the past season, loaded boats which should have gone down the canal, have touched bottom in the Rapide Plat.

Murray Canal.—In view of the greatly increased traffic in the Bay of Quinte, the association has recommended the lighting of the Murray canal, and the matter is under consideration.

Opening Canals on Sunday.—As in other seasons, the association has when special circumstances warranted, asked that the canals remain open on named Sundays, and reasonable requests of this kind were usually granted. The usual permanent opening during the fall months was also asked for and granted, and a request was presented that arrangements be made by general rule that the canals remain continuously open each year after Sept. 1.

In your last committee's report, reference is made to the statement by the ex-Deputy Minister, M. J. Butler, that while the association was asking a good deal, he nevertheless appreciated the efforts of the association to improve the efficiency of the canal system. Your present committee regrets to report that its efforts are apparently not looked upon quite so favorably, and that in fact formal or printed acknowledgments of its recommendations and the lack of further evidence of serious consideration rather indicate the need of a better understanding with the present officials of the Department, and it is suggested that an effort be made by your next committee to bring this about.

Dry Docks.—No amendment has been made in the law imposing customs duty on repairs made in a foreign port, but in every case which has been shown by reasonable proof to fall within the provisions of the statute regarding re-payment of the duty, the proper remission and refund has been readily obtained. The Government's policy in favor of subsidies for new docks in Canada was made operative by legislation during the last session of Parliament, and improved docking facilities are already under way at various points. At Kingston the Kingston Shipbuilding Co. has leased the Government graving dock and is undertaking the establishment of a shipbuilding plant. The association was instrumental in the revision of the tariff of tolls proposed by this company and in preventing the approval of a schedule by the Department of Public Works until it was generally satisfactory.

Central Pier Bridges.—On account of complaints made, the plans submitted by the C.P.R. for its new bridge over the Kaministikwia River were not approved, and the elimination of the central pier, a wider span, and a change in location were demanded. New plans were prepared and submitted and the promised opportunity was given to the association to inspect them before action was taken, approval only taking place after a declaration from the association that the new proposals, which included a bascule or lift bridge of wider span, were quite satisfactory.

A request for action to lead to improvement of the central pier bridge on the G.T.R., near Welland, met the response that nothing would be done in that regard during 1910. Your new committee should apparently repeat the request.

U. S. Commerce Court.—Attention is called to the Act of Congress of 1910 to create a Commerce Court. By sec. 6 it becomes the duty of every common carrier, subject to the provisions of the act, to designate in writing an agent in the city of Washington upon whom service of all notices and processes may be made in any proceeding or suit pending before the Interstate Commerce Commission or the new Commerce Court, provision being also made that service may be made by posting such notices in the office of the commission if no agent is appointed. The corporations subject to the commission and the new court are named in sec. 7 of the act, and attention is called to that section's definitions of the kind of transportation subject to the statute.

Customs Duty on Steamboat Fuel.—Early in the year the association was asked to endorse a proposal for the removal of the customs duty on coal. The grain section considered the question and came to the conclusion that in view of the conditions under which steamboat fuel is now obtained it would be better to limit the request of the association and to ask simply that all Canadian lines be put on a parity, so that boats plying in Canadian waters only should enjoy the same exemption from duty on their fuel as is enjoyed by Canadian vessels which enter or pass through U. S. waters. Some correspondence ensued with the Department of Customs, but no action was taken, the Department alleging that the distinction was made between Canadian vessels that enjoyed exemption from competition with U. S. tonnage, and those that were not protected by the coasting laws, and that uniformity could only be obtained with due regard to the preservation of the duty on coal for local consumption by withdrawing the privileges altogether.

The National Association of Marine Engineers, by deputation and by letter, asked for the appointment of a committee of arbitrators by this association to act with a similar committee of their own appointment and settle all disputes arising between the associations or their members. The communications were considered at a meeting of the grain section early in the year, and it was resolved that no action be taken, an objection being raised that this association had no inherent authority to deal with matters pertaining to the operation of individual vessels.

Light House Board of Canada.—The association was invited by the Minister of Marine and Fisheries to nominate a representative to act on the Light House Board in the interests of vessels on the inland waters, and your Counsel was nominated. The Department states that the Board is being reorganized, and it is understood that the appointment of your nominee will be made before long.

Livingston Channel, Detroit River.—The association was asked by the president of the Lake Carriers' Association to use its influence at Ottawa to prevent opposition to the maintenance of dams, etc., necessary in the construction of this work. Some enquiry was made in the effort to learn what proper basis existed for the local protests made against these dams, but in the absence of accurate data it was considered wise to confine the association's action in the matter to a general petition that no petty or selfish claims of small moment or little substance should be permitted to interfere with the speedy completion of a great undertaking financed by the U. S., and to be enjoyed by this country and its lake shipping without expense.

Lake St. Clair and Lake Erie Canal.—A project is on foot for a deep draft canal from the southeast end of Lake St. Clair across the neck of land to Lake Erie to shorten the passage and avoid the dangers of navigation in the Detroit River and in Lake Erie west of the southeast shoal. The association has been approached by the promoters of the undertaking with a view to learning the attitude of vessel owners towards the project, but no formal application for an expression of opinion has been made. It is understood that the plans and proposals in detail will be laid before the association early in the year.

The report dealt at considerable length with various bills introduced at the last session of the Dominion Parliament, and pointed out the association's action in regard to the same and the very satisfactory results secured.

The tonnage entered in the association and upon which dues were paid in 1910 was 175,594 net registered tons, of which 137,384 was steam and 38,210 barge or sailing property. The total shows an increase of over 20,000 tons over tonnage enrolled in 1909. The receipts for the year were:—Balance from 1909, $1,904.58; interest, $27.26; membership assessments, $2,939.48; total, $4,871.32; expenses, $3,373.11, balance on hand, $1,498.21.

Wireless Telegraphy on Ships.

The bill recently introduced in the House of Commons, respecting wireless telegraphy on ships, provides that every sea-going and coasting passenger ship over 400 tons, gross tonnage, registered in Canada, and every sea-going and coasting freight ship over 1,200 tons, gross tonnage, registered in Canada shall be equipped with an apparatus for wireless telegraphy, and that every owner of any such ship who neglects to equip it with the said apparatus shall be guilty of an offence, punishable on summary conviction or on indictment, and be liable to a penalty of not less than $100, and not exceeding $1,000, or to imprisonment for a term not exceeding 12 months, or to both fine and imprisonment.

The Allan Line is reported to have purchased premises, adjoining the Canada Life Block, recently bought by the C.P.R., on Main St., Winnipeg, where it proposes to erect an office building, of which it will occupy the ground floor, the remainder being taken by Allan, Killam and Mackay, real estate and insurance brokers.

During Nov. 1910, 12 employes were killed, and six injured in the course of their work in connection with the navigation of Canadian waters. Of the fatalities, 10 were due to drowning, and one each to being caught between vehicles, and to a fall, while of the other accidents, four were due to falls, and one each to falling material and to machinery.

THE MALES CO.
1508 First National Bank Bldg.
CINCINNATI, O.

Northern Navigation Co. of Ontario

Following are extracts from the report of the year 1910, presented at the annual meeting in Toronto, Jan. 31:

Navigation opened on Lake Superior on April 16, and the Georgian Bay on April 23, which was 11 days earlier on Lake Superior and eight days earlier on the Georgian Bay than in 1909.

Our statement shows an increase of about $84,000 in gross receipts, and $20,000 in net receipts, as compared with the previous year.

Last year 10 steamers appeared in the balance sheet valued at $1,485,394. This year it shows nine steamers, valued at $1,479,373. This difference is accounted for by the sale of the City of Windsor and some slight increases in the construction accounts of the Hamonic and Waubic before transferring them to the steamers' account.

The gross earnings of the company were $729,011.34, and the expenditure $568,935.95, which, with the balance at credit of profit and loss, Jan. 1, 1910, of $58,641.66, leaves a balance of $218,717.05, less appropriation for President and directors of $3,220.00. Out of this amount your directors have made the following appropriations:—

Claims for 1909 paid in 1910	$ 5,733.56
Interest on insurance and renewal funds	4,093.77
Renewal fund	28,000.00
Repair and maintenance fund	10,000.00
Written off special improvement account	2,100.00
Appropriation for President and directors, 1910	3,000.00
Interest on bonds hypothecated with Traders Bank	22,231.14
Dividend at 8% per annum on capital account	80,000.00
	$155,158.47

Leaving a balance to be carried forward at the credit of profit and loss of $60,338.58.

The reserve funds now stand as follows:—

Renewal fund	$120,312.43
Marine insurance fund	17,174.43
Profit and loss	60,338.58
	$197,825.44

The percentage of expenses of gross earnings (not including claims paid for previous years) are as follows:—1903, 94.16%; 1904, 89.71%; 1905, 80.73%; 1906, 77.73%; 1907, 77.63%; 1908, 80.73%; 1909, 77.80%; 1910, 78.04%. The percentage for operating for 1910 over 1909 shows a slight increase, which is accounted for by the loss of revenue during the strike on the G.T.R.

Your directors opened a laundry during the year at Sault Ste. Marie, Ont., it being a central location, the results of which have been satisfactory. On account of the scarcity of labor for handling package freight at Point Edward, your directors found it advisable to erect boarding houses to take care of outside labor.

Jas. Playfair, of Midland, Ont., President of the Inland Lines, Ltd., on behalf of himself and associates, made an offer in the middle of January of $1,250,000 for the $1,000,000 of the Northern Navigation Co.'s stock, $50,000 to be paid Feb. 15 and the balance Mar. 31. The matter was expected to come up at the N.N. Co.'s annual meeting Jan. 31, which had not been held when this issue was closed for the press.

◆

Notices to Mariners.

The Department of Marine has issued the following:

119. Nov. 19.—313. Ontario, Lake Ontario, Cobourg harbor, changes in lighting arrangement.

120. Nov. 14.—314. British Columbia, Burrard Inlet, First Narrows, Prospect point, red sector to be inserted in light. 315. British Columbia, Vancouver island, east coast, Baynes sound, Port Augusta, Goose spit, intended change in light.

121. Nov. 25.—316. Nova Scotia, Cape Breton island, Cape North, change in position and character of light. 317. New Brunswick, Miramichi River, northwest branch, light on bridge discontinued.

122. Dec. 14.—318. Quebec, River St. Lawrence, Saguenay river entrance, Pointe Noire, daymarks on range lighthouses. 319. River St. Lawrence, Crane island, change in character of light. 320. River St. Lawrence, ship channel between Quebec and Montreal, Ste. Croix, arc of visibility of range lights. 321. River St. Lawrence, ship channel between Quebec and Montreal, Lake St. Peter, gas buoy at No. 3 curve.

123. Dec. 15.—322. British Columbia, Active Pass, Galiano island, Mary Anne point, beacon light established. 323. Queen Charlotte sound new channel, Crane Islets, beacon light established.

124. Dec. 15.—324. Prince Edward Island, south coast, Hillsborough bay, Charlottetown harbor, change in color of Brighton Beach range lights. 325. Prince Edward Island, south coast, Bedegree harbor, Summerside harbor, change in description of island shoal buoys.

125. Dec. 28.—326. British Columbia, Vancouver Island, east coast, Baynes sound, Port Augusta, Goose spit light, erratum. 327. Alaska, Clarence strait, Ship island, light established. 328. Alaska, Sumner strait, Strait island, light established.

126. Dec. 30.—329. Ontario, Georgian bay, Nottawasaga island, period of flashes of light. 330. Ontario, Georgian bay, Parry Sound, wreck removed.

1. Jan. 4.—1. Nova Scotia, south coast, Halifax harbor, Leopard shoal, gas buoy established. 2. Newfoundland, south coast, Trepassey bay, Powles head, change in characteristic of fog alarm.

2. Jan. 5.—3. British Columbia, Queen Charlotte islands, Hecate strait, off Selwyn inlet, Low island, gas lighted beacon established. 4. United States of America, Washington, Juan de Fuca strait, Neah bay, range lights established. 5. United States of America, Washington, Juan de Fuca strait, Neah bay, Baaddah point, light changed.

3. Jan. 9.—6. New Brunswick, Bay of Fundy, Whitehead island, Gull cove, light pole replaced by tower.

4. Jan. 9.—7. Ontario, Lake Ontario, west end, Burlington channel, main light improved. 8. Ontario, Lake Superior, Thunder bay, Hare island reef, gas and bell buoy to be established.

5. Jan. 11.—9. Quebec, Ottawa River, McTavish point, light pole replaced by tower. 10. Ontario, Lake Ontario, Bay of Quinte, Onderdonk point, lighthouse established. 11. Ontario, Lake Huron, Kincardine, change in character of back range light.

6. Jan. 14.—12. New Brunswick, Bay of Fundy, Deer island, off North West harbor, Pompey ledge, change in color of beacon. 13. Nova Scotia, Bay of Fundy, Chignecto channel, Shulie, position of lighthouse. 14. Quebec, Chaleur bay, St. Omer, lighthouse established.

7. Jan. 20.—15. Quebec, River St. Lawrence, Matane, bell buoy replaced by gas and bell buoy. 16. Newfoundland, north coast, Strait of Belle Isle, Cape Norman, change in appearance of lighthouse.

8. Jan. 20.—17. Ontario, River St. Lawrence, Thousand Islands, buoy established south of Howe island. 18. Ontario, Georgian bay, Victoria harbor, range lights established.

9. Jan. 21.—19. Nova Scotia, southwest coast, Pubnico harbor entrance, St. Ann point, bell buoy established. 20 Nova Scotia, Cabot strait, St. Paul island, northeast point, fog alarm established. Atlantic cove, fog alarm discontinued. 21. New Brunswick, east coast, Northumberland strait, Jourimain islands, change in position of lighthouse.

Atlantic and Pacific Ocean Marine.

The Merchants and Shippers Steamship Co., of Sydney, Australia, has proposed to its Government to establish a 15 knot service between Australia, New Zealand and Canada.

The Elder Dempster Co.'s s.s. Kwarra, which was scheduled to sail from St. John to South African ports in January, was reported to have run ashore in Pentland Firth, Scotland, Jan. 3.

The White Star Line's s.s. Teutonic will be transferred to the Canadian service on the reopening of the St. Lawrence season. She will carry second and third class passengers only.

Press reports state that the steamship companies running to St. John, N.B., are considering a reduction of service to that port, on account of the increased harbor dues there, and the decrease in freight offering at remunerative rates.

The charges recently brought against the local agent of the Uranium Steamship Co., for bringing undesirable immigrants into the country, were dismissed at Halifax, N.S., on the ground that he was not responsible for any violation of the act.

A cargo of iron was landed at Halifax, N.S., Jan. 5, which has been salved from the Allan Line s.s. Hungarian, which was wrecked on the Nova Scotia coast in 1860. Several years ago a quantity was landed from the same source, but the work was abandoned as it did not pay, but owing to the present price of

iron, the salving is considered remunerative.

The Canadian Mexican Pacific Steamship Co., announces that it has arranged for the purchase of a steamship of about 7,000 tons capacity, to commence service in March, to replace the s.s. Henley, the charter for which expires in Feb. Capt. T. H. Worsnop, General Manager, states that by the autumn, another vessel will be added, making three in the service between the B.C. coast and Salina Cruz, Mexico.

Application is being made to the Dominion Parliament to incorporate the All Red Steamship Co., with powers to own and operate steamers from Canadian ports on the Atlantic and Pacific oceans, and waters contiguous thereto, and to build, own and operate harbors, docks, wharves, piers and other works in connection therewith. E. N. Armstrong, Montreal, is solicitor for applicants.

The U.S. Government has brought action against a number of steamship companies, including the C.P.R., Allan Line and International Mercantile Marine Co., and against a number of persons, connected therewith, including B. J. Allan, of the Allan Line, Boston, Mass., as members of the Atlantic Conference, for making an illegal contract, and asks that they be enjoined from further agreeing or conspiring to injure or destroy the business of any corporation engaged in carrying steerage passengers between points in the U.S. and Europe. It is stated that the action is a "friendly" one, and also that so far as purely Canadian companies are concerned in Canadian business, there is no jurisdiction. It is claimed that the action has been taken at the instance of a steamship company, not a member of the Conference, and which claims that "all the competitive devices of the conference are in full force" against it.

◆

Maritime Provinces and Newfoundland.

The city of St. John, N.B., received from harbor fees, dues and wharfage, during 1910, $92,835, against $84,649 during the previous year.

The New Brunswick Public Works Department has received tenders for the construction of a low water wharf at Maugerville, in Sunbury county.

The Dartmouth, N.S., Ferry Commission, it is reported, has decided to order a steel ferry steamboat, to be built in Glasgow, Scotland, at a cost of about $62,000.

J. McGill recently launched, at Shelburne, N.S., a schooner named Lloyd George, for Zwicker & Co. Her dimensions are, length, 108 ft., breadth, 26 ft., depth 10 ft. 5 ins.

The s.s. John Irwin, which recently stranded at Queensport, N.S., has been docked at Halifax, and tenders have been called for repairs. It is stated that 29 new plates will be required, in addition to minor repairs.

W. D. Reid, President Reid Newfoundland Co., in an interview recently, indicated that the establishment of a daily steamer service between Port aux Basques and North Sydney, is a probability of the coming season.

The Governor of Newfoundland has declared, by proclamation, that the provisions of chap. 121 of the Consolidated Statutes concerning outport pilots and pilotage, shall apply to Port aux Basques, effective July 1.

The Reid Newfoundland Co.'s coastal bay service, which completed its season on the last day of the year, handled a considerable increase in both passengers and freight, over the previous season, and without any fatal accident.

The name of the schooner Rowena, register no. 103261 at St. John, N.B., which was wrecked some time ago, has been changed by order in council, the requirements of the law having been complied with, to Ethel McLeod.

The St. John, N.B., city council ferry committee, decided recently in response to the offer of the Pennsylvania Rd., to sell one of its ferry steamers, to send the Superintendent of the ferry service to New York, to inspect the vessel and report.

S. Brookfield, of the Halifax dry dock, recently offered the use of the plant to the city, for the construction of two, or more, steel schooners for the deep sea fisheries. The city council and board of trade are taking the matter up, with a view to giving practical effect to the offer.

The Government s.s. Stanley, which, with the s.s. Earl Grey, has been running to Charlottetown, P.E.I., was compelled to change to the Georgetown route, Jan. 4, on account of the heavy formation of ice. The latter vessel is able to continue on the Charlottetown route.

Bowring Bros.' sealing steamer, Stephano, which is under construction in Glasgow, Scotland, will, it is stated, be completed by the end of March, and is due to arrive at St. John's, Nfld., early in April. She will be operated on the St. John's, Halifax and New York route, with the s.s. Florizel.

The survey of the St. John River, which is being undertaken by the International St. John River Commission, is being continued throughout the winter. When completed, a complete survey of the river, with its tributary streams and lakes will have been obtained. The work is in charge of H. M. Ranney.

The Port Elgin Fish Co., Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $24,000, and office at Seal Cove, to carry on a general fishing and fish dealing business along the coast of New Brunswick, and in connection therewith to own and operate boats, wharves and all the necessary facilities therefor.

The returns of trade at the port of St. John, N.B., for the portion of the winter season to the end of 1910, show Canadian exports of $1,785,267, against $2,355,476 for same period 1909. There was also a decrease of about $43,000 in foreign exports through the port. The chief falling off was in the export of lumber to Great Britain.

The Star Line Steamship Co., Ltd., is applying in the N.B. courts for a winding up order. J. W. Smith, President, is reported to have said, in St. John recently, that this action was necessary, in the interest of the creditors, as the company had been going behind. The sale of the assets would probably follow the granting of the winding up order.

R. G. Reid, General Superintendent Reid Newfoundland Co., in a conference with the representatives of the Longshoremen's Protective Union, at St. John's, Nfld., recently, effected a settlement of the dispute with the men, which provides that the company will not employ non-union men, except in cases where the demand for men cannot be met by the union.

The Dominion Public Works Department will shortly call for tenders for the construction of a steel sand suction dredge for work in the Maritime Provinces. The specifications provide for a dredge 110 ft. over all, 30 ft. beam, and 7 ft. 8 ins. deep, fitted with a 15 ins. suction, triple expansion engine, Scotch marine boiler and service condenser adapted for salt water. Teh discharge will be on the pontoon system.

Press reports from Halifax state that the Nova Scotia Fish Co., is being organized, to own and operate 25 vessels, two of which will be of steel, and two fishing stations, one on the Newfoundland coast and one at Cape Breton. It is proposed that after the fishing season, the vessels will take the fish to the Mediterranean and Brazil. It is stated that French capital is chiefly interested in the scheme.

The Naval Service Department recently received tenders for the supply of a schooner for the Naval Service Supply service. The vessel required is to be of 100 tons burden, not more than three years old and well and strongly built of oak, built along the lines of those used by fishermen along the Newfoundland banks, complete with all gear, sheathed with greenhart, and equipped with auxiliary engine. The two latter items are optional.

The Labrador Whaling Co. has ordered a whaling steamship to be built in Norway, to replace the steamer Cachelot which was lost during last summer. The new vessel will bear the same name, but will be larger and stronger, and will be equipped with the latest patent gun, which is claimed to be a distinct advance on the weapon at present in general use. She will be ready in the spring, and will reach St. John's in time for next year's operations.

The Hilyard Dock and Construction Co. is applying for incorporation in New Brunswick, with a capital of $250,000 and office in St. John. Among the powers asked, are those for the building, owning and operating of steam and other vessels, wharves, docks, graving docks, etc., and to carry on a general transportation business. The applicants are, A. H. and G. A. Hilyard, G. G. Murdoch, W. H. Harrison and H. A. Powell, St. John.

The Dominion Government quarantine steamboat Alva, which has been built at Dartmouth, Eng., for the quarantine station at Halifax, N.S., arrived there Jan. 8, after a lengthy and stormy passage from England, which she left Nov. 22, via the Azores and Bermuda. Her dimensions are, length, extreme, 89¼ ft.; length from stem to stern post, 83½ ft.; beam, molded, 19 ft.; depth, 10 ft.; draft with 15 tons of water and 30 tons of coal, 8 ft. at stern and 6 ft. at bow. Her cost is $22,600. A full description was given in our Mar. 1910, issue.

◆

Province of Quebec Marine.

The Quebec Harbor Commission recently received tenders for the construction of a bascule, single track railway bridge.

The city of Quebec recently received tenders for the erection of a bascule span, or a swing bridge, to span the St. Charles River, in Limoilou ward.

The Richelieu and Ontario Navigation Co. will move its head office in Montreal, in March or April, to the building it has secured in Victoria Square, where it will occupy five of the seven stories, the remaining two being let as offices.

The Department of Marine has arranged for a series of lectures to be given on subjects connected with navigation, seamanship, rules of the road, etc., for the benefit of candidates who wish to qualify for the examination of masters and mates.

Aqueducts, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Quebec, Que., to carry on a general contracting business. The incorporators are, R. O. Sweeney, A. H. Hall, F. A. La Rue, J. B. Churchill, and A. Leofred, Quebec.

The Department of Marine will receive tenders, to Feb. 15, for the construction of a twin screw steel steamer for survey and inspection work in connection with the St. Lawrence River ship channel, to be delivered at Quebec, to the following leading dimensions: length, between perpendiculars, 130 ft.; breadth, molded, 27 ft.; depth, molded, 13½ ft.; draught, mean, 9½ ft. It is reported that this vessel will be named Bellechasse.

On the re-opening of navigation, the light shown from the lighthouse on the outer end of the Government wharf on the south side of Crane island in the St. Lawrence River, below Quebec, will be changed from its present occulting characteristic, to fixed white. The apparatus will remain dioptric to the fourth order, but the light will be reinforced in the downstream range by reflectors. The light is produced by vaporized petroleum burned under a mantle.

The Dominion Premier, in a recent interview at Quebec, is reported to have stated that when the Marine Department's workshops at Quebec, were removed from their present location, they would be installed at the mouth of the St. Charles river, or thereabouts. He also stated that the reorganization of the Quebec Harbor Commission, on the lines adopted in connection with the Montreal Harbor Commission, was under consideration.

The Minister of Marine had a conference recently with representatives of ocean steamship companies, and the Pilots' Association, with reference to a proposal contained in a bill to be presented to Parliament, to provide that lake vesels should have the privilege of navigating the St. Lawrence ship channel without a pilot. The representatives present, it is stated, are opposed to the proposal.

Press reports from Ottawa state that the Government has decided to pay a subsidy on a first class dry dock at Montreal, providing the promoters vary their application. It is stated that this has been agreed to by all concerned, and that contracts for the work will be signed shortly. On a first class dock, the Subsidy Act provides for an annual payment of 3½%, for 35 years, on a maximum of $4,000,000, and although it is said that the subsidy granted may not reach this figure, the work will be in the first class. The same report states that the proposal to construct a dry dock at Levis appears to be in suspense for the present.

The Fraserville Navigation Co.'s s.s. Canada was offered for sale at the end of January, under an order of the Quebec Admiralty Court, on behalf of Mrs. G. St. Pierre. The matter has been before the courts for some time, a seizure being placed on the vessel in favor of G. St. Pierre, last October, for $12,000 on a second mortgage, there being also a first mortgage for $20,000, and a third mortgage for $5,000. The vessel, formerly known as Pro Patria, was built at Kinghorn, Scotland, in 1892. She is equipped with engine of 131 n.h.p., driving a screw, her dimensions being, length, 185.5 ft., breadth 27.2 ft., depth 19.5 ft.; tonnage, 701 gross, 449 register.

The Montreal Harbor Commissioners are proceeding with preparatory work in connection with the construction of a dry dock in the harbor. The site is opposite Molson's Creek, the distance from the shore, at this point, to the ship channel, being about 2,500 ft., the dry dock site and protection works projecting from the shore, about half that distance. The land which is to be reclaimed, will be filled with material dredged from the basin and approach from the ship channel. The dock will be of the floating type, with a capacity of over 25,000 tons, the cost of this and the ship repairing plant, being in the neighborhood of $4,000,000. The approach from the channel will give ample room for waiting vessels to anchor, and to turn, if necessary to proceed down channel. The centre of the dock basin requires a depth of 50 ft., while the remainder will be made the same depth as the ship channel. The dimensions of the dock, as shown on the plan, are, length, about 650 ft., breadth, about 130 ft., and it will be built in sections, so that smaller vessels will not require the whole dock to be utilized.

Ontario and the Great Lakes.

The New Liskeard board of trade decided recently to ask the Dominion Government that work on the construction of the new dock there be started immediately. The estimate for the dock and harbor facilities is $18,000.

The Owen Sound Dredge and Construction Co., Ltd., is applying to the Legislature for the acceptance of the surrender of its charter, as it has parted with its property, divided its assets rateably amongst its shareholders, and has no debts nor liabilities.

The Western Dry Dock and Shipbuilding Co.'s dry dock at Port Arthur was recently completed and put into operation. A number of the shops comprising the ship building plant are in course of erection, and it is anticipated that the whole will be completed in the early spring.

The Toronto harbor master reports that during 1910 3,402 vessels arrived, an increase of 461 over 1909. At the commencement of the year there was a cash balance in hand of $13,954.96, which, with receipts during the year of $14,891.70, less expenses, $13,425.51 leaves a balance in hand of $15,321.15.

The Public Works Department received tenders, Jan. 30, for the construction of a breakwater at Port Burwell, 1,200 ft. long, 30 ft. wide and 8 ft. above low water, sunk in a dredged berth 23 to 25 ft. below the low water line. The substructure is to be of timber crib work filled with stone, and the superstructure of concrete.

At the recent annual meeting of the Turbine Steamship Co. in Hamilton the usual routine business was conducted. Following are the officers and directors for the current year: President, J. C. Eaton; Vice President, R. Y. Eaton; Secretary-Treasurer, J. J. Vaughan; Manager, J. A. Goodearle; other directors, H. McGee and T. A. McCrea.

The Inland Lines steamboat Dunelm, which it was intended to dock at the Port Arthur dry dock for overhauling and repairs, after the wreck at Isle Royale, Dec. 7, when she was abandoned to the underwriters, has been tied up at the King elevator dock, where she will remain for the winter on account of the ice.

The U.S. Lake Survey reports the levels of the Great Lakes, during December, in feet above tide water, as follows: Superior, 601.50; Michigan and Huron, 579.51; Erie, 571.19; Ontario, 244.89. As compared with the average December levels for the past 10 years, Superior was 1.11 ft. below; Michigan and Huron 0.80 ft. below; Erie 0.52 ft. below, and Ontario 0.47 ft. below. It was anticipated that during January, Superior would fall 0.3 ft., Michigan and Huron 0.2 ft., and Erie and Ontario remain stationary.

Jas. Playfair, President Inland Lines Ltd., Midland, is negotiating with the shareholders of the Northern Navigation Co., to acquire their shares, and has offered to purchase the whole of the stock at $125. The Northern Navigation Co. has a paid up capital of $1,000,000, which, the directors were authorized at the last annual meeting, to increase to $1,500,000, the additional capital to be issued as required. The question was to come up for discussion at the annual general meeting of shareholders, Jan. 31.

Montreal press reports of Jan. 20 stated that negotiations were pending for the amalgamation of several large navigation companies, with the Richelieu & Ontario Navigation Co. interests in control. It is stated that preliminary matters have already been discussed with certain companies, and that, among others, overtures have been made to the Niagara Navigation Co., R. Forget, President R. & O.N. Co., subsequently stated that while there was some talk of a merging of navigation companies, nothing had been decided.

The Hamilton Steamboat Co.'s annual meeting was held at Toronto, Jan. 4, and a dividend of 10% was declared for the past year. Following are the officers and directors for the current year: President, J. C. Eaton; Vice President, R. Y. Eaton; Secretary-Treasurer, J. J Vaughan; Manager, W. E. Bishop; other directors, H. McGee, C. Booth and T. A. McCrea. The officers of the company's steamboats for the forthcoming season will be: Macassa, captain, J. Henderson; chief engineer, O. Flumerfelt; Modjeska, captain, P. Walsh; chief engineer, W. Noonan.

Application is being made to the Dominion Parliament to incorporate the Western Canal Co., to construct a canal from the Rainy River, below Fort Frances, Ont., to the Rainy River, five miles below the Long Sault Rapids; to carry on the business of forwarding and manufacturing; to erect and operate telegraph and telephone lines; to transmit electrical energy, and for the purposes of such canal and waterway construction and operation, to exercise all the powers and rights of the Railway Act, and with power to amalgamate with other companies. Smith and Johnston, Ottawa, are solicitors for applicants.

A proposal has been mooted in Toronto recently to construct a canal from Goderich to Hamilton, 35 ft. deep and 300 ft. wide, which, with the deepening of the St. Lawrence canals, would enable vessels to pass right up to Fort William and Chicago. A. P. Gillies, when interviewed on the subject in Toronto, recently, said that the matter would be brought to the attention of the Dominion and Ontario Governments, and the municipal and local bodies concerned, and even if their assistance was refused, the Canadian National Canal Co. was determined to carry out the scheme on its own responsibility. He has been interested in several large schemes, more or less visionary, a recent one being the establishment of a large terminal system in Toronto for handling all the railway traffic entering and passing through the city.

The Inland Lines s.s. Emperor, which was launched at Collingwood, recently, is 525 ft. long, 56 ft. beam, 31 ft. deep, and has been built with heavy double bottom and double sides, on the arch and web frame system. The pilot house and captain's and mates' quarters are at the forward end, and boiler and engine rooms at the stern. Between these the deck space is clear of spars and superstructures, and has 30 hatches, 9 ft. clear, with centres of 12 ft., with ore chute at each hatchway. The side ballast and water bottom tanks are directly connected with large steel pipes, with a combination header connected to sea valves and ballast pump. She is equipped with triple expansion engines, with cylinders 23, 38½ and 63 ins. diar. by 42 ins. stroke, supplied with steam by two Scotch boilers, 15½ by 12 ft., at a pressure of 180 lbs. a square inch.

Application is being made to the Dominion Parliament to incorporate the Nipigon, Albany Canal and Transportation Co., to build and operate a canal, waterway and transportation system from Nipigon Bay on Lake Superior, by way of the Nipigon River and Lake Nipigon, northerly to and along the Albany River to James Bay, and to utilize, deepen, widen and alter the course of waterways in the route; to build or otherwise acquire and operate steam and other vessels, wharves, docks, terminals and other facilities for the development of the undertaking. Power is also sought to carry on telegraph, telephone, express, warehousing, forwarding, hotel and other business, and to exercise the rights granted by the Railway Act, and that the work be declared to be for the general advantage of Canada. A. T. Thompson, Ottawa, is solicitor for applicants.

The Peterborough and Lake Simcoe Navigation Co., Ltd., the incorporation of which was announced in a recent issue, has taken over the steamboats recently operated by the Otonabee Navigation Co., and named Manita, Monarch, Otonabee and Water Lily. The route over which these vessels will be run on the re-opening of navigation, covers Lakes Simcoe, Scugog, Sturgeon, Cameron, Balsam, Pigeon, Bald, Sandy, Buckhorn, Chemong, Deer, Lovesick, Stony, Clear, Katchewanooka, and Rice Lake, 20 miles down the Otonabee River from Peterboro, aggregating over 150 miles. An issue of cumulative preference stock at 7%, to the amount of $75,000 in $100 shares, has been put on the market. R. Pinchin, formerly interested in the Otonabee Navigation Co., is Manager, and the other directors are W. A. Cressman, T. F. Matthews, W. H. Robertson, Peterboro; J. H. Brandon, Fenelon Falls, and W. H. Smith, Toronto.

The Ontario and Quebec Navigation Co., Ltd., which was recently incorporated, has been organized to take over the businesses and vessels of the former Ontario and Quebec Navigation Co., Ltd., and the Quinte Navigation Co. The O. and Q.N. Co., owned the steamboats Aberdeen, Alexandria, Lloyd S. Porter, and Water Lily, and the Q.N. Co. owned the steamboats Aletha, Brockville, Varuna and Where Now, running on Bay of Quinte waters, between Picton, Belleville, Deseronto, Trenton and Kingston. An order has been given for the construction of another steamboat, which will be operated between Toronto, Charlotte, Montreal and Quebec, during the coming season. Following are the officers and directors for the current year: President and General Manager, B. R. Hepburn; Vice President, J. F. Chapman, General Freight and Passenger Agent Rathbun Lines; General Freight and Passenger Agent, J. D. Hepburn; other directors, W. V. Cooper, A. Leslie, H. Dempsey.

The Toronto city council, in accordance with a recent vote of the ratepayers, is applying to the Dominion Parliament to change the constitution of the Harbor Commission so as to provide that hereafter the board shall consist of five members, three to be appointed by the city council, one by the Governor-in-council, on his own motion, and one on the recommendation of the Toronto Board of Trade, each for three years, with powers for removal and withdrawal. It is also provided that the board may take and hold the management of Ashbridge's bay, with the dock property and water lots owned by the city in the harbor, and along the east and west shores to the city limits, with the docks and shores on the island property, as far as is necessary for the protection and development thereof, and the regulation for the use of vessels. Power is also being sought to build docks, channels, railway tracks, equipment, etc., for carrying on a harbor and transportation business, and to levy harbor rates, tolls, etc., to be approved by the Governor-in-council, on all goods landed or shipped in the harbor, or moved on the harbor tracks, and to commute any such rates. It is also being asked that the commission shall have power to pass bylaws for the regulation and control of navigation and all works and operations within the harbor, to regulate building operations, deposit of material, pipes or conduits, to impose penalties for infringement of such bylaws, and for other purposes.

The Great Lakes and Atlantic Canal and Power Co. is asking the Dominion Parliament for incorporation, with power to build a canal from the eastern shore of Lake Huron, in Huron county, Ont., to the northern shore of Lake Erie, in Elgin county, and another canal from the northeastern shore of Lake Erie, in Haldimand county, to the western shore of Lake Ontario, in or near Lincoln county; to improve and deepen, if necessary, a channel in Lake Ontario and the St. Lawrence River, to or near Grenville county; to build a canal from or near Grenville county to the Ottawa River, near Ottawa; to improve and deepen a ship channel in the Ottawa River from the canal to its junction with Riviere des Prairies; to improve and deepen the channel in the Riviere des Prairies to join the St. Lawrence ship channel below Montreal Island, at or near Varennes, or by an alternative route, if deemed of better advantage, from St. Ann's, in Jacques Cartier county, Que., through Lake St. Louis to Montreal, with power to make surveys and determine the location of the waterway, whether canal or ship channel, and carry out such works, so as to complete a waterway from Lake Huron to the St. Lawrence ship channel or Montreal, of not less than 28 ft., and not over 33 ft. depth, and of such width as may be found necessary to enable ocean going vessels to meet and pass in safety at any point; to construct, own and operate wharves, docks, terminals, warehouses, elevators, tramways, steam and other vessels, dry docks, ship building plants, and to enter into agreements with the Government respecting subsidies and exemption from duty on articles used in the construction of such work, and for other purposes.

Manitoba, Saskatchewan and Alberta.

The Prince Albert, Sask., ratepayers have voted $26,000 for the building of a steamboat, and some barges, for hauling building materials on the Saskatchewan River for various city works.

A number of vessels of various types for navigation on the Red River, are reported to be under construction at Winnipeg, by the Hyland Navigation and Trading Co., the Eli Sand Co., and other companies.

The Moosonee Development Co., Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $20,000 and office at Winnipeg, to acquire certain lands in the province, and to develop same; to build, own and operate steam and other vessels from its lands to a place on an existing or established railway, and to build wharves, docks, tramways, telegraph lines, etc., in connection therewith. The incorporators are, G. A. Elliott, A. C. Miller, F. J. Campbell, F. C. Kennedy, R. W. Wydeman, Winnipeg.

B.C. and Pacific Coast Marine.

The name of the G.T.P. Coast Steamship Co.'s s.s. Bruno was officially changed to Prince Albert, Jan. 3.

The Washington Tug and Barge Co of Seattle, Wash., has been licensed to carry on its business in British Columbia, with D. Donahy, Vancouver, as attorney.

The repairs on the C.P.R. s.s. Princess May, which ran aground on Sentinel Island last summer, have been completed, and she has been again put into service.

The Canadian North Pacific Fisheries Co. is reported to have five whaling vessels on the way from Norway to the Pacific coast, for operation during the coming season.

The recently arrived C.P.R. s.s. Princess Adelaide has been overhauled after her voyage from Great Britain, and has been put on her route. Capt. Hunter of the company's s.s. Charmer has been appointed to the Princess Adelaide.

The C.P.R. s.s. Princess Mary was reported at Coronel, about the middle of January, on her way from Great Britain to the B.C. coast. It was expected she would call at Callao, where she would coal for her final run to Victoria.

Capt. M. B. Wilson, for some time connected with the Liverpool Salvage Association, and a number of large salvage matters on the Pacific coast, has been appointed Manager of the British Columbia Salvage Co., Esquimalt.

The G.T.P.R. is reported to have purchased the Albion Ironworks site and waterfront lot at Vancouver, where it is proposed to build wharves and other accommodation for handling of G.T.P. steamship business.

Press reports from Nelson state that the C.P.R. has arranged to build an all steel car transfer barge to hold 15 of the heaviest cars on the system, to be used in the Proctor and Kootenay Landing service, at a cost of about $68,000.

The C.P.R. s.s. Princess Adelaide, which recently arrived on the coast from Great Britain, has been placed in service, relieving the Princess Royal. A full description of this vessel was given in our Apr., 1910, issue.

A steam tug, unnamed, has been built at Lulu Island, for the logging business at Cracroft. Her dimensions are: length, 55 ft.; breadth, 11 ft.; depth, 5 ft. The machinery which has been installed was taken from the tug Gypsy.

The Kyax Navigation Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $25,000, to build, purchase or otherwise acquire and operate steam and other vessels, and to carry on a general transportation business.

Wallace Fisheries, Ltd., has been incorporated under the B.C. Companies Act, with a capital of $2,000,000, to carry on a general fisheries business, and in connection therewith to own and operate steam and other vessels of every description.

The arrangements whereby the G.T.P. Steamship Co.'s s.s. Prince Rupert were chartered for a trip to the Hawaiian Islands, in the spring, have been cancelled, the Seattle, Wash., parties responsible for the excursion not having complied with the conditions agreed to.

The B.C. Telephone Co. has prepared plans for a cable repair steamer, which it proposes to build for its repair service, at a cost of about $35,000. The hull will, it is said, be built in the province, and the equipment purchased in England.

The Marine Department's s.s. Newington, which returned to Victoria Jan. 4, after replacing several missing buoys, and placing a spar buoy at the entrance to the inner harbor, has been dispatched to Nootka Sound, where a lighthouse is under construction.

The plans for the dry dock, which the

G.T.P.R. proposes to build at Prince Rupert, have been filed with the Dominion Public Works Department. They provide for a dock of the second class, at a cost of about $2,000,000, which will carry a subsidy of 3½% for 25 years.

The order for the construction of the Marine Department's lighthouse and buoy steamer Estevan, for the British Columbia coast service, has been placed in Collingwood, Ont. The contract price is stated to be $260,000. A full description was given in our Nov., 1910, issue.

The Evans, Coleman Wharf Co., Ltd., registered under the B. C Companies Act, Sept. 5, 1905, passed a resolution, recently, to voluntarily wind up the company's affairs. A company of the same name has recently been incorporated under the B.C. Companies Act, as announced in our Dec. 1910 issue.

The dredge which the Dominion Public Works Department recently ordered in Glasgow, Scotland, for the widening of the channel in the Narrows, is reported to be on the way to the coast, where she is expected about the end of February. The width of the channel is to be increased from about 1,200 ft. at its narrowest, to about 2,400 ft. at its widest.

C. H. Nicholson, Manager G.T.P. Steamship Co., is reported to have stated recently that a representative is at present in Great Britain looking for a suitable vessel for use between Prince Rupert and Queen Charlotte Islands. The desired vessel will have first class passenger accommodation, and will be somewhat smaller than the company's s.s. Prince Albert.

The Canadian North Pacific Fisheries Co. has purchased the s.s. Petriana from the Northern Navigation Co., for use as a tender for its whaling stations. She has recently had her accommodation increased by the addition of four staterooms, and electric light apparatus, with a powerful searchlight has been installed. She was built at Workington, Eng., and has a single screw driven by triple expansion engines, developing 1,000 h.p. Her dimensions are: length, 182.7 ft.; breadth, 27.9 ft..; depth, 12.3 ft.; tonnage, 700 gross, 289 register.

The Westham Steamship Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $5,000, to acquire and operate the steamship Westham; to own and operate steam and other vessels of all descriptions and to carry on a general ship owning and transportation business. The Westham is a screw driven vessel, with engine of 10 n.h.p., and is registered at New Westminster, where she was built in 1909. Her dimensions are: length, 85.3 ft.; breadth, 22 ft.; depth, 8.3 ft.; tonnage, 199 gross, 126 register.

Lubrication of High Pressure Slide and Piston Valve Locomotives.

By W. O. Taylor.

With the lubricant properly introduced and distributed with the steam, the pressure and temperature of the steam, are factors of but little, if any, importance.

It is within the memory of many who are in active service today, when vegetable and animal oils were the sole lubricants for valves and cylinders. The introduction of a mineral cylinder oil in 1870 met with derision by some, scepticism by many, and it was received in confidence but by few. Of such superior merit, that long before its general introduction, a railway master mechanic made the statement in convention, that since its adoption as a substitute for tallow, the gain in power permitted the addition of one car to each train, it would have seemed an easy matter to induce the user of tallow to leave it for something better, but the change came about only through the persistent efforts of the manufacturer, and this statement applies to every user of steam, as well as to the railroads. How well has it been verified. "If we begin in certainties, we shall end in doubt, but if we begin with doubts, and are patient in them, we shall end in certainties." It has long since been demonstrated that the best of animal oils will rapidly decompose, their fatty acids corrode metal, and their gummy nature prove a source of danger as well as expense. That a viscous and cohesive mineral oil only, should be used in steam cylinders, and on hot rubbing surfaces, and that the price of an oil is of little importance in comparison with its friction reducing power.

Of the various terms which apply to all lubricating oils, gravity, viscosity, fire test, etc., explanation seems unnecessary; but as "flashing point" has become a byword with many since the use of steam of high temperature, it is pertinent to explain "flashing point" as the degree of temperature at which oils discharge vapor in sufficient quantity to mix with the air above the oil and produce a gas, which if brought in contact with a lighted match, or taper, will ignite and flash, hence "flashing point." The writer has witnessed a 550 degree test oil, passed through a cylinder in steam superheated to 1,000 degrees, and from the water of condensation recovered in its original condition. This test was in the laboratory, but it demonstrated that when protected by the steam the oil stood an excessive temperature, and that phenomenon of flashing, does not, and cannot occur while the oil is in the steam.

The function of a lubricant is to keep the rubbing surfaces apart; the determining quality of a lubricant is its ability to satisfactorily perform that function. The essential quality required is that of distribution over the surfaces to be lubricated. The best service from a valve or cylinder oil requires that it enter the steam chest thoroughly atomized, each drop being divided into thousands of minute drops, or atoms, as it reaches the rubbing surfaces. This is accomplished by a combination process of emulsification, vaporization, and atomization, and it follows that a first class cylinder oil must possess the qualities to readily emulsify and atomize, with a sufficient degree of vaporization to spread itself over the surfaces with the steam. In other words, to lubricate the steam..

W. A. Dube
Superintendent District 1, Intercolonial Railway.

Uniformity of distribution is as important as uniformity and continuity of supply. These are principles that apply to valve and cylinder lubrication, irrespective of type of valve or temperature of steam. The design of valve, the method of introducing the oil, are very important factors. It has been practically demonstrated that a flat or slide valve cannot be successfully used with very high temperature steam because of the heat warping the valve, presenting an uneven surface to the seat. Reference to this type of valve pertains to its use with saturated steam. With piston valves, where a very high initial pressure is used, or where superheated steam is used, which, because of a greater expansive force throughout the stroke, maintains a higher average pressure, even though the initial pressure may not be so high, the design of rings should be such as to avoid an excessive pressure behind them, forcing them against the walls of the valve chamber, which results in a loss of energy, and excessive wear of the rings. It has been found that when using steam at high temperatures the composition of the rings in both valves and cylinders is an important factor. A hard gray iron has given excellent results.

One of the world's great thinkers has said, "Men seek for truth in their own little world, and not in the great world about them." The average mind is prone to follow in the well beaten paths of the pioneers who blazed the trail. Precedent is the most available guide. It is only the restless spirit of the discoverer, or changed conditions that stimulate a new thought. The evolution of the locomotive has carried with it the progress from the earlier method of delivering the lubricant through the medium of a plug cup, located on top of the steam chest, to the more convenient location in the cab. The automatic displacement cup, located on top of the chest, has been superseded by the hydrostatic or mechanically operated lubricators, but it seems that because, in the infancy of the locomotive, from the top of the steam chest was the logical place to admit the lubricant, precedent rules that the old custom shall prevail, and at present, on a large percentage of locomotives in this country, the oil for valve and cylinder lubrication is delivered direct to the steam chest or valve chamber. "An obstinate adherence to custom, is as turbulent a thing as innovation." Is there a good reason for continuance of this practice, other than convenience, custom or precedent?

With the increase in steam pressure came the locomotives of increased valve and cylinder dimensions, a revolution in train service. and runs scheduled at higher speeds for long continued distances without closing of throttle. A new problem was presented. Precedent offered no solution. The revival of an old question, familiar to those who have seen the transition from tallow to mineral oil, the adaptability of the oil for the service, became a subject of discussion, and "flash point" was freely handled by many who have never given it thought before. Some not even knowing its significance. "Those who take in but few considerations easily decide." The lubricator and the oil manufacturers were placed on the defensive. In

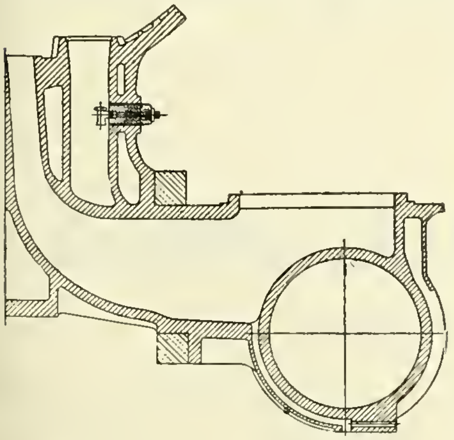
the minds of many there must be a different device for delivering the oil, and a better oil. The manufacturers of the hydrostatic feed lubricator, without any deviation from the principle upon which that device is operated, promptly met the requirements, by changes in construction, strengthening and increasing areas. In the vernacular of the day, the manufacturers of the oil "stood pat." They had builded upon solid foundation, and for the future. Through all the changes incident to the growth, from the 20 ton locomotives of years ago, to the mammoths of the present, through all the gradations of temperature, as steam pressures have increased from 120 to 230 lbs., and the higher temperatures incident to superheating steam, the oil has stood the test, and without one iota of change in composition or characteristic, the same oil that superseded tallow in 1870, has rendered, is rendering, and will continue to render satisfactory service, when properly delivered and distributed on the surfaces where needed.

It has been stated, that with the lubricant properly introduced and distributed with the steam, the pressure and temperature of the steam are factors worthy of but little consideration. The best authorities are agreed, that the ideal method of lubricating steam surfaces is by having the oil introduced in a highly attenuated form, and thoroughly intermingled with the steam, the steam becoming lubricated. Then why not deliver the oil into the steam, at a point where this process can take place before it reaches the steam chest or valve chamber, and thus secure lubrication at every point where the steam has contact? Those who have had to do with the examination of slide valves, have been impressed with the conditions found. All too frequently the valves and seat cut or excessively worn, and yet the top of the pressure plate always oily, a convincing refutation of the claim sometimes made, that the heat dries the oil, and a proof that while it has been delivered, it has not been satisfactorily distributed. Such conditions have prompted a change in the delivering point from the top of the chest, to the steam way in the saddle casting, and personal observations in several instances, justifies the assertion that better results were obtained than were posible under the old method. The kindness of a friend, who is thoroughly familiar with the subject, has made it possible to submit information pertaining to the device shown in one of the accompanying illustrations which has given excellent results, and is confirmatory of the writer's opinion as to the best place to admit the oil to the steam.

In a letter which accompanied the blue print, my friend wrote: "The drawing is from the original atomizer made, which idea was conceived and put into operation by J. C. Garden, Master Mechanic, G.T.R. on some passenger locomotives, cylinder dimensions 20x26, with steam pressure 225 lbs., equipped with Richardson slide valves, which were giving much trouble from valve seats cutting, notwithstanding engineers were receiving all the valve oil they desired. One engine in particular had valve seats faced four times in 2,000 miles made. The oil delivery pipes were then turned into the saddle to steam passages, and the valves examined after the engine had made 30,000 miles, and the seats were perfect. As an experiment, by putting a valve in delivery pipe, close to lubricator, and turning the pipe down a distance of 12 ins, and up again to the original position, and putting in another valve; after filling the bend in pipe with water, and working steam for some time opening the valve next to the steam chest, it was found that the water had been entirely drawn out of the 12 in. pocket. Mercury was also raised 3 in. in it proving that the atomizer is really a syphon to the delivery pipe. I am quite positive in assuring you that the locomotive is better lubricated by the use of this device, than with the ordinary couplings and plugs."

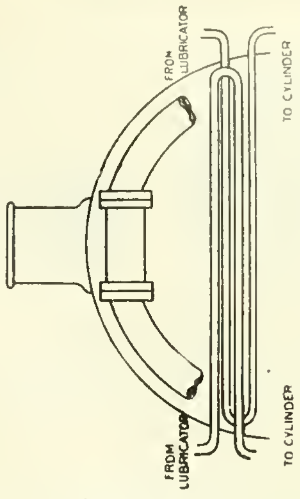


Position of atomizer for main valves.

Recently, in reading, I noted a thought which seems applicable here: "Things authorized by custom, if not excellent, are yet comfortable, and sort well together." And again, "With regard to what is common; let men reflect, that they have hitherto been used to do nothing but refer and adapt the causes of things of rare occurrence, to those of things which more frequently happen, without any investigation of the causes of the latter, taking them for granted and admitted." For years, the custom of delivering the oil to the steam chest, "If not excellent" has been "comfortable," convenient.

Twenty years ago, a cut valve was of rare occurrence. and always attributed to neglect. Now the "things which more frequently happen' are attributed to the same cause often without investigation. Not long since I learned of a device originating with J. H. Watters, Assistant Master Mechanic, Georgia Rd., by means of which after the oil leaves the lubricator it is passed through superheating pipes located in the front of the engine, by means of which the oil is raised in temperature to that above the temperature of the steam, and is carried with the steam to the surfaces to be lubricated. I am informed that this device was tried on a passenger engine, with cylinder dimensions, 18x24, wheel diameter, 60 ins., steam pressure 160 lbs., running in local passenger service 192 miles a day. This locomotive made 530 miles to one pint of valve oil, including the lubrication of the air pump. The illustration and information is submitted as a further confirmation of the statement that the efficiency of the oil is not impaired when submitted to high temperatures, and also as another means of obtaining satisfactory lubrication, by introducing the oil into the steam at a temperature above the steam, thus insuring more perfect atomization and distribution. While the locomotive upon which this test was made is not the equal in size or steam pressure, of the modern locomotives, the principle involved is the same, and results should be comparatively as good on the larger locomotives.

In the earlier experience with superheated steam, it was assumed that a mechanically operated, or force feed lubricator, was necessary. The error of that opinion is shown by the success attained from the hydrostatic feed lubricator, which is the standard in this country for superheated steam, as well as locomotives using saturated steam. It has been demonstrated beyond question, that the cylinder oil in general use, is efficient under all steam pressures and temperatures yet obtained in locomotive operation. It has been further demonstrated, that locomotives using superheated steam, where the maximum temperature does not exceed 500 degrees Fahr., do not require any more oil for valve and cylinder lubrication than the same locomotive using saturated steam. I will go further and say that even less oil is required for the locomotive using superheated steam. Conditions are more favorable for satisfactory and economical lubrication. The absolutely dry condition of superheated steam entirely obviates the flushing of valves and cylinders with the consequent washing away of the lubricant, which is a frequent cause of loss of material, and impaired efficiency of the locomotive, when using saturated steam. The pressure in the steam chest is necessarily lower than the boiler pressure, insuring a more uniform delivery of the oil when fed directly to the valve chamber. The oil is more thoroughly atomized when it comes in contact with the high temperature steam and is consequently better distributed over all parts to be lubricated. When brought in contact with these parts, because of their lower temperature, the oil condenses and remains because of the absence of moisture.



Watters Oil Heater. Outline Sketch.

The statement has been made, and reiterated, that the valve oil now in general use is efficient under all pressures and temperatures. Without equivocation that statement is correct. However, the manufacturers, realizing the importance of furnishing their patrons the best that can be produced, are now furnishing an oil specially adapted for service in steam temperatures above 500 degrees, because of its high viscosity, cohesion, and vaporization in such temperatures. In the terms we all understand, under those extreme temperatures this oil adheres more closely to the walls of the cylinders, and to the valve seats, than does the oil we are more familiar with, and consequently it requires a smaller quantity.

A committee upon the lubrication of locomotives using superheated steam, recently reported in part as follows: "From what the committee has been able to learn, the highest temperature of steam obtainable under present conditions, does not exceed 620 degrees Fahr., and of course, this temperature does not prevail in the cylinders, but only in the steam chest; inasmuch as the temperature in the cylinders is governed by the average pressure obtained throughout the stroke of the piston, and not the initial or admission pressure. It is believed by the committee that two locomotives, the same in every respect, except one being equipped with high temperature superheat, the one with superheater will make as many miles per pint with superheat valve oil, as engine with-

out superheat, with the oil more commonly used." It was the sense of this committee, that while there is every probability of improvement in the present arrangement of superheating, it would seem improbable that any effort will be made to secure a much higher temperature, not because of the problem of lubrication, but in view of the effect upon the materials comprising the machinery.

That superheating is destined to find a permanent place, if not universal, in modern locomotive design, is the opinion of most competent authorities. With over 600 locomotives on the C.P.R., equipped with superheaters, it is but just to credit H. H. Vaughan with a large measure of the success attained in the new world from this feature of locomotive operation. What is known as the Vaughan-Horsey superheater, is used on the C.P.R. absolutely, and the superheat oil mentioned is used on this type of engine. It has been found that by using this oil, as many miles, or more per pint, can be made, compared with the non-superheated locomotive using the standard valve oil.

"Miles per pint" has been the unit of measurement, when considering the efficiency of a valve oil in railroad service. The C.P.R. freight locomotives average in steam temperature, from 540 to 560 degrees; on passenger engines 520 degrees. Engines equipped with superheaters, cylinder dimensions 21x28, and 22x32, are allowed oil on the basis of 75 miles per pint. Engines having cylinders 24x32, 65 miles to the pint, imperial measure, which is about one-fifth more than wine measure, such as is used in the U. S. Very good results are obtained from this allowance, and it is only on rare occasions that the allowance is exceeded. All engines equipped with superheaters, have piston valves, and carry 200 lbs. pressure, with the exception of about 100 engines, which carry 180 lbs. Diameter of driving wheels, 57 and 63 inches.

Excellent results have been obtained by applying the oil pipes in the steam passage in the saddle casting, and it has been further demonstrated that additional pipes are not necessary. It is found that cylinder packing wears somewhat faster with superheated steam, but this is attributed to the increased pressure behind the rings, or possibly to the deteriorating effect of the heat on the material in the rings, and not due to any deficiency in lubrication. As the locomotive and its equipment change, lubrication will demand consideration, to the end that efficiency and economy be maintained.

Acknowledgments are due, and gratefully rendered to the gentlemen whose names appear in mention of their devices, and also to several of the writer's associates in the Galena-Signal Oil Co.

The foregoing was read before the Central Railway Club at Buffalo N.Y., recently.

◆

G. T. Western Ry. Rate Case.—In the case of W. K. Noble vs. Grand Trunk Western Ry. et al, complainant asked reparation on shipment of coiled elm hoops from Mount Clemens, Mich., via Norfolk, Va., to Ripplemead, Va., on a combination rate of 26c. per 100 lbs. Subsequently a specific rate from Mount Clemens to Norfolk was published. Reparation was demanded on the basis of the resulting Ripplemead rate of 21½c. The Interstate Commerce Commission has held that as the later tariffs could not be used until the Commission's tariff rules had been complied with, there is no basis for an order of reparation. Such order should be made upon affirmative evidence that the rate complained of is unreasonable or unjustly discriminatory, which does not appear in this case.

March Birthdays.

Can. Soc. C. E., Committee Reports.

Several of the reports of committees of the Canadian Society of Civil Engineers, presented at the annual meeting in Winnipeg recently, which are of importance to railway engineers, are given elsewhere in this issue in full.

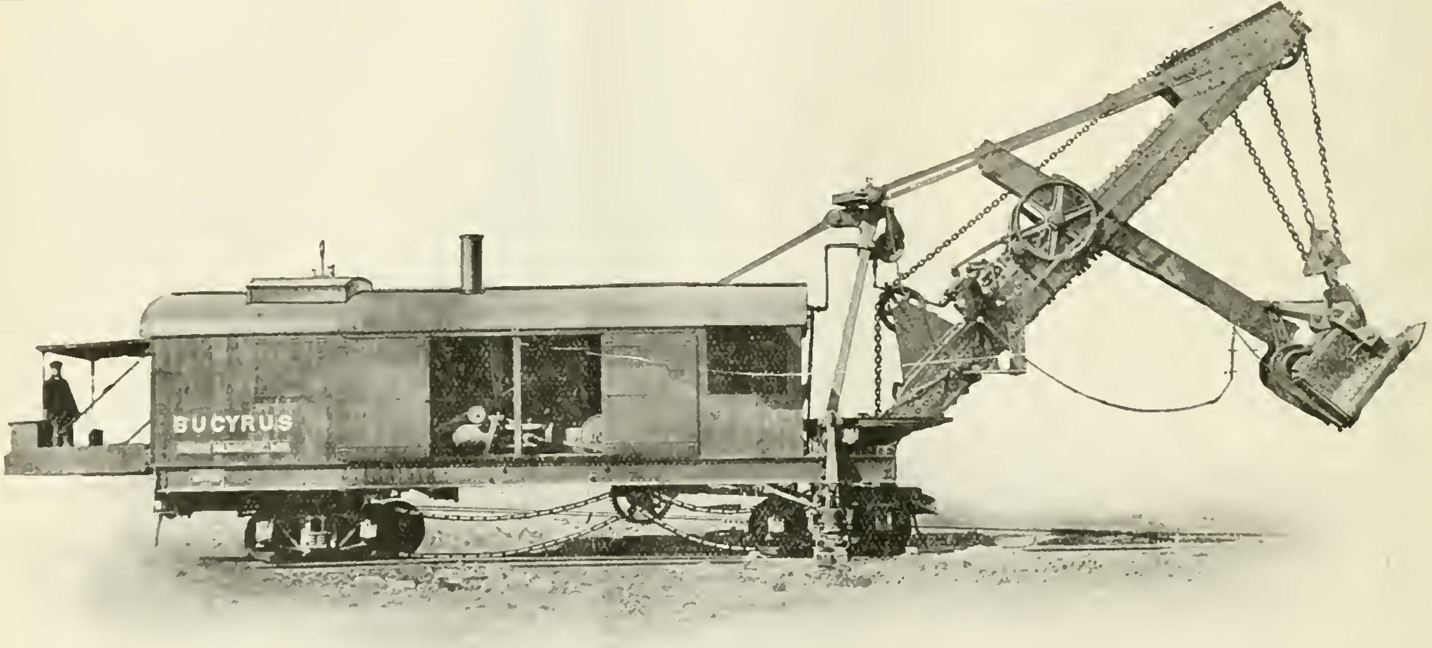
W. F. Tye, chairman of the committee on transportation routes, reported that a preliminary report on the relative cost of construction, maintenance and operation of the Georgian Bay canal, St. Lawrence canals and a lake and rail route was in course of preparation, that a great deal of work had been done on it, but that while it had been discussed and criticised by members of the committee, it had been found impossible to have it ready for presentation at the meeting.

J. G. Sullivan, Assistant Chief Engineer C.P.R. Western Lines, chairman of the committee on roadbed and ballasting, reported that as per instructions to the committee, it was hoped they would be able to agree on modifications and omissions of the specifications on roadways as adopted by the American Railway Engineering and Maintenance of Way Association, so that a standard specification might be recommended to the Society, but after considerable correspondence it was thought best not to recommend a specification this year. Some very good points have been brought out in correspondence, and it is thought better that the committee be given more time to carefully consider this important matter, especially as they hope to be able to get a specification that will meet with the general approval of the majority of the committee.

BUCYRUS

STEAM

SHOVELS



Bucyrus Shovels are admitted to be the best for heavy digging and strenuous work.

We also solicit enquiries for **Bucyrus Improved Ballast Plows and Heyworth-Newman Drag-Line Excavators.** Order now for early delivery.

Primitive and Wasteful Manner of Laying Out and Constructing Transportation Lines.

Col. H. N. Ruttan, President Canadian Society of Civil Engineers, read the following address at the annual meeting in Winnipeg recently:

Engineering was some 80 years ago defined by Thomas Tredgold as "the art of directing the great sources of power in nature for the use and convenience of man." At the beginning of the twentieth century it has become apparent not only to engineers, but to all those who have the interests of posterity at heart, that the great sources of power in nature should not only be directed, but that they should be economically managed and conserved, so that Tredgold's definition may now properly read, "The art of directing and conserving the great sources of power in nature for the use and convenience of man."

Anything approaching an exhaustive discussion on the subject, one on which volumes might be written, is not now intended. It may be pointed out that among the wastes which have been permitted throughout the past are:

1. The impoverishment of the lands. The gradual conversion of what were productive areas into barren wastes, examples of which may be seen in older parts of Asia and Europe, and, unfortunately, to an appreciable extent, in North America.

2. Following the exhaustion of the soil, and keeping pace with it, has been the destruction of the forests; and

3. The unbalancing and perhaps the lessening, of precipitation, so that rains come when they are not wanted and fail when they are indispensible for successful agriculture.

4. The primitive and wasteful manner in which transportation lines are laid out and constructed.

It is the last paragraph only with which it is proposed to deal in the present address. The requirements of modern civilization demand not only that people be carried at express speed from one quarter of the globe to another, but that every food and fabric grown and produced be distributed broadcast for the use and convenience of man. The rush to meet these requirements has led to the abnormal development of transportation routes, which, though good in themselves and generally advantageous, have often, with a total disregard of economic arrangement, been improperly located or needlessly multiplied in one section to the inconvenience of another. The necessary requirements in the initiation and construction of transportation lines may be stated as follows: A thorough knowledge of the country to be served, both in its physical features and its capabilities for production. That this knowledge be utilized in the location of lines of transportation, so that the greatest service be provided at a minimum ultimate cost against the traffic using the lines.

Before going further it may be well to consider to what extent these requirements are at present met. A study of the railway systems of any country must lead to the conclusion that no effective system of supervision has been exercised in the locations of the systems to meet the economic requirements above stated. Much comparatively useless road has been constructed for the purpose of enabling one set of capitalists to take tolls on traffic which could have been easily handled by an existing line. Instances appear where productive districts, separated by unproductive or partially unproductive country, are connected by lines running full length through the unproductive land, whereas a single line would have served the traffic of several converging railways. All this largely increases the capital, interest, maintenance, and management charges, which must be borne by the traffic. Some of the causes contributing to the defective economy referred to are:

Want of knowledge of the country in the construction of the first lines.

The desire of capitalists to share in profits being earned by favorably situated lines.

The ease with which charters for so-called competing lines may be obtained.

The relatively slight interest taken by the public in the location of transportation lines, and the mistaken idea that the construction of any line is advantageous.

This deplorable state of affairs may be remedied in a most simple and inexpensive manner. Before any companies are given franchises by Parliament, both the public and Parliament should insist upon having before them sufficient information to enable them to judge of the effect upon both public and private property of the proposed works. This information may be best given by large scale and accurate plans of the proposed works, such as are required by the standing orders of the House of Commons in England, extracts from which are given in an appendix to this address. In this connection attention is called to the fact that in Canada something should at once be done to arrange for surveys of the country and the preparation of plans similar to the ordnance maps of Great Britain.

A further step forward would be the giving of compulsory running rights over existing lines to companies which may properly participate in the traffic of certain districts, and which cannot do so without heavy expenditure in the construction of parallel lines, which would in themselves be unproductive or which would unnecessarily cut into business which can be readily handled by existing lines.

The remarks on granting charters to railway companies and proposed improvements in procedure apply with equal force to canals, river improvements, and hydro-electric plants. Though Canada is noted for its magnificent canal system and for the progressive and patriotic policies of its governments in this respect, the opening up of the country will necessitate in the immediate future a development far beyond any that has yet taken place. It is therefore most necessary that a broad and intelligent view of the whole situation be taken so that duplication of facilities be avoided and expenditure be made in the interest of and ultimate economy in, capital and operation charges.

Numerous instances might be given illustrating great expenditures which have been made in an ill-considered and extravagant manner in the construction of railways, and of applications to Parliament for charters to construct works, which were both physically and economically impossible to carry out. These have often masked the acquisition by private parties of important assets of the public domain. Such instances are well known to most engineers. It is therefore not necessary to refer directly to them.

It is not intended in any way to discourage development work in the country, but to point out the haphazard and expensive manner in which undertakings for the public service are often carried out, and to suggest what is considered a business-like and common-sense means of conserving, in this respect, the interest of the people at large. It must be remembered that eventually the burden falls upon, and must be borne by, the people. If the construction of an unnecessary mile of railway is prevented, or a mile already constructed is made to do the work of two, the country as a whole will be greatly benefitted.

At first it may appear that the suggested changes in initiating and carrying out public works would, if carried into effect, discourage the construction of works needed for the development of the country and its resources. This, however, would not be the case; on the contrary, the care displayed in scrutinizing projects before they were authorized would give confidence to investors by the assurance that, in the opinion of Parliament, the works were such as were reasonable and proper, and would go far, by the confidence inspired, to facilitate the flow of capital into the country. A charter granted by Parliament under the regulations proposed would be in itself a guarantee that the project was sound and practicable. The criticism called for by these regulations should greatly assist in determining the merits of such projects.

It is, of course, apparent that, in addition to the enormous saving which could be made by the economic location and construction of works for the use and convenience of the public, there are other conditions not less important. For example, the power now possessed by companies to increase capital beyond reasonable limits, and the crude management in operation, now being so much discussed in connection with the claim of the American railways, that rates must be increased to enable them to earn revenue to meet their capital and operation expenses.

In the following conditions the last two are not purely engineering, and need not be further considered at the present time: The economic location and construction of lines of transportation; the limiting of capitalization within reasonable bounds, and the scientific and economical operation of all transportation services, will all three have the effect of reducing rates to a minimum. It is in the first of these that engineers are vitally interested, and their advice to clients will go a long way towards conserving immense sums of capital now wasted in crude and uneconomical locations and constructions. The word economy has no reference to detail, and is used in its broader meaning only. As to economy of designs in detail, there is no fault to be found; on the contrary, all are proud of the bridges, tunnels, and other noted structures which are being constantly turned out by the profession.

In carrying out the proposed system no cumbersome legislative machinery would be required—an amendment to the Railway Act giving the Board of Railway Commissioners power to make regulations for the necessary surveys and plans, and finally to deal with the matters in question, is all that would be necessary.

Extracts from Standing Orders of the British House of Commons.

4. Plans, Books of Reference, Sections and Cross-sections.

40. Every plan required to be deposited shall be drawn to a scale of not less than 4 ins. to a mile, and shall describe the lands which may be taken or used compulsorily, or on which an improvement charge may be imposed, or which are rendered liable to the imposition of an improvement charge, and in the case of bills of the second class, shall also describe the line or situation of the whole of the work (no alternative line or work being in any case permitted), and the lands in or through which it is to be made, maintained, varied, extended, or enlarged, or through which any communication to or from the work may be made; and where it is the intention of the promoters to apply for powers to make any lateral deviation from the line of the proposed work, the limits of such deviation shall be defined upon the plan, and all lands included within such limits shall be marked thereon; and unless

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

the whole of such plan shall be upon a scale of not less than ¼ in. to every 100 ft., an enlarged plan shall be added of any building, yard, courtyard, or land within the curtilage of any building, or of any ground cultivated as a garden, either in the line of the proposed work, or included within the limits of the said deviation, upon a scale of not less than a quarter of an inch to every one hundred feet.

41. In all cases where it is proposed to make, vary, extend, or enlarge any cut, canals, reservoir aqueduct, or navigation, the plan shall describe the brooks and streams to be directly diverted into such intended cut, canal, reservoir, aqueduct, or navigation, or into any variation, extension, or enlargement thereof respectively, for supplying the same with water.

42. In all cases where it is proposed to make, vary, extend, or enlarge any railway, the plan shall exhibit thereon the distances in miles and furlongs from one of the termini; and a memorandum of the radius of every curve not exceeding one mile in length shall be noted on the plan in furlongs and chains; and where tunnelling as a substitute for open cutting is intended, the same shall be marked by a dotted line on the plan, and no work shall be shown as tunnelling in the making of which it will be necessary to cut through or remove the surface soil.

43. If it be intended to divert, widen, or narrow any public carriage road, navigable river, canal, or railway, the course of such diversion and the extent of such widening or narrowing shall be marked upon the plan, and, if it be intended to divert any public footpath, the course of such diversion shall be marked upon the plan.

44. When a railway is intended to form a junction with an existing or authorized line of railway, the course of such existing or authorized line of railway shall be shown on the deposited plan for a distance of 800 yards on either side of the proposed junction, on the same scale as the scale of the general plan.

48. In cases of bills for improving the navigation of any river, there shall be a section which shall specify the levels of both banks of such river; and where any alteration is intended to be made therein it shall describe the same by feet and inches, or decimal parts of a foot.

49. In every section of a railway the line of the railway marked thereon shall correspond with the upper surface of the rails.

50. Distances on the datum line shall be marked in miles and furlongs, to correspond with those on the plan; a vertical measure from the datum line to the line of the railway shall be marked in feet and inches, or decimal parts of a foot, at the commencement and termination of the railway, and at each change of the gradient or inclination thereof; and the proportion or rate of inclination between every two consecutive vertical measures shall also be marked.

51. Wherever the line of the railway is intended to cross any public carriage road, navigable river, canal, or railway, the height of the railway over or depth under the surface thereof, and the height and span of every arch of all bridges and viaducts by which the railway will be carried over the same, shall be marked in figures at every crossing thereof; and where the railway will be carried across any such public carriage road or railway, on the level thereof, such crossing shall be so described on the section; and it shall also be stated if such level will be unaltered.

52. If any alteration be intended in the water-level of any canal, or in the level or rate of inclination of any public carriage road or railway, which will be crossed by the line of railway, then the same shall be stated on the section, and each alteration shall be numbered; and cross-sections, in reference to the numbers on a horizontal scale of not less than 1 in. to every 330 ft., and on a vertical scale of not less than 1 in. to every 40 ft., shall be added, which shall show the present surface of such road, canal, or railway, and the intended surface thereof, when altered; and the greatest of the present and intended rates of inclination of the portion of such road or railway intended to be altered, shall also be marked in figures thereon; and where any public carriage road is crossed on the level, a cross-section of such road shall also be added; and all such cross-sections shall extend for two hundred yards on each side of the centre line of the railway.

55. When a railway is intended to form a junction with an existing or authorized line of railway, the gradient of such existing or authorized line of railway shall be shown on the deposited section, and in connection therewith and on the same scale as the general section, for a distance of 800 yards on either side of the point of junction.

5. Estimates and deposit of money and declarations in certain cases.

56. An estimate of the expense of the undertaking under each bill of the second class shall be made and signed by the person making the same.

◆

Modern Track Tools and How to Use Them.

In writing on this subject I realize how important a matter it is to care for and use tools correctly. I will take the hand car. Its use is to carry men and tools to and fro; also light material. As to the care of hand car I would not overload it at any time nor carry unnecessary tools or material; keep it well oiled and lost motion corrected; would set it off and on track if force is large enough; if not I would turn it off. My way of putting car on track is as follows: One man and foreman constitutes the gang; I use a piece of crossing plank 14 ins. long by 8 by 4; adze it down to ½ in., this will give it a raise of 3½ in. When ready to put car on track pull rear wheels inside of track. Place frog inside of rail; go to front of car, pull around until wheel strikes frog and mounts the rail, then pull the other wheel on track. Two men can put the car on track as easy as four men and just as quick. The old way of pulling car over rails is very hard on the car. Don't place frog parallel with rail. But place one end close to rail, the other 5 inches away so as when wheel mounts the rail it will have full flange bearing and will not crowd over rail while the other wheel is mounting the opposite rail.

The track level is used in leveling track. It should be accurate, no matter how turned or what way you use it. For levelling curves: Know the proper elevation and set level board in accordance. A level board that is not true should not be used; they are very costly if used. Think of a surfacing gang using an untrue board, say ½ in. of level for one season. It would take half of the next season to level what should have been done in the first place. The results are the same on sections, use a poor level two years, then use a true level, note the result. Half the track is ½ in. low. All track levels should be tested before being sent out for use.

The track jack is used principally for raising track. It can be used for lining track, and can also be used around wrecks to good advantage for jacking cars over and clearing track. For raising track always place jack outside of rail in an upright position, to avoid throwing track out of line, and for safety.

The claw bar is used to pull track spikes. It should be made of good material, claws well hollowed out with high heel to pull spike straight up out of ties. Claw bars with low heel should not be used; they pull the spike over and tear part of the tie with it. I think the heels of claw bars should have sharp raised grooves to hold bar from backing away while spike is being pulled.

The tamping bar is used to pack all kinds of ballast under ties; it should have a well shaped blade of good steel, 4 by ½ in. thick or less; the upper end should have a blade 6 by 1 by ¼ in., slightly sharpened to clean surplus ballast from ties to be tamped. The tamping end should be well curved and the handle bent to balance. To get the best results the operator should stand as low as possible, so that tamping blade will drive ballast well under the ties; tamping ties with bar too straight will not drive it under but down, which will do no good to track.

Spike pullers are used to pull spikes where claw bars cannot be used. The ones in use are good, but could be made a little wider at the opening.

Cold chisels are used for cutting small pieces of iron; they are good for marking steel rails that are to be cut with track chisels; should be sharp and carried on car at all times.

Sledges are used for driving fence posts. Are also good to maul joint ties down to surface, but it is best to cover tie face with a large solid piece of elm or some tough wood to avoid bruising its face.

Track gauge is used for gauging track. Can also be used for leveling straight track; in cases of necessity place gauge on track with a small 10-in. level on top; this will do very well. Can also be used to square ties across track. In spiking new ties, place track gauge on track, gauge centre on tie centre, drive the other end to gauge, centre and tie will be square across track, either on curve or straight track.

The tape line is used for measuring anything you wish, but I would condemn the use of the common cloth tape line; nothing but the steel tape should be used, if accurate measurements are wanted, especially for rail measure.

Track drills, lining bars, pinch bars, in fact all track tools should always be kept in the very best of condition. No two men use the same tools alike. In fact a very small per cent. of laborers know how to use all tools correctly. Railway companies should furnish the best of tools to their employes and they in turn would take better care of them, especially the pick and shovel. To describe how to use them is a hard proposition. Volumes could be written on this subject and very little accomplished. I make a business of keeping all edge tools sharp, and all other tools in good condition. By "Rail Joint," in Roadmaster and Foreman.

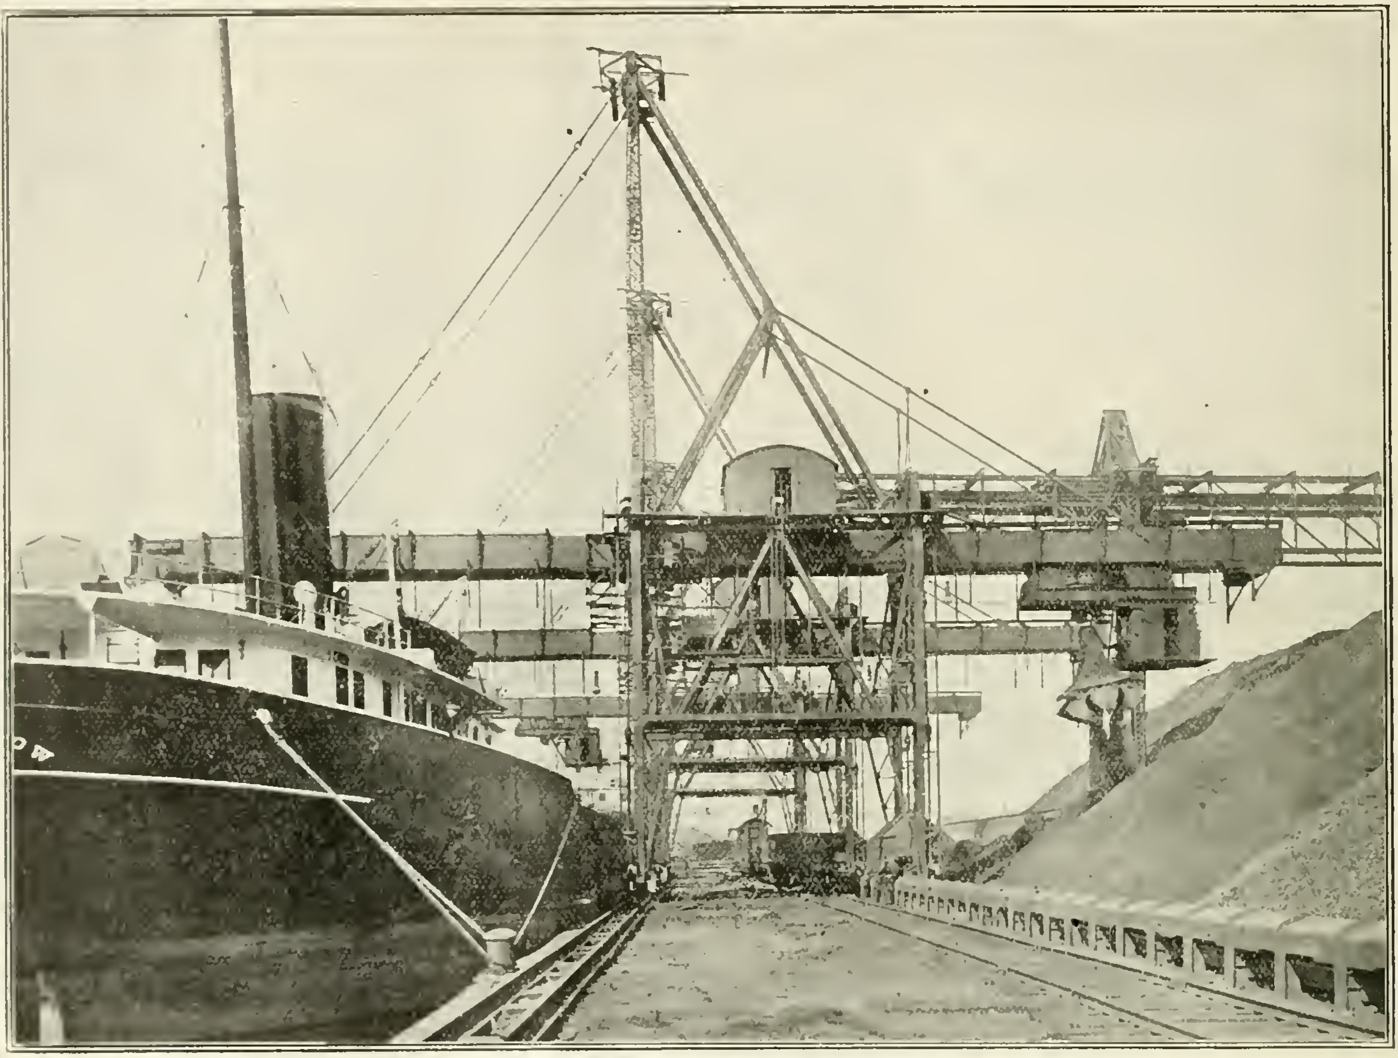
Cross-wall Railway Bridge, Quebec.—The railway bridge which the Quebec Harbor Commissioners are about to build, is at the entrance to the wet dock of Princess Louise Embarkment and docks. The superstructure will consist of a single leaf, single track bridge of the bascule type, having a clear span of 74 ft. 4 in., and giving 22 ft. headroom. The trusses will be 22½ ft. centre to centre. The bridge will give connection between the railway tracks on the two sides of the wet-dock and tidal basin. The contract has been given to the Dominion Bridge Co., Montreal.



WISCONSIN STEEL CO., South Chicago, Ill. Three fast plants.

Rails, Fastenings and Tie Plates.

At the annual meeting of the Canadian Society of Civil Engineers in Winnipeg recently, H. G. Kelley, Chief Engineer G.T.R., Chairman of the committee, presented the following report:

At the annual meeting two years ago your committee on rails, fastenings and tie-plates, presented drawings of the various sections of rail used as standard by the railways of Canada and the United States, and also of some sections which had been proposed and were then being placed in service experimentally. At the last annual meeting your committee reported upon a standard drop testing machine, which received the approval of the Society, and which is now in universal use in the mills of both countries. The experiments with the new sections have not progressed sufficiently for your committee to present a statement of the results in this report, but the use of the new testing machine is proving most satisfactory, and is producing a uniformity of results in the physical tests at the different mills, which is of much value in the collation of statistics.

In considering the subjects for this year's report, it has seemed to your committee, that the next logical step is to consider the service to which a rail is subjected, and the physical qualities requisite for such a rail, leaving for future investigations the consideration of how such physical qualities can be obtained.

With the increasing traffic of railways there followed naturally and of necessity an increase in car capacity and of engine weights. From a freight car weighing about 16,000 lbs., with a carrying capacity of 20,000 lbs., there came gradually an increase to cars having a carrying capacity of 40,000 lbs., 60,000 lbs., 80,000 lbs., and finally 100,000 lbs., with an allowable overload of 10%. In this transition of car weight and capacity, it is interesting to note, that whereas the cars weighing 16,000 lbs., had a carrying capacity of 125% of their empty weight, that the cars of to-day carrying 100,000 lbs., with a maximum empty weight of 40,000 lbs., have a carrying capacity of 250% of their empty weight. Freight cars having originally about 36,000 lbs., upon 8 wheels, or 4,500 lbs. a wheel, were superseded gradually by cars having, when overloaded 10%, 150,000 lbs. upon 8 wheels, or 18,667 lbs. a wheel. Engines having 12,000 lbs. per driving axle, or 6,000 lbs. per driving wheel, gave place to engines having 50,000 lbs. per axle, or 25,000 lbs. per driving wheel.

The original weight of rails varied from 35 to 45 lbs. a yard, but with the increasing weight of equipment the change was rapidly made to 56, 60, 65, 72, 80, and finally to as high as 100 lbs. per yard. The effects of these heavy loads upon track having been investigated both theoretically by mathematical analysis and practically by carefully conducted tests upon the rail and track, under actual train movements. Allowing 100% for the impact of rapidly moving trains over the standard track in use in this country, with engine axle loading of 50,000 lbs., we obtain the following, in which the third column would probably be more nearly the correct one theoretically, provided the stresses were due to the effect of the assumed load only.

Weight of rail per yard	Fibre stress per square inch (Tension)	
	Between 3 ties as a continuous girder having stable supports.	Between 3 ties as a continuous girder having an unstable centre support
60 lbs.	24,878 lbs.	28,000 lbs.
80 lbs.	16,668 lbs.	18,750 lbs.
100 lbs.	11,417 lbs.	12,842 lbs.

The stresses shown in column 3 do not reflect accurately the actual condition to which a rail may be subjected, for there is a reversion of stress of tension to compression like the swing of a pendulum under the passage of every wheel. In addition, the rail is subjected to a continual series of shocks, due to imperfect counter-balancing of engines, flat spots on wheels, irregularity of track surface, the oscillation and jar of equipment, the tension due to contraction in a falling temperature, and the effect of the tractive force of the engines.

To determine the actual effect upon rails by passing trains, a series of careful experiments were conducted on the New York Central and Hudson River Rd., with a delicate automatic recording machine, by which the actual deformation of the rail could be measured for each passing wheel of a train, and the actual stresses in the rail determined. These investigations demonstrated that at speeds of 30 to 40 miles per hour, engines having about 20,000 lbs. upon a driving wheel would produce tension stresses in the bottom flange of 80 lb. rails somewhere in excess of that shown in the third column of the preceding table, but well within the safe allowable limits of unit stress for good rail steel.

Experiments upon joints have also shown that a tensile stress of 12,000 lbs. per sq. in. could be produced in the unloaded rail due to its contraction in a falling temperature, before the grip of the angle bars would permit the rail to slip and relieve itself. An accumulation of these varied stresses in the lighter sections of rail, might therefore bring the total stress up close to the "elastic limit" or "yield point" of some of the rail steel.

The question has sometimes been asked, has the weight of the rail section increased as rapidly as the wheel loading? To this may be answered, yes. In the days when a 60 lb. rail section was a common standard, an engine axle loading of 24,000 lbs. was not infrequent; this loading produced a tension in the rail under the conditions of column 3 of the table of 13,440 lbs. per sq. in., as compared with 12,842 lbs. per sq. in. for a 100 lb. rail, under an axle loading of 50,000 lbs.

From a study of the preceding conditions it is evident that certain physical characteristics must be secured, in a steel rail, to meet the requirements of modern transportation necessities; briefly these may be recalled as follows: The steel must be sound and free from physical defects. It must be sufficiently hard to resist abrasion reasonably and also deformation of section. It must be of uniform texture, tough, but not brittle. It must have a high limit of elasticity and ultimate tensile strength.

The question naturally arises, can such a rail steel be produced? The answer is, that it has been produced in the past, that it is produced today, although not uniformly, and therefore, that it should be produced uniformly in the future. How to produce a rail steel uniformly possessing such qualities, and how to identify positively when such a steel has been produced, is a work, first, for the manufacturers, and second, for the manufacturers and users of rail jointly, and this knowledge must be the basis of a satisfactory specification in the future. That such a result can be reached is earnestly to be hoped, but it will require the co-operation and serious endeavor of both interests to accomplish this most desired and necessary result.

From A Chief Engineer of Surveys, Construction and Maintenance.

R. S. McCormick, Chief Engineer of the Algoma Central & Hudson Bay Railway, the Manitoulin & North Shore Railway, and the International Transit Company, Sault Ste. Marie, Ont., in renewing his subscription for the current year, writes:—

"I cannot do without the Railway and Marine World. It is the best magazine for the money published."

Officers Canadian Society of Civil Engineers.

Following are the officers for the current year, as elected at the annual meeting at Winnipeg recently:—

President—C. H. Rust, City Engineer, Toronto.

Vice Presidents—H. Holgate, Montreal; C. E. W. Dodwell, Resident Engineer Public Works Department, Halifax, N.S.

Councillors—District 1, Professor L. A. Herdt, M.A.E., E. E. McGill University, Montreal; Phelps Johnston, Vice President Dominion Bridge Co., Montreal; H. G. Kelley, Chief Engineer G.T.R., Montreal; J. M. Shanly, Consulting Engineer, Montreal; J. G. Sullivan, Assistant Chief Engineer C.P.R., Winnipeg; H. H. Vaughan, Assistant to Vice President C.P.R., Montreal. District 2, P. S. Archibald, Commissioner New Brunswick Coal and Ry. Co., General Manager Elgin and Havelock Ry., Moncton, N.B.; F. W. W. Doane, City Engineer, Halifax, N.S.; R. McColl, Provincial Engineer, Halifax, N.S. District 3, A. E. Doucet, District Engineer National Transcontinental Ry., Quebec; J. T. Morkell, Enginer Quebec Central Ry., Sherbrooke, Que.; P. E. Parent, District Engineer Marine Department, Quebec. District 4, C. R. Coutlee, District Engineer Georgian Bay Ship Canal, Ottawa; D. MacPherson, Assistant Chief Engineer National Transcontinental Ry., Ottawa; W. J. Stewart, Chief Hydrographer, Marine Department, Ottawa. District 5, Prof. H. E. T. Haultain, C.E., Toronto University, Toronto; A. F. Stewart, Chief Engineer Mackenzie, Mann & Co., Toronto; C. L. Fellowes, Deputy City Engineer, Toronto. District 6, Prof. E. E. Brydone-Jack, B.A., C.E., Manitoba University, Winnipeg; J. A. Hesketh, Assistant Engineer C.P.R., Winnipeg; J. G. Legrand, Bridge Engineer G.T. Pacific Ry., Winnipeg. District 7, F. F. Busteed, General Superintendent C.P.R., Vancouver; J. S. Dennis, Manager Irrigation Department Alberta and B.C. Land Departments C.P.R., Calgary, Alta.; J. H. Kennedy, C.E., Chief Engineer Vancouver, Victoria and Eastern Ry., Keremeos, B.C.

◆

St. Leonards-Van Buren Bridge.—In connection with the bridge being erected between these points by a commission representing Canada and the State of Maine, a bill is under consideration by the Maine Legislature providing for the incorporation of a company with the title of the St. John River Toll Bridge Co., with a capital of $40,000, to build a bridge and to charge tolls. The provisional directors are:—W. H. Cunliffe, F. W. Mallett, A. G. Finlayson, D. C. Burpee, J. R. Burpee, and W. D. Burpee. (Feb., pg. 135.)

The Lethbridge, Alta., Herald, in copying considerable matter from our January issue, said:—"The Railway and Marine World is a mine of information on railway and marine matters."

The Board of Railway Commissioners, which has under consideration the question of transcontinental rates from Winnipeg westbound, as distinguished from those from Vancouver eastward, will not deal with the matter finally until the next sitting in Vancouver, which will probably be held in the spring.

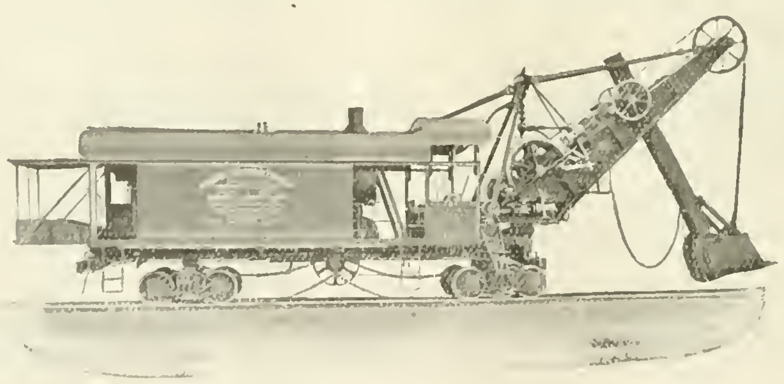
ROTARY SNOW PLOWS

CANADIAN
PACIFIC
4241

Rotary Snow Plows have been in successful operation under the most trying conditions for over twenty-five years.
They keep the road open.
Work with certainty and regularity.
Do not spread the rails.
Do not derail.
Heavy snowstorms and deep drifts increase operating expenses
No snow too heavy or too hard for the Rotary.
No drift too deep.

THE NEW ATLANTIC STEAM SHOVEL

SIMPLE - STURDY



For heavy or light digging.
No chain troubles.
Few repairs.
Not top heavy.
Saves fuel.

MONTREAL LOCOMOTIVE WORKS, LTD.

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—The second instalment of interest on the $7,500,000 bonds of this company has been paid by the province of Alberta under its guarantee. The proceeds of the bond issue are lying in the banks or have been paid into court, pending a legal decision. (Feb., pg. 109.)

Alberta Central Ry.—The Minister of Railways has approved route plans from Rocky Mountain House to the Yellowhead Pass, Alta; and the Board of Railway Commissioners, Feb. 2, approved location plans between mileage 63 and 75 from Red Deer. (Feb., pg. 109.)

Alberta Ry. and Irrigation Co.—In discussing the company's bill in the House of Commons recently for an extension of time and for power to build certain lines, an amendment was proposed to compel the building of one of the proposed lines through Pincher Creek, instead of about three miles to the east. It was stated on behalf of the C.P.R., which acquired control of the A.R. and I. Co. some time ago, that there were engineering difficulties in the way of building the line as suggested. Several western members contended that there were no difficulties in the way, that the gradient between Cardston and Pincher Creek was less than one per cent., and that another company had completed a survey for a line with that gradient. The matter was, on Feb. 3, adjourned for further consideration. (Nov., 1910, pg. 909.)

Algoma Central and Hudson Bay Ry.—In continuance of the betterments which have been in progress during the past year, the company proposes this year to fill all timber trestles between Sault Ste. Marie, Ont., and mileage 69, to lay out new terminal yards at Sault Ste. Marie, and to build a new station there.

Work is reported to be progressing rapidly on the extensions of the line. The O'Boyle Construction Co. has the general contract, and sub-contractors working on the lines are: Murdock Bros., Gorman & Co., Hick & Furlong, H. Day and T. Trombley. (Feb., pg. 109.)

Brandon Transfer Ry.—According to a letter recently received by the Brandon, Man., city council, H. A. K. Drury, the Board of Railway Commissioner's Engineer at Winnipeg, has been instructed to discuss with the Canadian Northern Ry., the C.P.R., and the Great Northern Ry. representatives, the question of a route for this projected railway. (May, 1909, pg. 355.)

British Columbia and Alaska Ry.—We are advised that it has not been decided when construction will be started, but that it is expected that some work will be done this year. (Feb., pg. 109.)

British Columbia and Dawson Ry.—The Dominion Parliament has under consideration an application for the incorporation of a company with this title to build a railway from Lytton to Fort George, and from Telegraph Creek, B.C., to Dawson city, Yukon with a branch from Ashcroft to Vancouver. The provisional directors are: J. Walkenstein, A. T. Sullivan, C. G. Young, New York; J. O. Clifford, Chicago, Ill. (Nov., 1910, pg. 909. See also British Columbia and Alaska Ry., Feb., pg. 109.)

British Columbia and White River Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a line of railway from the International boundary at Bear Creek, B.C., to the Chilkat River, and northwesterly to the Alsek River, and on to White River, then to the International boundary between Yukon and Alaska, between the 62nd and 64th parallels. The provisional directors are: C. M. Marpole, G. Wilson, G. E. MacDonald, Angus McDonnell, Jas. Ironside, Vancouver, B.C.; J. Rosene, Seattle, Wash. (Dec., 1910, pg. 1013.)

Canadian Inter-Mountain Ry. — The provisional directors named in the application to the Dominion Parliament for the incorporation of a company to build the lines mentioned in our Jan. issue are: J. A. Harvey, W. Clayton, W. Warner, E. W. Bigelow, Vancouver, B.C. (Jan., pg. 21.)

Charlton to Elk Lake.—A deputation representing the Gowganda district waited upon the Ontario Government Feb. 15, to urge the granting of a right to a private company to build a line from Charlton or Uno Park, on the Temiskaming and Northern Ontario Ry. A company has been in negotiation for the building of this line since 1909, and the principal concession which the deputation asked was that the Government would not build a branch line in opposition.

Development Co. of Canada.—The Quebec Legislature is being asked to incorporate a company with this title to, among other things, build the following railways: from its mill site at Paugan Falls, Ottawa county, to the C.P.R.; from its mill site at Guigues, in Ottawa county, to the western boundary of the province, or in the alternative, to the C.P.R. Authority is asked to operate the lines by steam, electricity or any other motive power. The provisional directors are: R. H. Welden, C. W. Batho, W. B. Smith, Montreal.

Dominion Atlantic Ry.—A press report states that plans have been completed for the strengthening of a number of bridges, and for the building of a new bridge at Digby, N.S., on the location made by the old Western Counties Ry., and that the work will be put in hand at once. The building of a new bridge, it is stated, will enable the company to abandon a portion of the present route, which includes two bridges, and will give a shorter and better approach to Digby. (June, 1910, pg. 447.)

Great Lakes and Hudson Bay Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title, to build a railway, to be operated by steam or electricity, or both, from near Peninsula Bay, on the coast of Lake Superior, following the Pic River northerly and northwesterly to Martin Falls near the northerly boundary of the province, with connecting lines, northerly or northeasterly to Hudson Bay, by way of the Kenogami River, Albany River, or other more direct course. Fullerton, Macdonald and Lytle, Toronto, are solicitors for applicants.

Ha Ha Bay Ry.—The branch line to Laterriere village, seven miles, starts from the main line at Riviere du Moulin, Que. The contractors, Boulianne and Boulianne, have started work, and expect to have the grading completed by July. (Feb., pg. 111.)

Halifax and South Western Ry.—See Liverpool and Milton Ry.

High River, Saskatchewan, and Hudson Bay Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from some point in tps. 25 to 29, range one, west fourth meridian, Alta., northeasterly through Saskatoon, to the eastern boundary of Saskatchewan, in tps. 52 to 56, thence northeasterly to the Pas, in the Northwest Territories. Ballachy and Black, High River, Alta., are solicitors for applicants. (See High River and Hudson Bay Ry., Feb., pg. 111.)

Intercolonial Ry.—The Minister of Railways made the following statement in the House of Commons Jan. 30, in reference to dock accommodation at Halifax, N.S.:—"Some few months ago the Government Railways Managing Board visited Halifax and decided that some improvements in the way of additional accommodation should be made there. The department authorized the engagement of John Kennedy, of Montreal, who is an expert in harbor matters, to go to Halifax, make an investigation and report as to what was needed. His report has not come in yet, and it is too late to do anything this season. In the meantime some temporary arrangements were made to handle the traffic as well as possible this year. We hope in a few days to receive Mr. Kennedy's report and to take into consideration the much needed improvements with regard to wharf accommodation at Halifax during the coming year." (Feb., pg. 111.)

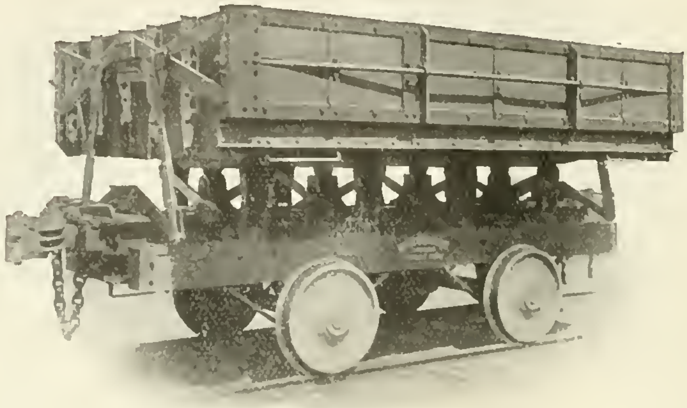
Joliette and Lake Manuan Colonization Ry.—The Dominion Parliament is being asked to extend the time within which the company may build its projected line from Joliette to Lake Manuan, Que., and to authorize the building of a line from Joliette southerly through Montcalm, L'Assomption and Hochelaga counties to Montreal. (Sept., 1910, pg. 727.)

Kettle Valley Lines.—Tracklaying is reported to be progressing between Midway and Rock Creek, 12 miles, and between Merritt and the crossing of the Coldwater River, B.C., on the portions of the extension under contract. About 20 miles of steel was reported to have been laid on the two sections Jan. 31. The Midway-Rock Creek section of 10 miles was reported laid Feb. 8, and according to the present rate of progress the Merritt-Coldwater River section is expected to be completed by Aug. 31. The location surveys for the route between the Coldwater Divide and Aspen Grove are reported to have been completed. N. E. Brooks and W. Gourlay are making surveys in the vicinity of Penticton and Trout Creek. (Feb., pg. 111.)

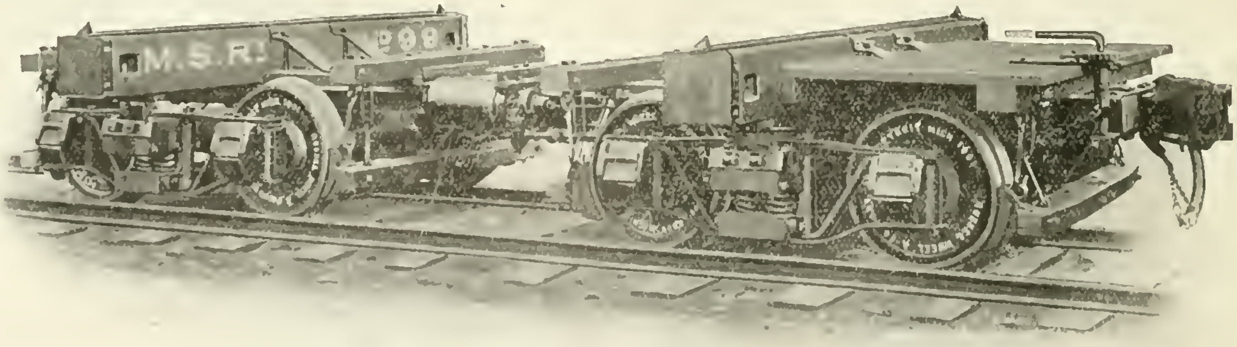
Kootenay and Alberta Ry.—The Board of Railway Commissioners has approved location plans for this projected railway from Pincher to Beaver Creek, Alta., mileage 0 to 13.09. (Jan., pg. 23.)

Liverpool and Milton Ry.—In connection with the contract under the Dominion act, granting subsidies in aid of certain railways, recently entered into, we are advised that the L. and M. Ry. was originally constructed as the L. and M. Tramway, and ran along the main road for most of the distance. This road ran from the pulp mills above Milton to Liverpool. A subsidy was voted some years ago by the Dominion Parliament, and has been revoted at various times since. This tramway, which was always operated by steam, was moved off the street in a number of places, but the gradients were heavy and the curves sharp, the road being of such a class as could not be passed for subsidy purposes. When the Halifax and South Western Ry. was built it was found that a good deal of freight would pass over the L. and M. R., and it became necessary to reduce the gradients and curves to allow an interchange of traffic. The Nova Scotia Government agreed to advance a certain sum to the L. and M.R. on a mortgage to make the necessary improvements to bring it up to the standard, so that it could obtain the subsidy. This work was virtually completed about a year ago, but no subsidy contract was made until recently. The line, which is five miles long, is now completed. Negotiations have been car-

Russel Heavy Duty Dump Cars



The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

ried on during the past year with the H. and S.W.R. for the purchase by it of the L. and M.R. The company was given authority by the Nova Scotia Legislature in 1910 to extend its line to Caledonia, about 25 miles. It is not possible to say at present whether any work will be gone on with on this extension in the near future or not. (Feb., pg. 155.)

Manitoulin and North Shore Ry.—Application is being made to the Dominion Parliament to change the name of the company to the Algoma Eastern Ry.

We are officially advised that the shop which has been erected at Clara Belle is not a locomotive repair shop, as press reports stated, but a car repair shop, and that it is a very small one. (Feb., pg. 111.)

Montreal and Great Eastern Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Montreal by way of Joliette and Lake Manuan, or by the most feasible route, to the National Transcontinental Ry. at Weymontachene, Que. In addition to asking power to enter into agreements with the G. T. Pacific Ry., the C.P.R., the Canadian Northern Quebec Ry., or any other railway crossed or to be connected with the projected railway, it is desired to have power to acquire the rights, etc., of the Joliette and Lake Manuan Colonization Ry. J. A. Ritchie, Ottawa, is solicitor for the applicants. (See Joliette and Lake Manuan Colonization Ry.)

Montreal and Northern Colonization Ry.—The provisional directors mentioned in the application to the Quebec Legislature for the incorporation of a company with this title are A. Geoffrion, K.C., V. Cusson, K.C., and L. Dansareau, Montreal. Power is asked to build a railway northerly from Montreal, the northerly terminal to be approved by the Governor General in Council, to build underground railways in Montreal, and for general powers as to the building of railway and general traffic bridges. The Montreal city council has authorized steps to be taken to see that the city's interests are protected when the bill is under consideration in the Legislature. (Feb., pg. 111.)

Montreal Central Terminal Ry.—The Montreal board of control has been informed by J. M. Shanly, President M.C.T.R., that it is intended to secure a location in the heart of the city, on which will be built a terminal station with underground and surface approaches. All trains coming from the south will reach the city by a subway beneath the St. Lawrence, while all incoming lines from other directions will be provided for by means of depressed lines, the existing approaches to the city being utilized therefor, and no appreciable change in the existing grades being affected. There will be no level crossings under the new conditions. Substations will be provided at various points in the city, in order to facilitate the transfer of passengers, baggage and freight. The incoming lines could, if necessary, connect with the existing street railway surface lines, and the latter lines would be used for the collection of freight throughout the city. The subways needed will be constructed, as far as possible, on private property, the city thoroughfares being utilized only when necessary.

Letters have also been received by the board of control from D. McNicoll, Vice President C.P.R., and C. M. Hays, President G.T.R., stating that with the improvements being made and in contemplation at their existing terminals, they see no advantage in the M.C.T.R. Co.'s plans. (Feb., pg. 113.)

Mountain Coal and Colonization Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a line from the G.T. Pacific Ry. branch now under construction, to the Yellow Head Pass Coal Co.'s lands, to tp. 46, range 23, west 5th meridian, with branches to the various coal mines along its route. Short, Wood, Biggar and Collisson, Edmonton, Alta., are solicitors for applicants.

New Ontario and Quebec Ry.—Application is being made to the Dominion Parliament to incorporate a company to build a railway from mileage 940 on the National Transcontinental Ry. in the province of Quebec, southerly around the east end of Upper Lake Abitibi, about 15 miles, through Matheson tp., Ont., to Tisdale tp., 95 miles, thence southwesterly to a junction with the James Bay Ry. near Congdon Station, or mileage 131, about 50 miles, making a total of about 160 miles; a line from near mileage 1,000, on the N.T. Ry. southerly along the west side of Abitibi Lake to a junction with the first mentioned line, being about 25 miles; a line from Iroquois Falls station, on the Temiskaming and Northern Ontario Ry. northerly and easterly along the Abitibi River, to a junction with the last mentioned line, about 25 miles. H. Fisher, Ottawa, is solicitor for applicants.

New Westminster Bridge.—The financial statement of British Columbia for the year ended Mar. 31, 1910, recently presented to the Legislature shows that the expenditure on the New Westminster Bridge was $94,108.78, of which $25,794.26 was on account of new flooring; $22,942.58 on account of repainting, and $12,648 for a new interlocking system. The bridge is used by the Great Northern Ry., by the B.C. Electric Ry., and by the general public. The bridge tolls received during the year were $29,901.35, the largest amount received since the bridge was opened during the financial year 1904-05.

Owen Sound and Meaford Ry.—See Simcoe, Grey and Bruce Ry. (Dec., 1910, pg. 1015.)

Pacific and Peace River Ry.—The provisional directors named in the application to the Dominion Parliament for the incorporation of a company with this title are: L. R. Lemarchand, V. Pujebet, A. Michelet, Edmonton, Alta.; E. Brunet, Havre, France; G. Pujebet, Andrincq, France; P. Bounet, Montbron, France, and A. Clement, Perigueux, France. The proposed railway would run from Bella Coola, B.C., to Fort McLeod, thence through the Pine Pass to Peace River, at Dunvegan, Alta., about 480 miles. (Dec., 1910, pg. 1015.)

Pere Marquette Rd.—Press reports state that the enlargement and improvement of the company's shops at St. Thomas, Ont., is under consideration. (Mar., 1909, pg. 175.)

Prince Edward Island Ry.—A Charlottetown, P.E.I., press report states that the building of what is known as the North Shore branch will be proceeded with at an early date. This line will, it is said, connect Kensington and New London, a distance of about 12 miles. (Feb., pg. 113, and Dec., 1910, pg. 1015.)

Prince Edward Island Tunnel.—In a discussion in the House of Commons with respect to the possibility of building a tunnel between Prince Edward Island and New Brunswick, the Minister of Public Works stated, Jan. 23, that he intended to submit a motion during the present session to have a survey made. (Oct., 1910, pg. 831.)

Railway to Hudson Bay.—It is expected that an announcement will shortly be made by the Dominion Government with respect to the policy to be pursued in regard to the building of the railway to Hudson Bay. The Saskatchewan Legislature has had under consideration a resolution favoring Government ownership and operation of the line. (Feb., pg. 105.)

Reid Newfoundland Ry.—The residents of the Burin district of Newfoundland are petitioning the Government to consider the building of a branch line from Come-by-Chance, or some other point on the main line, through the district to Baine Harbor. The branch would serve a population of about 20,000. (Feb., pg. 155.)

St. John Valley Ry.—We are officially advised that the preliminary surveys, made by engineers under the direction of D. F. Maxwell as Chief Engineer of Survey for the New Brunswick Government, have been completed and the estimates made. The report has been submitted to the Government, and it is expected it will soon be made public. The surveys cover the following sections of the route:—Fredericton to St. John, 74 miles; Evandale to Westfield, 20 miles; Westfield to Hampstead, 25 miles; Woodstock to River du Chute, via Sackville and Centreville, 44 miles.

The Minister of Railways gave notice in the House of Commons, Feb. 6, that he would bring forward a resolution authorizing the Government to lease the projected line from the New Brunswick Government, on its completion, for 99 years, for 40% of the gross receipts. The line will extend from St. John to Grand Falls, on the National Transcontinental Ry., 220 miles, and is to be built to the N.T.R. standard. The notice of motion provides that the Government may enter into a contract for the operation of the road in sections when completed and equipped, from Fredericton to Woodstock, from Fredericton south, 50 miles, and for each 25 miles thereafter until the line becomes completed and equipped from Grand Falls to St. John. (Feb., pg. 113.)

The St. Louis and Richibucto Ry. is an extension of the Kent Northern Ry. from near Richibucto to St. Louis, N.B., about seven miles. About 15 years ago, owing to the collapse of a bridge, the line ceased to be operated, and it has since lain derelict. A petition has been forwarded to the Minister of Railways asking that the line be inspected with a view of its being taken over in connection with other lines by the Intercolonial Ry. The applicants state that the line could be put in order at a small expense, as, with the exception of the fallen bridge, and decayed ties, it is in good condition. (See Kent Northern Ry., Dec., 1907, pg. 889.)

Sarnia, Chatham and Windsor Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Sarnia to Chatham, and thence to Windsor, Ont., with ferry boats across the Detroit and St. Clair rivers. Pringle and Guthrie, Ottawa, are solicitors for applicants.

Saskatoon and Hudson Bay Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Saskatoon northeasterly to Melfort, Sask., thence to Pas Mission, about 200 miles. The provisional directors are:—F. O. Fowler, Winnipeg; V. T. Bartram, Toronto; C. O. Foss, St. John, N.B.; H. Pardee, Philadelphia, Pa.; J. B. Craven, New York city. (Dec., 1910, pg. 1013.)

Shaw Lumber and Ry. Co.—Application is being made to the Saskatchewan Legislature to incorporate a company with this title to carry on a general lumbering business, and in connection therewith to build railways as follows: from Shaw's Siding southwesterly for 30 miles to timber limit 981, with a branch of 15 miles to the northern part of tp. 43, range 10, west second meridian, and from Shaw's Siding northerly for 30 miles to timber limit 960. The provisional directors are T. Shaw, Jas. Shaw, Dauphin, Man., and J. C. Shaw, Prairie River, Sask. (Feb., pg. 113.)

Telephone Train Despatching

Despatcher's Office.

No relays—only one contact—high speed—is not polarized. High efficiency transmission. Lines in complete control of despatcher. No physical effort to call way station.

MONTREAL TORONTO WINNIPEG REGINA CALGARY VANCOUVER

Simcoe, Grey and Bruce Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Southampton to Orillia, Ont., passing through Owen Sound, Meaford, Thornbury and Collingwood. The provisional directors are:—C. M. Bowman, Southampton; J. B. Tudhope, Orillia; W. T. Toner, Collingwood; H. Pedwell, Thornbury; H. Cleland, Meaford; S. J. Parker, J. McLaughlan, C. Eaton, F. W. Harrison, E. Lemon, R. McDowell, B. Allen, A. G. Mackay, Owen Sound. The bill was opposed in the House of Commons by the Ontario Government on the ground that the proposed company was one which should be under provincial jurisdiction. On the other hand, it was pointed out that the company proposed to carry on a business as steamship owners on the Great Lakes, with vessels running to U.S. ports. The bill was finally passed.

In the course of his inaugural address recently the mayor Owen Sound said the Meaford railway proposition (or better still, a railway from Orillia to Kincardine, via Collingwood, Meaford, Owen Sound, Allenford and Southampton) would be submitted for consideration during the year. A proposal was well advanced to build a railway from Meaford to Owen Sound, and the council would be asked to act in the same very shortly. (See Owen Sound and Meaford Ry., Dec., 1910, pg. 1015.)

Temiskaming and Northern Ontario Ry.—The speech from the throne at the recent opening of the Ontario Legislature stated that during the past year the line had been fully completed to a junction with the National Transcontinental Ry. at Cochrane, Ont., and that the Government was building a branch line into the Porcupine country, which it was expected to have completed by June 30.

On returning from a recent inspection of the line, J. L. Englehart, Chairman of the Commission, said the proposed terminus of the branch would be about a mile west of the southerly end of Porcupine Lake. Construction was being gone on with at a satisfactory rate, and the line would be completed by June 30. The Chief Engineer stated that there were 700 men at work, and it was expected that an additional 500 would be at work by Feb. 28.

The question of the building of a branch to Gowganda is being urged by the people of the district, and a deputation waited on the Government Feb. 15 to advocate it. (Feb., pg. 113.)

The Northern New Brunswick and Seaboard Ry., from Nipisiguit Jct., on the Intercolonial Ry., to the Bathurst iron mines, N.B., 16.9 miles, has been completed. The contractors were A. and A. W. Wheaton. (Oct., 1910, pg. 827.)

The Toronto, Hamilton and Buffalo Ry. is reported to have secured options on a considerable area of property in the northeastern section of Hamilton, Ont., with the object of building a spur line to the Canadian Westinghouse Co.'s works and other industrial establishments. The matter is expected to come before the city council at an early date in the form of an application to build the line across Princess St. (Feb., pg. 115.)

Thunder Bay, Lake Nepigon and St. Joe Ry.—The Port Arthur city council is asking the Ontario Legislature to revise the act incorporating this company, and to authorize the city to acquire the companies' rights and powers, and to proceed with the construction of the railway.

Winnipeg River Ry.—Application is being made for the incorporation of a company with this title to build a railway from Winnipeg to Lac du Bonnet, Man., about 65 miles, with power to build branch lines.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

Freight Rates to and From Kenora.

12685. Sept. 23, 1910.—Re application of the Board of Trade of Kenora, Ont., complaining that rates charged by C.P.R. on inward freight traffic to Kenora from Port Arthur and Fort William, and on outward freight traffic from Kenora, are discriminatory in favor of Winnipeg. It is ordered that the company publish and file on or before Feb. 15, 1911, a freight tariff (or tariffs) placing the rates from Port Arthur and Fort William to all stations intermediate to Winnipeg upon the same relative scale, with due regard to mileage, as the rates from Port Arthur and Fort William to Winnipeg, and that on or before the said date the company publish and file a special "town" tariff of rates on general merchandise distributed from the towns of Kenora and Keewatin.

Mining Students Rates to British Columbia.

12829. Jan. 26.—That the C.P.R. be granted leave to carry a party of mining students of McGill University at a special rate of $40 per capita for the trip from Montreal to Rossland, Phoenix and Greenwood, B.C., and return, or at a rate of $50 per capita from Montreal to Vancouver, B.C., and return, including side trips to Rossland, Phoenix and Greenwood, B.C. That the company be granted leave to carry such party, if desired, over its lines from Sudbury to Sault Ste. Marie and back at proportionate rate per capita of $2.75. That any other parties desiring to travel for the same purpose to British Columbia, or any other mining district, be granted equally favorable terms, until otherwise ordered by the Board.

Montreal Park and Island Ry. Passenger Fares.

12852. Jan. 25.—Re application of Montreal Park & Island Ry. under sec. 331 of the Railway Act. for approval of a standard passenger tariff applying on its lines a rate of 3c. per mile, with a minimum fare of 5c., subject to such special fares, if any, as may be in force under any agreements made by the company with the municipal authorities of the district. It is ordered that the application be refused, and that the company, not later than Feb. 15, 1911, file for the Board's approval a standard passenger tariff specifying a maximum toll of 2½c. per mile, to be charged on the company's existing lines of railway.

Montreal Terminal Ry. Passenger Fares.

12853. Jan. 25.—Re application of Montreal Terminal Ry. under sec. 331 of the Railway Act, for approval of a standard passenger tariff applying on its lines a rate of 3c. per mile, with a minimum fare of 5c., subject to such special fares, if any, as may be in force in any district traversed by the company with the municipal authorities of the district. It is ordered that the application be, and it is hereby refused. And that the company, not later than Feb. 15, 1911, file for the Board's approval a standard passenger tariff specifying a maximum toll of 2½c. per mile, to be charged on the company's existing lines of railway.

Compliance with General Interswitching Orders.

12901. Feb. 6.—Re order 4988, July 8, 1908, known as the General Interswitching Order, and circular letter 58, Dec. 23, 1910, calling the attention of railway companies to the fact that many of their tariffs are not in accordance with the general interswitching order, and requiring that such variation from the order be removed and new tariffs published and filed without delay. Upon its appearing that the requirements of the circular letter have not been complied with, it is ordered that the railway companies whose tariffs of interswitching tolls have not been prepared in accordance with the said order, as amplified in the Assistant Chief Commissioner's judgment of Nov. 26, 1910, file new tariffs of interswitching tolls, in accordance with the provisions of the order, not later than March 1, 1911.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

A. O. Norton, Coaticook, Que., has brought out an entirely new jack which is of interest to railway mechanical men, it being stated that it is four times as fast as other ball-bearing jacks, and absolutely safe and reliable.

The Safety Car Heating and Lighting Co., in its monthly pamphlet, in addition to a number of interesting items, gives detailed descriptions of its remodelled carburetor lamps, old and new hot water heaters and electric deck lamps.

Burton W. Mudge & Co., railway supplies, Chicago, have elected T. H. Garland, a Vice President. His attention will be directed to the development of car ventilating and refrigerating devices, patented by him while Superintendent of Refrigerator Service of the Burlington System.

The Duquesne Steel Foundry at Kendal station has been using oil fuel in two of its open hearth furnaces with Tate, Jones & Co.'s equipment for several years. It is now abandoning the use of natural gas and using oil exclusively, and has let the contract to Tate, Jones & Co., Pittsburgh, Pa., for the equipment of its last and third furnace with the Kirkwood system.

The Northern Engineering Works, Detroit, Mich., has issued its crane catalogue 30, fully describing and illustrating the various classes of cranes made. The illustrations include among other cranes in operation in railway car shops, and car shop yards, foundry service, electric power plant, power stations, for lifting car bodies, locomotive cranes, coal storage electric transfer cranes, etc.

The Pay As You Enter Car Corporation issue of $250,000 7% cumulative preferred stock at par, with a bonus of 30% of common stock, is reported to have been fully subscribed. The authorized capital is $5,000,000, of which is issued, $1,500,000 cumulative preferred stock at 7% and $2,500,000 common stock. There is also $1,000,000 of common treasury stock. The earnings for 1910 were $365,000, from which $105,000 preferred interest was paid. It is announced that the Pay Within Car Co., which owns certain patents considered to be advantageous, has been absorbed. Duncan McDonald, General Manager Montreal St. Ry., is President, and W. G. Ross, ex-Managing Director Montreal St. Ry., is a director.

◆

During Dec. 1910, letters patent were issued in respect of Dominion railway lands, to the Grand Trunk Pacific Ry., for 102.01 acres.

The Intercolonial Ry. management, though not under the Board of Railway Commissioners' jurisdiction, has decided to adopt the new sleeping and parlor car tariff as approved for lines under the Board's jurisdiction.

Report on Ties by Canadian Society of Civil Engineers Committee.

At the annual meeting of the Society in Winnipeg recently, a report was presented by the committee on ties, signed by the Chairman, D. MacPherson, Assistant Chief Engineer National Transcontinental Ry., the names of the following members of the committee being appended: H. D. Lumsden, F. P. Gutelius, M. J. Haney, W. McNab, J. G. Sullivan, H. A. Woods, M. H. McLeod, A. F. Stewart, W. A. Bowden and H. G. Kelley. The chairman, in transmitting the report stated that W. B. MacKenzie and T. C. Burpee, of the Intercolonial Ry., dissented from the part of the report about the use of 10½ ft. ties. The chairman added:—"H. Holgate disapproves of the form, the subject matter and the conclusions, but gives no reasons for doing so; presumably, he will give these reasons when the report is under discussion. Under these circumstances, I have not attached the names of these three members of the committee to the report."

Following is the report:—

At the last annual meeting it was resolved—"That the committee on ties be continued, and that it confine its attention more particularly to the artificial preservation of ties, their size, and the timber best suited to the purpose."

Your committee beg leave to report as follows:—In their report, presented to the Society in Jan., 1909, it was pointed out that some 12,000,000 ties were being used annually in Canada, which number was being continuously and largely increased, so that probably within the next 40 years, the consumption will be about 120,000,000, or equal to the present annual consumption in the United States.

Assuming the following data—average cost of untreated ties at point of shipment at 50c.; freight and putting in track, 15c.; total, 65c.; average life, 8 years. Initial cost of treated tie the same as above; cost of treatment, including extra handling, 25c.; total, 90c..; average life, 16 years. Then, if 12,000,000 untreated ties are being used annually, and their average life is 8 years, there must be about 96,000,000 in use, and the capital necessary to place these ties in the track and provide for their renewal every 8 years, on a 4% basis, would be $2.41 per tie. The capital necessary to place treated ties in the track and provide for renewal every 16 years would be $1.93 per tie. The total capital necessary:

= 96,000,000 × $2.41 = $231,360,000 for untreated ties.

96,000,000 × $1.93 = $185,280,000 for treated ties.

Total difference in capital ..$46,080,000

$46,000,000 at 4% = $1,843,200 = eventual annual saving.

As the cost of untreated ties and the numbers used are increasing very rapidly and the cost of treatment is likely to be reduced, surely no more need be said to prove the urgent necessity of at once beginning the introduction of treated ties at all points where their capitalized values will show a fair saving on the investment, even if the question is only viewed from the standpoint of economy for the railways. When the broader view of conserving our supplies, for fear of depletion, is considered, it assumes enormously greater importance.

Tie preservation by creosoting or otherwise has not hitherto received the attention it deserves in Canada, but it doubtless soon will, as the railway companies are becoming alive to this really vital subject. The American Railway Engineering and Maintenance of Way Association have, however, taken the matter up vigorously, and valuable information can be found in their proceedings, vol. x, part 1, for 1909, and subsequent volumes. In co-operation with this Association, Purdue University made a series of tests to determine whether or not treatment of tie timber had any injurious effect on the strength of the material. The conclusions arrived at, from these tests, are briefly summarized as follows:—

No weakness was shown by treated ties, as compared with natural ties, either in rail-bearing or spike-holding strength, except in the case of ties treated with crude oil, and, even with that treatment, the weakening in rail-bearing was of a temporary character.

The average stress under the rail at the elastic limit on the various woods was as follows: red oak, 1,131 lbs. per sq. in.; short leaf pine, 642 lbs.; long leaf pine, 690 lbs.; red gum, 830 lbs.

The extremes of atmospheric temperature have an appreciable effect on the strength of wood, especially when green. The warm timber was from 9% to 17% weaker than the very cold timber.

The direct pulling resistance of common spikes in the various woods was as follows, in their natural state: red oak, 7,639 lbs.; short leaf pine, 4,359; long leaf pine, 3,955; red gum, 3,883.

The lateral resistance of common spikes in the various woods was as follows, loads at elastic limit, in lbs.; red oak, 2,026; red gum, 1,704; long leaf pine, 1,650; short leaf pine, 1,619. The lateral resistance of screw spikes depends on the diameter and length of shank under the head, elastic limit of the metal, and character of the wood.

The screw spike had from 1.7 to 3.8 times the strength of the common spike against direct pull, and from 1.2 to 2.4 times the strength of the common spike against lateral resistance. The smaller screw spikes gave greater lateral and direct resistance per lb. of weight than the larger spike. The strength of the common spike against withdrawal is increased when driven to follow a bored hole. The shape of the point of a common spike, however, leads it to drive out of a bored hole, and the resistance to withdrawal is thereby lowered.

A very interesting paper on the economic comparison of railway ties of different materials, written by N. M. Campbell, was published in Sept., 1910. The results are summed up in a table giving the order of merit of different kinds of wood treated by the three processes, zinc chloride, creosote, and Rueping, as compared with untreated ties, taking into consideration the first cost in the track and the average life. Strange to say, the first in order is untreated catalpa wood, but, as the writer does not give the value of treated ties of the same wood, this does not prove that it might not be still more valuable if treated. The second in order of merit is cypress, also untreated, for which a life of 10 years is claimed, and initial cost in track 54c. The same wood, when treated with creosote, comes 19th in order of merit, having a life of 17.5 years and first cost of 95c. When treated by the Rueping process, the order of merit is 6, life 15 years, and cost in track 81c. Oaks, untreated, come 30th in order of merit, 23rd when treated with zinc chloride, 15th when creosote is used. Pine, when treated with creosote, comes 3rd in merit, 28th when zinc chloride is used, and 29th when untreated. Tamarac, treated by the Rueping process, comes 10th in order of merit, but no mention is made of untreated tamarac or cedar. The table below will illustrate more clearly the comparative values of the woods above mentioned:

Material.	Treatment.	Average life, years.	Cost in track.	Capitalization 4%.	Annual cost.	Order of Merit
Catalpa..	None	20	0.60	1 104	0.044	1
Cypress..	None	10	0.54	1.664	0.066	2
Cypress..	Rueping ...	15	0.81	1.822	0.073	6
Cypress..	Creosote ...	17.5	0.95	1.952	0.078	19
Pine....	Creosote ...	15	0.75	1.687	0.067	3
Pine....	Zinc chloride	8	0.710	2.636	0.106	28
Pine....	None	6	0.615	2.933	0.117	29
Tamarac.	Rueping ...	15	0.81	1.822	0.073	10

From the foregoing it appears that, for the best results, different woods require different treatments. The Rueping process is a creosote treatment. It differs from ordinary creosoting in that the timber is first put under air pressure sufficient to fill all the wood cells with air. The creosote fluid is then forced in at higher pressure, and the theory is that, after the greater pressure is released, the expansive force of the air throughout the interior of the timber will expel part of the fluid from the cells, leaving the walls of the cells painted with creosote instead of having the cells filled with it.

The cost of treating ties, of course, will vary largely, and will depend, to a great extent, on the numbers treated, the efficiency of the plant, and the nature of the treatment, but the Atchison, Topeka and Santa Fe Ry, which has used the Rueping creosote treatment pretty extensively, reports that the cost of treating inferior pine ties is 20c.

H. G. Kelley, a member of your committee, reports satisfactory personal experience with the Burnettizing process at a cost of from 15 to 20c.

With regard to size of ties, the 8 ft. length, 6 ins. to 7 ins. thick, with face from 6 to 10 ins., is in most general use, but it is somewhat difficult to find any logical reason, other than initial cheapness, for adopting an 8 ft. tie for standard gauge track. As this length was adopted, and has been in use for such a long period, it is very easy to understand why the railway companies should hesitate to change, for the transition period would be both troublesome and costly. However, as the weights of rolling stock have more than doubled in the past 20 years, and steel rails have been increased in, roughly, the same proportion, it seems about time to make some correspondingly adequate change in tie dimensions. It is true that the spacing of ties has been, of late years, made slightly closer, but, while the loads have been increased from 200 to 300%, the base of the superstructures to carry these loads, or the base area of the ties under a rail length, has been increased less than 50%. As there is a practical limit to close spacing of ties, on account of the difficulty of properly tamping them when spaced closer than 20 in. centres, the only resource left is to lengthen them, if more supporting area is required. The 8 ft. tie, not only does not give sufficient support, but it is impossible to utilize its whole length for fear of breaking it, owing to the distribution of the loads on track of standard gauge.

The distance from the end of an 8 ft. tie to the outer edge of a 5 ft. rail base is about 16 ins., and the best practice is to firmly tamp such ties only 16 ins. from the rails each way. The reason for this is that, if fully tamped to the centre of the track, they would give a firmer support, in proportion to the load, at centre than at both ends, and the ties would break. In other words, you cannot utilize much more than 75% of the bearing capacity of such a length of tie under a standard gauge track, without destroying the tie itself. In order to utilize the full uniform supporting capacity of the tie for its whole length, it should have the same length from the centre of rail

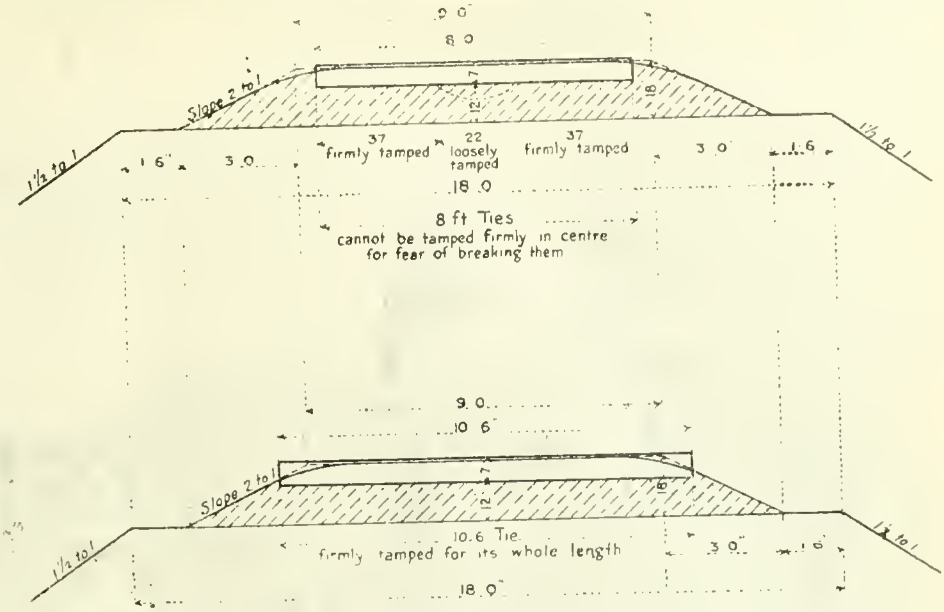
W

to end of tie, as from former point to centre of track, which would make it 10 ft. 8 ins.—say 10½ ft. long.

It is certain that even the best roads would hesitate to make such a radical change, and, of course, your committee would not presume to say that they should make such a departure from long-established practice, but the fact remains that strong logical reasons can be given for the use of ties 10½ ft. long, and such reasons canot be given for the use of 8 ft. ties. Ties 7 ins. thick, 10½ ft. long, with 9 in. face, would give about 70% increased support at an increased cost of only 31%. No increased width of ballast section would be necessary for the longer ties, because no shoulder of ballast would be required at the ends of such ties, so that the actual yardage of ballast required would be slightly decreased by the increased space occupied by the ties. This is fully shown on the accompanying diagram, drawn to scale, illustrating how ties 10½ ft. long may be used in an ordinary ballast section for 8 ft. ties, without requiring any extra ballast.



Note.—8 ft. ties tamped firmly for 16 ins. each way from rails only utilize the supporting area of 77% of tie, equal to 74 ins. in length, or 740 sq. ins. for a tie of 10 in. face. 10½ ft. ties could be used in the same ballast section, firmly tamped for the whole length, giving the maximum supporting area of 1,260 square inches, or equal to 170% the efficiency of 8 ft. ties.

At the present average price of 50c. for 8 ft. ties, they cost about 36% of cost of 80 lb. rails and fastenings, which would only be increased to 42% by using the longer ties. The improved condition of track and saving in maintenance of rails and rolling stock would probably soon more than offset the difference in cost of ties.

It has been suggested that longer ties would make drainage more difficult, but, if good ballast is used, there would seem to be no difficulty in that regard, and if the ballast is inferior, the loose tamping under the centre of 8 ft. ties and the shoulder required at the ends of them would form pockets to retard drainage that would be obviated by the use of long ties. Your committee would suggest experimental tests with ties 10½ ft. long.

The best kinds of wood to use for ties depends upon so many conditions of climate, availability, and cost of timber treated and untreated, that it is very difficult to make definite recommendations. For general use in our Canadian climate, however, the following woods, if untreated and used with tie-plates, might be recommended, and they are given approximately in their order of merit, having regard to life and initial cost: Cedar, tamarac, oak, yellow pine, hemlock. For treated ties, used also with tie-plates, the order of merit would be about as follows: Yellow pine, tamarac, hemlock, oak.

T. C. Burpee, Engineer of Maintenance of Way and Works, Intercolonial Ry., who was a member of the committee, dissented from the report in a letter to the chairman, of which he has furnished us a copy as follows:—"I cannot subscribe to a report calling for ties 10½ ft. long. Breakages in ties might be avoided if in a country without frost; but in this country I believe that 75% of 10½ ft. ties would be broken each year. My experience is that our 8 ft. ties, which are being used at the present time, break very much less than the 9 ft. ties which we used on the I.C.R. some years ago, and if 9 ft. ties would break more than 8 ft. ones, of course breakages of 10½ ft. ties would be proportionately greater. I do not think that our track, when we were using 9 ft. ties, was any better than it is at the present time with 8 ft. ties. I am inclined to think it was not as good, and yet our rolling stock is very much heavier than it was at that time. However, I presume a practical test is the best way to demonstrate which would be preferable."

W. B. Mackenzie, Chief Engineer, I.C.R., also dissented as follows:—"I agree to the report as modified, except the matter of the long ties, and my reasons are as follows:—Very considerably more timber and larger timber would have to be used, thereby increasing the destruction of standing timber. They would cost more. The freight would be increased. The cost of labor for handling, putting in and taking out would be doubled, and the maintenance would be increased. One man can handle an 8 ft. tie, but two men would be required to handle a 10½ ft. tie. It would require much more digging to get them in or take them out, and in cuttings this would be a very serious matter. In yards where there are many leads, retaining walls, etc., the 10½ ft. tie could not be used at all. A short tie comes down to surface in the spring much quicker and more evenly than a longer tie. This is because there is more chance for gravel to work under a long tie than a short one, while the frost is coming out. Some time ago a writer in one of the scientific papers proved by figures that 8½ ft. was the best length for ties; as this length was all that was practically useful in keeping up the track; but I cannot at present give the paper or the date. No doubt heavy long ties are all right over bogs. What I think is that while you might be able to prove your 10½ ft. scientifically correct, the change would be so radical that no notice would be taken of that part of the report by practical men. It would be no harm to say that trials of longer ties should be made."

In the discussion on the report G. A. Mountain asked who recommended the use of long ties and from what experience the information had been derived.

D. MacPherson said the committee had not recommended the immediate adoption of 10½ ft. ties, but rather experimenting with or testing them, with a view to improving the present practice, which has not kept pace with improvements in other parts of the permanent way. It seemed to him that good reasons for this suggestion were given in the report, but the committee invited the fullest discussion, and would be glad to hear all the good reasons that could be urged against the use of such long ties or in favor of the present practice. He had had personal and favorable experience with the use of long ties over bogs and places where the track crept badly, and had recently been advised by an engineer, who worked on the London & North Western Ry. in nngland, that 10½ ft. ties were used as standard on the main lines of that road. As this was one of the best lines in England, and ties were much more expensive there than here, it would appear to be a strong point in favor of 10½ ft. ties. At all events it was not logical that railways should continue using the same dimensions for ties that were used 50 years ago, when the weights of rolling stock had been increased several hundred per cent. He accepted the responsibility of suggesting these long ties to the committee, and some members thereof evinced considerable interest in the matter. It could not be expected that the railways would immediately begin the general use of 10½ ft. ties, but it might be to their interest to try them on new lines, where heavy traffic was expected, and the chances were they would prove eminently satisfactory. The committee suggest the testing of 10½ ft. ties, that is all.

The report was adopted, the President, Col. Ruttan, having stated that the Society should be very careful not to adopt anything definitely that had not been fully tried, but he saw no harm in adopting the report suggesting that tests be made.

In reply to the President's remarks D. MacPherson said the committee merely suggested the testing of 10½ ft. ties.

ESPLANADE STREET EAST, TORONTO

The Quebec Bridge.

Replying to questions in the House of Commons Jan. 30, the Minister of Railways said the firms tendering for the building of the superstructure of the Quebec Bridge, gave dates for the completion of the work varying from June, 1914, as the earliest, to Dec., 1916, as the latest, all dates being contingent upon the substructure being completed by Nov. next. The cost of clearing away the debris of the collapsed bridge has been, to date, $31,995 for removal of the old steel, and $13,644 for the removal of the false work, the contract price being $45,000 for the first work and $22,750 in the second. The total cost of the bridge to the country to date has been $7,154,987.49. The steel remaining the property of the Government is calculated to be 22,640,594 lbs. "It is very difficult," he added, "to determine the value of this material, taking into consideration the expense of handling, loading, transporting and having no knowledge of the use to which it will be put. For the present all that can be figured on is what it would be worth as scrap, which has a value of about $10 a ton. This would make this material worth about $113,000. It is difficult to estimate the value of the material in the present piers, in regard to the new structure, but a safe estimate would be $300,000."

In replying to a request in the House of Commons, Feb. 6, for copy of advertisement for tenders, and the specification and contract or proposed contract for the erection of the Quebec Bridge, the Minister of Railways said:—The situation is this. When the Government took over the work of reconstructing the bridge, we appointed a board composed of three eminent bridge engineers who were to prepare the plans, and be responsible for the construction on those plans. Three eminent engineers were named by order in council: Mr. Vautelet, Montreal; Mr. Fitzmaurice, London, Eng., and Mr. Modjeska, Chicago. In the order in council there was a provision that if these engineers did not agree on any point, two other eminent engineers should be called in to advise with them, and the board, composed of the three original members and the two additional ones, should decide the points of difference. On several occasions differences arose, and two other eminent engineers were appointed to the board for the time being, and the points of difference settled. But when it came to the time for advertising for tenders, two members of the board were not in perfect unison with the chief engineer and chairman as to the design. It might be said that there had been a difference of opinion as between the principle of doubling the intersections, and singling the intersections. The two members of the board who did not agree entirely with the Chairman and Chief Engineer as to the design which had been prepared, agreed that tenders should be called on this condition, and a resolution was passed by the board. The resolution provided that tenders should be called on the official design prepared by the chairman and chief engineer, and that each tenderer would be asked to submit a plan of his own for the erection of a bridge, and if that plan was better than the official design, it should be adopted. On that condition tenders were called for.

Some 35 different propositions were submitted—not 35 plans. These were all submitted by four different tenderers—and by the board. The board's design, called the official design, contained a design with several modifications—nos. 1, 2, 3, 4 and 5, I think, with little variations. From the St. Lawrence Bridge Co. there were five or six modifications of the one design. A German company submitted a design of its own, as well as a tender on the official design. The Pennsylvania Steel Co. submitted a design for a suspension bridge in addition to tendering on the board's design. Previous to this, during the summer Mr. Fitzmaurice, who had been ill some time, resigned. And his resignation was accepted. C. E. Macdonald, once president of the Engineers' Association of New York, a native of Leeds county, now living in Gananoque again, was appointed in Mr. Fitzmaurice's place. These three met and looked over the tenders and the various propositions. They reduced the number which ought to be considered to the tenders on number 5 of the official design and propositions (a) (b) and (c), if I remember correctly, of the St. Lawrence Bridge Co. That company is composed of two companies, the Canadian Bridge Co. at Walkerville, Ont., and the Dominion Bridge Co., Montreal, and these two formed a third company for the purposes of this work. There then remained tenders to be considered from the British Empire Co. of England, from the German company, from the Pennsylvania Steel Co. and the St. Lawrence Bridge Co. on the official design, and the other propositions, (a), (b) and (c), on their own designs from the St. Lawrence Bridge Co. They tendered on both. No company sent in a tender on its own design without tendering also on the official design. The question to be decided was as between the tenders on the official design, the lowest of which I have no hesitation in saying, was the British Empire Co., and the counter propositions of the St. Lawrence Bridge Co. on its own designs. The board recommended to me that a substantial bridge could be erected on either of these propositions. I replied, asking them to perform their whole duty, and tell me which one was the better, if there were a better. Mr. Macdonald and Mr. Modjeska favored one of the designs of the St. Lawrence Bridge Co., while the chief engineer and chairman, Mr. Vautelet, could not coincide with this, as he thought the official design was fully as good, or better, and was considerably cheaper. After waiting for some time and consulting with the board as then constituted, to see if they would not make me an unanimous recommendation, I came to the conclusion that they would not, and so proceeded to act under the order in council, adding two other eminent engineers to the board for the purpose named in the order in council. The chief engineer and chairman was ill at his home in Montreal, and at his suggestion I sent for Mr. Macdonald and Mr. Modjeska, and they came to Ottawa. H. W. Hodge, of Boller and Hodge, Consulting Engineers, New York, a prominent engineer, and M. J. Butler, my former deputy, were elected as the two additional members. They are now sitting in Montreal, working at the question, and I hope shortly to have a decision on which the Government can act one way or the other in reference to awarding the contract.

Replying to questions on his statement, the Minister of Railways said the bridge was to be 88 ft. wide, and he understood both designs under consideration conformed to that measurement. The question of a tunnel had not been seriously considered, although he had discussed it with some interested persons. The conclusion he had personally formed was that the river banks, being very high, a tunnel would have to be started a very long way back from the river on either side, and that a tunnel was not as practicable as a bridge. The bridge floor was to be 150 ft. above highwater, a height which had been decided upon after very careful consideration.

It was reported Feb. 9 that the engineers had reached a decision, and that it had been communicated to the Government, but no official announcement had been made when this was written. The report states that the design and tender of the St. Lawrence Bridge Co. is favored, the estimated cost of the structure being $13,500,000. The tender of the British Empire Bridge Co. is stated to be about $400,000 less than that of the St. Lawrence Bridge Co.

Replying to questions in the House of Commons Feb. 9, the Minister of Railways said the Department did not consider the construction of the tunnel at the site of the Quebec Bridge practicable. He had not employed any engineer to report upon the feasibility and cost of such a tunnel.

◆

British Columbia's Aid to Railways.

In the balance sheet of the province of British Columbia recently presented to the Legislature for the year ended Mar. 31, 1910, among the assets are included: Victoria and Sidney Ry., paid for interest on company's bonds, $106,215; Nakusp and Slocan Ry., mortgage account, $647,072, and paid for interest on bonds, etc., in excess of Dominion subsidy and net earnings, $160,643.59; Shuswap and Okanagan Ry., paid for interest on bonds, etc., in excess of the Dominion subsidy and net earnings, $391,938.38, making a total of $1,305,868.97. The liabilities include $647,072 of railway guarantee bonds under the Nakusp and Slocan Ry. Aid Act, of 1894.

A return appended shows the sums guaranteed by the province under the various railway acts:—Shuswap Ry. guarantee act of 1890, guarantee of interest of the Shuswap and Okanagan Ry. bonds, 4% on $1,249,760, amounting to $49,980.40 a year, the bonds being terminable in 25 years from July 1, 1890. Nakusp and Slocan Ry. Aid Act, 1894, guarantee of principal and interest of $647,072 of the N. and S. Ry. bonds, principal payable in 1918, interest at 4% equals $25,882.88. Against the guarantee to these two railways the province receives 40% of the gross earnings under agreement with the C.P.R., which is operating both lines. Victoria and Sidney subsidy act, 1892, guarantee of interest of the V. and S. Ry. bonds at the rate of 2% per annum on $300,000 for 25 years from Sept. 1, 1892, equal to $6,000 a year. The total annual liability is therefore $81,863.28, less the 40% receivable from the C.P.R., which for the year ended Mar. 31, 1910, was $44,308.48 for the Shuswap and Okanagan Ry., and $5,191.92 for the Nakusp and Slocan Ry.

T. Howell, General Immigration Agent C.N.R., Toronto, left Canada for England recently to complete the organization of an immigration campaign for the approaching season.

Sir Wm. Mackenzie is at the head of a Canadian syndicate which has obtained a concession for a large dam across the Balsas River, and the installation of a large hydro-electric plant in the State of Guerrero. It is said the dam will be 150 ft. high, will cost about $2,000,000, and will be located in the river canyon near the end of the Cuernavaca, Mexico and Pacific division of the Mexican National Railway. The power is to be distributed to the capital of the state and to several mining districts. It is said the syndicate is negotiating for railway concessions in the State, and that one of the lines to be built will run from Balsas, where connection will be made with the Mexican National Railways, to the port of Acapulco, on the Pacific coast.

G.T.R. Betterments, Construction, Etc.

Central Vermont Ry.—During 1910 the company reballasted 15.9 miles of its lines in Canada, and laid new 80-lb. steel on 12.4 miles in Vermont.

The application of the New York, New Haven and Connecticut Rd. to the Vermont State Legislature for certain powers at Brattleboro, has been modified considerably, and the C.V.R. will continue to have possession of the terminal facilities there. The Legislature has passed the bill granting incorporation to the Southern Vermont Ry., authorizing the building of a line from Brattleboro to Windsor, and to arrange for the use of the Rutland Rd. terminals at Bellows Falls. The Southern Vermont Ry. will nect with the lines proposed to be built in Massachusetts and Rhode Island by the Southern New England Ry.

Press reports state that the G.T.R., which controls the C.V.R., has given instructions to proceed with the building of the lines above mentioned.

The line to be built in connection with the Southern New England Ry. part of the project will start at Palmer, Mass., and extend to Providence, R.I. The final location on the water front at Providence has not, press reports state, been finally decided on. The reports state that all surveys have been completed, that construction will be started at once, and the line be completed in two years.

Lachine, Jacques Cartier and Maisonneuve Ry.—The House of Commons has authorized the company to connect its projected lines with the C.P.R., the Canadian Northern Ry., or either of them. The Board of Railway Commissioners has refused the company's application for permission to cross the C.P.R. at Jacques Cartier Jct., Que.

Ship Fever Cemetery, Montreal.—The matter of expropriation of the land adjoining the G.T.R. at Point St. Charles, Que., which was set apart or used as a cemetery for victims of the ship fever in 1847, has been before the Board of Railway Commissioners recently, with the result that a 30 ft. strip is to be reserved, east of the monument lot, to commemorate the burial place of the ship fever victims. The company is to be allowed to acquire the rest of the land for yard extension purposes.

Ottawa Improvements.—A Gray, Resident Engineer, G.T.R., Ottawa, in an address to the Ottawa branch, Canadian Society Civil Engineers, Feb 8, referred to the work being done by the company at Ottawa. He stated that already over $2,000,000 had been expended on account of the erection of the hotel and station, and the expenses incurred in connection with the enlargement of the yards, etc. The accommodation for passenger trains had been increased 100% by the alterations, and the freight yard had its accommodation increased 50%. The tracks have been laid in the yards with 100 lbs. steel. The tracks are ballasted with broken stone instead of sand or gravel, in order to avoid dust. The changes in the freight yards alone cost $45,000. He went into the details about the retaining wall which was constructed along the canal, which cost much more than was first expected, because a boulder and gravel bottom was found for a distance where rock foundation was anticipated and piers had to be sunk. The cost of this retaining wall was $24,050. The wall is designed to carry 5,000 lbs. to the foot.

He also described the train-shed covering the eight tracks, which is to be 500 by 182 ft. The entire roof will be of glass, though the exact kind is not yet decided. It will be set in steel with steel supports for the roof. It will extend from the present baggage annex to the retaining wall along the canal. The train shed has an opening in the roof directly over the engine funnel in order to do away with the smoke in the shed as would be the case if the entire place were covered. The platforms will be, of course, of concrete. The work will be started next summer.

It is proposed to instal an interlocking switch system at the company's terminal yard and station, Ottawa, to build a new draw bridge across the Rideau canal at Elgin St., and to build a new roundhouse and repair shop at Ottawa East.

Ottawa to Toronto.—W. Wainwright, Second Vice President, is quoted as having stated that the company is planning to build a direct line from Ottawa to Toronto. Three routes are under consideration, that of the Kingston, Smiths Falls and Ottawa Ry., the Ottawa, Rideau Valley and Brockville Ry., and another interest which is advocating a route by way of Gananoque.

Sunnyside Bridge or Subway, Toronto.—The city council is figuring out the question whether a subway will be put in under the G.T.R. at Sunnyside, or the road carried over the tracks by a bridge. The board of control, Feb. 4, decided in favor of a subway 66 ft. wide at an estimated cost of $145,000, exclusive of land damages. Under the terms of the order the city will pay one-third of the cost. When the matter came before the council, Feb. 10, the city engineer and the assessment commissioner were directed to report as to the cost of both subway and bridge.

Humber Bridge, Toronto.—In connection with the new bridge which the G.T.R. is erecting over the Humber River, objection has been taken to the size of the pier which it is proposed to build in the middle of the river to carry the bridge. Replying to questions in the House of Commons, Feb. 2, the Minister of Public Works said the G.T.R. had applied for approval of plans for the bridge to his department, as well as to the Board of Railway Commissioners. The application was made to the Department under the Navigable Waters Protection Act. He purposed naming an early date to take up the matter, and due notice would be given to the city of Toronto and property owners along the river to attend.

The question asked the Minister of Public Works set out that the floor of the bridge was only "19 ft. above high-water," that "the abutments encroached upon the river banks," and that there was "at least one pier in the middle of the stream 15 ft. wide by 80 ft. long," which is said "to be more in the nature of a dam than a pier."

Wyevale to Tiffin, Ont.—There is under construction a cut-off from Wyevale, on the Penetanguishene branch, to Tiffin, Ont., on the Midland branch, 8.90 miles. The Midland Railway Construction Co., Midland, has the contract.

Galt and Elmira Branches.—A deputation is being organized at the instance of the Berlin, Ont., board of trade, to ask the G.T.R. to operate the Galt and Elmira branches by electricity.

Erie, London and Tillsonburg Ry.—An Aylmer, Ont., press report states that the G.T.R. has acquired a block of land along the creek north of the bridge at Port Burwell, for yard purposes, and that negotiations are in progress for the taking over of the charter of the E.L. and T. Ry. This company has power to build a line from Port Burwell to London, Ont. The G.T.R. already has a line from Brantford to Port Burwell. (Feb., pg. 117.)

Highways Crossing Bell Signals.

The Board of Railway Commissioners passed order 12915 Feb. 7, providing the following specifications for electric bell signals at highway crossings:—

POST.—The bell must be placed upon a post of some suitable structural material. If the post is made of wood, it must be of sound timber not less than 8 by 8 ins. and 18 ft. long, and shall be firmly set in the ground to a depth of 4 ft. If it is made of iron or steel, it shall be not less than 4 ins. in diameter, shall extend 14 ft. above the ground, and shall be firmly bolted to a concrete or other foundation constructed below the frost line. If other suitable structural material is used it must be of the length mentioned above, and of sufficient strength to carry the weight placed upon it.

BELL.—The bell shall be either of the locomotive type, the gong type, or the twin-gong type, and it must in each case emit a clear, loud volume of sound under all weather conditions. If the locomotive type is used the bell shall be of standard size (about 18 ins. in diameter); if the gong type is used, the gong shall be at least 12 ins. in diameter; and, if the twin-gong type is used, the gongs shall be at least 10 ins. in diameter.

SIGN.—A sign shall be placed upon the same post as the bell, with the word "danger" upon it in letters of not less than 6 ins. in length, to be illuminated either by direct or reflected light so as to be plainly visible after sunset. There may be added to the post, if so desired, the railway crossing sign provided for by sec. 243 of the Railway Act.

OPERATION.—The bell and the illumination of the sign shall be controlled and operated electrically and automatically by the approach of trains, in such manner that only approaching trains shall operate the signal, and the signal must remain in operation until the rear end of each approaching train has passed the crossing. The bell and lamps used for illumination may be operated from any suitable source of electric current that is continually available, or from batteries. If batteries are used they must be either chemical batteries of the caustic potash type, having a capacity of not less than 300 to 400 ampere hours, or storage batteries of the same capacity.

Telephone Dispatching on the C. P. R.

In addition to the mileage at present being operated by telephone details of which we have given from time in previous issues, it has been decided 1,528 miles will be equipped for similar operation during the current year, thus making a total of 3,782 miles of telephone train dispatching circuits on the system. These circuits cover the line as follows: From Kamloops to Calgary; Medicine Hat to Winnipeg; Fort William to Ottawa and Brockville; Saulte Ste. Marie, Mich., via Sudbury to Toronto; Windsor, Ont., to Smiths Falls; St. Thomas, Port Burwell and St. Marys branches; Quebec to Montreal; Montreal to Newport, Vt., and St. John, N.B., and the Temiskaming branch. There will also be a new copper wire strung from Toronto to Winnipeg and Toronto to Detroit, and various other wires, making a total of 4,000 miles of wire, in addition to the re-stringing of all lines now showing any evidences of decay.

CANADIAN RAILWAY EQUIPMENT COMPANY

TAYLOR & ARNOLD, Limited

Selling Agents——MONTREAL

Supplying Cars for Routing Over Other Lines.

In the case of the Imperial Steel and Wire Co. vs. the G.T.R. Co., Chief Railway Commissioner Mabee gave the following decision Jan. 10, which was concurred in by Assistant Chief Commissioner Scott and Commissioner McLean:

On March 12, 1910, the applicants complained to the Board that they had been receiving, during the previous two weeks, almost daily, telegraph orders from their Winnipeg agent, for carload lots of wire nails for all-rail shipment to Winnipeg via G.T.R. to North Bay and C.P.R., and via G.T.R. to North Bay, C.P.R. to Port Arthur, and C.N.R. to Winnipeg. It was also alleged that the G.T.R. was the only line in Collingwood, and that, upon application to the agent of the company there, he informed the applicants that he had orders not to place G.T.R. cars for that routing, but that he could place cars immediately if the applicants would route via Chicago; and that, if the routing asked for was insisted upon, the agent would have to order in C.P.R. or C.N.R. cars, as the case might be, notwithstanding the G.T.R. had empty cars standing in their yards. The applicants further alleged that this should not be permitted, as it was discrimination against the manufacturer located on one line of railway.

The G.T.R. on April 14 filed its answer to this complaint, among other things alleging that, at the time of the occurrence in question they were short of cars throughout Ontario, due to the outbound loaded car movement from Ontario being greater than the inbound loaded car movement, and that 60% of G.T.R. box cars were on foreign lines; that in order to protect their Canadian local business and preserve sufficient equipment for that purpose, they were compelled to place orders with the connecting lines for the foreign empties that might be required for loading their lines. It is admitted that the applicants were refused the use of G.T.R. cars for loading to Winnipeg, via the route above mentioned, namely C.P.R. and C.N.R.

It was thought that possibly the car shortage at the particular time in question might be relieved, but the applicants desire a ruling upon the facts, and we presume they are entitled to it.

Under date of April 27, the applicants allege that they are compelled to secure their business in competition with other manufacturers who have G.T.R. C.P.R. and C.N.R. facilities, and seem to be under the impression that they are in some way entitled to have the Board furnish them with just as good transportation facilities as if they were located at points where they had two or three connecting lines of railway. The applicants were advised in April last, that the Board did not regard it as reasonable that a railway company should be required to supply its cars for a short haul upon its own line and a long haul on the line of another company.

Let it be assumed that, in April last, the G.T.R. was having a shortage of cars by reason of its own equipment having gone to foreign lines. Now it seems to us that its first duty was to protect the traffic upon its own road. If the applicants were entitled to require the G.T.R. to send its cars off its own lines, every other shipper situated upon the line of the G.T.R. would have the like right, and if the railway company was in no way allowed to control the movement of its own equipment, in a very short time this equipment might practically be entirely beyond its control. This question came up for consideration as early as 1888, in a case of Riddle vs. The Pittsburgh & Lake Erie Rd., reported in 1 Interstate Commerce Reports, pg. 374, from which the following excerpt is taken:—"If complainants had a right to insist that this company should send its cars at such a time with coal to Buffalo, then every other coal mine on its line had the same right, and this would have stripped this railroad of its equipment, leaving the other business along its line to go to ruin, but none of them had any such right. The company had its legal duty to perform. Its first and most paramount legal duty to the shipping public was to make its entire freight equipment do its utmost in serving the shippers along its own line." Further, "Under such circumstances the legal duty of this railway company was, as the evidence shows it did, to operate its cars so as to keep them as much as possible on its line and confined to the business of its line."

We are not suggesting that the Board has not power to require a railway company to transfer its cars to other lines, but rather simply affirming the principle that, in times of car shortage, it is not only the privilege but the duty of a railway company to retain its equipment so that traffic upon its own lines may be properly taken care of.

In the case of the C.P.R. and the Nelson & Fort Sheppard Ry., as far back as Oct. 13, 1906, the late Chief Commissioner ruled that the N. & F.S.R. need not permit its equipment to leave its own lines, and required suitable accommodation and facilities to be furnished by the N. & F.S.R. for receiving, carrying, and delivering traffic from Salmo and Ymir to the nearest junction point with the C.P.R., and further requiring the latter company to furnish adequate and suitable accommodation and facilities for receiving, carrying and delivering such traffic brought to that point for furtherance to points on the C.P.R., from time to time, as might be required

We do not think, assuming that the G.T.R. was honestly endeavoring to take care of the traffic upon its own lines, that, at the time in question, the applicants were entitled to have them compelled to furnish their own cars for the movement of this traffic to Winnipeg, along the route they desired.

With reference to the point taken by the railway company that it would furnish cars for this traffic routed via Chicago, the railway company answers that they had foreign cars upon their lines that they could have utilized, instead of of moving westward empty. In any event, it is well settled that the initial or originating railway company is entitled to as long a haul upon its own lines as may be reasonable. This is laid down in the English case of the Plymouth, Devonport and South-Western Jct. Ry. vs. Great Western Ry., 10 Railway and Canal Traffic Cases, pg. 68. The following is an extract from the judgment in this case:—"For instance, on the one hand, we have to take into consideration that the G.W.R. ought not, without some due cause in the public interest, to be deprived of the advantage of its long run in respect of traffic which has originated on its own system."

It is not necessary to say anything further upon this point, as the foregoing covers the applicant's complaint.

◆

The Canadian Transfer Co.'s board for the current year is as follows President, C. Cassils; directors, Hugh Paton, G. R. Starke, Sir H. Montagu Allan, H. M. Molson. The General Manager and Secretary is F. M. McRobie.

When the proposed regulations for inspecting, setting and washing locomotive boilers came before the Board of Railway Commissioners Feb.. 7, it was ordered that all railway companies file with the Board within 60 days, copies of their regulations for the work referred to.

Great Northern Ry. Lines in Canada.

In connection with the G.N.R. plans for building lines in Canada, a St. Paul, Minn., press dispatch says it has been decided that a number of the branch lines now running towards Canadian territory, will be extended so as to connect with Canadian lines, and that other branch lines will be built to the International boundary line in Manitoba, Saskatchewan and Alberta.

Manitoba Great Northern Ry.—A press report states that it has been decided at G.N.R. headquarters that construction is to be gone on with early in the spring with a line from Winnipeg south to the International boundary and to a connection with one of the company's lines in Northern Dakota; a line from Winnipeg westerly via Brandon and Elkhorn, Man.; a branch from Morden northwest to Rothwell, and on to a junction with the line westerly from Winnipeg. The Winnipeg city council has not been satisfied with the position of affairs regarding the laying out of terminals there, and the board of control directed its secretary, Feb. 3, to write the company's representative in Winnipeg, stating that unless a definite reply was given by a certain date as to when the company would begin work, the petition for approval of the layout would be returned. Early in Feb. it was stated that the G.N.R. had entered into an agreement with the Canadian Northern Ry. for joint use of its Fort Garry station in Winnipeg, but later a press dispatch credited J. J Hill with stating that he had withdrawn from the agreement, and that the G.N.R. would build a station itself.

Kaslo and Slocan Ry.—The British Columbia Government, on being asked to take such steps as were possible in order to secure the reopening of this line for traffic, discussed the matter in connection with some questions relating to the G.N.R.'s Vancouver plans, with the result that the K. and S. Ry. is to be rebuilt and operated between Kaslo and Sandon.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The Attorney General for British Columbia stated, Feb. 5, that an arrangement had been entered into with representatives of the G.N.R., by which the questions arising out of the agreement of the city of Vancouver re False Creek, had been settled. The immediate result of the agreement, the Attorney General said, would be the starting of work by the G.N.R. on the construction of the projected terminals at False Creek. A bill confirming the agreement will be introduced in the Legislature as soon as the agreement is signed. In addition to settling the questions as to False Creek, the agreement deals with the reconstruction of the Kaslo and Slocan Ry. from Kaslo to Sandon, and the adjustment of differences as to the liability of the Government and the city of Victoria with respect to the old Victoria and Sidney Ry., now owned by the C.N.R.

Vancouver press reports Feb. 11 state that two additional tracks are to be laid from False Creek to Burrard Inlet, Vancouver, at once, and that large oil tanks are to be built on the south shore of False Creek, next the coal bunkers. These oil tanks are said to be for the supply of oil as fuel to the locomotives in use at the Vancouver terminals. The locomotives are to be sent in turn to Seattle, Wash., to be equipped for oil fuel.

◆

C. C. Chipman, who has been Commissioner of the Hudson's Bay Co., with office at Winnipeg for some 20 years, will retire from the position during the current year and will, it is said, live in England, the company granting him a retiring pension.

Should a Railway Have a Trouble Department.

By R. G. Pratt, General Maintenance Foreman and Supervisor of Apprentices C. P. R. Shops, Winnipeg.

This paper is written and based upon the fact that more can be learned from mistakes than by any other means. Theories are not facts, nor should they be taken as facts until they have been proved by experience. By putting a theory to test, it either proves a mistake or else a fact. Civilization, or the practical results of civilization, has advanced to its present state, principally, to start with, upon theories. Without an actual test, something, or some process, may look good and absolutely practical; it may be put to the test, several tests; it may be tested to the extent of our practical knowledge, and pass every one; it is then accepted as something practicable, and is everywhere adopted as a standard, the best of its kind. At some later date a test, we will say accidental, is put to this article or process, and it fails to stand this test sufficiently to warrant the party interested to discard it, or to put it to one side until he has further investigated. Over the failure of this he may have been put to a great amount of expense, or a number of lives may have been lost, or, by good luck, he may have lost nothing. There may be users of this article or process at some other points outside his province, unknown to him, or not get-at-able, who, if they had had the experience that he has had, or knew of his experience, would instantly make the necessary changes before they were put to any loss.

To get down to the railways with the above in mind, to my way of thinking it would be profitable and very beneficial for a railway to have what we will call an accident department. All accidents, or mistakes, we might call them, to be handled by this department, to have a good head, who would hold a position similar to a magistrate in our civil courts; he would investigate thoroughly and impartially, have sufficient staff to get the necessary details, or power to get any details from any employe in any department direct, without going to the heads of the departments. To have power to call on any official of the company for an opinion, or in consultation, or assist in any investigation. After the investigation is concluded put all facts before the management, together with all evidence collected. Also draw up in pamphlet form all facts relating to the accident, the cause, and what could have been done to have prevented it. Then send a copy to all parties having jurisdiction over any such class of work, materials or operation, taking particular care to see that the parties holding the lowest official position have a copy. By doing this you will get direct to the parties that can prevent a recurrence of the accident either through ignorance or neglect of duty. This will save half the troubles and will tend to bring about better feeling between the different departments. It will possibly save a recurrence of the accident, which accident might have occurred for the following reasons:—

The man doing the work, or responsible for the work may not have had sufficient technical knowledge to see the fault.

He may know of the faults, but not having had the experience of the party that had the failure, in his opinion it may not be serious, or he may classify it with one of those things which his superior officer has at some time or another said, "That's good enough, let it go at that."

He may know of the fault, but be too negligent to put it right, saying to himself, "that will go another day or so; if anything happens no one will say anything to me."

From the experience of you all, I think you will agree with me that a man will bluff himself out of a corner verbally easier than he will by writing. If he knows that in the event of a certain thing happening he has got to put in a written report, he will go to more trouble to prevent it happening.

Under the existing rules, if a man does anything he should not do, or if an accident happens which someone could have prevented by a little more care, this party expects possibly a blowing up or a few words from his superior the next time he sees him; he more often gets it, but sometimes does not. It may be some days before an opportunity occurs and his boss may think that it is not worth mentioning now. The boss himself may get a kick about it later on, but the newness has worn off, and the possibilities are that he files it, saying to himself that Bill, or whoever he is, is not so bad after all, and he will let it go this time. Bill may do the same thing again with more serious results, but he knows his boss, and possibly takes as much notice of a ragging as he would of shaking hands with him. But if this were changed so that Bill was taken on the carpet, independent of his boss, by an impartial official, he would think more of it, and it would have more terrors for him.

By sending copies of investigation direct to the subforemen you get direct to the men doing the work, as, usually they are more or less intimate with the men working under them, and nine men out of ten would talk the matter over, and hand round the report to the men.

At present any accident or trouble is usually settled entirely by the head officials in the department responsible; if there is any investigation, unless it is of a very serious nature, it usually results in its being filed in his office, being seen only by him and the local official. It may possibly be seen by the party directly concerned when he has to take his medicine. To give a few practical examples:—

A wheel may become loose on an axle and cause an accident, we will say that it was not bored out correctly. You have a record of the date when the wheel was put in, and where, and it is easy to have a system of marks for each man's work. You can get direct to the man; he may be able to put it to machine out of order, or bad tools, but whatever the reason, if he had been expecting that he would be called down in case it was found out, he would have gone to more trouble to turn the work out good.

Again, at some portion of the line there is a derailment on account of expansion of track, or joint being slack, or not properly suspended, or track requires shimming, or it may be through some defect that the average trackwalker would pass over saying, "We will do this next time we are out this way." We will say that a certain section foreman had received a report of an accident at some other place, from what, up to that time, he had thought as something not worth noticing. He would at once begin to think of the similar defects upon his own portion of track, and remedy them.

Labor troubles should be handled by this department, both parties submitting evidence.

However, it is a subject that would require a great amount of consideration from all points. The cost of the investigation might prove more than the amount saved, or, again, it might appear to be so, as the amount saved could never be shown in black and white; it would be almost entirely guess work.

The man or men doing the work might spend a lot of time upon details that are not necessary. Their superiors might get lax, thinking that they would not require so much direct supervision.

It might do away with the usual method of railroading "Putting it up to the next man," or it might act just the other way by putting all the responsibility on to the new department.

The foregoing was read before the Western Canada Railway Club recently.

◆

Atlantic Quebec & Western Ry. Finances

A return presented to the House of Commons from the Railway Department shows that the Dominion Government has paid $396,902 in subsidies to the Atlantic, Quebec & Western Ry., the enterprise in which so much money of the Charing Cross Bank of London, Eng., was sunk. There have been completed 53.75 miles, and there remain to be constructed 48.65 miles. The return states that the total cost of the part constructed has been $2,451,550, but in his examination in bankruptcy in London on Jan. 26, A. W. Carpenter said that he had expended £800,000 (nearly $4,000,000). The department estimates the cost of completion at $769,568, but Carpenter said it could be completed for £30,000 or £40,000. All the subsidies were paid over to the Bank of Montreal, which held a power of attorney for the company. The company has been asked to furnish a list of its shareholders, directors and officers, as well as a statement of the amounts paid out for directors' fees and for promotion expenses, together with a statement as to whom the amounts were paid.

◆

Railway Rates for Naval Forces.

An order in council has been passed under clause 289 of the Railway Act, prescribing the following fixed scale of rates for the conveyance of officers and men belonging to the Naval Forces of Canada and all naval stores by rail:

For conveyance of officers and men: East of Port Arthur, 2c. a mile for 1st class accommodation, and when 2nd class accommodation is requisitioned, whether the railway provides second class accommodation or not, 1½c. a mile. From Port Arthur westward 3c. a mile for 1st class accommodation and 2c. a mile for 2nd class accommodation.

When special return or cheap rate tickets are in force at less than the above, they shall always be taken.

For the carriage of stores, special rates shall be agreed upon, with the special proviso that the charge in no case shall exceed what would be paid by the public.

◆

Contracts have been let by the C.P.R. for the building of a dam on the Bow River at Bassano, Alto., to be used in connection with the irrigation of an additional 540,000 acres in the eastern section of the company's irrigation block. The contractors are Janse, McDonnell and Co., Vancouver, B.C., for the earth work, and the Walter-Fyshe Co., for the concrete work. The work is to be started at once, and 2,500 men with 800 mules will be employed.

During Dec. 1910, 17 employes were killed, and 29 were injured in the course of their work in connection with Canadian railways. Of the fatalities, five were due to being run over, four to collisions, three to falls, two to being caught between cars, and one each to a derailment, to exposure and to asphyxiation, while of the other accidents, seven were due to being caught between cars, six to being run over, five to collisions, four to derailments, three to falls, and one each to exposure, to falling material and to being struck by an object in passing.

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them

12746. Jan. 12.—Ordering G.T.R. to protect crossing at Cannon St., Hamilton, Ont., with two watchmen.

12747. Jan. 12.—Ordering Hamilton St. Ry. and G.T.R. to provide half interlocking plant at crossing of King St., Hamilton, Ont.

12748. Jan. 12.—Ordering that complaint of city of Hamilton, Ont., re engines and trains being allowed to stand across King St., stand for further consideration if arrangement undertaken by G.T.R. be not satisfactory.

12749. Jan. 12.—Authorizing city of Winnipeg to lay sewer under C.P.R. at Nairn Ave.

12750. Jan. 12.—Authorizing G.T.R. and C.P.R. to operate interlocking plant at lot 7, con. 1, Etobicoke tp., Ont., without bringing trains to a full stop.

12751. Dec. 6.—Authorizing C.N.O.R. to connect with Ottawa & New York Ry. in Nepean tp.

12752. Jan. 13. Approving G.T.R. plans for the construction of swing bridge 42 over Rideau canal, Ottawa, Ont.

12753. Jan. 13.—Authorizing C.P.R. to open for traffic its second track from Islington to Islington Jct., Ont.

12754. Jan. 12.—Authorizing C.N.O.R. to cross with its telegraph wires Lachute Electric Co.'s wires in Chatham tp., Argenteuil county, Que.

12755. Jan. 13.—Amending order 11762 re opening of Sumas St. across C.P.R., Sumas tp., B.C.

12756. Jan. 12.—Extending to June 30 time for completion of C.P.R. spur to Saskatoon Brick & Supply Co., authorized by order 11935.

12757. Jan. 12.—Authorizing Consumers Gas Co. to lay pipe under C.P.R. at St. Clair Ave., Toronto.

12758. Jan. 16.—Authorizing Alberta Government to maintain highway across C.P.R. Calgary and Edmonton branch, in sec. 12, tp. 27, r. 1, w. 5 m., at Airdrie.

12759. Jan. 14.—Ordering C.P.R. and G.T.R. to build a transfer track before May 15 at St. Marys, Ont.

12760. Mar. 22.—Ordering that Eramosa, Esquesing, Erin and Nassagameya tps. be made parties with G.T.R. to application re protection of highway crossing 2½ miles west of Acton West station, Ont.

12761, 12762. Jan. 16.—Authorizing Ontario Hydro-Electric Commission to erect wires across Bell Telephone Co.'s wires at lot 4, con. 3, London tp., and at Stone road, Woodstock.

12763. Jan. 16.—Approving revised location of portion of C.P.R. Regina, Saskatoon and North Saskatchewan branch, authorized by order 3428, Aug.. 13, 1907, in sec. 23, tp. 20, r. 21, w. 2 m., at mileage 21.9 to sec. 7, tp. 22, r. 23, w. 2 m., at mileage 43.2, from Regina, Sask.

12764. Jan. 16.—Authorizing C.P.R. to build additional main line track (second track) across road allowances from mileage 29.05 to 35.5 on its Brandon subdivision, Man.

12765. Jan. 16.—Authorizing J. Marshall, Barton tp., Ont., to lay pipe under G.T.R. at second road south of the Indian line, between lots 7 and 8, con. 2, range east, Seneca tp.

12766. Jan. 16.—Authorizing Consumers Gas Co. to lay pipe under C.P.R. at Bathurst St., Toronto.

12767 to 12769. Jan. 1, 16.—Authorizing J. Marshall to lay pipes under G.T.R. between Glanford and Seneca tps., and at two points in Seneca tp., Ont.

12770. Jan. 16.—Authorizing C.P.R. to build spur to Massey-Harris Co.'s premises, Moose Jaw, Sask.

12771 to 12776. Jan. 16.—Temporarily approving Bell Telephone Co.'s contracts with La Compagnie de Telephone St. Laurent, Brougham and Grattan, Wright and Pontiac, and Ahmic Telephone Cos., North Easthope tp., and Schomberg Telephone Co., Ont.

12777. Jan. 17.—Extending to July 1 time for installation of interlocking plant by C.N.O.R. at Cobourg.

12778. Jan. 17.—Approving coldproof fire extinguisher for use on steam railway cars.

12779. Jan. 17.—Approving change in G.T.R. location, grade and alignment on part 1, Toronto grade separation.

12780. Jan. 18.—Approving location of Kettle River Valley Ry. from mileage 9.79 to 29.0, Merritt to Coldwater summit location.

12781. Jan. 18.—Authorizing Ontario Hydro-Electric Commission to erect wires across C.P.R. wires at Mutual and Carnagie Sts., Ingersoll.

12782. Jan. 18.—Authorizing town of Galt, Ont., to maintain sewer under G.T.R. on George St.

12783. Jan. 18.—Re White Pass and Yukon Ry rates. This order was given in full in our Feb. issue, pg. 147.

12784. Jan. 19.—Approving location of Calgary and Edmonton Ry. (C.P.R.) from eastern boundary of sec. 26, tp. 36, r. 12, w. 4 m., at mileage 100, Alta., to the C.P.R. Moose Jaw Northwesterly branch, in sec. 23, tp. 34, r. 23, w. 3 m., at mileage 221.9, Sask.

12785. Jan. 18.—Authorizing G.T.P. Branch Lines Co. to cross C.P.R. Arcola branch at Griffin, Sask., interlocking plant to be installed before Aug. 15.

12786. Jan. 18.—Dismissing application for interswitching at Ingersoll, Ont., which was reserved in order 10805, June 6, 1910.

12787 to 12789. Jan. 19. — Authorizing Farmers Telephone Co. to install telephones in C.P.R. stations at Hartland, East Florenceville and Woodstock, N.B.

12790. Jan. 20.—Approving C.P.R. revised location from sec. 12, tp. 32, r. 27, w. 2 m., at mileage 89.8, from Regina, to sec. 29, tp. 33, r. 27, w. 2 m., at mileage 100.1, Sask.

12791. Jan. 20.—Authorizing C.P.R. to build its Regina, Saskatoon and North Saskatchewan branch across G.T.P.R. at mileage 118 from Regina, interlocking plant to be installed by July 31.

12792. Jan. 20.—Approving C.N.O.R. revised location on n.e. ¼ lot 11, con. 3, Hope tp., mileage 62.67 to 62.82.

12793. Jan. 21.—Authorizing C.P.R. to build spur to Toronto Carpet Co.'s premises, across Liberty St., Toronto.

12794. Jan. 20.—Approving agreement between Bell Telephone Co. and South Bruce Rural Telephone Co. for interchange, tolls, etc.

12795 to 12798. Jan. 20.—Authorizing Ontario Hydro-Electric Commission to maintain wires across Bell Telephone Co.'s wires at Avery Lane, Norwich, lot 15, con. 4, South Norwich tp., and at two points on Edinborough Rd., Guelph tp.

12799. Jan. 20.—Authorizing South River Electric Co. to erect wires across G.T.R. at Main St., South River, Ont.

12800. Jan. 20.—Authorizing C.P.R. to build spur to Doan and Charles' premises, and siding for Toronto Laundry Machine Co., Dundas St. and Sorauren Ave., Toronto.

12801. Jan. 20.—Authorizing city of Regina, Sask., to build subway at Broad St. under C.P.R., the city to close Hamilton St.; $5,000 to be paid to city from Railway Grade Crossing Fund. (See order 12708, Jan. 9.)

12802. Jan. 23.—Authorizing Ontario Hydro-Electric Commission to erect wires across G.N.W. Telegraph Co.'s wires at lot 6, con. A, London tp.

12803. Jan. 23. — Authorizing Seymour Power and Electric Co. to erect wires across Bell Telephone Co.'s wires at lot 22, con. 2, Rawdon tp., Ont.

12804, 12805. Jan. 23.—Authorizing C.N.O.R. to build bridges over Cravens Creek, and over creek at station 2176-29, Thurlow tp., mileage 131.36, from Ottawa.

12806. Jan. 23.—Authorizing C.P.R. to build siding across Jeffreys St., Chatham, Ont., to American Pad and Textile Co.'s premises.

12807. Jan. 24.—Authorizing G.T.P. Branch Lines Co. to divert road on its Calgary branch in south ½ sec. 27, tp. 29, r. 24, w. 4 m., South Alberta District.

12808. Jan. 24.—Authorizing G.T.P. Branch Lines Co. to build across highway on its Yorkton extension, in n.w. ¼ sec. 13, tp. 26, r. 4, w. 2 m., Yorkton District, Sask.

12809. Jan. 24.—Authorizing G.T.P.R. to divert road in east half sec. 16, tp. 53, r. 17, w. 5 m., North Alberta District.

12810. Jan. 24.—Authorizing Dominion Atlantic Ry. to rebuild bridge across Gaspereaux River at Horton Landing, Kings county, N.S.

12811, 12812. Jan. 23.—Relieving T.H. & B. Ry. from further protection of crossings at Ancaster stone road, between lots 54 and 55, con. 1, mileage 41, and at third highway crossing west of Chippewa Bridge between Thorold and Pelham tps., at milepost 2, from Welland, Ont.

12813. Jan. 28.—Approving plans of C.P.R. station at Dorion, Ont.

12814. Nov. 14.—Approving plans of G.T.P. Branch Lines Co.'s station at Balcarres, Sask.

12815. Jan. 28.—Authorizing T.H. & B. Ry. to build spur in South Grimsby tp., Ont.

12816. Jan. 26.—Authorizing C.P.R. to build spur for Rat Portage Lumber Co., across First and Fir Sts., Vancouver, B.C.

12817. Jan. 24.—Reporting amalgamation agreement between C.N.R. and Edmonton and Slave Lake Ry. to Governor-in-Council for sanction.

12818. Jan. 26.—Authorizing C.N.O.R. to build across and divert public road in lot 3, con. 2, Gloucester tp.

12819. Jan. 23.—Approving agreement between Bell Telephone Co. and Central Ontario Ry. for interchange business.

12820, 12821. Jan. 27.—Authorizing Ontario Hydro-Electric Commission to erect wires across C.P.R. wires at Carnegie and Harris Sts., Ingersoll, and at lot 2, con. 2, Dereham tp.

12822. Jan. 24.—Authorizing C.P.R. to build its Moose Jaw Northwesterly branch across some 108 highways and divert same between mileage 9.59 and 119.6, Sask.

12823. Jan. 21.—Authorizing T.H. & B. Ry. to build spur in South Grimsby tp., Ont.

12824. Jan. 26.—Approving C.N.R. revised location through tp. 28 and ranges 4-6, w. 4 m., mileage 196.64 to 210.21 from junction with Qu'Appelle, Long Lake and Saskatchewan Ry., at Saskatoon, Sask.

12825. Jan. 30.—Authorizing C.N.O.R. to cross Dominion St., Trenton.

12826. Jan. 30.—Ordering C.N.R. before April 30, to rebuild and put in good order crossings between secs. 1 and 2, tp. 11, r. 3, and in centre of sec. 11, St. Francois Xavier municipality, Man., and build suitable culverts and clean out existing ditch, etc.

12827. Jan. 30.—Approving C.N.O.R. revised location in St. Andrews parish, Que.

12828. Jan. 30.—Approving revised location of G.T.P. Branch Lines Co.'s Regina-Boundary branch, mileage 88.32 to 100, and location, mileage 100 to 110.21 from sec. 21, tp. 7, r. 1, w. 2 m., to east line of sec. 28, tp. 5, r. 7, w. 2 m., Assiniboia District, Sask.

12829. Jan. 26.—Re transportation by C.P.R. of McGill University mining students from Montreal to British Columbia. This order is given in full on another page.

12830. Jan. 30.—Authorizing C.P.R. to operate under two structures, being corner of Salt block and overhead conveyer of Western Canada Flour Mills Co., Goderich, Ont.

12831. Jan. 20.—Approving location of G.T.P. Branch Lines Co.'s Young-Prince Albert branch from mileage 110.9 to east boundary of First Avenue East, Prince Albert, Sask. All questions of street protection and closing are reserved for further consideration.

12832. Jan. 30.—Extending to May 1, time for completion of spur to Ingersoll Packing Co., Ingersoll, Ont., by Tillsonburg, Lake Erie and Pacific Ry., as required by order 10805, June 6, 1910.

12833. Jan. 20.—Authorizing Ontario Hydro-Electric Commission to erect wires across Bell Telephone Co.'s wires at Queen St., St. Marys.

12834. Jan. 30.—Relieving Wabash Rd. from further protection of Diltz Road crossing, Halton tp., Ont.

12835. Jan. 30.—Relieving C.P.R. from further protection of highway crossing one mile west of Vankleek Hill, Ont.

12836. Jan. 25.—Dismissing C.N.Q.R. application to extend its yards in Hochelaga, Montreal, to cross Marlborough St., and to take extra lands on Stadacona and Marlborough Sts.

12837. Jan. 25.—Dismissing application of city of Montreal to compel C.N.Q.R. to remove shanty at intersection of Valois Ave. and Ontario St., and to remove fence, etc.

12838. Jan. 31.—Authorizing C.P.R. to build bridge in lieu of subway where it crosses road allowances between secs. 11 and 12, tp. 24, r. 1, w. 5 m., Calgary, Alta., and approving agreement between it and the city.

12839. Jan. 26.—Adding Delaware and Hudson Co. as party to application of W. A. Stewart, Napierville, Que., and village of St. Cyprien, re alleged inadequate train service by Napierville Jct. Ry.

12840. Jan. 25.—Approving C.N.Q.R. extension of yards between Moreau and Marlborough Sts. Montreal, and dismissing application for closing of Robillard St.

12841. Jan. 31.—Ordering C.N.O.R. to carry out provisions of order 12553, Dec. 19, 1910, re farm crossing at Banning, Ont., within 10 days from date, under penalty of $25 a day.

12842. Jan. 24.—Dismissing C.N.Q.R. application for order fixing terms, conditions and method in which the dam and headrace or other portions of water power of

12843. Jan. 24.—Authorizing C.N.Q.R. to use tracks on bridge over St. Charles River, near Quebec, including property owned in common by Quebec Ry., Light and Power Co. and Quebec and Lake St. John Ry. for entering city of Quebec, C.N.Q.R. to pay $1,500 a year rental to Q. Ry., L. and P. Co., and to also pay arrears for use of bridge, and be responsible for its share of maintenance and operation.

12844. Jan. 25. — Refusing application, without prejudice, of Mousseau and Gagne, Montreal, to compel G.T.R. to build highway crossing on proposed road between St. Polycarpe and St. Clet, Que.

12845. Jan. 25.—Dismissing application of town of Notre Dame de Grace, Que., for order to amend order 8208, Sept. 14, 1909, re Montreal Park and Island Ry. location.

12846. Jan. 31.—Authorizing C.P.R.. to build spur to Burridge-Cooper Co.'s premises, Regina, Sask.

12847. Jan. 31.—Extending to June 1, time in which G.T.P.R. may erect shelters, as ordered by order 12132, Oct. 27, 1910, at Reford, Sask., under penalty of $25 a day after that date.

12848. Jan. 31.—Authorizing Vancouver, Victoria and Eastern Ry. to build spur to Vancouver-Prince Rupert Meat Co.'s premises.

12849. Jan. 30.—Authorizing C.P.R. to operate three sidings upon and across Pardee Ave. and Liberty St., Toronto, to connect with G.T.R. siding.

12850. Jan. 31.—Authorizing Ontario Hydro-Electric Commission to erect wires across G.T.R. at Main St., Norwich.

12851. Jan. 30.—Authorizing city of New Westminster, B.C., to lay water main under C.P.R. near Westminster Jct.

12852, 12853. Jan. 25.—Dismissing application of Montreal. Park and Island and Montreal Terminal Rys. for approval of standard passenger tariff of 3c. a mile, with a minimum fare of 5c., and specifying a maximum toll of 2½c. a mile on existing lines. This order is given in full on another page.

12854. Feb. 1.—Authorizing suspension of freight rates from Ontario shown in tariff of Joint and Proportional Rates, C.R.C. 188, issued by J. F. Tucker, Chicago, until Sept. 1, and for reinstatement until and including Aug. 31, of joint and proportional rates between same points shown in said Tariff C.R.C. 180, which was superseded by C.R.C. 188 on Nov. 1, 1910.

12855. Feb. 2.—Relieving G.T.R. from further protection of Market St. crossing, Paris Jct., Ont.

12856. Feb. 1.—Extending to March 1, time for crossing, by Essex Terminal Ry., of Windsor, Essex and Lake Shore Road Ry. at Howard Ave., Windsor, Ont., as required by order 12051, Oct. 13, 1910.

12857. Feb. 1.—Extending to April 15, time for connection between C.P.R. and G.T.P.R. at St. Boniface, Man., as required by order 12292, Sept. 22, 1910.

12858. Feb. 1.—Authorizing C.P.R. to build spur to Ogilvie Flour Mills Co.'s premises, and to cross Duncan St., Fort William, Ont.

12859. Feb. 1.—Authorizing G.T.R. to rebuild bridge 70, south of Madoc, Ont.

12860. Feb. 2.—Authorizing C.N.O.R. to build across Ontario St., between lots 18 and 19, con. A, Cobourg, Ont.

12861. Authorizing T.H. & B. Ry. to build spur in Pelham tp., Ont.

12862. Feb. 2.—Authorizing C.N.O.R. to cross Darcy St., between lots 14 and 15, Cobourg.

12863. Feb. 2.—Approving location of Alberta Central Ry., mileage 63 to 75, from Red Deer.

12864. Feb. 1.—Authorizing city of Medicine Hat, Alta., to erect wires across C.P.R. wires at Esplanade St.

12865 to 12881. Feb. 1.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect wires at 17 points in Ontario.

12882. Jan. 25, 26.—Dismissing application of Halifax, N.S., Board of Trade, re complaint that G.T.R. discriminates against Halifax in favor of other Atlantic ports in its differential rate of 1c. per 100 lbs. on traffic between Halifax and Montreal, and points east of Montreal.

12883. Feb. 2.—Dismissing application of Paipoonge tp, that C.N.O.R. maintain suitable highway crossing between lots 3 and 4, con. "B".

12884. Feb. 2.—Approving location G T.P. Branch Lines Co.'s Regina-Boundary branch from east line of sec. 28, tp. 5, r. 7, w. 2 m., to east line of sec. 32, tp. 3, r. 4, w. 2 m., Sask., mileage 110.21 to 130.92.

12885. Feb. 3.—Authorizing C.N.O.R. to cross Sinclair ave. in lot 20, con. A, Cobourg.

12886. Dec. 1.—Rescinding order 12443 and providing that plans be filed by Mar. 15 by town of Lachine, Lachine parish, and Montreal West with suggestions as to elimination of crossings, etc, or protective appliances to be installed.

12887. Feb. 3.—Authorizing C.P.R. to build spur to Superior Fuel and Coal Co.'s premises, Winnipeg.

12888. Feb. 3.—Authorizing C.P.R. to build spur to A. Eby's premises, Elmira, Ont.

12889. Feb. 3.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect wires across Bell Telephone Co.'s wires at G.T.R. crossing, 1 mile west of Jordan, Ont.

12890. Feb. 6.—Amending order 12225, Nov. 9, 1910, re protection of railway employes, see Dec. 1910 issue, pg. 1045). This order is given in full on another page.

12891, 12892. Feb. 6.—Authorizing Canadian Light and Power Co. to maintain wires across G.T.R. at Lachine canal, north bank, 2,000 ft. west of Cote St. Paul bridge.

12893. Jan. 3.—Dismissing application of Lachine, Jacques Cartier and Maisonneuve Ry. to cross C.P.R. to Jacques Cartier Jct., Que

12894 to 12896. Feb. 6.—Authorizing G.T.P. Branch Lines Co. to build its Prince Albert branch across three highways in the East Saskatchewan district.

12897. Feb. 6.—Authorizing G.T.P. Branch Lines Co. to cross highway in Saskatoon District, Sask., in n.w. ¼ sec. 5, tp. 34, r. 27, w. 2 m.

12898. Feb. 6.—Authorizing C.P.R. to build extension of its Langdon branch to Langdon station and across road allowance at s.w. ¼ sec. 24, tp. 23, r. 27, w. 4 m., Alta.

12899. Feb. 6.—Authorizing city of St. Boniface, Man., to build Marion St. across C.N.R.

12900. Jan. 3.—Authorizing C.N.O.R. to cross overhead, C.P.R. near Jacques Cartier Jct., mileage 49.3 south from Hawkesbury.

12901. Feb. 6.—Ordering railway companies subject to the Board's jurisdiction to file tariffs of interswitching tolls, by Mar. 1, in accordance with order 4988, July 8, 1908.

12902. Feb. 6.—Authorizing Niagara, St. Catharines and Toronto Ry. to open for traffic its line from Welland to Port Colborne, Ont.

12903. Feb. 7.—Approving revised location of C.P.R. Weyburn to Lethbridge branch from sec. 17, tp. 8, r. 18, at mileage 26.2 to sec. 22, tp. 7, r. 22, w. 2 m., at mileage 52.2 Sask.

12904. Feb. 7.—Approving location of Kootenay and Alberta Ry. from Pincher to Beaver Creek, Alta., mileage 0.0 to 13.09.

12905. Feb. 6.—Authorizing G.T.R. to operate over Niagara, St. Catharines and Toronto Ry.'s crossing near Welland, Ont., as authorized by order 9552, Feb. 3, 1910.

12906. Feb. 7.—Ordering that Bell Telephone Co. file tariffs of tolls under penalty of $100 a day, not later than Feb. 20, in accordance with order 12625, Dec. 14 1910.

12907. Feb. 6.—Authorizing G.T.R. to cross Niagara, St. Catharines and Toronto Ry. crossing, near Welland, Ont., authorized by order 9552, Feb. 3, 1910, wihout being brought to a stop. Speed limited to 15 miles an hour.

12908. Feb. 6.—Authorizing Seymour Power and Electric Co. to erect wires across G.N.W. Telegraph Co.'s wires in lot 3, con. 2, Murray tp., Ont.

12909. Feb. 7.—Authorizing Berlin, Ont., Water Commissioners to lay pipe under G.T.R. at Strange St.

12910. Feb. 7.—Relieving C.P.R from further protection at crossing at mileage 22.92, lot 4, St. Jerome parish, Que.

12911 to 12913. Feb. 7.—Authorizing C.P.R. to build spurs to Canadian Western Lumber Co.'s premises near New Westminster, B.C.; an extension to spur for James Smart Mfg. Co., Brockville, Ont.; and a spur for city of Winnipeg, in Block B, St. John.

12914. Feb. 7.—Ordering C.N.R. to maintain an agent and place an outside closet at Devlin, Ont., not later than Mar. 7, under penalty of $25 a day.

12915. Feb. 7.—General order in matter of specifications for installation of electric bell signals at highway crossings. This order is given in full on another page.

12916. Jan. 25.—Ordering that G.T.R. and Boston and Maine Rd. provide connection between their trains 2 and 70 at Sherbrooke, Que., not later toan May 15.

12917. Jan. 25.—Ordering that G.T.R. provide watchman at east end of Windsor Mills station, Que., from 7 a.m. to 7 p.m., wages to be borne half by G.T.R., ⅛ by town of Windsor Mills, and ⅛ each by Canada Paper Co. and Brompton Bridge Co.

12918. Jan. 2[illegible].—Ordering that C.N.Q.R. open and maintain a water course across right of way for drainage scheme to drain Lac a l'Ours, in discharge of Lac aux Sables, put in head gates, etc., by June 1, on application of mayor of Lac aux Sables.

12919. Feb. 8.—Extending to May 15, time within which C.N.R. may fence its right of way between Maidstone and Paynton, Sask., and install cattle guards as provided by order 12072, Oct. 22, 1910.

12920. Feb. 8.—Approving location of G.T.P. Branch Lines Co.'s new station on its Calgary branch at Camrose, Alta.

12921 to 12931. Jan. 23, 24.—Approving Standard Tariff of Maximum Sleeping and Parlor Car Tolls, to apply on and after Feb. 15, 1911, on C.N.O.R., C.P.R., G.T.R., T.H. & B. R., Rutland Rd. Wabash Rd., Boston and Maine Rd., Michigan Central Rd., G.T.P.R., C.N.R., and N.Y.C. & H.R.R. In case of C.P.R. and G.T.P.R., approval shall not in any way prejudice the right of parties interested in the Vancouver Board of Trade application charging that railway rates generally in the West are discriminatory against Vancouver, said parties to be at liberty to present any evidence they may desire against the charges hereby approved for sleepers and parlor cars west of Calgary and Macleod.

12932. Feb. 7.—Ordering all railways to file within 60 days, copies of regulations in force for inspecting, testing, and washing of locomotive boilers.

12933. Feb. 8.—Extending to June 1 time within which C.P.R. may complete spur for Standard Lumber Co., near Cranbrook, B.C., as provided by order 11875, Oct. 5, 1910.

12934. Feb. 9.—Authorizing C.P.R. to build bridge over Talbot River, Ont., for Georgian Bay and Seaboard Ry.

12935. Feb. 9.—Authorizing C.P.R. to cross highway with double track at mileage 45.9, Brandon subdivision, Man.

12936. Feb. 7.—Authorizing C.N.O.R. to cross public road between lots 16 and 17, Junction Gore.

12937. Feb. 7.—Recommending to the Governor in Council for sanction agreement between Quebec Ry. Light & Power Co. and Quebec County Ry.

12938. Feb. 7.—Refusing C.N.R. application to cross C.P.R. Didsbury-Kininvie branch with its Vegreville-Calgary branch in n.w. ¼ sec. 21, tp. 25, r. 24, w. 4 m.

12939. Feb. 8.—Authorizing Vancouver, Victoria and Eastern Ry. to build branch from its main line near McLean Drive to Park Lane, Vancouver, B.C.

12940, 12941. Feb. 10.—Authorizing Niagara, St. Catharines and Toronto Ry. to operate over crossings of G.T.R. air line near Welland, and at G.T.R. crossing in Port Colborne, Ont.

12942 to 12948. Feb. 10.—Authorizing C.P.R. to build second track across highways at mileages 43.1, 46.5, 59.95, 48.8, 48.0, 47.7, 8.05, Brandon subdivision, Man.

12949. Feb. 10.—Authorizing N., St. C. & T. Ry., M.C.Rd. and T.H. & B. Ry., pending completion of interlocker ordered by 9552, to operate trains over crossing of Canada Southern Ry., T.H. & B. Ry., authorized by order 10639, March 22, 1910, trains to come to full stop and be flagged by watchman employed by M.C.R. and paid for by N., St. C. & T. Ry.

◆

Quebec Public Utilities Commission.

The parish of Infant Jesus, Que., complained recently to the Commission against the reconstruction of the Quebec Central Ry.'s locomotive house, which was burned last summer, alleging that it caused permanent danger of fire to part of the village, and also asked for the establishment of a public crossing where "Jacob's Route" crosses the tracks, and complained of the location of a water tank at the King's crossing, contending that it rendered the crossing dangerous. The Commission decided:—

That there is no reason to prevent the Q.C.R. from reconstructing its engine house on the same site as it was formerly located, but the walls and roof must be covered in undulated sheet iron or other incombustible material to the Commission's satisfaction. The company is permitted to pave the engine house with earth mixed with ashes or cinders, which must be replaced by a cement or concrete pavement as soon as the ground is sufficiently solid.

There is no reason at present for the company to be directed to open and maintain a public crossing on the "Jacob's Route."

That the Q.C.R. install at its own expense an automatic alarm bell or other means of protection approved by the Commission, to protect the level crossing situated at the side of the reservoir, from the approaching trains from the west or the side from which the bridge is situated over the Chaudiere River, at a distance of 1.000 ft., counting from the said level crossing.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto - - -	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto - . - -	9.40 p.m.	Daily except Sunday.
Leave North Toronto - - -	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service. .

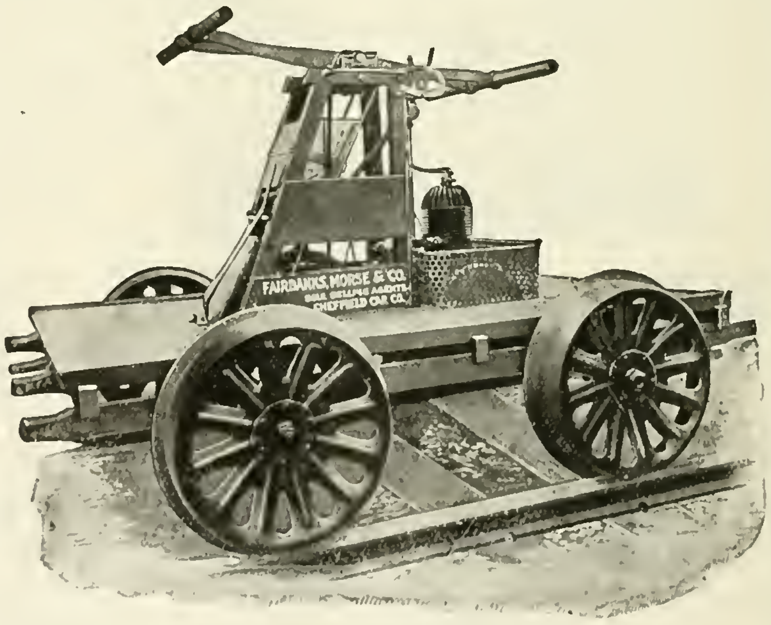
5. H. P GASOLINE MOTOR

Your men will do more work

BECAUSE

They start to work Fresh and Strong. They work harder and longer, for they can Ride Home Quickly. Sections can be lengthened and forces cut down with increased efficiency.



No. 13 Fairbanks-Morse Air Cooled Motor Car

The car rides easily with scarcely any side motion. The parts are all protected, and rain or moisture will not affect the running. Ten minutes daily will keep it in first-class running order. Speed, 18 miles per hour.

The Canadian Fairbanks Co. Limited

MONTREAL ST. JOHN, N.B. TORONTO WINNIPEG SASKATOON CALGARY VANCOUVER

C.P.R. Betterments, Construction, Etc.

Nova Scotia.—A press report states that among the projects under consideration by the C.P.R. in connection with the development of the Dominion Atlantic Ry., when it is taken over, is the building of a line of about 30 miles to Chester.

St. John, N.B.—Local reports state that it is proposed to expend $1,000,000 on terminals on the property recently acquired at the head of the harbor.

Windsor St. Improvements, Montreal.—The company has acquired the property of the Calvary congregational church, near its Windsor St. terminals, for $28,000, and will be given possession June, 1912.

Place Viger Improvements, Montreal.—In connection with the plans for the station building, it is said that for the present the building will be two stories high, with a flat roof. The idea to make it a four story building with gabled and turreted roof, like the hotel, with the two top stories as an annex to the hotel, will probably be carried out later.

A permit was issued at the city hall Feb. 8, for the new freight sheds, which are to extend from Lacroix St. to Montcalm St., and are to cost about $100,000.

Campbellford, Lake Ontario and Western Ry.—The application of the company for the repeal of sec. 8, chap. 54, of the statutes of 1904, and the substitution of a new subsection, locating the line to be built as from between Smiths Falls and Sharbot Lake southwesterly to Cobourg, and thence westerly to the C.P.R. between Locust Hill and Leaside Jct., met with considerable opposition in the House of Commons. The opposition was settled by the withdrawal of the portion of the bill repealing sec. 8. The effect of this is that the company has power to build from the C.P.R. between Blairton and Ivanhoe, as well as from between Smiths Falls and Sharbot Lake, to between Locust Hill and Leaside Jct.

Press reports, Feb. 16, state that the new line will leave the C.P.R. Toronto-Montreal line at Bathurst, about 10 miles west of Smiths Falls, and proceed southwesterly to Belleville, and thence along the lake to Leaside Jct., paralleling the G.T.R. for the greater part of the way.

Georgian Bay and Seaboard Ry.—The Board of Railway Commissioners has authorized the building of a bridge over the Talbot River.

The contract let to the Toronto Construction Co. for the section of the line from Coldwater easterly, has been extended so as to cover the last 38 miles, ending with a junction with the C.P.R. Toronto-Montreal line at Bethany siding, Ont.

Toronto to Windsor Bridges.—It is reported that all wooden bridges on the line between Toronto and Windsor, Ont., are to be replaced by steel spans on concrete piers and abutments. For the past two or three years the company has been putting in concrete culverts, as well as abutments for bridges along the line, and this report suggests that the work is to be gone on with until all the bridges have been removed, so as to make them in a better condition to carry the heavier traffic.

London, Ont., Improvements.—A London, Ont., press report, Feb. 14, states that work in connection with the building of a new station and roundhouse, and the enlargement of the yards there, at a cost of about $250,000, is to be started at an early date.

Port Arthur-Fort William second track—We are advised that it is proposed to start building the second track between Port Arthur and Fort William, Ont., about April 1, and that the work will be done by the company's own staff.

Brandon to Kemnay.—The Board of Railway Commissioners has authorized the opening for traffic of a short diversion of the line between Brandon and Kemnay, Man.

Brandon to Birtle, Man.—A resolution has been passed by residents of the district between Brandon and Birtle, Man., asking the Dominion Government to grant such an increased subsidy as will ensure the building of a direct line between these two points. The route surveyed shows a very difficult country for construction for seven miles southerly from Birtle, and an extra subsidy of $12,000 is asked. The total subsidy usually given is estimated at $106,000, and the amount asked for is $118,000.

Weyburn-Lethbridge Branch. — The Board of Railway Commissioners has approved the revised location of this branch from sec. 17, tp. 8, range 18, at mileage 26.2 to sec. 22, tp. 7, range 22, at mileage 52.2.

Lethbridge, Alta., people are anxious that work be started from there easterly, and have been in communication with the management on the matter. A telegram has been received by W. A. Buchanan, M.L.A., from W. Whyte, Vice President, to the effect that additional mileage was being built at once westerly, and that later some building would be done from the west end easterly.

Subway at Regina, Sask.—The Board of Railway Commissioners has authorized the city of Regina to build a subway under the C.P.R. tracks at Broad St., and to close Hamilton St. Five thousand dollars will be paid out of the railway grade crossing fund towards the cost.

Relocation West of Regina.—The Board of Railway Commissioners has approved of revised location of locations previously approved, from mileage 89.8 from Regina, Sask., to mileage 100.1.

Moose Jaw Northwesterly. — Castor Southeasterly.—The Board of Railway Commissioners has authorized the company to carry its tracks across some 108 highways, and to divert such highways where necessary, between mileage 9.59 and 119.6 on the line from Moose Jaw northwesterly. It has also approved location plans for the extension of the Calgary and Edmonton Ry. branch now terminating at Castor, Alta., at mileage 100, to the located line of the Moose Jaw northwesterly branch in sec. 23, tp. 34, range 23, west 3rd meridian, at mileage 221.9 in Saskatchewan.

Moose Jaw Second Track.—We are officially advised that the second track work to be done this year easterly from Moose Jaw to Pasqua, Sask., seven miles, will be a diversion in order to reduce the gradient to 0.4%. It is also intended to build a second track westerly from Moose Jaw to Caron, 16 miles.

North Portal Water Supply.—A press report states that a pumping station is to be built on the banks of the Souris River, about eight miles from North Portal, Sask. The work is estimated to cost $50,000.

Langdon Branch.—The Board of Railway Commissioners has authorized the company to build an extension of the branch to Langdon station, and across certain road allowances.

Wilkie-Tramping Lake Line.—In connection with the building of this line, W. Whyte, Vice President, is quoted as having stated at Winnipeg, that this branch which will be run down both sides of Tramping Lake, and will connect at two points with the Moose Jaw-Castor line. This line is one of those which the Dominion Parliament is being asked for authority to build. The junction of one of the lines will be in tp. 30, r. 16 or 17, west 3rd meridian, and the other is described in the bill as running from near Kerr Robert, northeasterly and easterly to a junction with the line from Wilkie, in tp. 38 or 39, r. 19 or 20, west 3rd meridian.

Strathcona-Edmonton Line.—Work is being resumed on the substructure for the high level bridge across the Saskatchewan River between Strathcona and Edmonton, Alta. The piers have been completed to about water level, and it is expected that those on the Strathcona side will be ready for the steel workers early in the summer. It is expected that the bridge will be completed this year.

In connection with this work press reports state that Edmonton will be reached from Winnipeg, by way of a line to be built from Sedgewick, mileage 580, on the Kirkella-Wetaskiwin line, running direct to Strathcona, about 90 miles, and that when completed this line will be extended to the Peace River Valley, and if a favorable pass can be secured, on to the Pacific coast.

Hotel in Calgary.—An arrangement has been completed between the company as represented by F. W. Peters, Assistant to the Vice President, and the Calgary city council, by which the hotel to be built in that city will be freed from all taxation, providing the company pays $4,000 a year and undertakes one-half of the cost of paving Ninth Ave. from First St. west to First St. East, and a quarter of the cost from First St. East to Fifth St. East.

Calgary, Alta.—The Board of Railway Commissioners has authorized the company to build an overhead bridge in lieu of a subway between secs. 11 and 12, tp. 24, r. 1, Calgary, Alta., and has approved an agreement therefor between the company and the city.

Westminster Jct.—Coquitlam. — F. W. Peters, Assistant to Vice President, met the municipal council of Coquitlam B.C., Feb. 7, and discussed plans for the erection of a roundhouse, car shops and freight sheds in the vicinity of Westminster Jct. It is reported that about 1,100 acres have been acquired at a cost of $750,000, through the Royal Trust Co., the land purchased extending from Westminster Jct. on the west to Pitt River on the east, and along the west bank of the Pitt River to the confluence of the Pitt and Fraser rivers, giving a water frontage of 1½ miles. As a result of the conference a delegation from the municipal council went to Victoria, Feb. 8, for the purpose of obtaining the necessary authority from the Legislature to enter into an agreement with the company.

Vancouver, B.C.—In a recent interview, W. Whyte, Vice President, said the company's plans for Vancouver were not yet completed, but extensive improvements were under consideration. There would be large extensions of the yards; a jetty wall would be built in order to extend the wharf accommodation, and it was possible that Granville St. would be extended through the station and a bridge built over the tracks to the wharf.

A local report states that among the works contemplated is the erection of a new station, with a headquarter office building at the foot of Seymour St.

Esquimalt and Nanaimo Ry.—The engineers running preliminary lines for a proposed extension of the line from French Creek, north to Campbell River, have returned to Vancouver, and will go out again in the spring.

The grading on the Alberni line is expected to be completed Apr. 1, and the bridge work is well forward. Track laying from Cameron Lake towards Alberni will be started at once, and it is expected to have the extension ready for operation before the fall.

WILLIAMS & WILSON, Limited, - Montreal

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Press reports state that the extension proposed from Ambrose, N.D., to Plentywood, Minn., will not be built at present.

Duluth, South Shore and Atlantic Ry.—Second track was laid during 1910 on 3.75 miles of line. 2.48 miles of new sidings were laid. and 2.5 miles of main line easterly from Negaunce, Minn., were reconstructed.

Mineral Range Rd.—During 1910 the company relaid 24 miles of its tracks with new 80 lb. steel rails. (Feb., pg. 137.)

◆

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—At a special general meeting of shareholders an agreement was authorized Feb. 22, in London, Eng., with the C.P.R. for the sale and conveyance, or lease of all the corporate powers. and all, or any portion of the railways, lands, works and undertakings, and all other powers, rights, privileges, franchises and assets, and to approve the conveyance or lease, in return for a guaranteed annuity of 6% on its capital stock.

Approximate net profits from all sources, exclusive of land sales for Dec., 1910, $40,583, against $43,820 for Dec., 1909. Cumulative net profits for six months ended Dec. 31, 1910, $189,270. Railway traffic receipts for Jan., $15,723, against $21,442 for Jan., 1910. Cumulative traffic receipts for seven months ended Jan. 31, $201,887. .

Dominion Atlantic Ry.—Gross earnings for Dec. 1910, $85,700, against $97,451 for Dec. 1909; aggregate gross earnings for six months ended Dec 31, 1910, $773,506, against $821,295 for same period 1909.

Grand Trunk Ry.—An issue of £750,000 of perpetual consolidated debenture stock was placed on the market recently by Glyn, Mills, Currie and Co., London, Eng. Of the issue price, 5% is due on application, 15% on allotment, and 40% each time on Mar. 1 and Apr. 1. Interest is payable quarterly on Jan., Apr., July and Oct. 14 in each year, a coupon of 5s. per £100 stock being payable on Apr. 1. The stock, proceeds of which will be applied to general purposes, will rank parri passu with the existing 4% perpetual consolidated debenture stock.

Lake Superior Corporation.—A special general meeting of shareholders was called for Mar. 1, at Camden, N.J., to approve a plan for financing the completion of the Sudbury-Little Current section of the Manitoulin and North Shore Ry., and to confirm a resolution of the directors guaranteeing the principal and interest of a proposed issue of first mortgage 5% fifty year gold bonds of the M. & N.S.R. to $30,000 a mile of the railway, limited in the aggregate to $3,000,000 par value; to approve the sale of the stocks and bonds of the Sault Ste. Marie Pulp and Paper Co., owned by the Lake Superior Corporation, and for other purposes.

Manitoulin and North Shore Ry.—A special general meeting of shareholders was called Feb. 22, to authorize the issue of 1st mortgage 5% fifty year gold bonds for $30,000 a mile for the full mileage of the lines authorized under the act of incorporation and amendments thereto. between Sudbury and Little Current, to be secured by a mortgage and deed of trust on and of all the property now owned or hereafter to be acquired: to authorize the increase of the capital stock from $1,000,000 to $3,000,000, and to authorize the issue of $1,000,000 of the $3,000,000 capital stock of 5% non-cumulative preferred stock, and for other purposes

New Brunswick and Prince Edward Island Ry.—Press reports state that G. M. Siddall, of Port Elgin, N.B., has secured options on the majority of the stock of this company. The line extends from Sackville, on the Intercolonial Ry., to Cape Tourmentine, N.B., 36 miles.

Quebec and Lake St. John Ry.—Total earnings for Jan., $40,773.40 against $37,654.84 for Jan. 1910. Mileage operated, 285.4; earnings per mile. $142.85, against 280 miles operated and $134.48 earnings per mile in Jan. 1910

Quebec Central Ry.—A London, Eng., paper, in referring to the reports as to the probable sale of this line, says considerable caution should be observed in regard to them, as "while the line is not up for sale, the directors would not turn away from a promising deal," and that "it appears possible that the assets may change hands before long, and on terms which should prove satisfactory to the existing proprietors."

Quebec Central Ry.—Gross earnings for Dec., 1910, $74,955.17; expenses, $60,708.11; net earnings, $14,247.06, against $82,589.52 gross earnings; $62,852.998 expenses; $19,736.54 net earnings for Dec., 1909. Aggregate gross earnings for six months ended Dec. 31, 1910, $620,836.66; expenses, $412,760.80; net earnings, $208,075.86, against $580,626.45 aggregate gross earnings; $388,361.76 expenses; $192,264.69 net earnings for same period 1909.

Temiskaming and Northern Ontario Ry.—Gross earnings for Jan., $124,484, against $131,254 for Jan., 1910.

The Vancouver, Westminster and Yukon Ry. Co. has given notice of a call of 10% on the subscribed stock, other than the shares held under certificate 16, in respect of shares numbered 10221 to Mar. 15, to the Secretary at Vancouver B.C., in accordance with a bylaw passed 35220 inclusive, payable on or before Jan. 3.

Western Coal and Coke Co.—Following are the directors for the current year, elected at the annual meeting Feb. 14:—E. B. Greenshields, Hon. R. Mackay, J. W. McConnell, H. A. Lovett, K.C.; C. Fergie, M. Curry.

Approximate gross earnings for Jan., $5,650,000, and for two weeks ended Feb. 14, $2,749,000 against $6,007,000 and $2,888,000,for same period 1910.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for Dec., 1910, $249,758; operating expenses, $174,114.75; net revenue, $75,638.29, against $236,364 operating revenue; $164,201.12 operating expenses; $72,163.83 net revenue for Dec., 1909. Aggregate operating revenue for six months ended Dec. 31, 1910, $1,734,947.72; operating expenses, $1,133,196.40; net revenue, $601,751.32, against $1,719,742.71 aggregate operating revenue; $1,149,182.67 operating expenses; $570,560.04 net revenue for same period 1909. Approximate gross earnings for Jan., $235,120. and for two weeks ended Feb. 14, $96,317, against $219,885, and $101,464 for same period 1910.

MINERAL RANGE RD.—Operating revenue for Dec., 1910, $64,934.37; operating expenses, $58,617.53; net revenue, $6,316.84, against $69,790.85 operating revenue; $58,463.88 operating expenses; $11,326.97 net revenue for Dec., 1909. Aggregate operating revenue for six months ended Dec. 31, 1910, $379,875.52; operating expenses, $376,665.20: net revenue, $3,210.82, against $439,286.02 aggregate operating revenue; $366,652.25 operating expenses; $72,633.77 net revenue for same period 1909. Approximate gross earnings for Jan., $65,404, and for two weeks ended Feb. 14, $29,444, against $65,600 and $30,258 for same periods 1910.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE Ry.—Total operating revenue for December, 1910, $997,712.28; expenses and taxes, $755,310.48; operating income, $242,401.80, against $1,044,495.93 total operating revenue; $671,407.59 expenses and taxes; $373,088.34 operating income for Dec., 1909. Aggregate total operating revenue for six months ended Dec. 31, 1910, $7,159,472.02; expenses and taxes, $4,566,236.37; operating income, $2,593,235.65, against $8,592,203.64 aggregate total operating revenue; $4,560,913.21 expenses and taxes; $4,031,290.43 operating income for same period, 1909. Aggregate gross earnings for January, $1,517,271, and for two weeks ended Feb. 14, $697,464, against $1,568,719 and $748,521 for same periods 1910.

CHICAGO DIVISION.—Total operating revenue for Dec., 1910, $695,348.69; expenses and taxes, $607,158.67: operating income, $88,190.02, against $573,855.43 total operating revenue; $503,741.62 expenses and taxes; $70,113.81 operating income for Dec., 1909. Aggregate total operating revenue for six months ended Dec. 31, 1910, $4,692,038.38; expenses and taxes, $3,533,107.44: operating income, $1 158,930.94, against $4,277,460.14 aggregate total operating revenue; $2,994,044 43 expenses and taxes; $1,283,415.71 operating income for same period 1909.

◆

Grand Trunk Ry. Earnings, Expenses, Etc.

Subject to audit, the accounts for the half year to Dec. 31, 1910, show the following results:—

Gross receipts		£3,699,900
Working expenses		2,790,700
Net receipts		£ 909,200
Income from rentals; outside operations, and car mileage balances		38,400
Total net revenue		£ 947,600
Net revenue charges for the half-year, less credits		525,400
Balance		£ 422,200
Deduct, Canada Atlantic Ry. deficiency for the half-year	£40,100	
Less D., G.H. & M. Ry. surplus for the half-year	3,900	
		36,200
Surplus		£ 386,000

This surplus of £386,000 added to the balance of £12.500 from June 1910 makes a total of £398,500 available for dividend, which will admit of the payment of dividend for the half-year on the 4% guaranteed stock, and first and second preference stocks, and a dividend of one-half of 1% for the year on the third preference stock, leaving a balance of about £9,000 to be carried forward

The accounts of the G.T. Western Ry. for the half-year including the balance brought forward, show a surplus of £1,700 which amount is carried forward to the current half-year.

Approximate gross earnings for Jan., $3,381 239, and for two weeks ended Feb. 14 $1,489,366, against $3,152,992 and $1,449,558 for same periods 1910.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to Jan. 31:—

	1911.	1910.	Inc.
Grand Trunk Ry. ..	£514,227	£490,217	£24,010
Canada Atlantic Ry. .	32,599	29 373	3 226
G.T. Western Ry. ..	113,188	95,664	17 524
D.G.H. & M. Ry. ...	34,761	32,621	2 140
Totals	£694,775	£647,875	£46,900

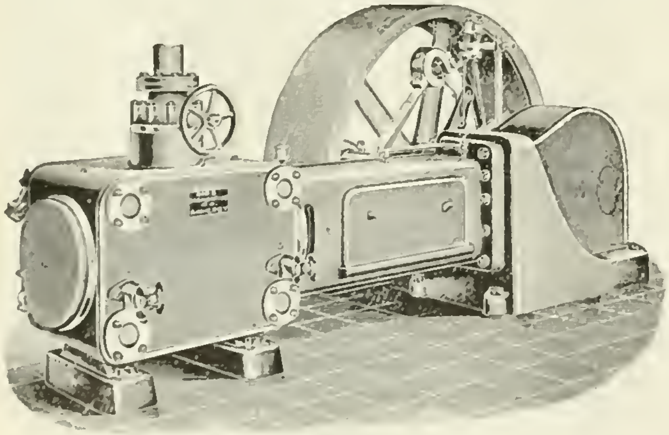
ROBB CORLISS ENGINES



Have the Armstrong-Corliss valve gear, which will operate at a higher speed than the ordinary releasing gear.

This valve gear does not depend on springs or dash pots for closing and runs without noise.

The wearing parts of the valve gear are enclosed in a casing and run in oil so that friction is reduced to a minimum.

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—The Board of Railway Commissioners has authorized the company to use tracks on the bridge over the St. Charles river, near Quebec, including property used in common by the Quebec Ry., Light and Power Co., and the Quebec and Lake St. John Ry., for entering Quebec, $1,500 a year rental to be paid to the former company, and also to pay all arrears for the use of the bridge, and be responsible for its share of its maintenance and operation. The Board has also approved the extension of the yards between Moreau and Marlborough streets, and dismissed the applications for closing Robillard St., the extension of yards in Hochelaga, to cross Marlborough St., and to take certain lands on Stadacona and Marlborough streets.

Canadian Northern Ontario Ry.—The Board of Railway Commissioners has approved a revised location for a section of the line under construction in St. Andrews parish, Que., authorized the company to build an overhead bridge across the C.P.R. near Jacques Cartier Jct., mileage 49.3, south from Hawkesbury, Ont.; to lay tracks across various highways and streets, and to build bridges over creeks, on the line under construction between Toronto and Ottawa.

Plans have been filed showing the route of the proposed entrance into North Toronto for the line to Buffalo. The new line is a prolongation of the Electric Development Co.'s right of way from where it ceases at Davenport Road, north of the C.P.R., to McLennan Ave. Several streets will be closed, and the tracks will be elevated between Avenue Road and Yonge St., at both of which points subways will be built. The route from Toronto will follow the Electric Development Co.'s right of way as far as possible. The entrance into Hamilton is at present undecided, but it is said that a route paralleling the G.T.R. from Burlington to the Valley Inn has been laid out. No plans have been filed with the city authorities, although the mayor was advised Feb. 4 that they were ready, neither has any report been received from the Board of Railway Commissioners' Chief Engineer, to whom the matter was referred some time ago. Various properties have been purchased near the old N. and N.W. Ry. at Ferrie St., Queen and Greig streets, by persons said to represent the company.

The Electric Development Co. has a right of way from Hamilton to Cainsville, and the C.N.O.R. has filed plans for an entrance into Brantford over this route. (See Toronto, Niagara and Western Ry., Jan., pg. 61.)

Surveys are reported completed for a line from Rideau Jct., on the Toronto-Ottawa line, about six miles southwest from Ottawa, to Port Arthur, effecting a junction on the way with the line from Toronto, via Sudbury, now terminating at Gowganda Jct. The route laid out is said to cross the Ottawa River at Fitzroy Harbor, and to return to the Ontario side of the river at Portage du Port, entering Pembroke from the rear, and on to Petawawa, skirting the south end of the military reserve, and following the valley of the Petawawa River through a section of Algonquin Forest reserve to Cedar Lake, then crossing a low divide to the collecting basin of the Amable du Fond. The route is right across country to Wistiwasing, where a settled country is again reached. Near here a branch line will diverge to Key Inlet, while the main line will pass Callender and Nipissing Jct., to North Bay. On leaving North Bay the line surveyed ascends the Sturgeon and Kapikotiwia rivers, crosses the Wahnapitei river, and on to a junction with the line now in operation to Toronto, near Capreol. From this point the line proceeds westward, getting on the Hudson Bay slope, and crossing various rivers, passing within 30 miles of the great fall of the Pic River, and rounding the head of Long Lake, it heads southwest for Lake Nipigon, and then to Port Arthur.

Replying to questions in the Ontario Legislature, Feb. 8, the Premier said the company had not made application for an extension of time for the building of the line from Sellwood Jct. to Port Arthur, for which the Legislature had voted 4,000 acres of land a mile, the line to be completed in 1913. There had been completed 30.65 miles of the line; an additional 15 miles had been graded, and some 300 miles of location surveys had been approved by the Board of Railway Commissioners. These replies apply to the second portion of the route described above.

A deputation from Parry Sound waited on the Ontario Government Feb. 3 and requested that the Legislature be asked to guarantee the C.N.O.R. bonds for a line from Parry Sound to North Bay, about 75 miles. The Premier promised consideration.

The city solicitor of Port Arthur states that he was advised by Sir Donald D. Mann that construction would be started at that city easterly in the spring, and that the line would be completed as far as Nipigon by the end of the year.

Canadian Northern Ry.—A Winnipeg press dispatch, Feb. 11, states that an agreement has been arrived at by which the Great Northern Ry. and the Northern Pacific Ry. will use the Fort Parry station being built in Winnipeg by the C.N.R. for the joint use of the C.N.R. and the G.T. Pacific Ry. A later dispatch says the G.N.R. has withdrawn from the agreement, and that it will build its own terminus in Winnipeg.

The Oak Point branch, heretofore terminating at Oak Point, on Lake Manitoba, was extended during 1910 to Gypsumville, Man., 96.84 miles. A further extension will probably be undertaken during this year.

The Greenway branch, heretofore terminating at Adelpha, Man., was extended during 1910 for 12.90 miles westerly, and it is expected that some additional mileage will be built this year.

The Maryfield branch, which had its terminus at Lampman, Sask., was extended westerly for 88.81 miles during 1910. This line is under construction to Lethbridge, Alta. A branch from this line extends to Bienfait, and it was stated in the Saskatchewan Legislature recently that the fact that the C.N.R. had practically ceased to operate its line from Maryfield to Bienfait, Sask., since Jan. 1, had been brought to the attention of the Government, and that steps had been taken to induce the company to resume operations.

The Rossburn section branches off the main line at Neepawa Jct., and was in operation to Stornoway, Sask., 199 miles, early in 1910. During 1910 track was laid for 16.46 miles westerly. It is intended to extend the line westerly to a junction with the main line to Edmonton near Tiny or Buchanan.

The Hallboro branch starts at Hallboro, on the Rossburn Section, and has been completed to Beulah, Man., 6.15 miles.

The Oakland branch has its present terminus at Totogan, 27 miles from Arizona Jct., Man., where it leaves the main line. It is proposed to extend this line along the western shores of Lake Manitoba, for some miles, and then to swing westerly, effecting a junction with the main line near Makinate.

The Thunder Hill branch starts from near Swan River, and is in operation to Pelly, Sask. The line is projected westerly to a junction with a proposed line east of the Saskatchewan River, from Humboldt on the Edmonton line, to Melfort, on the Prince Albert line. It is expected that some construction will be done on this line this year.

A line is under construction from Prince Albert to Battleford, Sask., and track was laid during 1910 on it for 16.13 miles, from Prince Albert to Shellbrook. It is expected that this line will be completed during the current year. Starting at Shellbrook, a branch is under construction to the Crooked Lake district, on which track was laid during 1910, to Big River, 56.95 miles. A further extension will probably be put in hand this year.

A branch line is under construction from North Battleford to Jackfish Lake, Sask., and on this line track was laid during 1910, between North Battleford and Meots, 22.59 miles.

A branch line is projected from Regina westerly to Moose Jaw, and it is expected that progress will be made with construction on it this year.

The Goose Lake branch was in operation during 1910 from Saskatoon to Kindersley, Sask., 126 miles. Track was laid during 1910 for 49.90 miles westerly. This line, it is proposed, shall be extended into Calgary. The Board of Railway Commissioners has approved of revised location through tp. 28, ranges 4, 5 and 6, west 4th meridian, mileage 196.64 to 210.21, from a junction with the Qu'Appelle, Long Lake and Saskatchewan Ry. A line to be known as the Delisle branch is under construction from Delisle, on the Goose Lake line, southerly, and it is expected that an additional mileage will be graded this year.

The Vegreville-Calgary branch line, on which track was laid in 1909 to Ryley, Alta., was extended during 1910 to Red Deer River, 155.23 miles. This line is to be extended this year into Calgary. A branch line is being built from Stettler westerly into the Brazeau River coalfields, and further construction will be gone on with during this year.

It is also proposed to continue the grading for the main line west of St. Albert, Alta.

The contractors engaged on these different lines are: Cowan Construction Co., McMillan Bros. and Kenny, Ltd., Northern Construction Co., Janse and Macdonald, and M. McCrimmon.

Press reports state that it is expected that all the line from Pembina River to the Yellowhead Pass will be placed under contract in the spring. A survey party left Edmonton, Jan. 29, to revise the location west of the Pembina River ready for the contractors. It is expected that this contract will go to the Union Construction Co., which is the new name of the Cowan Construction Co., the Manitoba Legislature having been asked to give the necessary authority. A Winnipeg dispatch states that C. J. Merry, President of the construction company, and F. Owens, the Superintendent, left Winnipeg Feb. 9 to open up work on the section of the line to the Rocky Mountains, a contract for a 200 mile stretch having been arranged. The contractors for the line to Pembina River, McMillan Bros., are reported to be making satisfactory progress. Preparations are being made for the letting of contracts for the substructure and steel work of the bridge across the Pembina River.

Canadian Northern Branch Lines Co.—The Dominion Parliament is being asked to incorporate a company with this title with power to build branch lines from 18 different points in Manitoba, Saskatchewan and Alberta, the starting and terminal points of which were given in our Dec., 1910, issue, page 1031. The provisional directors are: F.

H. Phippen, K.C.; G. G. Ruel, G. F. Macdonald, R. H. M. Temple, A. J. Reid, all of Mackenzie. Mann & Co.'s legal department.

Edmonton and Slave Lake Ry.—The Board of Railway Commissioners has recommended the sanctioning by the Governor-in-Council of the amalgamation of the E. and S.L.R. with the C.N.R.

Canadian Northern Pacific Ry.—In connection with the route of the line from Chilliwack to Hope, B.C., we understand that there are some matters about which negotiations are being carried on with the Vancouver, Victoria and Eastern Ry., and that an early adjustment is expected. Good progress is being made with the grading between Port Kells and Popkum, and it is expected that tracklaying will be started at Port Kells by April 1. Press reports state that preparations are being made for letting another contract at an early date for the section extending from Hope to Boston Bar, 42 miles.

The surveys for the terminal site at Port Mann were reported completed Jan. 28, the site covering 4,000 acres, with a waterfront of 2½ miles. There is said to be a depth of 40 ft. of water along the front. There has been deposited with the Minister of Public Works at Ottawa. copies of the plan and description of the site and elevation of the railway wharf proposed to be built. The contractors for clearing the site are reported to have over 500 men at work. It is expected that work will be started at an early date on the area selected for terminal purposes, and that the lots will be put on the market June 1.

Vancouver Island Ry.—We are advised that the contract for the first 40 miles of the section of the C.N. Pacific Ry., which is being built on Vancouver Island, has been let to Grant, Smith and Co. Press reports state that the firm consists of M. Carlin and Grant Smith, and that the contract was signed by them and by T. G. Holt, attorney at Vancouver for Mackenzie, Mann & Co., Jan. 21. The contract covers the building of about 40 miles of line, from 4.7 miles from Victoria to the vicinity of Shawinigan Lake, the work to be finished within a year. Work was started at Peddar Bay, Feb. 6, by a gang of 60 men, under sub-contractor Macdonald. Other subcontracts are being let.

The route surveyed swings slightly east from Sooke Lake, to which point location has been completed, reaching Shawingan Lake at its extreme southeast corner. skirting its western shore, and then following the northwest arm, crossing the Koksilah river about a mile from the lake, then swinging to the northwest to the Cowichan River, about nine miles west of Duncan, and follows that river to the lake near the mouth of Mud Creek. Cowichan Lake is followed for its entire length on the north side, and at the western end the route swings abruptly northerly to the Nitinat River, which is followed to within five miles of Nitinat Lake. then curves northerly to the head of Coleman Creek, and along the valley of that creek to its outlet in Barkley Sound, whence it follows the deviations of the Alberni canal to Alberni.

Duluth, Winnipeg and Pacific Ry.—Tracklaying is expected to be started on this line May 1, by which time the grading and bridge work is expected to be completed. The approaches to the tunnel at Shoreline Park, Duluth, Minn., have been cut, and preparations are being made for driving the tunnel through the 500 ft. of granite which lies between the two approaches. (Feb., pg. 141.)

◆

The Dominion Wire Rope Co., Ltd. Montreal, has increased its capital stock from $200,000 to $500,000.

National Transcontinental Railway.

Replying to a question in the House of Commons Feb. 6, the Minister of Railways said the cost of the N.T.R. from Moncton to Winnipeg, to the end of 1910, was 89,553,740, and on the following day stated that while that was the actual amount paid out to Dec. 31, the work done to that date which was being paid for brought up the total cost to $93,920,956.16. On another occasion he stated that the section of the line between Moncton and the St Lawrence, was expected to be opened by Sept. 1912. The state of completion on the several contracts on the section at Dec. 31, 1910, was as follows:

Contract	Contractors.	Percentage of work done	Percentage of work remaining to be done.
1	Grand Trunk Pacific Ry. Co........	99.5	0·5
2	Jno. W McManus & Co.	98·09	1·91
3	Grand Trunk Pacific Ry. Co........	98·64	1·36
4	Grand Trunk Pacific Ry. Co........	99.22	0·78
5	Willard Kitchen Co.......	89.48	10·52
6	Lyons & White..................	88.70	11·30
7	M. P. & J. T. Davis	62.80	37·20
8	M. P. & J. T. Davis....	75.70	24.30

There were then 1,450 men employed on the several contracts.

A contract has been let to J. A. Latouche, for the clearing away of the old buildings on the Champlain Market site, Quebec, in preparation for the erection of a terminal station thereon

Replying to questions in the House of Commons, Jan. 26, the Minister of Railways said neither the Government nor the National Transcontinental Railway Commission had entered into any agreement or working arrangement of any kind with the Province of Ontario or the Commission operating the Temiskaming and Northern Ontario Ry. regarding the securing of running powers over that line from Cochrane to North Bay, Ont., or to any other point; nor was it intended to discontinue the construction of the N.T.R., in whole or in part, permanently or temporarily. east of Cochrane.

The report of the arbitrators on the over-break, etc.. on certain contracts has been handed to the Government and will be laid before Parliament. Press reports state that the finding of the arbitrators does not say in so many dollars how much is to be deducted. but it takes each particular part of the work complained of and lays down a ruling as to what the measurements and allowances should have been. This will be compared with what was allowed and if the latter is in excess of the arbitrators' findings. deductions will have to be made accordingly. About $500,000 will, it is estimated, be taken off contractors and sub-contractors. It will come out of the drawbacks held by the Government. If dissatisfied with the award those who are affected will have the right to appeal to the Exchequer Court.

Grand Trunk Pacific Railway.

There have been persistent rumors in Brandon. Man.. to the effect that the G.T.P.R. was negotiating for the purchase or lease. or for running powers over the Brandon, Saskatchewan and Hudson Bay Ry.. a line owned by the Great Northern Ry., U.S., and that the line would be at once extended to the G.T. Pacific Ry. Several conferences have taken place between G.T. Pacific Ry. officers and the city council. at which the mayor asked the company to give Brandon a branch line.

Press reports state that a G.T.P.R. engineering party is at work in the vicinity of Frobisher. Sask., making a survey for a line towards the International boundary.

The Board of Railway Commissioners has approved plans for the station at Balcarres, Sask.. on the line from Melville to Regina: of the revised location plans for the branch from Regina to the International boundary from mileage 88.32 to 100, and location surveys from mileage 100 to 130.92.

A deputation representing the Saskatoon, Sask., city council, waited on Vice President Chamberlain, at Winnipeg, recently, with a view of discussing the entrance of one of the company's projected branch lines into the city. Four propositions have been submitted to the city council.

The Board of Railway Commissioners has authorized the company to lay tracks for its Young-Prince Albert branch across certain highways in East Saskatchewan district. and has approved of location plans for the same line from mileage 110.9 to the east boundary of First Ave,, east. Prince Albert, Sask.

Calgary press reports state that that city is to be made an important centre by the G.T.P Ry. It will be the meeting point for the line from Tofield, now under construction; another from Moose Jaw, Sask.; and other lines preceding to Lethbridge, and other southerly and westerly points, while other lines will connect up with these branches from different points. The line from Tofield is expected to be completed by Sept. A conference between officers of the company and the city council representatives was held Feb. 4, with a view of completing arrangements for the entrance into Calgary.

Press reports state that the main line to Tete Jaune Cache. 47 miles west of the Rocky Mountains, will be completed by the end of the season. The contractors have been doing a good deal of rock work west of the Athabasca River during the winter, and preparations are being made for starting up other work.

Surveys for the proposed branch line from Fort George to Vancouver are being gone on with, and two lines are being run by way of the Pemberton Valley.

At Prince Rupert, B.C., a great deal of work has been done in the way of laying track in the yards, laying tracks on the wharves. and providing additional wharf accommodation. (Feb., pg. 117.)

Protection of Railway Employes.

Upon the recommendation of the Chief Operating Officer and the Board of Railway Commissioners order 12890 was passed. Feb. 6, amending order 12225. Nov. 9, 1910, respecting the protection of railway employes. which was given in full in our Dec. 1910 issue. making subclause c, of clause 8, read as follows:

(c) No structure except mail cranes, which shall be erected and maintained as directed in order 5647, Nov 20, 1908, over 4 ft. high shall hereafter be placed within 6 ft. from the gauge side of the nearest rail without first obtaining the approval of the Board.

◆

The city of St. Thomas is asking power from the Ontario Legislature to fix the amount to be paid yearly by the Canada Southern Ry. or Michigan Central Rd., in payment or commutation of its taxes, rates and assessment on right-of-way, yards, buildings and structures, lying north of Wellington St., St. Thomas, notwithstanding any provision in any act to the contrary.

The Saskatchewan Legislature has passed a resolution expressing the opinion that "action should be taken to compel the railway companies to pay compensation for right of way for new lines, within reasonable time after taking possession of farmers' land for this purpose, and that if for any cause railway companies are unable by reason of any provision of law to promptly pay such compensation, such law should be amended so as to enable them to do so."

Coal Rates Duluth to Winnipeg.

Chief Railway Commissioner Mabee gave the following judgment Feb. 6 in the case of the Great Northern Ry. Co. (U.S.A.) vs. the Canadian Northern Ry. Co., the same being concurred in by Assistant Chief Commissioner Scott and Commissioner McLean:—

In Sept., 1907. the Great Northern Ry. filed with the Board an application asking for an order that the Canadian Northern Ry. should "agree and concur in a joint tariff of $2.50 a ton on coal from Duluth to Winnipeg," alleging, among other things, that the rate on coal from Port Arthur and Fort William to Winnipeg, over the Canadian Northern lines, was $2.50 a ton; that the joint tariff between the applicant and respondent from Duluth to Winnipeg was $3 a ton, of which the respondent received 75c. a ton, that the applicant desired to reduce its rate to $2.50 a ton, and was willing to allow the respondent 75c. a ton out of this reduced rate; that the Great Northern mileage was 365 from Duluth to Emerson, and the Canadian Northern 66 miles from that point to Winnipeg; that the people of the latter city had called upon the applicant for assistance in their coal supply, and that this could only be done by putting the Duluth-Winnipeg rate upon the same basis as the Fort William and Port Arthur-Winnipeg rate.

To this application the Canadian Northern made lengthy answer. and took objection to the Board's jurisdiction, which question was argued and determined adversely to the respondent's contention. Later on. evidence was given at Fort William and Winnipeg at length, and the case was again argued in all its phases in the last week of Jan., 1908. and judgment was reserved. The death of the late Chief Commissioner took place within six weeks of the close of the case, and the matter has never since been finally disposed of.

Sec. 336 provides that as respects all traffic carried from any point in the U.S. into Canada by any continuous route operated by more than one company, a joint tariff for such route shall be filed with the Board. This section applied to the movement of coal from Duluth to Winnipeg by the applicant and respondent, and in compliance therewith the applicant duly filed C.R.C. 142, effective Dec. 31, 1902, superseded by C.R.C. 612. effective Aug. 6, 1909, superseded by C.R.C. 631, effective Sept. 30, 1909, all naming the Canadian Northern Ry. as a participating carrier, and the rate from Duluth to Winnipeg as $3. C.R.C. 631 has since remained and is still in effect.

Sec. 338 provides that where these joint tariffs are filed, the company or companies shall "until such tariff is superseded, or disallowed by the Board, charge the toll or tolls specified therein."

In the case of the Grand Trunk Ry. vs. the British American Oil Company 43 S.C.R. 311, the Supreme Court held, affirming this Board, that under sec. 336 tariffs filed by foreign railway companies for rates on through traffic originating in foreign territory. to be carried by continuous routes owned or operated by two or more companies from foreign points to destinations in Canada, are effective and binding upon all Canadian companies participating in the transportation, although not expressly assented to by the latter, and may be enforced by the Board against such Canadian companies.

Under this decision there is and has been nothing to prevent the Great Northern Ry., if it so desired. from filing a tariff giving a rate of $2.50 upon coal from Duluth to Winnipeg. naming the Canadian Northern Ry. as the participating carrier. and this tariff would "supersede" the old $3 one, and the Canadian Northern would be bound to accept and carry traffic under it, unless it was "disallowed by the Board." No order granting leave to file any such tariff or requiring the Canadian Northern Ry. to agree to or concur therein, was or is necessary. and this application was entirely unnecessary.

The Canadian Northern has had on file, during all this time, a general concurrence with all tariffs that might be filed by the Great Northern. and in that respect its position would have been much weaker than that of the Grand Trunk in the oil case, as there it has endeavored to protect itself by filing an exception to the oil rate of the Indianapolis Southern.

In view, however, of the amount of evidence given. and the time and labor spent upon argument, to say nothing of the importance with which the respondent, as well as the Canadian Pacific Ry., regarded the application, it does not seem proper to leave the case in the above position, as, doubtless. if the applicants filed such a tariff, the respondents would at once move for its disallowance, and as all the possible material is now before the Board, it would seem reasonable to now determine whether, if a $2.50 rate were put in by the applicants between Duluth and Winnipeg, over the route of the applicant and respondents lines. it would be disallowed by the Board.

The Canadian Northern Ry has a line from Port Arthur to Winnipeg, the C.P.R. has a double track road between Fort William and Winnipeg. and the evidence showed that large sums had been expended at Port Arthur by the respondents for the establishment of a plant for handling coal. Large sums in wages are paid at both these points to workmen engaged in this work, and it was clearly demonstrated that if this trade was taken away from these cities it would seriously injure them. The facts, so far as they affected these two cities, were presented by counsel for the cities, they being allowed to intervene, and may or may not have any bearing upon the case.

Let us deal for a moment with the case as it affects the Canadian Northern only. Now it enjoys the revenue derived from this coal traffic at the rate of $2.50 a ton. hauling it from Port Arthur to Winnipeg, about the same distance as from Duluth to Winnipeg, and the Great Northern desires to get this traffic away from it, putting seven-tenths of the revenue earned from it into its own treasury, cutting down the earnings of the Canadian Northern from $2.50 to 75c. a ton, and compelling it to return its empty grain cars to Winnipeg minus this coal traffic. In whose interests would all this be? What reason exists for the transfer of this traffic and the revenue derived therefrom from one company to another? How would the Winnipeg coal consumer be benefited? Would he be getting coal by a shorter route or at a lower freight rate? This case is not to be considered as if the application came from the people of Winnipeg. supported by satisfactory evidence that the railways were defaulting in furnishing a sufficient coal supply via Fort William and Port Arthur. There was something said about a shortage at some time. but it was not suggested at the hearing that the Fort William and Port Arthur route was not a satisfactory and reasonable one. nor was it suggested that the railways operating from those points could not supply Winnipeg and adjacent points with all the coal necessary. and at the minimum of cost for its transportation.

The application then is a plain and selfish attempt by the applicants to use the Board to divert traffic from the respondent lines to its own lines, not to furnish any better or cheaper route for the carrying of coal to Winnipeg, nor to furnish any more prompt or steady service, but solely that the applicants might obtain the revenues earned by the respondent from this coal traffic. This Board has steadily refused to permit the Railway Act to be put to any such abuse.

An attempt of a somewhat similar nature was made in the Muskoka rates case, Canadian Northern Ry. vs. the Grand Trunk Ry. and Canadian Pacific Ry., 7 Canadian Railway Cases, 289. There the Board said: "Is it fair that the applicant should be permitted to make use of the Act to divert from the G.T.R. and C.P.R. lines at Toronto the tourist traffic that the last mentioned railways have spent years in developing? That this would be to the advantage of the applicant is clear, but it has not been shown that the public is to any appreciable extent interested?"

The same principle was involved in the case of the Elder Dempster S.S. Co. vs. the G.T.R. and C.P.R., 10 Canadian Railway Cases, 334. There the Board refused the application, and the following extract from the judgment is sufficient to show why it failed: "Upon the fact of the matter then, it is a struggle to obtain from the railways part of their westbound traffic, and it is by no means clear that the shippers would obtain any material benefit if the application succeeded."

In England, in the case of the Didcot, Newbury, and the Southampton Ry. vs. the London and South-Western Ry., 10 Railway & Canal Traffic Cases, 9, Sir Frederick Peel said:—"It seems to me, upon the evidence, that the means provided for that purpose by the Southwestern Co., by their route, leave no cause of complaint, and that no real advantage would accrue to the public through having the different route proposed by the applicants." These words are particularly applicable to the case in hand, as there was no evidence, nor did counsel argue, that the route proposed by the Great Northern would produce any advantage to the public.

In the U.S. the administration of the Act Respecting Commerce has been entirely upon the lines above indicated. In re Through Passenger Routes, 16 Interstate Commerce Reports, pg. 310, the then Chairman said:—"The statute provided that before the Commission may establish through routes and joint rates, but does not require it to do so. It follows then, that the Commission can lawfully exercise its discretion in this respect, it must find that no reasonable or satisfactory through route exists, and when its jurisdiction is thus established, its discretion must be exercised upon sound consideration of justice to the public and to the carriers."

In Baer Brothers vs. the Missouri Pacific. 17 I.C.R., at pg. 225, the present Chairman said:—"As we understand the law, it does not require us in all cases where no through route and joint rate exists to establish a route and fix a rate applicable thereto, but only empowers, for the purpose of giving effect to the Act."

In Spring Hill Coal Co. vs. Erie Rd., 18 I.C.R., 508, it was held that the Interstate Commerce Commission had no jurisdiction to establish a through route and joint rate where a reasonable through route already existed.

Now, applying these cases to the one under consideration, the Board finds as a fact that there is already a reasonable route and rate—not a joint rate with the water carriers of this coal, because the Board has no control over them—but a reasonable route to destination; so if this case were before the Interstate Commerce Commission, the applicants upon that state of facts, would be told that there was no jurisdiction to establish another route. It may be that the

THE RAIL JOINT COMPANY OF CANADA, LIMITED

OFFICES: BOARD OF TRADE BLDG., MONTREAL, CAN.

Makers of Base Supported Rail Joints for Standard and Special Rail Sections, also Girder, Step or Compromise, Frog and Switch, and Insulating Rail Joints, protected by Patents.

Railway Act gives wider authority to this Board, and that we have jurisdiction to establish more than one route and joint rate between any two given points; but any such action could only be justified by it being clearly established that the interests of the public plainly called for such intervention.

The law requires the carriers to establish reasonable through routes aud rates applicable thereto, and when this has been done they have discharged their duty in that regard. The Canadian Northern says it has established a reasonable route for coal to Winnipeg; it has established that fact by evidence, and it is not bound to submit to another route established by the Great Northern Ry., this latter proposition being made solely for the pecuniary benefit of the Great Northern to the loss of revenue of the Canadian Northern, and no apparent corresponding benefit to the public.

If such a tariff were filed by the applicants, it would, upon the existing state of facts, be disallowed by the Board.

Steam Railway Track Laid in 1910.

In our last issue we gave a preliminary statement of steam railway track laid in Canada in 1910. Since then some belated returns have been received, including a more detailed statement from the Grand Trunk Pacific Ry., and the table is repeated below revised up to date. The returns show that 1870.44 miles of track were laid against 1588.47 in 1909 and 1505.95 in 1908. The figures as finally corrected do not differ materially from the figures given in our last issue, although some of the figures given were estimates. others which were totalled are now given in more detail, and the Detroit River tunnel, the length of which in Canada is estimated at 1,20 miles, is added.

International Traffic Regulations.

The Minister of Railways stated in the House of Commons Feb. 6 that the question of the control of rates on lines running from Canada into the United States, and from the United States into Canada, had been under consideration for more than a year. The settlement of the question by the appointment of an international tribunal was first brought to his attention by the Chief Railway Commissioner. The difficulties experienced by shippers on traffic between the two countries were, at times, quite apparent. For instance, the rate from New York to Toronto was a point. He presumed it was possible to get a through rate by the boards acting independently, but what often results was this, the railway companies on each side charged a local tariff, particularly if there was no competition, and as a result the purchaser of the goods in Toronto was obliged to pay two local rates instead of one through freight. The object of the agreement, if one could be arrived at, was to form some tribunal that could quickly make a through rate from any point in Canada to any point in the United States, or vice versa, so that as far as the control of the rates was concerned there would be a tribunal that would as completely control the traffic originating in either country and going to the other, as if the traffic were all in one country. Chief Commissioner Mabee and Chairman Knapp, of the Interstate Commerce Commission, have had several conferences, and they arrived at a basis which to them seemed satisfactory for the solution of the difficulty, and in a manner to protect both shippers and producers on either side of the line having business on the other. The report of each of these gentlemen was in the hands of their respective governments. If approved, a treaty would be made on the lines suggested in the report. The details of the report had not been given to the public, but an article in a U.S. publication contained an approximately correct statement of the report.

This suggests the appointment of a body of four, the Chief Commissioner and a member of the Board of Railway Commissioners for Canada, and the Chairman and a member of the Interstate Commerce Commission for the U.S., with powers corresponding to those dealing with interstate traffic in the U.S.

The matter was still under the consideration of the Canadian Government. As it would be dealt with in the form of a treaty, the usual custom and practice as to treaties would be followed in both countries.

Dominion Railway Subsidy Agreements—An agreement, under the Dominion act relating to granting aid to certain railways, was entered into Jan. 27 with the Kettle Valley Ry., in respect of the building of a line from Midway to a junction near Merritt, B.C., with the Nicola, Kamloops and Similkameen Ry., a distance not exceeding 250 miles.

Major H. Swinford, General Agent Northern Pacific Ry., Vancouver, B.C., and formerly acting in a similar capacity at Winnipeg, has been elected a Fellow of the Royal Geographical Society.

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

Railway Rolling Stock Notes.

The Powell River Paper Co. has received one Columbia locomotive from the Montreal Locomotive Works.

McDonnell and O'Brien, railway contractors, Harvey Jct., Que,. have ordered two mogul locomotives, with cylinders 19 by 26 ins.; driving wheels 50 ins. diar. and with total weight of 130,000 lbs., from the Montreal Locomotive Works.

The Intercolonial Ry., has ordered nine vans to be built at its Moncton shops, and has received six vans and one Pintsch gas car from its shops, and four first class passenger cars from the Preston Car and Coach Co., Preston, Ont.

The Intercolonial Ry. rolling stock, according to a statement made by the Minister of Railways, in the House of Commons, Feb. 16, consists of 397 locomotives, 454 passenger cars, and 12,491 freight cars, the first cost of which was $19,049,837.93.

The C.P.R., from Jan. 1 to Feb. 13, received the following additions to rolling stock: four first class cars from its Angus shops, Montreal; one automobile car from the Canadian Car and Foundry Co., Montreal, and five G.2 and one G.1 locomotives from the Montreal Locomotive Works.

The Canadian Northern Ry., between Dec. 15 and Feb. 15, received the following additions to rolling stock: four snow plows, 125 box cars, from the Canadian Car and Foundry Co., Montreal; 150 box cars from the Crossen Car Manufacturing Co., Cobourg, Ont.; and three baggage and mail cars from the Preston Car and Coach Co., Preston, Ont.

The G.T.R., between Oct. 1 and Dec. 31, 1910, received the following additions to rolling stock: 398 steel underframe box cars from the Canadian Car and Foundry Co., Montreal; three parlor-buffet cars from its Montreal shops; one snow plow from its London, Ont., shops, and 1,000 box cars and 500 automobile cars, built in the U.S., for the G.T. Western Ry. and affiliated lines.

The C.P.R., from Jan. 1 to Feb. 13, ordered the following rolling stock: 170 box cars, 10 flat cars, 12 stock cars, four freight refrigerator cars, eight vans, three second class cars, three flangers, one fruit and express car, one baggage and smoking coach, one snow plow and 11 D.10 locomotives from its Angus shops, Montreal. and four Hart ballast cars and two coal cars from the Canadian Car and Foundry Co., Montreal.

The Canadian Northern Ry., between Dec. 15 and Feb. 15, ordered the following rolling stock: 10 switching locomotives from the Canadian Locomotive Co., Kingston, Ont.; 250 steel under-frame flat cars, from the Canadian Car and Foundry Co., Montreal; five second class and baggage cars from the Preston Car and Coach Co., Preston, Ont.; 200 Hart convertible cars from the Hart-Otis Car Co., Montreal; 100 refrigerator cars, 200 stock cars; 15 cabooses from the Crossen Car Manufacturing Co., Cobourg, Ont., and 15 cabooses in the U.S., for the Duluth, Rainy River and Winnipeg Ry.

Triple-expansion locomotives and condensing locomotives have been suggested at various times, and have obtained public notice recently. The condensing locomotive came to light in the daily press in a reporter's account of a train being stopped near Chicago by the engine drawing up fish from a track tank. It was stated that on removing "the piston of the condenser" the latter was found to be packed with fish. Of more serious interest is the triple-expansion locomotive, which has recently been patented by S. M. Vauclain, of the Baldwin Locomotive Works. His design provides for an elongated locomotive of the Mallet type, having three (instead of two) groups of drivers. These groups are driven by cylinders using high-pressure, intermediate and low-pressure steam, respectively.

Cavicchi and Pegano, railway contractors, have ordered one 10-wheeled locomotive from the Montreal Locomotive Works. Following are the chief details:

Weight in working order	109,000 lbs.
Weight on drivers	83,000 lbs.
Weight on engine truck	26,000 lbs.
Wheel base, driving	10 ft. 6 in.
Wheel base, engine	20 ft. 8 in.
Driving wheels, diar.	50 in.
Cylinders	18 in. by 24 in.
Boiler, type	Extended wagon top
Boiler pressure	160 lbs.
Tubes, no. and diar.	198 2 in.
Tubes, length	12 ft. 3 in.
Brake	Westinghouse American
Capacity, water	5,000 U.S. gals.

E. F. and G. Fauquier, railway contractors, Ottawa, have ordered two 10-wheeled locomotives from the Montreal Locomotive Works. Following are the chief details:—

Weight in working order	109,000 lbs.
Weight on drivers	83,000 lbs.
Weight on engine truck	26,000 lbs.
Wheel base, driving	10 ft. 6 in.
Wheel base, engine	20 ft. 8 in.
Driving wheels, diar.	50 in.
Cylinders	18 in. by 24 in.
Boiler, type	Extended wagon top
Boiler pressure	160 lbs.
Tubes, no. and diar.	198 2 in.
Tubes, length	12 ft. 3 in.
Brake	Westinghouse American
Capacity, water	5,000 U.S. gals.

O'Brien, Fowler and O'Gorman, railway contractors, Ottawa, have ordered two mogul locomotives from the Montreal Locomotive Works. Following are the chief details:—

Weight in working order	130,000 lbs.
Weight on drivers	113,000 lbs.
Weight on engine truck	17,000 lbs.
Wheel base, driving	12 ft. 6 in.
Wheel base, engine	20 ft. 6½ in.
Driving wheels, diar.	50 in.
Cylinders	19 in. by 26 in.
Boiler, type	Extended wagon top
Boiler pressure	180 lbs.
Tubes, no. and diar.	275 2 in.
Tubes, length	10 ft., 5¾ in.
Brake	Westinghouse American
Capacity, water	5,000 imp. gals.

O'Brien, Fowler and McDougall Bros., railway contractors, Ottawa, have ordered seven mogul locomotives from the Montreal Locomotive Works. Following are the chief details:—

Weight in working order	130,000 lbs.
Weight on drivers	113,000 lbs.
Weight on engine truck	17,000 lbs.
Wheel base, driving	12 ft. 6 in.
Wheel base, engine	20 ft. 6½ in.
Driving wheels, diar.	50 in.
Cylinders	19 by 26 in.
Boiler, type	Extended wagon top
Boiler pressure	180 lbs.
Tubes, no. and diar.	275 2 in.
Tubes, length	10 ft. 5¾ in.
Brake	Westinghouse American
Capacity, water	5,000 imp. gals.

The Brompton Paper and Pulp Co. has ordered one Columbia type locomotive (2-4-2), of which the following are the chief details. from the Montreal Locomotive Works:—

Weight in working order	79,000 lbs.
Weight on trailers	12,000 lbs.
Weight on drivers	59,000 lbs.
Weight on engine truck	8,000 lbs.
Weight of tender	79,000 lbs.
Wheel base, driving	7 ft. 0 in.
Wheel base, engine	22 ft. 6 in.
Driving wheels, diar.	44 in.
Cylinders	14 by 22 in.
Boiler, type	Straight top
Boiler pressure	165 lbs.
Tubes, no. and diar.	106 2 in.
Tubes, length	11 ft. 8 in.
Capacity, water	1,200 U.S. gals.

Following are the chief details of the 10 ten-wheeled locomotives which the Algoma Central and Hudson Bay Ry. recently ordered from the Montreal Locomotive Works, as mentioned in our last issue:—

Weight in working order	194,000 lbs.
Weight on drivers	168,000 lbs.
Weight on engine truck	26,000 lbs.
Weight of tender	130,000 lbs.
Wheel base, driving	15 ft. 10 in.
Wheel base, engine	24 ft. 4½ in.
Wheel base, engine and tender	56 ft. 6 in.
Driving wheels, diar.	56 in.
Valve gear	Walschaert
Superheater	Vaughan-Horsey
Cylinders	22½ by 28 in.
Boiler, type	Extended wagon top
Boiler pressure	180 lbs.
Tubes, no. and diar.	240 2 in., 24 5 in.
Tubes, length	14 ft. 2½ in.
Capacity, water	5,000 imp. gals.

Following are the chief details of the 12 compound consolidation locomotives which the G.T.R. is having built by the American Locomotive Co. at Dunkirk, N.Y., for use on its U.S. lines:—

Cylinders	22½ in. and 35 in. by 32 in.
Driving wheels	63 in.
Boiler pressure	210 lbs.
Tubes, no. and diar.	353 2 in.
Tubes, length	15 ft. 0 in.
Heating surface, tubes	2,757.1 sq. ft.
Heating surface, firebox	168.2 sq. ft.
Heating surface, total	2,925.3 sq. ft.
Grate area	50.62 sq. ft.
Boiler diar., front end	67 in.
Weight in working condition on truck	26,400 lbs.
Weight on first pair of drivers	48,350 lbs.
Weight on second pair of drivers	44,430 lbs.
Weight on third pair of drivers	48,720 lbs.
Weight on fourth pair of drivers	43,300 lbs.
Weight of engine total	211,200 lbs.
Weight on drivers, total	184,800 lbs.
Weight on front truck of tender	65,600 lba.
Weight on back truck of tender	77,700 lbs.
Total weight of tender loaded	143,300 lbs.
Total weight of locomotive	354,500 lbs.
Wheel base, driving	17 ft. 0 in.
Wheel base, engine, total	25 ft. 9 in.
Wheel base, engine and tender	57 ft. 3½ in.
Total length over all	67 ft. 6½ in.

Following are the chief details of the six Pacific type locomotives which the G.T.R. is building at its Montreal shops, an illustration of which, with description, was given in our Oct., 1910, issue:—

Weight on driving wheels	131,050 lbs.
Weight on truck, front	37,100 lbs.
Weight on truck, back	38,500 lbs.
Weight, total, engine	206,650 lbs.
Weight, total, engine and tender	345,000 lbs.
Wheel base, driving	13 ft. 4 in.
Wheel base, total, engine	33 ft. 2 in.
Wheel base, total, engine and tender	62 ft. 3½ in.
Boiler, type	Wagon top
Boiler, diar.	66 in.
Boiler pressure	200 lbs.
Boiler, staying	Radial
Cylinders, diar. and stroke	22 in. by 28 in.
Valve	Balanced slide
Firebox	96⅞ in. by 75¼ in.
Tubes, no. and diar.	305 2 in.
Tubes, length	20 ft. 7 in.
Heating surface, firebox	170 sq. ft.
Heating surface, tubes	3,274 sq. ft.
Heating surface, firebrick tubes	28 sq. ft.
Heating surface, total	3,472 sq. ft.
Grate area	50.6 sq. ft.
Driving wheels, diar.	73 in.
Journals	9½ in. by 12 in.
Truck wheels, diar., front	31 in.
Journals	6½ by 10½
Truck wheels, diar., back	49 in.
Journals	8 in. by 14 in.
Tender wheels, diar.	34 in.
Journals	5½ in.. by 10 in.
Capacity, water	7,000 gals.
Capacity, coal	10 tons

Following are chief dimensions, etc., of the rolling stock, which the Intercolonial Ry. is building at its Moncton, N.B., shops, as mentioned in our last issue:—

Steel Frame Box Cars (50).

Length over buffer blocks	38 ft. 1¼ in.
Width over sill	9 ft. 3½ in.
Length, inside	36 ft. 0 in.
Width inside	8 ft. 6½ in.
Steel under frame	Canadian Car & Foundry Co.
Capacity	60,000 lbs.

Wood Box Cars (50).

Length over end sills	36 ft. 9⅝ in.
Width over side sills	9 ft. 0⅝ in.
Length inside	36 ft. 0 in.
Width inside	8 ft. 6 in.
Height inside, floor to carline	8 ft. 0 in.
Door opening	6 ft. 0 in.
Truck centres	26 ft. 9⅝ in.
Springs	M.C.B. type G
Journal boxes	McCord
Bolsters and brake beams	Simplex
Air brakes	Westinghouse
Capacity	60,000 lbs.

Colonist Cars (3).

Seating capacity	72
Length over buffers	71 ft. 7¼ in.
Length over end sills	63 ft. 7 in.
Width over side sills	9 ft. 10 in.
Height top of sill to under side of plate	6 ft. 7¼ in.
Length inside sheathing at floor line	62 ft. 8½ in,

Oil Storage in a Signal Tower

is not hampered by space limitations when the Bowser Outfit No. 126 is used. A floor space of less than two square feet is sufficient for the pump, and the tank is kept outside, buried underground near the track where it can be conveniently filled direct from supply cars. This outfit exemplifies the thoroughness with which every detail in

Bowser Oil Storage Systems

(adopted by nearly 150 railroads)

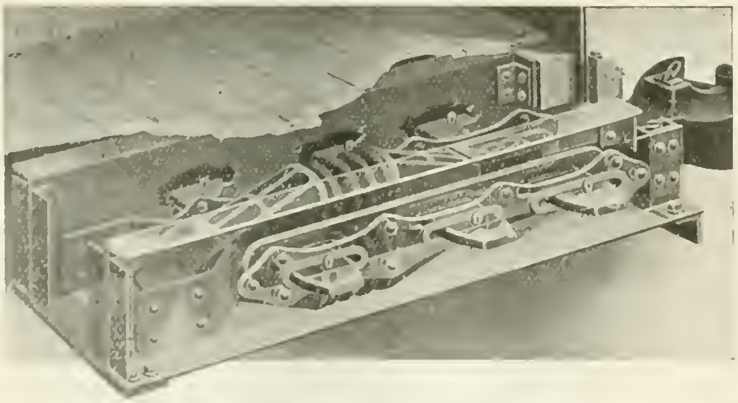
has been thought out and applied to conditions such as they exist. The pump can be adjusted to fill exactly different sized lamps, at a single stroke of the pump. An accurate half-gallon, quart or pint can also be discharged at each stroke, as may be desired.

Drop a postal for our Booklet No. 18, on railroad oil storage.

S. F. Bowser & Co. Ltd., 66=68 Fraser Ave., Toronto

THE FARLOW DRAFT GEAR

No Yokes' Yoke Rivets or Follower Plates



PARTS FOR ONE CAR:
4 Malleable Iron Cheek Plates
4 Malleable Iron Follower Blocks
4 Steel Side Links
6 Steel Draft Keys

Any Friction Device May Be Used In Combination with FARLOW Attachments.

Canadian Steel Foundries Limited.

The Canadian Steel Foundries, Ltd., which was recently incorporated under the Dominion Companies Act, has been formed to acquire the Montreal Steel Works, Ltd., at Montreal, and the Ontario Iron and Steel Co., Ltd., at Welland, Ont. It will have a capitalization of $10,000,000, as follows: Bonds authorized, $5,000,000. of which $3,650,000 will be issued at present; preferred stock, $2,000,000, of which $1,400,000 will be issued at present, and common stock $3,000,000, all of which will be issued. The Canadian Car and Foundry Co. will guarantee the Canadian Steel Foundries bonds. and will hold control of the latter's stock.

The Canadian Steel Foundries board has been elected as follows:—President, N. Curry; Vice President, W. W. Butler; Vice President and Managing Director, W. F. Angus; Vice President, K. W. Blackwell; Assistant Secretary-Treasurer, F. A. Skelton; other directors, A. H. Chave, W. W. Near and J. R. Wilson, Secretary and Treasurer, C H. Godfrey. Messrs. Curry, Butler, Skelton and Chave especially represent the Canadian Car and Foundry Co.'s interests on the board. Messrs. Blackwell. Angus and Godfrey were President, Vice President and Managing Director and Vice President and Treasurer respectively of the Montreal Steel Works, of which J. R. Wilson was also a director. W. W. Near was President and Managing Director of the Ontario Iron and Steel Co.

It is expected that the Montreal Steel Works and the Ontario Iron and Steel properties will be taken over before the end of March. The building of the large steel plant at Longue Point, near Montreal, at a cost of about $1,000,000 and with a capacity of 20,000 tons a year, for which a bond issue was made by the Montreal Steel Works in July, 1910, will be gone on with, and it is probable that some additions will be made to the Welland plant to improve it and increase its capacity. The changes and additions to the cast steel plants, when completed, will give an annual capacity of 42,000 tons steel castings, 35,000 tons rolling mill products, and 4,000 tons of railway springs and other specialties which the new company will manufacture.

The close alliance between the Canadian Car and Foundry Co. and the Canadian Steel Foundries will undoubtedly be of great advantage to both companies.

◆

The Dominion Government has paid in cash subsidies to railways since Confederation, $607,776,853.50.

The board of conciliation. consisting of Judge McGibbon, Brampton, Ont., chairman, F. H. McGuigan, Toronto, representing the company, and T J. W. Lee, Toronto, on behalf of the men, appointed to enquire into the differences between the C.P.R. and its employes in the west, has completed its investigation, and it is reported that decision, acceptable to both parties, has been reached.

C.P.R. Toronto Improvements.

The C.P.R. is engaged in working out an extensive plan of betterments and additions to its lines and yards in Toronto and vicinity, which will result in providing for the rapidly increasing business being done in that city. In the first place, it is said that an appropriation has been made for making a start this year on the building of a line from Bathurst, near Smiths Falls, to near Leaside Jct., and for a second track from that point into Toronto. This would give the company a double track line between Toronto and Montreal, except for the mileage between Leaside Jct. and Bathurst, between which points there would be two single track lines—the existing one via Peterboro, and the new one, which would take in Lake Shore points to Belleville, and then go north to Bathurst. On the west of the city a second track has been completed just beyond Islington, and a spur line has been completed from there to Mimico, over which traffic is taken direct into the West Toronto yards, instead of being carried around Parkdale, as formerly.

With regard to the work in Toronto, D. McNicoll, Vice President, was there Feb. 15 for the purpose of considering the various matters with the Mayor and the city council, and conferring with the board of trade. The works in contemplation in the different localities in the city are as follows:—

The construction of local freight yard and freight shed facilities in the neighborhood of Cherry St., near which the Canadian Northern Ry. is also going to lay out freight yards. In connection with this work the company is desirous of having authority from the city to close up certain streets and to lay tracks upon other streets. At North Toronto, where a new freight shed has already been built, it is proposed to build a new passenger station and to very materially increase the local freight facilities. A project for the separation of grades at Yonge St. and Avenue Road is to be carried out, the actual work on which is being held temporarily in abeyance at the request of the Board of Railway Commissioners.

A 15 or 16 story office building is to be erected at the corner of King and Yonge St., on the site of the present ticket office and two adjoining buildings on King St.

The proposal to lay out the Simcoe Street yard is the most extensive of these proposals, as it involves the construction of nine tracks across John St., and one track from Front St. and Spadina Ave., across a corner of Clarence Square, and the intersection of Peter and Wellington Streets, and the erection of a large warehouse fronting on King St., for freight and express purposes. The plans for yard extension have not been finally completed. but the general intention is to almost double the capacity of the present yard by extending it to Lambton. In connection with this extension it will be necessary to build the following subways: Runnymeade Road (formerly Elizabeth St.), 56 ft. wide; Jane St., 32 ft. wide, and Scarlett Road, 30 ft. wide.

It is proposed in the spring to open up a local freight delivery yard at Bloor St., near its junction with Dundas St. On the water front in Toronto city proper it is proposed to build a freight storage building on the Hamilton wharf at the foot of George St.. and it is hoped to make an arrangement with the city, and to obtain authority from the Board of Railway Commissioners to utilize the balance of certain properties between John, Lake, York streets, and the new Windmill Lane, for yard extension, which it is proposed to name the Simcoe St. yard.

The amount to be spent in buildings, extensions, improvements, etc., in Toronto by the company is estimated at $6,000,000.

In explaining the company's plans to the Toronto Board of Trade, Mr. McNicoll exhibited a plan on which the various improvements were indicated. The central feature of the plan was a new Union Station. This work, with which the G.T.R. was associated, and the new yards on the site of the Government House, of which possession would not be obtained until 1912, could not be carried out immediately, but all the others could be completed in about a year. The plans for the union station, had been approved by the C.P.R. in 1907. Nothin ghad been done in the way of building that station. He was not saying why, but it was a fact that to the best of his belief there would not be a difference of 2 ft. in the levels whether a viaduct be built or not. The C.P.R. did not watn a viaduct, because they believed that bridges would serve the needs equally as well, but if the Privy Council ordered the viaduct, the company would join in building it. It had been said that the bulk of the traffic from Toronto would be handled at the north end of the city, but he considered that the big travel would always go from the union station. The north end station would be convenient for those who live in the residential district lying north of College St. When the union station plans were originally prepared the cost of construction was estimated at $2,125,000, but it would probably be $3,000,000. Mr. McNicoll then went on to deal with the different works proposed to be done in the other parts of the city, referred to above.

We are advised that the freight car repair shop proposed to be erected at West Toronto will have a frontage on Keele St. of 105 ft., with a depth of 133 ft. The building will be of steel and brick, and is estimated to cost $20,000. The old trestle bridge carrying the Weston Road over the tracks has been partially removed, and a good deal of building work is being gone on with in the cleared area.

◆

Manitoulin and North Shore Ry. Contract.

The contract for the construction of the section from Crean Hill to Whitefish, about 46 miles. including the loop, tenders for which were recently invited through the Railway and Marine World's advertising columns, has been awarded to the Superior Construction Co., of which T. J. Kennedy, heretofore General Superintendent of the Algoma Central and Hudson Bay Railway is President, and J. D. McArthur, Winnipeg, Vice President. Considerable progress has been made in the preliminary work necessary for the organization under the contract and to get outfits on the ground, and the work will be pushed through as rapidly as possible. The Superior Construction Company has its head office at Sault Ste. Marie, Ont., but the operating head office, at which Mr. Kennedy is located, is at Espanola, Ont., where the M. & N.S.R. connects with the C.P.R.

◆

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

the Quebec and Lake St. John Ry. service. Mr. Evans has been retained as consulting engineer for the Quebec and Saguenay Ry., tenders for the construction of which have been invited.

G. H. Shaw, whose appointment as General Traffic Manager Canadian Northern Ry., Toronto, was announced in our last issue, was born at Smiths Falls, Ont., Nov. 25, 1859, and entered C.P.R. service, Aug. 1882. From Nov. 1885 to July, 1886, he was chief freight clerk Western and Pacific Divisions C.P.R., Winnipeg; July 1886 to 1898, chief freight and passenger clerk same divisions; 1898 to June, 1901, Assistant General Freight Agent Western Division C.P.R. Port Arthur to Canmore and Fernie, B.C.; June 1901 to Jan. 16, 1911, Traffic Manager Canadian Northern Ry., Winnipeg.

M. K. McQuarrie, whose appointment as Resident Engineer District 1 British Columbia Division C.P.R., Revelstoke, was announced in our last issue, was born at Sault Ste. Marie, Ont., Aug. 17, 1884, and entered C.P.R. service in 1905 as transitman in the Resident Engineer's office, Vancouver, B.C. He graduated from the School of Practical Science, Toronto University, in 1907, since when he has been, to 1909, transitman on Nicola-Penticton survey and in charge of revised location of portion of Nanaimo to Alberni extension, Esquimalt and Nanaimo Ry., and 1909 to the end of 1910, assistant engineer in Division Engineer's office, Vancouver, B.C.

W. A. Dube, Superintendent District 1, Intercolonial Ry., Levis, Que., whose portrait appears on the first page of this issue, was born at St. John's, Que., Apr. 21, 1864, and entered railway service in 1880, since when he has been, to 1884, in various minor positions in G.T.R. service; 1884 to 1887, dispatcher G.T.R., Montreal; 1887 to May 1, 1899, Chief Dispatcher G.T.R., Montreal; on May 1, 1899, he was appointed Superintendent Intercolonial Ry., which position he still holds. He is also a member of the Canadian Government Railways Provident Fund, having been appointed by the Minister of Railways, on the inauguration of the fund in Apr., 1907.

I. McMichael, Vice President and General Manager Great North Western Telegraph Co., died at Baltimore Md., Feb. 22, following an operation, early in the month. He was born at Brantford, Ont., in Jan. 1840, and entered Buffalo and Lake Huron Telegraph Co.'s service in 1856. In 1860, he entered the U.S. Military Telegraph Service, and served in Central Missouri, St. Louis, Little Rock and Fort Smith. From 1865 to 1903, he was with the Western Union Telegraph Co., and was Superintendent of the eighth central district, when he was appointed General Manager G.N.W. Telegraph Co., Toronto, of which company he was also appointed Vice President in 1904. His son, S. B. McMichael, is Assistant General Manager G.N.W. Telegraph Co., Toronto.

R. Creelman, who has been appointed General Passenger Agent Canadian Northern Ry., Winnipeg, entered railway service Sept., 1891, since when he has been to 1893, messenger City Freight Agent's office, G.T.R., Toronto; 1893 to 1897, ticket clerk G.T.R. city office, Toronto; 1897 to 1900, chief clerk District Passenger Agent's office, G.T.R., Toronto; Jan. 1, 1900, to Aug., 1901, in General Passenger Agent's office, C.P.R., Winnipeg; Aug., 1901, to Sept. 1, 1903, in Passenger Traffic Department, C.N.R., Winnipeg; Sept. 1, 1903, to July 1, 1906, City Ticket Agent, Northern Pacific Ry., Winnipeg; July 1, 1906, to July 1, 1909, Travelling Passenger Agent C.N.R., St. Paul, Minn.; July 1, to Oct., 1909, Commercial Agent, C.N.R., St. Paul, Minn.; Oct., 1909, to Mar. 1, 1911, Assistant General Passenger Agent, C.N.R., Winnipeg.

R. McLennan, who died in Toronto Feb. 2, aged 88, was one of the oldest and best known railway construction engineers in Canada and the Southern States. His U.S. experience ended in 1864, and on his return to Canada he was engaged on lines now forming part of the Intercolonial Ry., and subsequently on survey work in British Columbia. In 1872 he was appointed engineer of Government railways between Port Arthur and Winnipeg, and afterwards was engineer of construction on the C.P.R. for the Lake Superior Division. He was later engaged in general consulting work, and retired from active work in 1886. His five sons, four of whom are now living, all followed the engineering profession.

H. M. Gain, whose appointment as Passenger Trainmaster Eastern Division G.T.R., Montreal, was announced in our last issue, was born at Lindsay, Ont., Mar 21, 1879. He entered Canadian Express Co.'s service, Apr. 13, 1894, and was, to Oct. 1898, relieving agent, and messenger, Port Harvey to Portland, Me.; Oct. 1898 to Apr. 1899, in general and executive offices same company, Montreal; Apr., 1899, to June, 1904, messenger, Portland, Me., to Richmond, Que., same company; June to July, 1904, acting route agent same company, Montreal; July to Sept. 1904 assistant route agent, Quebec; Sept., 1904, to Feb., 1905, route agent same company, Montreal; Mar. 1905 to Mar. 1910, route agent same company, Richmond, Que.; Apr. to July 30, 1910, route agent same company, Montreal; July 31 1910, to Jan. 23, 1911, in G.T.R. passenger train service at Montreal.

S. A Simpson, whose appointment as Superintendent Sleeping, Dining and Parlor Cars and News Service, Saskatchewan Division, C.P.R., at Moose Jaw, was announced in our last issue, was born at Toronto, Aug. 22, 1880. He entered railway service Oct. 24, 1898, since when he has been, to Sept. 26, 1901, in Motive Power and Traffic Departments G. T. R., Montreal; Sept. 26 to Dec. 1901, secretary to Second Vice President and General Manager, G.T.R., Montreal; Dec., 1901, to Dec. 1, 1904, secretary to Third Vice President G.T.R., Montreal; Dec 1, 1904 to June 1, 1905, secretary to President Canada Car Co., Montreal; June 1, 1905, to Mar. 31, 1908, storekeeper Canada Car Co., Montreal; July 15, 1908 to May 1, 1909, in office of General Superintendent Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal; May 1, to Sept. 1, 1909, chief clerk same department, at Winnipeg; Sept. 1, 1909 to Jan. 1, 1911, Assistant Superintendent same department, Winnipeg.

J. A. Clarke, Relieving Purchasing Agent C.P.R., Montreal, died Feb. 5 from paralysis, due to hemorrhage of the brain, caused by a fall on a slippery pavement at Ottawa, while attending the funeral of the late J. E. Schwitzer, Jan. 27. Though the result was anticipated, a strong desire was expressed that he be brought to Montreal, and D. McNicoll, Vice President C.P.R., sent his private car to Ottawa for the purpose, but on the arrival at Montreal it was found inadvisable to remove him from the car, and he died there soon after. He was born in New York State in 1848. He entered the C.P.R. Purchasing Department as an accountant, and was promoted from the position of Chief Accountant about two years ago, to that of Relieving Purchasing Agent. The first part of the funeral service was held at Montreal, Feb. 7, when the various C.P.R. departments were represented, E. N. Bender, General Purchasing Agent, issuing orders that the department's offices at Montreal, Winnipeg and Vancouver be closed as a mark of respect. The interment took place at Peeksville, N.Y., when A. S. Maynard, Chief Commissary Agent C.P.R., Montreal, represented the Purchasing Department.

T. J. Kennedy has resigned the position of General Superintendent Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., to become President of the Superior Construction Co., Sault Ste. Marie, Ont., which has been awarded the contract for the construction of a section of the Manitoulin and North Shore Ry. The operating head office of the company where he is located, is at Espanola, Ont. He entered railway service at chainman of the first survey for the C.P.R. east of Winnipeg in 1874, since when he has been consecutively June, 1877, assistant engineer contract 15, C.P.R.; May, 1880, engineer for Manning, Macdonald & Co., contractors section B, C.P.R., at Rat Portage; Oct., 1882, to spring of 1885, superintendent of construction for Manning, Macdonald & Co., on section B.; June, 1885, roadmaster C.P.R. White River section; Aug., 1892, Superintendent Chapleau district C.P.R.; Sept., 1899, Superintendent North Bay district, C.P.R.; June, 1900, to date, General Superintendent Algoma Central and Hudson Bay Ry., and Manitoulin and North Shore Ry. From 1904, to Sept., 1910, he was also Manager International Transit Co., Trans-St. Mary's Traction Co., and the ferry line at Sault Ste. Marie Ont., and Mich.

Robert Kerr, who recently retired from the position of Passenger Traffic Manager C.P.R., was presented, at Montreal, Feb. 21, by Sir Thos. G. Shaughnessy, President, on behalf of the company's officials with a heavy silver tea and coffee service and tray, accompanied by a framed illuminated parchment, bearing the names of the chief officials of the company. In making the presentation, Sir Thomas said: "On behalf of your brother officials and mine, and as a sign of their esteem and the executive's keen appreciation of your services, it gives me much pleasure to present to you this token of our regard, you having been with the Canadian Pacific from its beginning—indeed, your railway connection in Canada somewhat antedates this company. You have seen the facilities of this company grow from twenty-five passenger cars to over seventeen hundred and your work has done much to fill these cars. You have seen our earnings grow from practically nothing to over $100,000,000, the placing of our ships on both oceans, the growth of our lake and river service, and also our British Columbian coast service. You have assisted in, as it were, the creation of an empire. I doubt if any man ever retired from this service so universally esteemed by all his colleagues, and we wish you, in your retirement, that peace and happiness which we hope may be yours to long enjoy."

J. S. Dennis, Manager Irrigation Department, Alberta and British Columbia Land Departments C.P.R., Calgary, Alta., whose appointment was announced in our last issue, has been intimately connected with land development in the west since the age of 16, when he was engaged in Government survey work in Manitoba. In 1878 he took charge of a special survey party in the province, and a year later entered the Hudson's Bay Co.'s service when its land department was organized by the late C. J. Brydges. In 1885, during the Riel rebellion, he formed an intelligence corps of surveyors and pioneers, and at the end of the rebellion he retired with the rank of Major of the Canadian Militia. Resuming his connection with Government surveys, he was, in 1887, appointed Chief Inspector of Surveys, and in 1894 was commissioned to visit the

Transportation by the Company's Steamers, brigades of boats and canoes throughout the Territories not traversed by railways.

Full information at the Company's Offices, Winnipeg, or 1 Lime St., London, E.C.

U.S. irrigated districts to secure information for use in Canada. In 1897 he was appointed Deputy Commissioner of Public Works for the North West Territories. In addition to supervising the Government irrigation development in the west, and on the transfer of that work to the Public Works Department, he took entire charge of the western irrigation surveys. On the inclusion of a large portion of these Government lands in the land grants to the C.P.R., in 1903, he became Superintendent of Irrigation and Land Commissioner for British Columbia for that company, and subsequently also Assistant to the Second Vice President, and later Assistant to Vice President Whyte, and in addition, had charge, for some time, of the company's water supply for locomotives west of Winnipeg. He was appointed to his present position Dec. 1, 1910. He is also President Canadian Pacific Irrigation Colonization Co., and has been a member of the Canadian Society of Civil Engineers since 1901.

◆

Railway Development.

The following matter was too late to be included with the other matter under this heading on pages 205 to 209.

Alberta Ry and Irrigation Co.—Further reference to this legislation will be found under the head of Railway Development, on another page The House of Commons, Feb. 10, amended sub-sec. 3 of sec. 1, to which objection had been taken, by substituting Cardston for Spring Coulee, and by adding the words "at or near Pincher Creek," so that the section as amended now reads· "From a point between Cardston and Mountain View, westerly at in or near the town of Pincher Creek to a point on the line of the C.P.R."

British Columbia and Alaska Ry.—L. M. Rice, is quoted as having stated in Vancouver, Feb. 9, that survey parties will be put in the field at an early date to complete the surveys started last summer from Lytton to the Alaskan border. No instructions had been given for making surveys for the projected line from Lytton to Vancouver. (Feb. pg. 109.) Further reference to this project is made under the head of Railway Development on another page.

The Burrard Inlet Tunnel and Bridge Co.'s projected railway will connect up the north arm of the Fraser river with Burrard Inlet, crossing the inlet at the second Narrows by a bridge, thence easterly along the shore line to Deep Cove, and westerly along the shore line to Horse Shoe Bay, with a tunnel under the first narrows which will give connection for the west end to the north shore. The line will be owned and controlled by the municipalities adjoining Burrard Inlet. The bridge proposed is a single deck one, 55 ft. above high water mark, high enough not to impede ordinary navigation, with a bascule opening large enough to enable the biggest vessels to pass in safety. The bridge will be of sufficient width to accommodate a single railway track, a double tramway track, two wagon roadways and sidewalks for pedestrians. The estimated cost of the bridge is $1,250,000. Test holes for the foundation of the bridge piers are now being sunk, and as soon as the engineers are in a position to advise the directors, tenders will be called for the erection of the substructure. (Feb., pg. 109.)

Canada and Gulf Terminal Ry.—The surveys which have been in progress during the winter between Matane and Gaspe Basin, Que., are reported to have been very successful, a route having been gone over, which will assure a maximum gradient of 0.6 %. L. E. Rowley, who has been acting chief engineer has been in charge of the work and is reported to have been appointed Chief Engineer. (Feb., pg. 109.)

Canadian North Eastern Ry.—The British Columbia Legislature is being asked to change the name of the Portland Canal Short Line Ry. to that of the Canadian North Eastern Ry., and authorize it to extend its line along Bear River easterly to the eastern boundary of the province at the Peace River on the Pine River pass, with a branch down the Naas River valley to the Pacific coast; and following additional lines: From near Stewart Lake to a junction with the G. T. Pacific Ry., and from some convenient point to the northern boundary of the province. (See Portland Canal Short Line Ry., Feb., pg. 155.)

Charlton to Elk Lake.—Referring to the matter under this subhead in the Railway Development department on another page. The Ontario Minister of Public Works replying to the delegation said the proposition was a straight mining one and not for colonization purposes. If figures could be provided showing that there would be enough ore shipped over the line to make it pay, the Government would consider the proposition and if it was decided not to build the branch would agree not to parallel any private line built the serve the territory.

Crows Nest and Northern Ry.—The British Columbia Legislature is being asked to extend the time for construction for a further three years. (April, 1909, pg. 247, and Jan., 1909, pg. 17.)

Dominion Development Ry.—The provisional directors named in the bill now before Parliament for the incorporation of a company with this title are: O. O. Howard, New York; J. G. Kent, W. D. Balfour, R. R. Hart, Toronto: T. A. Burgess, Ottawa. See also under Railway Development on another page.

Kamouraska and L'Islet Ry.—The following are the provisional directors of the company with this title, for the incorporation of which the Quebec Legislature is being asked: G. Michaud, J. A. Loney, C. Kidd, G. Hudon, Ste Anne de la Pocataire, Que.; F. Belanger, St. Damase, Que.: F. Soucy, St. Antonin, Que.; A. Stein, Fraserville Que. (Feb., pg. 111.)

Kettle Valley Lines.—A site of over 50 acres is reported to have been purchased at Penticton, B.C., or divisional yards, and station. A spur line of about a mile is to be built from the yards to the lake, where a wharf will be erected. See also under Railway Development on another page. (Feb., pg. 111.)

A contract has been entered into between the Kettle Valley Ry. and the Dominion Government, under the act granting aid to certain railways, under which the company will build about 250 miles from Midway, to a junction with the Nicola, Kamloops and Similkameen Ry., near Merritt, B.C.

Mid-Provincial and Nechaco Ry.—Application is being made to the British Columbia Legislature to incorporate a company with this title to build a railway, to be operated by steam, electricity, or other power, from the mouth of the Salmon River on Dean Channel, or Bella Coola, or some intermediate point, on the western boundary line of B. C. to Sigutla Lake, on to Kwalcho Lake, Entiaco Lake, Natalkuz Lake and Fraser Lake, thence easterly through Pine Pass to the eastern boundary of the province at Peace River. The provisional directors are: A. C. Forsberg-Hamilton, Vancouver; C. H. Lugrin, H. M. Leonard, E. B. Shaw, F. E. Reid, Victoria. (See Salmon River to Peace River, Jan., pg. 23.)

Naas and Peace River Ry.—The provisional directors named in the bill now under consideration by the British Columbia Legislature for the incorporation of a company with this title, having power to build the lines already mentioned are J. D. Hunter, W E Olliver, C. E. Thomas, Victoria, B.C (Feb., pg. 113.)

Naas and Skeena Rivers Ry.—The British Columbia Legislature is being asked to incorporate a company with this title to build a railway from Portland Inlet to the headwaters of the Skeena River, with extension lines from Nasoga Gulf or Naas Bay on Portland Inlet, to Ayance; from Ayance along the Naas and the Blackwater rivers to the outlet of Blackwater Lake; from the outlet of Blackwater Lake to the west fork of the Skeena River, and another line thence along the west fork of the Skeena River to the headwaters of the same river. The provisional directors are: G. H. Barnard, H. B. Robertson, Victoria; R. C. Johnson, Vancouver, B.C.; L. Benoit, Winnipeg, Man.; J. G. Scott, J. T. Ross, L. P. Pelletier, K.C.; J. A. Choquette, G. Le Moine, Hon. N. Garneau, A. E. Doucet, A. Gauvreau, O. E. Gauvreau, A. Hardy, J. E. Dube, C. E. Taschereau, H. Doheny, G. Proteau, Quebec; B. Newgrass, London, Eng. (Feb., pg. 115.)

New York Central and Hudson River Rd.—In order to construct a second track between Niagara Falls and Rochester, N.Y., the company has acquired the necessary extra width for its right of way.

Northern Vancouver Island Ry.—Application is being made to the British Columbia Legislature to incorporate a company with this title, to build a railway from Hardy Bay or Port McNeill, on the east coast of Vancouver Island to Cool Harbor, on the west arm of Quatsino Sound, or to Rupert Arm on Quatsino Sound. The provisional directors are: J. H. McGregor, W. B Garrard and H. B. Robertson, Victoria, B.C. (See Hardy Bay to Quatsino Sound. (Dec., 1910, pg. 1013.)

Ontario Railways Co.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Sarnia via Chatham, to Windsor, Ont. with a branch line to Brigden, Ont. Authority is also being asked to operate car ferries across the Detroit and St. Clair rivers. Pringle and Guthrie, Ottawa, are solicitors for applicants.

Quebec Eastern Ry.—The Quebec Legislature is being asked to extend the time for the construction of the projected line to 1918, and to authorize an increase of the capital stock from $1,000,000 to $5,000,000. (Oct., 1909, pg. 745.)

Richmond, Magog and Stanstead Ry.—The provisional directors named in the bill before the Quebec Legislature for the incorporation of a company with this title are: A. H. Eastis, Boston, Mass.; A. C. Bissell, R. H. Fletcher, H. B. Fletcher, Sherbrooke, Que.: M. G. Crombie, Melbourne, Que.; C. B. Hibbert, Iberville, Que.: G. W. Cook, Montreal. (Feb., pg. 113.)

Vancouver North to Grouse Mountain.—Two bills are under consideration by the British Columbia Legislature asking for the incorporation of companies to build a railway to Grouse Mountain. One is by the Grouse Mountain Scenic Ry., of which the provisional directors are C. S. Gzowski, C. H. Allen, G. M. Gibb, W. E. Graveley, J. A. Macdonald, Vancouver. This company desires power to build a railway to be operated by steam, electricity, or other motive power from North Vancouver, to the summit of Grouse Mountain. The other company is the Grouse Mountain Scenic Incline Ry., the provisional directors of which are W. J. McGuigan, L. C. Miles, Vancouver. This company is asking for power to build a railway of standard or any gauge from lot 589, group 1, to lot 1526 group 1, New Westminster district. (Dec., 1910, pg. 1017.)

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry.—Consequent on the resignation of T. J. Kennedy, General Superintendent, G. A. Montgomery, Superintendent Michipicoten Division, has been moved from Michipicoten Harbor, to Sault Ste. Marie, Ont. to take up the duties of the A.C. & H.B.R. and other work.

Canadian Northern Ry.—R. Creelman, heretofore Assistant General Passenger Agent, has been appointed General Passenger Agent. Office, Winnipeg.

Osborne Scott, heretofore chief rate clerk Passenger Department, Winnipeg, has been appointed Assistant General Passenger Agent, vice R. Creelman, promoted. Office, Winnipeg.

W. Pratt has been appointed Superintendent of Sleeping and Dining Cars and Hotels. Office, Winnipeg. This is an extension of his previous duties, to include the hotels.

Canadian Northern Steamships, Ltd.—Wm. Phillips, heretofore Acting Traffic Manager, has been appointed General Freight and Passenger Agent. He also continues as General Eastern Agent C.N.R., and General Freight and Passenger Agent C.N.O.R. Office, Toronto.

Canadian Pacific Ry.—Pending an appointment in consequence of the death of J. E. Schwitzer, Chief Engineer, and the appointment of J. G. Sullivan, heretofore Assistant Chief Engineer Eastern Lines, as Assistant Chief Engineer Western Lines, at Winnipeg, J.M.R. Fairbairn Engineer Maintenance of Way Eastern Lines is acting as Assistant Chief Engineer Eastern Lines. Office, Montreal.

T. A. Martin, heretofore in charge of C.P.R. Montreal wharf, has been appointed agent at Place Viger station, Montreal, vice W. P. Martin, transferred to Vancouver.

R. W. McCormick, heretofore Assistant Superintendent District 4, Eastern Division, Ottawa, Ont., has been appointed Assistant Superintendent District 1, Eastern Division, vice J. H. Sheldon, transferred. Office, Farnham, Que.

T. Collins, Assistant Superintendent District 2, Eastern Division, has also been appointed Assistant Superintendent District 4, Eastern Division, as reported in our last issue. Office, Smiths Falls, Ont.

Jno Burns, heretofore District Master Mechanic District 1, Lake Superior Division, North Bay, Ont., has been appointed District Master Mechanic District 2, Ontario Division, London, Ont, vice L. G. Roblin, transferred.

L. G. Roblin, heretofore District Master Mechanic District 2, Ontario Division, London, Ont., has been appointed District Master Mechanic District 1 Lake Superior Division, North Bay, Ont., vice Jno. Burns, transferred.

W. R. Dunsmore, heretofore conductor, has been appointed acting Trainmaster District 1, Manitoba Division, Kenora, Ont., vice H. J. Coffin, appointed acting Superintendent at Saskatoon, Sask., during the absence on leave of E. L. Chudleigh.

J. G. Sullivan, heretofore Assistant Chief Engineer Eastern Lines, Montreal, has been appointed Assistant Chief Engineer Western Lines. Office, Winnipeg.

J. Manson has been appointed Assistant to the Vice President. Office, Winnipeg.

H. J. Pickersgill, heretofore Paymaster at Winnipeg, has been appointed Assistant Local Treasurer there, vice J. H. Carter, transferred to Calgary, Alta.

J. Kennedy, heretofore Trainmaster at Cranbrook, B.C., has been appointed Paymaster at Winnipeg, vice H. J. Pickersgill, promoted.

P. J. Cullin, heretofore chief clerk in City Ticket Office, Montreal, has been appointed Travelling Passenger Agent, Brandon, Man., vice A. L. Powell, promoted.

J. H. Carter, heretofore Assistant Local Treasurer, Winnipeg, has been appointed Paymaster at Calgary, Alta., vice T. Fawcett, appointed General Fuel Agent, Western Lines.

W. B. Steeves, heretofore Locomotive Foreman at Rogers Pass, B.C., has been appointed Locomotive Foreman at Field, B.C., vice H. A. Keswick, transferred.

T. Cassidy has been appointel Locomotive Foreman at Rogers Pass, B.C., vice W. B. Steeves, transferred.

H. A. Keswick, heretofore Locomotive Foreman at Field, B.C., has been appointed Shop Foreman at Kamloops, B.C. vice J. C. Reed, resigned.

N. P. Smith has been appointed Assistant Engineer in charge of Vancouver Terminals.

W. P. Martin, heretofore agent at Place Viger station, Montreal, has been appointed wharf agent at Vancouver, B.C., vice J. McCreery, transferred.

A. L. Powell, heretofore Travelling Passenger Agent, Brandon, Man., has been appointed city Freight and Passenger Agent, Washington, D.C., vice E. P. Allen, superannuated.

O. M. Duckett, heretofore in the office of the Holland American Line, Paris, France, is reported to have been appointed Passenger Agent, C.P.R. there.

Central Vermont Ry.—In consequence of the continued illness of C. F. Soule, Superintendent, St. Albans, Vt., the following appointments are reported: J. Keefe, Trainmaster Northern Division, St. Albans, to be acting Superintendent; S. E. McKenney, Terminal Trainmaster, St. Albans, to be acting Trainmaster Northern Division, and G. Prentice to be acting Terminal Trainmaster at St. Albans.

Grand Trunk Pacific Ry.—H. Saunders, car foreman, has been transferred from Edmonton to Wainwright, Alta.

W. Silverwood, car foreman, has been transferred from Wainwright to Edmonton, Alta.

Grand Trunk Ry.—J. H. Guess, has been appointed Assistant General Purchasing Agent. Office, Montreal.

H. G. Elliott, heretofore First Assistant General Passenger Agent at Chicago, Ill., has been appointed General Passenger Agent, vice G. W. Vaux, resigned on account of ill health. Office, Montreal.

B. A. Rose, heretofore clerk in the City Passenger and Ticket Agent's office, Peterboro, Ont., has been appointed City Passenger and Ticket Agent there, vice W. Bunton, deceased.

A. E. Duff, heretofore District Passenger Agent G.T. Pacific Ry., Winnipeg, has been appointed District Passenger Agent G.T.R., Toronto, vice J. D. McDonald, promoted.

J. R. Leckie, heretofore Locomotive Foreman, Palmerston, Ont., has been appointed Locomotive Foreman, London, Ont., vice J. Hay, transferred.

J. A. Walton, heretofore leading hand at Lindsay, Ont., has been appointed Locomotive Foreman Palmerston, Ont., vice J. R. Leckie, transferred.

J. Hay, heretofore Locomotive Foreman, London, Ont., has been apopinted Locomotive Foreman at Sarnia Tunnel, vice W. H. Towner, resigned.

J. D. McDonald, heretofore District Passenger Agent, Toronto, has been appointed Assistant General Passenger Agent at Chicago, Ill., succeeding H. G. Elliott, promoted.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—F. A. Nancekivell, heretofore Travelling Agent Great Northern Ry., Toronto, has been appointed General Agent M., St. P & S. S. M. R., Toronto.

R. G. McCraw, heretofore travelling from the Detroit office, has been transferred to Toronto.

New York Central and Hudson River Rd.—W. P. Carroll has been appointed Master Mechanic Rochester Division, vice F. M. Steele, resigned. Office, Rochester, N.Y.

Northern Pacific Rd.—W. E. Belcher, heretofore Travelling Freight Agent with headquarters at Detroit, Mich., has retired from the company's service.

Pere Marquette Rd.—T. Ensel, heretofore Superintendent Grand Rapids District, has been appointed Superintendent Telegraphs, vice W. K. Tasker. Office, Detroit, Mich.

F. P. Little has been appointed Chief Train Dispatcher Grand Rapids Division, Detroit, Mich., vice R. S. Black, appointed Trainmaster Buffalo Division, St. Thomas Ont., as reported in our last issue.

Connections between Dominion and Ontario Railways.

The following bill has been introduced in the Ontario Legislature by Col. the Hon. J. S. Hendrie:—

1. Sec. 98 of the Ontario Railway Act, 1906, is amended by adding thereto the following subsections:

(8) Where the lines or tracks of any railway, the construction or operation of which is authorized by the Legislature of the province of Ontario, are intersected by those of a railway, the construction or operation of which is authorized by the Parliament of Canada, or in any case in which the tracks or lines of any two such railways run through or into the same city, town or village, and it is desired by one of such companies or by any municipal corporation or other public body, or any person or persons interested, that the lines or tracks of such railways should be connected, so as to admit of the safe and convenient transfer of engines and trains from the tracks or lines of one railway to those of another, and for the reasonable receiving, forwarding, delivery, and interswitching of traffic between the said railways, the following proceedings may be had and taken:—

(a) Either of such companies, or any municipal corporation or other public body, or any person or persons interested, may file with the Secretary of the Board, or with the Secretary of the Board of Railway Commissioners for Canada, an application for an order that such connection should be required to be made, together with evidence of service of such application upon the railway company, or companies, interested or affected, and where the application is not made by the municipality upon the head of the municipal corporation within which the proposed connection is situate.

(b) After the receipt of the said application, the Board, and the Board of Railway Commissioners for Canada, may, by joint session or conference, in conformity with the practice to be established by them, hear and determine the said application, and may order that the lines and tracks of such railways shall be so connected at or near the point of intersection, or at or near such city, town or village, upon such terms and conditions and subject to such plans as they may deem proper.

(c) The Chairman of the Board, and the Chairman of the Board of Railway Commissioners for Canada, may make rules of procedure and practice covering the making of such applications and the hearing and disposition thereof, and may vary, alter or rescind the same from time to time.

(d) The Chairman of the Board, and the Chairman of the Board of Railway Commissioners for Canada may from

time to time assign or appoint from each Board the members comprising the joint Board that may be required to sit for the hearing and determining of such applications, as they arise.

(e) Any order aforesaid may be made a rule of the Exchequer Court of Canada, and shall be enforced in like manner as any rule, order, or decree of such court.

9. The word "railway" shall in the next preceding subsection include any steam or electric street railway or tramway.

Telegraph and Cable Matters.

The British Postmaster General recently stated in London, Eng., that he would give early attention to the question of reduced press cable rates.

J. Townsley, who recently retired from the position of Superintendent of Construction Eastern Lines C.P.R. Telegraphs, Montreal, has been presented with a fur lined coat by the linemen of the division, and a gold headed . ebony cane by the officers of the system.

The Ontario Court of Appeal, Feb. 14, quashed the recent conviction by a Toronto magistrate of G. Hogarth, Local Manager G.N.W. Telegraph Co., Toronto, for transmitting racing information, and in doing so stated that the evidence was entirely insufficient to prove the case.

The board of conciliation, consisting of Judge Barron, Stratford, Ont., chairman; J. Gilmour, Brockville, Ont., on behalf of the Government Railways Managing Board, and J. G. O' Donoghue, representing the operators appointed some time ago, to enquire into the complaints of the Intercolonial Ry. telegraphers, concluded the enquiry Feb. 16. It is stated that the finding was unanimous, and that a small increase has been recommended in the report which has been forwarded to Ottawa.

At the annual meeting of the Anglo-American Telegraph Co., in London, Eng., Feb. 3, F. A. Bevan, who presided, is reported to have said that there were difficulties in the way of concluding a provisional agreement with the Western Union Telegraph Co., but that the directors hoped soon to surmount them. He was not sure that the company would remain a distinct one, but he gave assurance that no agreement would be carried out without the consent of the shareholders.

Press reports from Winnipeg state that B. S. Jenkins, General Superintendent C.P.R. Telegraphs, has announced that during the current year, an alternative telegraph line will be erected, between the West and Toronto, via Minneapolis, Sault Ste. Marie, and also via Sudbury, entirely independent, and controlled by the C.P.R. alone, that a direct wire between Vancouver and Chicago, via Winnipeg, will also be undertaken, and that additional wires will be provided east to Fort William and Port Arthur, west to Regina, and locally throughout the various provinces.

◆

H. E. Vautelet, Chairman and Chief Engineer of the Commission of Engineers appointed for the reconstruction of the Quebec Bridge, has resigned. Ill health is alleged to be the cause.

P. J. Cullin, who has been appointed Travelling Passenger Agent C.P.R., Brandon, Man., was born in Montreal, Mar. 18, 1873, and entered C.P.R. service July 16, 1889, since when he has been, to 1891, in Car Accountant's office, Montreal; 1891 to 1893, in District Passenger Agent's office, Montreal; 1893 to 1895, in City Ticket Office, Montreal, where he remained to the date of his present appointment.

Grain Elevator Notes.

The Goose Lake Grain Co. and the Goose Lake Milling Co. intend to build an elevator each at Brock, Sask.

The damage caused by the recent fire in the Maple Leaf Milling Co.'s elevator at Brandon, Man., is stated as $25,000.

The Pincher Creek Mill and Elevator Co., Ltd., Alta., has increased its capital stock from $35,000 to $100,000, by the issue of 650 shares of $100 each.

It is reported that an elevator will be erected on the Temiskaming and Northern Ontario Ry. at New Liskeard, Ont., in connection with Salmon's grist mill.

The town of Battleford has been authorized by the Saskatchewan Legislature to borrow $40,000 for the purpose of operating the flour mill or mills, and elevator or elevators now or at any time hereafter owned by it.

The Ogdensburg Terminal Co., Ogdensburg, N.Y., has given a contract for the construction of a 500,000 bushel reinforced concrete grain elevator at Ogdensburg, N.Y., to John S. Metcalf Co., Chicago and Montreal, who have prepared the drawings and specifications therefor. It will have a receiving capacity from boats of 18,000 bush. an hour maximum, a shipping capacity of 60 cars in 10 hours, and the approximate cost will be $200,000.

Following on the report of the Saskatchewan Elevator Commission, details of which we gave in our Dec., 1910, issue, the Saskatchewan Premier introduced a bill into the Legislature, Feb. 2, to incorporate the Grain Growers Elevator Co. of Saskatchewan, designed to give effect to the Commission's recommendations, and to provide a solution for the international elevator problem in the province. Under the provisions of the bill the Government is authorized to advance to the company loans not to exceed 85% of the cost of each elevator purchased or built by the company, and to make a cash grant to cover the expense of the company's organization, and also to local bodies of shareholders who support an elevator at any point in the province.

The recent case of the Barnett and McQueen Co. against the Canadian Stewart Co. for infringement of patents for a plurality of cylindrical grain bins, forming a monolithic structure, and having their adjacent peripheral portions rigidly connected, and forming supplemental storage bins in the intervening space, vertical webs extending through adjacent supplemental bins to form leg passages in combination with bifurcated elevator legs, extending from below said bins to adjacent leg passages, and for an accounting of elevator contracts recently completed at Fort William, Ont., for the G.T.P. Elevator Co., and the Consolidated Elevator Co., was dismissed in the Exchequer Court, the judge holding that in the case under consideration there was not sufficient invention to validate a patent, and even if the patent were valid, that the defendants' construction did not constitute an infringement.

The Dominion Government's Grain Commission Bill was read a first time in the Senate, Feb. 7. It provides for the appointment of an independent commission of three members, appointed for 10 years, with somewhat similar jurisdiction over the inspection, transportation and storage of grain, as the Board of Railway Commissioners has over the railways. It will have power to investigate and control all questions, and authority to weigh and examine grain as desired; to declare which are terminal elevators, and with the Government's consent and on appropriation being made for the purpose by Parliament, to acquire by lease, purchase or expropriation, any terminal elevators, or to build new elevators. It is also provided that the board may employ experts and the necessary staff to create and arrange inspection divisions and to make rules and regulations respecting grain. Transportation companies are required to carry commissioners and their staffs free over their respective lines. The bill also provides that for mixing and similar offences, fines up to $20,000 may be imposed, with or without imprisonment.

Among the Express Companies.

The Canadian Northern Ex. Co. has closed its office at Bresaylor, Sask.

The Dominion Ex. Co. has issued a circular to its agents, respecting the regulations governing the transportation and inspection of meat.

The Dominion Ex. Co. has entered an appeal on the question of taxation by the Regina city council, Sask. The judgment recently given was to the effect that the company was not exempt from local taxation, and a similar judgment has been given against the company in favor of the city of Brandon, Man.

J. V. Dini pleaded guilty at Montreal, Feb. 3, to a charge of converting $4,000 belonging to the Dominion Ex. Co. to his own use. The money was obtained in connection with the company's money order department. As the prisoner's returns were not arriving regularly at the head office, an inspector was sent to examine his books, and it was discovered that he had not accounted for the sum named, for which he had issued orders.

The bill to compel express companies to make returns of all unclaimed monies has been under consideration by a sub-committee of the House of Commons railway committee, which heard representatives of the various companies, and arrived at an agreement on all points, except the period within which the return for each year should be made. As the bill stands, at present, the return must be made within 20 days of the expiration of the calendar year, which is claimed to be too short.

◆

The C.P.R. and Chesapeake and Ohio Rd.—We are officially advised that there is no truth in the reports that the C.P.R. has made a traffic agreement with the Chesapeake and Ohio Rd., to take effect May 1, by which the Minneapolis, St. Paul and Sault Ste. Marie Ry., would be provided with an outlet on the Atlantic, at Newport, Va.

The G.T.P.R. has received 53 box cars nos. 312456 to 312508, from the Canadian Car and Foundry Co., Montreal.

The Grand Trunk Railway has bought 37,500 tons of 100 lbs. steel rails, the order being divided between the Dominion Iron & Steel Co. and the Lake Superior Corporation.

The Montreal Park and Island Ry., and the Montreal Terminal Ry., subsidiaries of the Montreal Street Ry., applied recently to the Board of Railway Commissioners for approval of standard passenger tariffs of 3c. a mile, with a minimum of 5c., subject to any special fares in force under agreements with municipalities. The M. P. & I. Ry. application was opposed by the city of Montreal and the town of Lachine, and the M. T. R. application was opposed by the cities of Montreal and Montreal East, and by the town of Pointe aux Trembles. The Board refused the applications and ordered both companies to file by Feb 15, for the Board's approval standard passenger tariffs specifying a minimum fare of 2½c. a mile.

◆

Toronto Railway Co's Report.

Following are extracts from the report for 1910, presented at the annual meeting, Feb. 1:—

A summary of operations, shows the following results:

Gross earnings	$4,377,116.19
Operating and maintenance, etc.	2,237,187.75
Net earnings	$2,139,928.44
Other deductions:	
Dividends	$ 560,000.00
Bond interest, etc.	201,288.19
	$ 761,288.19
Payments to city:	
Percentage on earnings	$ 596,297.35
Paving charges	83,040.58
General taxes	48,142.37
	$ 727,480.30

The passenger earnings show an increase of $458,223.23 over the previous year, being $4,336,369.05, compared with $3,878,145.82. The charges against passenger earnings for operation, maintenance, etc., were $2,237,187.75, or 51.6% of earnings. The payments made to the city were $727,480.30, an increase of $87,198.85, or 13.6%. Notwithstanding heavy charges throughout the year, including an increase in wages, the year's operations have resulted so satisfactorily that your directors were enabled to transfer $651,159.95 to the credit of profit and loss account. Large expenditures were made during the year upon capital account, the amount being $633,786.49. The new car house on Lansdowne Ave. will be completed in a few months. Early in the year it was decided to build 100 more double truck cars, upon the construction of which very large expenditures have been made in addition to providing the electrical equipment for same. Of these cars 30 have been completed and placed in commission, and work upon the balance is being rushed as rapidly as possible. The laying of new tracks upon the following streets was proceeded with: Harbord St. from Ossington Ave. to Bathurst St.; Wilton Ave. from Sherbourne to Sumach St.; and Adelaide St., from Bathurst St. to Spadina Ave. Additional electrical equipment has been installed at no. 3 sub-station, Dovercourt Road and Harrison Sts., and an air compressor plant was placed at the Lansdowne Ave. car house. In addition to the money expended on capital account, a large amount has been expended on the maintenance of the property, and the board feels satisfied that the physical condition of the property has been greatly improved.

The Toronto and York Radial Ry. reports that earnings continue to show very satisfactory increases—the gross income amounting to $399,615.69. compared with $351,460.42 for the previous year, an increase of 13.7 %.; while the net earnings, after providing for all operation and maintenance charges, bond and loan interest, etc., show a surplus of $55,998.03, an increase of $13,864.73.

Assets.

Road and equipment, real estate and buildings, including pavements, etc.		$14,674,057.11
Advances to subsidiary companies		1,590,457.15

Total		$787,118.98
Less charges—		
Rentals, paid and accrued	$500,133.84	
Maintenance, operation, etc.	*215,477.47	
Interest on debenture stock, loans, etc.	133,200.04	
		848,811.35
Net deficit		$ 61,692.37

*Included in this amount is $56,483.59 expended in replacement of turbine runners.

Following is the board for the current year: President. Sir Wm. Mackenzie; Vice President, F. Nicholls; other directors, Hon. G. A. Cox, W. D. Matthews, Sir Henry M. Pellatt, Jas. Gunn.

◆

Electric Railway Notes.

The British Columbia Electric Ry. has received one heavy double broom electric snow sweeper from the Ottawa Car Co., Ottawa.

Application is being made to the London. Ont., city council to permit the street railway to operate freight cars on its lines during the night.

The Ottawa Electric Ry. has received six pay-as-you-enter car bodies, 33½ ft. long, 45 ft. overall. mounted on 27-FE-1 trucks. from the Ottawa Car Co.. Ottawa.

The Regina, Sask., city council has ordered in England our single-truck cars and two double-truck cars, of the p.a.y.e. type, for June delivery.

The British Columbia Electric Ry. has received two, the last of ten ordered last fall, double truck city cars. from the Preston Car and Coach Co.. Preston, Ont.

The Guelph Radial Ry. is reported to have ordered two pay-as-you-enter cars, of the most approved type, with 7 ft. vestibules and centre aisles, at a cost of about $7,400 each.

The Guelph Radial Ry.. Co. has ordered a 27-ton steel freight locomotive, and two 4 motor car equipments from the Canadian Westinghouse Co. It is also about to order two p.a.y.e. cars.

The Port Arthur and Fort William Electric Ry. has received two double truck city cars. for the city of Fort William, Ont., from the Preston Car and Coach Co., Preston, Ont.

The Ottawa Electric Ry is proceeding with the equipment of the double truck pay-as-you-enter cars, which it intends to put in operation in May, as recently announced by J. E. Hutcheson. Superintendent and Purchasing Agent.

The Montreal board of control is considering the question of enlarging the Wellington and Ontario street subways, to allow of the new type large cars of the Montreal St. Ry. to be operated there.

The Winnipeg city council has been granted leave to appeal direct to the Imperial Privy Council, instead of going to the Supreme Court of Canada, against the decision of the Manitoba courts in its action against the Winnipeg Electric Ry.

A majority of the Edmonton St. Ry. Commissioners are reported to have decided in favor of the dismissal of Superintendent Biswanger, and P. McNaughton, Superintendent of the Power House. To carry the vote into effect action by the city council is necessary.

G. R. G. Conway, M. Inst. C.E., M. Can. Soc. C.E., recently Chief Engineer Monterey Ry., Light and Power Co., and Monterey Waterworks and Sewer Co., Mexico, has been appointed Chief Engineer British Columbia Electric Ry. and its subsidiary companies, with office at Vancouver, B.C.

The Winnipeg Electric Ry. is applying to the Manitoba Legislature for an act ratifying the amalgamation between the Winnipeg Power Co., and the Winnipeg Electric St. Ry. Co., and between the latter company and the Manitoba Electric and Gas Co., the Northwest Electric Co., and other companies, and confirming the transfer of the assets, rights, powers and franchises of these companies to the Winnipeg Electric Ry.

The British Columbia Legislature has under consideration a measure declaring that the rules governing the operation of interurban electric tramways, and prescribing the equipment and appliances for locomotives, motors and cars used in the operation of tramways and street railways, approved Nov. 29, 1910, and Jan. 10, 1911, are valid, and made under the authority of the Tramway Inspection Act of 1910. These rules may at any time be amended. altered or annulled.

The Cleveland Punch & Shear Works Co.

CLEVELAND, OHIO

Projects, Construction, Betterments, Etc.

Alberta Electric Ry.—The provisional directors named in the application to the Dominion Parliament for the incorporating of a company with this title are:—R. R. Jamieson, G. E. Wood, D. Stuart, W. T. D. Lathwell, R. S. Barbour, Calgary, Alta. Power is asked to enable the company to operate its lines by electricity, gas, gasolene, steam or other motive power. (Jan., pg. 71.)

Aroostook Valley Electric Ry.—A bill was introduced into the Maine Legislature Jan. 26, authorizing the A.V.E.R. to acquire the C.P.R. branch line running from Aroostook Jct. to Presque Isle and to extend the line from Washburn, the present terminus to the Canadian boundary. Press reports stated that the A.V.E.R. is controlled by the C.P.R., and that the intention is to provide by the building of the line in Maine, and connecting it with the C.P.R. by a line to be built in Canada, to give the C.P.R. a line from St. John, N.B., to Quebec, about 100 miles shorter than its present one. The point at which it is proposed to reach the Quebec boundary is in L'Islet county, about 70 miles directly east from Quebec.

A. R. Gould, President, A.V.E.R., stated in an interview that the C.P.R. has nothing to do with the project, which is being financed by New York interests for the development of Aroostook county in the interests of the people of Maine. "The road we plan to build," he added, "begins at Washburn, strikes northerly and westerly, striking Canada in Casgraine parish, Que. This is a distance of 82 miles. The system will measure 130 miles from Aroostook Junction to the point in Áraco parish, Que., where this road will eventually meet the National Transcontinental Ry. It will be the longest electrically operated line in New England."

Belleville Radial Ry.—Application is being made to the Ontario Legislature to extend the time for the lines authorized to be built. Clute, Morden and Shorey, Belleville, Ont., are the solicitors.

Brandon Electric Ry.—Application is being made for a franchise for the building of an electric railway in Brandon, Man. H. P. Blackwood, Winnipeg, is solicitor for applicants. (Dec., 1910, pg 1065.)

Brantford St. Ry.—A bylaw was passed by the Brantford, Ont., city council granting the B.S.R., which is one of the constituent companies of the Grand Valley Ry., an extension of time to Apr. 1 to build the line to Holmedale. If default is made in the building of the line the company's charter will be forfeited. The agreement further provides that in the event of default the city will build the line and obtain legislative authority to operate it. (See Grand Valley Ry., Dec., 1910, pg. 1067.)

British Columbia Electric Ry.—The construction programme laid out for the current year provides for the completion of 23 miles of interurban lines, and the laying of about 15 miles of new lines in Vancouver and suburbs. The new interurban lines include the Vancouver, Fraser Valley and Southern Ry., under construction through Hastings and Burnaby into New Westminster, and an additional line to Eburne. In Vancouver it is proposed to build a large terminal station on False Creek, where the V.F.V. and S. Ry. starts. In New Westminster it is proposed to relocate some of the lines, and to build a second track on others. In connection with the wharf, which is being built at New Westminster, an area of 35 acres of low lying land is being reclaimed for use as yards, etc.

The city of Vancouver has under consideration the enlargement of the city boundaries, and in connection therewith is taking up the question of the various franchises of the B.C.E.R. within the area proposed to be taken in, with a view of unifying them, and having one contract governing the whole area. The franchise in Vancouver expires in 1919, that in Hastings and D.L. 301 has 20 years to run, and those recently granted in South Vancouver and Point Grey have 40 years to run. The company desires a franchise for 23 years, and while this has not been absolutely agreed to, the terms under discussion are based upon it. The question of the Point Grey franchise has been before the courts, and judgment has been reserved in the action brought to invalidate the bylaw granting it.

In an interview at Vancouver, Feb. 8, Assistant General Manager Glover stated that one of the conditions of the agreement between the company and the C.P.R. with respect to the Vancouver and Lulu Island Ry., was that the B.C.E.R. should take over the operation of the line connecting New Westminster and Westminster Jct., as soon as the management made the request. Local reports state that the request is likely to be made at an early date.

A. T. Goward, local manager in Victoria, is quoted as having stated Feb. 9, that power from the Jordan River plant would be available April 1. (Feb., pg. 167.)

Buffalo, Lockport and Rochester Ry.—In connection with this elevated railway in which Toronto people are interested, creditors were asked to send in particulars of their claims to the receivers by Feb. 20. The receivers were appointed on the petition of the National Bond and Share Co.

Buffalo, Niagara and Toronto Ry.—Application is being made to the Dominion Parliament to revive and confirm the powers conferred on the company by its act of incorporation, chap. 67 of the statutes of 1906, to extend the time for its construction; substitute the words "between the town of Niagara-on-the-Lake and" for "at or near," in par. 6, subsec. 1, sec. 8, and to state that any motive power except steam may be used. (Dec., 1910, pg. 1065.)

Calgary Municipal St. Ry.—In order to provide for projected extensions of the street railway the city council of Calgary, Alta., has approved plans for the erection of steel bridges across the Elbow at Twelfth Ave. east, and at Second St. The bridges will be 30 ft. wide, providing room for a single track to be laid, that at Twelfth Ave. will consist of two spans of 100 ft. each, and that at Second St. of two spans of 150 ft. each. The cost of the two bridges is put at $55,000. (Feb., pg. 167.)

Chatham, Wallaceburg and Lake Erie Ry.—No new work was undertaken during 1910, and the company does not propose to do more than add to its siding accommodation during this year. (Nov., 1910, pg. 963.)

Edmonton Radial Ry.—During 1910 track was laid on two additional lines, a distance of 3.5 miles, as follows;—from Syndicate Ave. to City Park, 2.5 miles, and from Twenty-first St. to Twenty-fourth St., 1.0 mile. The work was done by the city staff by day work. (Dec., 1910, pg. 1065.)

Guelph Radial Ry.—Application is being made to the Ontario Legislature to extend the time for the building of the branch lines authorized, and to ratify an agreement dated Aug. 15, 1910, with the People's Ry. respecting the building of that company's lines in the city of Guelph, Ont.

We were advised Feb. 10 that the extension proposed to be built in St. Patrick's ward will be one mile, and that a single track only will be laid. Tenders have not been asked for the work, it not having been decided how it will be done. (Feb., pg. 162.)

Greenwood-Phoenix Tramway Co. Application is being made to the British Columbia Legislature to incorporate a company with this title, having power to construct a tunnel under the mountain lying east of Greenwood, from the Nelson mineral claim to the Victoria mineral claim, under the city of Phœnix, with branch tunnels, and in connection with the same to build railways to be operated by electricity or otherwise. It is desired to have power to take over the Phœnix Tramway Co., which was incorporated under the Provincial Tramway Company Incorporation Act. I. H. Hallett, Greenwood, B.C., is solicitor for applicants.

Halifax Electric Tramway.—The city council had under consideration, Feb. 14, a letter from W. J. DeBlois, secretary, stating that the company was prepared, if given the proper authority from the council, to proceed with the work to complete the proposed second track on the loop line during the summer. The matter was referred to the Public Works Committee for consideration. Nov., 1910, pg. 963.)

Hamilton Street Ry.—The Hamilton city council has appointed a special committee to receive and consider suggestions for new lines in the city. The suggestions received Feb. 10 include an extension to be built along Ferrie St. through the manufacturing district to Birch Ave., and continued from the corner of Sherman Ave. and Main St. to Ottawa St., to Barton St. and another extension be built along Herkimer St. to McDonald Ave., to Aberdeen Ave. and to Queen St., Hamilton. (Dec., 1910, pg. 1069.)

Imperial Traction Co.—The provisional directors named in the application to the Dominion Parliament for an act incorporating a company with this title are:—L. B. Howland, Toronto; R. Miller, Ingersoll, Ont.; G. M. Reid, London, Ont.; F. W. Hay, Listowel, Ont.; J. M. Taylor, Guelph, Ont. (Feb., pg. 167.)

International Traction Railways.—The Ontario Legislature is being asked to enable the I.T.R. to acquire the name, rights, franchises, etc., of the International Ry. in the province. A. M. Grier, Niagara Falls, Ont., is solicitor for applicant. (Jan., pg. 71.)

Lake Erie and Northern Ry.—The bill under consideration by the Dominion Parliament for the incorporation of a company with this title gives power to build a railway from Port Dover, passing through Simcoe, Waterford, Brantford and Paris to Galt, with a branch from Paris or Glenmorris to Ayr, Ont. The company is also applying for power to operate steam and other vessels on Lake Erie. The provisional directors are:—J. Muir, R. Ryerson, W. S. Brewster, W. P. Kellett, W. D. Schultz, J. S. Sanders, Brantford. (Feb., pg. 167.)

Lethbridge, Alta.—A resolution has been passed by the Lethbridge, Alta., municipal council directing the city engineer to report as to various works which would be necessary in preparation for the building of a street railway system. (July, 1910, pg. 584.)

London St. Ry.—At the annual meeting held Feb. 1, it was decided to proceed with the work of building a plant to be operated by steam, for the development of electricity to operate the cars. (Dec., 1910, pg. 1069.)

The Montreal and Southern Counties Ry. has under construction an extension of a mile from St. Lambert to the Country Club of Montreal, and a 12 mile extension to Chambly, Que. It has also

under survey a line from Longueuil to Vercheres, 21 miles, and a line from St. Lambert to the Chateauguay and Huntingdon districts, 50 miles. The extension to the Country Club is expected to be in operation by June 1. and the line to Chambly by August Construction of the lines to Vercheres and to the Chateauguay and Huntingdon districts will not be started before next year. (Feb., pg. 168.)

The Montreal Park and Island Ry. is applying to the Dominion Parliament to extend the time for the construction of the lines authorized to be built. A clause provides that the company shall not construct any railway in Mount Royal Park. (Dec., 1910, pg. 1069.)

Montreal Terminal Ry.—An extension of 1.02 miles from Pie IX. St. along Earnest St. to the terminus was completed during 1910. (Feb., pg. 167.)

Montreal Underground and Elevated Ry.—A letter has been received by the board of control of the city of Montreal, on behalf of this company, stating that it was prepared to submit a proposal which it had under consideration for the promotion of rapid transit in the city. (April, 1910, pg. 311.)

Moose Jaw Electric Ry.—The Saskatchewan Legislature has under consideration a bill for the incorporation of a company under this title with authority to build or acquire lines to be operated by steam or electricity, or partly by steam and partly by electricity, as follows:—A single or double track railway on any of the Moose Jaw streets, subject to the approval of the city council, and suburban lines radiating from Moose Jaw to a distance of not more than 10 miles therefrom, the location and plans to be approved by the Provincial Government. The franchise granted Mar. 26. 1910, to J. B. McRae, assigned to the Moose Jaw Electric Ry., is declared to be an exclusive franchise, granting the exclusive right to operate a street railway in Moose Jaw during the term of its continuance. The provisional directors are A. A. Dion, N. J. Ker, D. R. Street, A. H. Dion, Ottawa; E. M. Saunders, Moose Jaw. The provisional directors are all officers and directors of the Moose Jaw Electric Ry. Co. (Limited), a company formed under the British Columbia Companies Act; and J. B. McRae, to whom the charter in Moose Jaw was originally granted by the city council, is Chief Engineer of the company. (Feb., pg. 167.)

Morrisburg and Ottawa Electric Ry.—The Ottawa city council is being asked to grant the company a franchise for a line along Main St., in order to connect its line from Morrisburg with the lines of the Ottawa Electric Ry. Also for permission to lay tracks on Main St. and Hawthorne Ave., Ottawa East, at the junction of which it is proposed to erect a passenger terminal station. C. M. Willard, Morewood, Ont., is President. (Dec., 1910. pg. 1067.)

Mount McKay and Kakabeka Falls Ry.—The municipal council of Paipoonge is applying to the Ontario Legislature to confirm bylaws exempting from taxation the company's railway in the municipality; to permit it to carry its lines along any highway, and to raise $4,000 by debentures to aid in building a bridge across the Kaministikwia River, to be used by the railway. (Sept., 1910, pg. 781.)

Niagara Frontier Electric Ry.—The Ontario Legislature is being asked to incorporate a company with this title to build an electric railway from Niagara-on-the-Lake. to Fort Erie, to acquire other electric railway lines, to make traffic arrangements with electric railways, ferries or steamboats, and to acquire running rights over any other electric railway. G. H. Pettit. Welland. Ont., is solicitor for applicants.

Niagara, St. Catharines and Toronto Ry.—The Board of Railway Commissioners Feb. 6 authorized the opening for traffic of the line from Welland to Port Colborne, Ont. (Feb., pg. 169.)

Niagara, Welland and Lake Erie Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Niagara Falls, Ont., westerly through Welland and Port Colborne, with branches from Port Colborne westerly to Port Dover, and easterly to Fort Erie. The line is declared to be a work for the general advantage of Canada, and while it is not so stated, it is evidently intended that it shall be operated by electricity, as power is asked to develop and dispose of electricity. The provisional directors are:—A. P. Laughlin, Welland, Ont.; F. W. Griffiths, Niagara Falls, Ont.; D. L. Stafford, Dunkirk, N.Y.; F. C. Carlesen, Los Angeles, Cal. ((Nov., 1910, pg. 965, and Oct., 1910, pg. 877.)

North Midland Ry.—Application is being made to the Ontario Legislature to authorize the city of London to enter into an agreement with the company, providing for the guarantee by the city of the principal and interest of the company's debentures to the amount of $200,000, as provided by the bylaw approved by the ratepayers, Jan. 2. (Feb., pg. 169.)

A. N. Warfield, formerly with the Peoples Ry., and now engaged as Chief Engineer of the N.M.R., has been in Stratford. endeavoring to obtain a guarantee of bonds for that line.

Ontario West Shore Ry.—The proposed bylaw granting the company a franchise in Goderich, Ont., is being reconsidered by the town council. The bylaw was prepared a year ago, but it was not pressed to a vote, as it was not satisfactory. The company desires to carry freight, and the council is opposed to this, so far as the main streets are concerned. (Nov., 1910, pg. 965.)

Oshawa Ry.—Application is being made to the Ontario Legislature to authorize the town council to enter into an arrangement with the company with regard to the paving of King and Simcoe Sts.

Ottawa and St. Lawrence Electric Ry.—The Ontario Legislature is being asked to extend the time for the building of the lines authorized by its act of incorporation. (Feb., pg. 169.)

Ottawa Electric Ry.—We are officially informed that no additional mileage of track was laid during 1910, the only new track laid being a mile of double track on portions of two streets where there had been previously only a single track.

The G.T.R., having arranged to give a 15 ft. strip to widen Mosgrove St. between Rideau and Besserer Sts., the city council, Feb. 15, decided to ask the O.E.R. to move its tracks for mail cars from Little Sussex St. to Mosgrove and Besserer Sts.

Ottawa, Smiths Falls and Kingston Electric Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title having power to build a railway to be operated by electricity or other motive power from Ottawa via Smiths Falls to the boundary of Leeds and Frontenac counties, and thence either through Pittsburg township or Storrington and Kingston townships to Kingston, with a branch from Smiths Falls to Perth and Lanark. The provisional directors are:—R. H. McElroy, Carp, Ont.; T. A. Kidd, Burritt's Rapids, Ont.; F. A. Heney, Nepean tp.; J. C. Graham, North Gower tp.; A. E. Baker, Merrickville, Ont.; J. S. R. McCann, Kingston, Ont.; J. E. Caldwell, Nepean tp.; Rev. D'A. T. Clayton, North Gower tp.; E. P. McGrath, Ottawa; G. L. Dickenson, D. Clarke, Manotick, Ont.; W. J. Scott, Lanark. (See Ottawa and Kingston Electric Ry., Feb., pg. 169.)

Peoples Ry.—It is reported that up to Dec. 31, 1910, there had been 7.5 miles of grading completed between Bloomingdale and New Germany, Ont., and that there had been built three piers and one abutment for the bridge over the Grand River.

The Guelph Radial Ry. is asking the Ontario Legislature to pass an act ratifying an agreement made Aug. 15, 1910. with the P.R. Co. respecting the construction of certain lines in the city.

In a recent interview, W A. Bugg stated that an excellent route had been found for a line into Collingwood, and that the people there were in favor of subscribing $50,000 toward building it, if a bylaw was submitted. The line would reach Collingwood from Guelph, by way of Arthur and Flesherton. Referring to the operation of the line, Mr. Bugg stated that negotiations were in progress with a strong syndicate for the operation of the whole of the lines proposed to be built.

It was stated at a recent meeting of the Berlin, Ont., board of trade, that it was expected an announcement would shortly be made that interests allied with the Canadian Northern Ry. had entered into an agreement for taking over the rights and franchises of the P.R. Co., and would complete the construction of the lines. (Feb., pg. 169.)

Port Arthur and Fort William Electric Ry.—The Ontario Legislature is being asked by the city council of Port Arthur to authorize, among other things, the appointment of three salaried public service commissioners, who shall have the control and management of all the corporation's public utilities, and who shall possess the powers conferred on a board of control by sec. 677 of the Municipal Act, the raising of $15,000 by debentures for the building of a second street railway track on Arthur St., the raising of $75,000 by debentures for the purpose of laying 80 lb. steel rails on Cumberland St., and for other street improvement purposes; to raise $6,500 by debentures for the purpose of purchasing an electric motor, etc., at the power house; and to raise $10,000 by debentures to purchase a motor generator at the hydro-electric station. (Feb., pg. 169.)

Quebec and Sagueuay Ry.—Tenders will be received to Mar. 10 by J. F. Guay, Chief Engineer, Quebec, for the building of 56 miles of line from Cap Tourmente to Murray Bay wharf, in sections of 10 miles. The line will start from the present terminus of the Quebec Ry., Light and Power Co.'s line, formerly known as the Quebec, Montmorency and Charlevoix Ry., and will be built along the shore of the St. Lawrence River. It is said that the whole project has been financed in England and France. R. Forget, M.P., the President, has been negotiating with the Dominion and the Provincial Governments with a view to obtaining subsidies in aid of the line. A subsidy for a line covering a portion of this route has already been voted by the Dominion Parliament, and is available for the Q. and S.R A contract has been let to the Bishop Construction Co., Montreal, for the building of a large pulp mill at Murray Bay, with a siding for the same. This siding will eventually be connected with the Q. and S.R. E. A. Evans, formerly General Manager and Chief Engineer of the Quebec R., Light and Power Co. is consulting engineer for the Q. and S. Ry.

The Q. and S.R. has power to build a line from Cap Tourmente via Murray Bay, to Tadousac, at the mouth of the Saguenay River. The construction will be a difficult piece of work, there being a great deal of rock work necessary in

Buying Road Machinery?

"CHAMPION" ROCK CRUSHERS

"Equal Work with Half the Speed"

Don't buy a Rock Crushing Plant until you see the Champion Crusher with its exclusive feature—the elliptical cam which gives the jaws two motions instead of one, and makes it necessary to only run the crusher at half the speed others require.

Speed means friction—friction means wear. Champion Crushers by doing the work at half the usual speed save wear, and therefore outlast others.

"CHAMPION" DUMP WAGONS

Wheel base 6 to 14 inches shorter than any other. You can get this waggon into and out of places without a hitch, where other waggons will give all kinds of trouble.

Accidental dumping impossible — instant dumping when wanted. And these are but single features. Learn the others before buying your next waggon. Champion Dump Waggons are beyond any question the best waggons on the market.

Send for our catalogs on Champion Crushing and Road Building Machinery and Dump Waggons. If you value extreme efficiency and durability, get these catalogs now and read them.

"CHAMPION"—the Standard for 20 years.

order to provide a route along the cliffs which form the northern bank of the St. Lawrence River. (Feb., pg. 169.)

Quebec County Ry.—The Board of Railway Commissioners has recommended the Governor-in-Council to sanction an agreement between the company and the Quebec Ry., Light and Power Co. (Feb., pg. 169.)

Regina Electric Ry.—We have been advised that contracts have not been let for the building of any electric railway lines in Regina, Sask. It is expected, however, that work will be started in a month or two. L. A. Thornton, city engineer, has charge of the project. We were further advised Feb. 11 that the city had placed orders for the steel rails, overhead work, street intersection work, and the necessary power plant, and that it is the intention to begin the construction of the street railway as soon as possible, so as to have it opened for traffic in July.

The Saskatchewan Legislature has under consideration a measure authorizing the city council to build and operate as a municipal public work a railway to be operated by electricity, and granting all the necessary powers, in order that the project may be carried out. The measure confirms all that the city has already done in connection with the matter, including the passing of a bylaw providing for the raising of $100,000 by debentures towards the building of the line. For the purpose of raising further funds the city may sell its lands, or raise money by mortgaging the lines to be built, and the revenues accruing from their operation, without the submission of any further bylaws to the burgesses for their assent. (Nov., 1910, pg. 965.)

St. John, N.B., Ry.—The city council, Feb. 12, passed a resolution making a charge of $100 a month for maintenance of roadway and snow cleaning for the proposed extensions out the Loch Lomond Road. (Feb., pg. 169.)

St. Thomas Street Ry.—In his annual report on the condition of the line, Supt. Gillett informed the city council of St. Thomas, Ont., that the overhead construction was very bad, and must be renewed for public safety; that the track on Talbot St. was too light for the heavy traffic, and that while the line as a whole was in fair condition, it was time it was entirely rebuilt. Some changes in the routes were necessary and new cars should be provided. The line was being run as cheaply and as efficiently as circumstances would permit, and there was no reason to be ashamed of the financial results, considering the conditions. (June, 1910, pg. 497.)

Sackville, N.B.—A short piece of line, which was laid out as a spur to the New Brunswick and Prince Edward Island Ry., on the Pickard-Fawcett properties in Sackville, N.B., is to be operated by electricity, the necessary power being obtained from the local electric light station. Construction is being proceeded with and tracklaying is reported to be in progress. (See New Brunswick and Prince Edward Island Ry., Jan., pg. 23.)

Sandwich, Windsor and Amherstburg Ry.—The Ontario Legislature is being asked to pass an act declaring that sec. 11 of chap. 97 of the statutes of 1893, shall not be intended to, and did not affect the rights and interests of the municipality; to strike out the first four lines of the section and by adding words to the effect that nothing in the act should have the effect of continuing the franchise of the company beyond Dec. 15, 1912, or beyond such time as under sec. 202, of the Ontario Railway Act, 1906, the company would be entitled to exercise its rights or franchise. (Nov., 1909, pg. 841.)

Sarnia Street Ry.—Press reports state that an arrangement is being made between the company and the Board of Trade, for the building of an extension of a mile along the shore of Lake Huron from the present terminus in connection with the projected extension of the summer resort there. The company is willing to build the line, provided the Board of Trade secures the right of way from the property owners along the route. (Jan., 1910, pg. 59.)

Sherbrooke St. Ry.—In addition to having laid some additional mileage, the company, since it took possession of the lines in Aug. 1910, has completed the reconstruction of about one-half of the seven miles of line operated by the old company. New ties have been put in; new 70 lb. steel rails laid, with new bonds, etc. The remaining mileage of the old lines will be reconstructed during this year.

Two of the three units of the new power plant on the Magog River have been completed, and the company has available for general distribution considerable power, over and above what is required for the operation of its lines.

We were advised Feb. 10, that the company on taking over the property from the former proprietors, arranged to reconstruct the lines then in existence, and to build extensions so as to increase the mileage to 13 miles. About five miles of line have been reconstructed, 60 ft., 7 in. girder rails, 70 lbs to the yard being used, laid on new ties, held by tie rods and rail braces being used, the rails being bonded with wire pressed bands, and all switches, frogs and crossovers having manganese steel centres. Preparations have been made to push forward the reconstruction of the remaining mileage in the spring. After the present lay-out has been rebuilt, the projected extensions in the city will be built. It is expected that this work will be completed by July 1. On this being done attention will be given to the building of interurban lines. It is proposed to make large extensions to the company's car barns, and to remodel the shops and stores. The new 4,000 h.p. hydro-electric plant on the Magog River was expected to be placed in operation Feb. 15. (Nov., 1910, pg. 965.)

Stratford Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title to take over the franchise granted by bylaw 1739 of the city of Stratford to T. O. Robson, H. L. Rice, D. Bouris, and A. Baird, for the building of an electric railway in the city, and to authorize the company to build, in connection with the city lines a system of interurban lines with branches therefrom, westerly to Lake Huron, westerly and northerly to Mitchell and Moncton; northerly to Milverton and Listowel and easterly to Tavistock. Makins and Gregory, Stratford, are solicitors to the applicants.

A conference between representatives of the company and the Stratford city council finance committee was held Jan. 31 when certain matters relating to the building of the line were informally discussed. The members of the committee state that satisfactory progress is being made by the company so far as its organization is concerned.

The company has had some car loads of material delivered in Stratford, Ont., and is said to be preparing to let contracts for concrete work. A contract with the St. Marys and Western Ontario Ry. for the building of a line from Stratford to Lake Huron, has been deposited with the city clerk.

Toronto and York Radial Ry.—The Ontario Railway and Municipal Board, Feb. 16, took up the consideration of the application of ratepayers of North Toronto, for a more efficient service, etc. on the Metropolitan Division. The company proposes laying a second track, but the town council opposes it. Decision was reserved. (Feb., pg. 169.)

Toronto Interurban Ry.—The Ontario Legislature is being asked to incorporate a company with this title to build a line to be operated by steam or electricity, or both, from the northerly limits of Toronto to Newmarket, Ont. The provisional directors are C. C. Cummings, F. D. Mackay, M. H. Ludwig, K.C., A. W. Ballantyne, C. F. Ritchie, Toronto. (Feb., pg. 169.)

Toronto Suburban Ry.—The notice of application to the Ontario Legislature to authorize the extension of lines, has been amended. The extensions now proposed are, from the present authorized Guelph or Hamilton line, near Cooksville to Milton, thence northerly to Acton, and to extend the Guelph line to Berlin, Preston, Hespeler, Galt and Hamilton; to increase the capital stock, to issue bonds for terminals, and to extend the time for the construction of the previously authorized lines.

We are advised that the company has under survey an extension of its line, now terminating at Lambton, Ont., to Brampton, 14 miles; and an extension of its line, now terminating at Weston, to Woodbridge, seven miles. (Feb., pg. 169.)

Western Central Ry.—The application to the Dominion Parliament for a Dominion charter for this company was talked out in the House of Commons Railway Committee Feb. 16. The company was originally incorporated by the Ontario Legislature, and has been granted several extensions of time, but no construction has been done. (Jan., pg. 73.)

Windsor and Tecumseh Electric Ry.—The Ontario Legislature is being asked to extend the time for the building of the already authorized line from Tecumseh to Chatham, Ont., and to authorize the building of a branch from its existing line in Sandwich East, easterly to Belle River, Ont. (Dec, 1907, pg. 929 See also Sandwich, Windsor and Amherstburg Ry.)

Winnipeg Electric Ry.—The Winnipeg board of control has under consideration proposals for the extension of the electric lines in the city. The last meeting was held Feb. 10, but the members of the committee refused to give any information as to the plans which had been considered.

A contract is reported to have been let for the building of a new power station. The plant is calculated to have a minimum capacity of 12,000 h.p. and a maximum capacity of 17,000 h.p. (Feb., pg. 169.)

London Street Railway Report.

Following is a summary of the report for 1910, presented at the annual meeting Feb. 1:—

	1910.	1909.
EARNINGS.		
Passengers	$250,897.34	$238,267.23

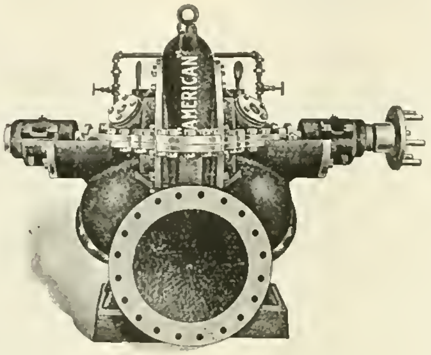
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

Opportunities for Industries AND Townsites in Western Canada

The Industrial and Townsite Department of the CANADIAN NORTHERN RAILWAY is prepared to furnish valuable information to, and will co-operate with, Homeseekers, Manufacturers, and Wholesale and Retail Merchants, in all lines of business who are seeking locations.

The entire line of the Canadian Northern Railway runs through the great wheat belt of Western Canada, where practically every acre can be put under cultivation. There is no waste land, and nowhere are crops more certain and markets more accessible.

The Canadian Northern is opening numerous new towns, where there are good openings for merchants, mechanics and professional men—some splendid opportunities for young men to get started in life.

In no section are there better educational advantages, greater social opportunities, or more healthful climatic conditions. Values are low compared with other sections of the country with like conditions and soil. If you are seeking any kind of location, write

Industrial and Townsite Department,
Canadian Northern Railway,
Winnipeg, Man.
or The Information Bureau,
Canadian Northern Railway,
Toronto, Ont.

ed on improvements, additions, etc. The expenditure for track purposes continues to increase, owing to the general reconstruction necessary throughout the system. In following the city's instructions to repave track allowance on Dundas St. from Wellington to Ridout, and Richmond St., from Fullarton to the G.T.R., it was found advisable to completely rebuild this track. An 80 lb. T rail in 60 ft. lengths was adopted, and laid on creosoted blocks thoroughly imbedded in a concrete foundation. Only part of this work has been completed, and will be charged to operation.

We have considered several propositions submitted by the Hydro-Electric Commission, relative to Niagara power, which we find are not attractive in comparison with modern steam generation. However, there is still a possibility that some arrangement can be made to our mutual satisfaction.

The wages of motormen and conductors were voluntarily increased on April 1, the new scale for regular men being 18c. an hour for the first and second years, 19c. an hour for the third year, and 20c. an hour for the fourth year. Other wages have also been increased as conditions required.

As we have had sufficient money for our requirements, the directors have not yet considered it necessary to dispose of the $25,000 bonds recently authorized. The gross earnings and surplus for the year have shown a substantial increase, and we believe the coming year will be quite as satisfactory. The directors are pleased to state that the relations with the public are very gratifying and that no litigation of any kind appears against the company.

◆

The Street Car Situation in Toronto.

The Ontario Railway and Municipal Board on Feb. 6, on the application of the city reversed its approval of the pay-as-you-enter system on the company's cars, the order stating that on the report of J. F. H. Wyse, consulting engineer, and D. M. Campbell, manager Preston Car & Coach Co., the sanction of the company's bylaw 36 respecting closed motor and trailer cars was rescinded. The city's application for an order that the company discontinue the use of trailer cars and build the motor cars with compartments for smokers, was dismissed.

In the case of the city against the Toronto Ry. Co., charging the latter with maintaining a common nuisance, which was fully explained in our last issue, the jury did not agree and on Feb. 14, Mr. Justice Riddell gave the following judgment: The defendants raised several objections: (1) That the court has no jurisdiction. This whole objection is unsound in essence. The Provincial Legislature has not formed a new court for the trial of nuisances. The Ontario Railway and Municipal Board is not a criminal court. Not only may but must these cases be tried according to the provisions of the code and the Board has neither jurisdiction in nor machinery for such trial. (2) As to the demurrer. The demurrer could not be allowed, but it remained open for the defendants under the plea of not guilty to contend that no duty such as contended for had been made out upon the law by the evidence adduced. (3) As to overcrowding, each member of the public is entitled to enjoy to the full, each of the rights of the public, and without legislative enactment you can no more interfere with one right and justify by alleging a benefit to another in the case of rights vested in the public than in the case of rights vested in private individuals. Count 6 as objected to was properly triable in this court. As to the legal duty of defendants not to endanger human life and the argument that sec. 247 of the code does not apply. This is not a duty imposed by the code, but any legal duty, however imposed—by the common law, statute, or perhaps contract. As to the fenders approved by the Board: No provision was made for trailers, and these have no safety device. The jurisdiction of the Board does not extend to trailers. I think it was open to the jury to find that the defendants in not applying any safety device to their trailers were guilty of an omission to take reasonable care and precautions, etc. I shall reserve a case for the Court of Appeal upon the many matters I have discussed, and if there be any matters I have not reserved I may be spoken to again.

W. K. McNaught, M.P.P. for North Toronto, has introduced a bill in the Ontario Legislature to amend the Ontario Railway Act, by adding the following, as sec. 214a:

What is known as the pay as you enter system of collecting fares shall not be operated on any street railway car unless such car complies with the following requirements:

It must have a rear platform at least 72 ins. deep with a folding step not less than 54 ins. long.

The rear platform must be enclosed and properly heated, and provided with a door or doors having an aggregate width of at least 54 ins., so arranged as to permit of the entrance and exit of passengers at one and the same time.

If there is a partition between the rear platform and the body of the car such partition must have doors or openings so arranged as to permit of the entrance and exit of passengers at one and the same time.

The front platform must be enclosed and properly heated. It shall be provided with an exit door at least 30 ins. wide and a folding step of the same width. If there is a partition between this platform and the body of the car, it must be provided with an exit door or opening not less than 30 ins. wide.

This section shall apply to cities only having a population of 100,000 or over.

Every person who violates the provisions of this section shall, on summary conviction therefor, incur a penalty of $100 per day for each car operated contrary to the provisions of this section.

◆

Ottawa Electric Railway Co.'s Report.

Following are extracts from the report for 1910, presented at the annual meeting, Feb. 6:—

The gross earnings were $748,708.75, compared with $677,357.11 in 1909, an increase of $71,351.64; 16,967,334 passengers were carried, compared with 14,983,799, and with 1,520,405 in the first year of the company's operations. The net earnings were $277,229.11, and dividends amounting to 12% were paid. The net earnings were disposed of as follows:—Interest paid on bond and loans, $34,288.79; four quarterly dividends of 2½% and a bonus of 2%, $149,724; mileage payments, $13,583.39; taxes, $8,673.74; placed to credit of contingent account to be applied to reduction of track renewal, car equipment, and other accounts, $41,000; transferred to credit of profit and loss account, $29,959.19.

Work on the new power house was commenced last fall. Waterwheels and a 2,000 h.p. generator are being installed, which will be completed early next summer. This will give double the present power capacity. We have also under order 18 double truck p.a.y.e. cars,

City of Toronto Civic Car Lines.

TENDERS FOR RAILS AND TIES.

Tenders will be received by registered post only, addressed to the Chairman of the Board of Control, City Hall, Toronto, Canada, up to noon on Tuesday, April 4th, 1911, for delivery of Thirteen hundred and forty (1,340) tons of open hearth steel rail, No. 80 section, also thirty thousand (30,000) untreated wood ties, white cedar preferred, although other woods will be considered.

Envelopes containing tender must be plainly marked on the outside as to contents.

Specifications and forms of tender may be obtained upon application to the office of the City Engineer, Toronto.

The lowest or any tender not necessarily accepted.

G. R. GEARY, Mayor,
Chairman Board of Control.
City Hall, Toronto, February 23, 1911.

BLAUGAS

Blaugas is bottled gas shipped in steel cylinders, sold by the pound.

It has 1800 B.T.U. and by this enormous heating power can do things which no other gas can. Blaugas is used, not only for house lighting, cooking, and water-heating, but for lighting of railway cars, buoys, railway stations, lighthouses. It is extensively used for all industrial purposes, as

Soldering

Brazing

Heating Appliances

of all kinds, and with oxygen, for

Welding

aluminum, bronze, copper, cast iron, etc.,

Cutting

of any kind of metal.

Blaugas is the safest gas ever invented. Explosion limits only within 96 to 92 per cent. of air and 4 to 8 per cent. of gas.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Write for catalog **now.**

INTERNATIONAL TEXTBOOK COMPANY
Box 1072, Scranton, Pa.

nine of which will be delivered next month. With these improvements and additions the company will be in a position to handle the rapidly increasing business, which has almost doubled in the past six years. The rolling stock and other properties have been efficiently maintained, and altogether the position and prospects of the company are better than ever.

◆

Nelson Street Railway Co's Report.

The annual meeting was held at Nelson, B.C., Feb. 6. The report showed that the operating expenses during the 23 days during which the cars were running, were $1,000.13, and the receipts $662.50. The President, J. E. Taylor, said that the extension had cost $21,191, against an estimate of $16,000; repairs to the old track had cost over $3,000, as compared with an estimate of $1,000; the rolling stock had cost $14,250, against an estimate of $11,500, and the car barns and machine shop $28,000, against an estimate of $25,000. The substation and generator, the cost of which had been estimated at $11,000, had, however, only cost $8,898. The estimated receipts from the two cars operated were $50, with the addition of $2 for advertising each day, giving a total of $1,560 a month, and the operating expenses were estimated at $1,412.67 a month, leaving an estimated surplus each month of $247.33, and allowing 5% dividend on the stock already issued and the further amount necessary to thoroughly equip the system, there would be a balance of $1,117.96 to be placed to the sinking fund each year. The following were elected directors for the current year:—G. W. McBride, W. R. McLean, J. E. Taylor, R. A. Brown, A. Carrie, A. Jeffs, M. R. McQuarrie, W. H. Douche, A. S Horswill, and S. M. Brydges.

◆

The Sherbrooke St. Ry. has received two 18½ ft. car bodies, 30 ft. long over all, mounted on 27-E trucks equipped with Westinghouse 101-B-2 motors, from the Ottawa Car Co., Ottawa.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Dec. 1910, $389,234; working expenses $224,549; net operating earnings $164,685; renewal funds $25,417; net earnings $139,268; approximate income from investments $20,000; net income $159,268, against $269,179 gross earnings; $151,522 working expenses; $117,657 net operating earnings; $17,833 renewal funds; $99,824 net earnings; $16,500 approximate income from investments; $116,324 net income for Dec. 1909. Aggregate gross earnings for six months ended Dec. 31, 1910, $1,991,648; net earnings $829,896, against $1,480,871 gross and $657,366 net for same period 1909.

Calgary Municipal St. Ry.—Passenger earnings for Jan. $19,524.16; miscellaneous earnings $354.66; total earnings $19,878.82; operating expenses $13,409.86; net operating revenue $6,468.96; contingent account $993.94; interest and sinking fund $2,715.88; net profits $2,759.14, against $11,375.60 passenger earnings; $189 miscellaneous earnings; $11,564.60 total earnings; $8,762.02 operating expenses; $2,802.58 net operating revenue; $578.23 contingent account; $2,715.88 interest and sinking fund; $491.53 deficit for Jan. 1910.

Dominion Power and Transmission Co.—Recent press reports stated that a British syndicate was in negotiation with certain interests for the purpose of securing the control of the company, but it was said that nothing was known officially about the matter.

Halifax Electric Tramway.—Railway traffic receipts for Jan., $16,380.69 and for two weeks ended Feb. 14. $7,478.23, against $15,510.09 and $6,913.26 for same periods 1910.

The directors decided Feb. 14, to increase the dividend from 7 to 8%, to commence with the current year.

London St. Ry.—Gross earnings for Jan., $20,596.43; expenses $15,182.50; net earnings $5,413.93; deductions $2,441.75; net income $2,972.18, against $18,363.71 gross earnings; $13,578.22 expenses; $4,785.40 net earnings; $2,441,75 deductions; $2,343.74 net income for Jan. 1910.

Montreal Street Ry.—Press reports state that the Toronto General Trusts Corporation recently asked shareholders to give it a 60-day option on their stock at 235, on behalf of a client who wanted to acquire a large number.

Application is being made to the Quebec Legislature for authority to increase the number of directors to 15 if deemed advisable.

Port Arthur and Fort William Electric Ry.—Gross earnings for year ended Dec. 31, 1910, are reported to have been $141,580.37 and operating expenses $83,430.38, leaving $58,150.19 as net earnings.

St. Thomas St. Ry.—The report for the year 1910, presented to the city council recently, showed that the number of passengers carried, decreased by 86,865, as compared with the previous year, while the deficit for the years operations was $12,944.44 which was $3,721.84 greater than for 1909.

Toronto Ry.—The percentage paid to the city for Jan., was $43,485.65, on gross receipts of $362,380.40, against $37,704.10 percentage on earnings or $331,346.65 for Jan., 1910.

Winnipeg Electric Ry.—Gross earnings for Dec. 1910, $340,281; expenses $177,754; net earnings, $162,527, against $283,528 gross earnings; $151,908 expenses; $131,620 net earnings for Dec., 1909. Aggregate gross earnings for 12 months ended Dec. 31, 1910, $6,284,341; net earnings, $1,629,508, against $2,623,731 gross and $1,303,066 net for same period 1909.

The company is applying to the Manitoba Legislature for the ratification of the amalgamation agreement between it and the Winnipeg Power Co., the Manitoba Electric and Gas Light Co., and the North West Electric Co., and other companies, and confirming the transfer of assets, etc.

NORTH AMERICAN LIFE

FINE RECORD FOR 1910

The Thirtieth Annual Meeting of the North American Life Assurance Company was held at its Home Office in Toronto, on Thursday, Jan. 26, 1911, when the report of the business for the year ended December 31, 1910, was presented.

CASH INCOME

The Cash Income for the year in premiums, interest, etc., was $2,177,012.61, showing the satisfactory increase of $147,134.91.

CONSERVATIVE MANAGEMENT

The business continues to be conducted on a conservative and economical basis, the North American Life being among the foremost in this regard.

PAYMENTS TO POLICYHOLDFRS

The amount paid on Policyholders' Account was $877,792.31, of which sum $142,764.06 was for surplus or dividends. Considering that the sum of $6,000 only was paid to Guarantors, the preponderance of the Policyholders' interest is apparent.

The large amount of $480,707.85, including surplus and guaranteed reserve, was paid to holders of Deferred Dividend policies.

ASSETS

The assets increased by $898,308.42, and now amount to $11,388,773.32.

They continue to be, as heretofore, invested in the best class of securities available, principally in Mortgage Loans and Bonds.

SURPLUS

After making ample provision for all liabilities and further strengthening the reserves, the net surplus on policyholders' account was increased to $1,171,768.68.

INSURANCES INCREASED

The policies issued during the year together with those revived, amounted to the sum of $5,106,047, being an increase over the previous year. The total business in force amounts to $43,391,236.

AUDIT

A careful and systematic audit was made every month by the Auditors, who also made a thorough scrutiny of all the securities of the Company. In addition a Committee consisting of two Directors made an independent audit of the securities each quarter

L. GOLDMAN, Managing Director. **J L. BLAIKIE,** President.

Canadian Lake Protective Association.

As announced in the Dominion Marine Association's annual report (Railway and Marine World, Feb., pg. 181), the vessel owners comprising that Association, decided to withdraw from the Great Lakes Protective Association, and have formed the Canadian Lake Protective Association, of which the following companies have already become members:—St. Lawrence & Chicago Steam Navigation Co., Canadian Lake Transportation Co., Montreal Transportation Co., Mutual Steamship Co., Merchants Mutual Line, Canadian Lake & Ocean Nav. Co., Keystone Transportation Co., Farrar Transportation Co., International S.S. Co., Interlake Transit, Ltd.; Point Anne Quarries, Ltd., Inland Lines, Ltd., Northern Nav. Co., Mathews S.S. Co., Canadian Northwest S.S. Co., Western S.S. Co. Several other companies have signified their intention of joining, and others again have the matter under consideration.

The agreement among the vessel owners provides that the chief purposes of the Association shall be to formulate rules designed to render careful navigation absolutely obligatory on the part of the master of every vessel owned or managed in the Association, which rules shall be effective upon their adoption, or amendment and adoption, at a general meeting of the subscribers. To enforce the rules, and to take such measures as may be possible to render the suspension or the cancellation of the master's license the certain penalty for every proved breach of the same, or for any other flagrant act improperly imperilling the safety of his vessel. To examine into all marine disasters affecting vessels owned or managed in the Association, and to see that penalties are imposed in all proper cases. To aid also in every possible way in a movement to decrease the risks of navigation, by disseminating information, by invoking government assistance, and obtaining where necessary additional aids to navigation and improvements in ship channels; and generally to take measures to lessen the chance of disasters on the waters named and thus to render the vessels owned or managed in the Association a better and more desirable class of underwriting risks. To take any other steps possible to decrease the cost of insurance upon vessels.

A committee of five shall be appointed for the purpose of investigating disasters, framing and enforcing the rules and imposing penalties whenever proper, and for the purpose generally of taking action from time to time in all matters within the Association's scope. The members of the committee shall hold office until their successors are appointed, and the first committee shall consist of the President of the Dominion Marine Association, and J. W. Norcross, W. H. Featherstonhaugh, S. Crangle, and R. Fraser. A new committee shall be appointed at each annual general meeting and the retiring members shall be eligible for re-election. No member of the committee shall act on any investigation relating to a vessel in which he is in any way interested, and in any such case the committee may appoint a substitute to act in place of such member. Each member of the committee shall receive his actual expenses incurred in attending meetings of the committee, and also a per diem allowance of $5 for each day the committee is in session.

No member shall be entitled to vote at any meetings unless he has complied with all the rulings of the executive committee and all the terms of the agreement, including the provisions respecting the payment of dues. The subscribers shall pay into the treasury a sum equivalent to 2½c. for each ton of net registered tonnage of vessel property, owned or managed by him, which payment shall cover the assessment of such member for the year ending Dec. 31, 1911, unless at the next annual general meeting it be found necessary and be decided to levy a further assessment in respect of this first period; and the rate per ton of the said assessment for each following year shall be fixed at each annual general meeting on the recommendation of the said committee.

Each owner or manager shall, in making contracts with his masters, incorporate any navigating rules adopted by the Association, and have the master sign the rules and agree to abide by them.

Rules for Masters of Vessels.

1. All signals prescribed in the "Rules of the Road" must be given without fail, and these Rules, as well as those governing the Dominion canals, must be at all times strictly observed.

2. It is imperative, however, that when it appears that the master of the other vessel is ignoring a rule, and that your adherence to the special rule applicable would lead to an accident, you must take such steps as will avoid an accident, and promptly report the action of the offending master to the chairman of the committee of the Association, who will deal with the case.

3. In fog, smoke or falling snow, it is absolutely forbidden to run the rivers or enter narrow waters at night, or to run in narrow waters in daylight when you cannot see far enough ahead to be able with certainty to keep your steamer in safe water.

4. You must not attempt to pass a steamer ahead in narrow waters without asking and receiving permission, and then only when you can pass in perfect safety.

5. Do not consent to another steamer passing you in the same direction until you are satisfied this can be done safely, and until this can be done safely blow a danger signal, and repeat it if the other vessel persists in coming on, and do all you can to avoid collision. After permission is given, check your steamer until the other is past and clear.

6. In all narrow waters, and in fog, smoke or falling snow, and under all difficult circumstances, the master must be on the bridge when the steamer is under way.

7. The compasses must be checked at every opportunity by solar observations and river and shore ranges.

8. The steering gear must be overhauled before leaving port every trip, and kept in perfect order.

9. In canals and harbors the vessel must only be moved with the greatest caution, and kept going dead slow and under perfect control at all times.

10. The master shall see that a watchman is on duty, in the proper station, at all times between sunset and sunrise, in all thick or foggy weather, and in all narrow waters, excepting only the canals.

11. The master must see that all shifting boards are in place when carrying grain, and that hatch covers and tarpaulins are properly secured after loading. Where vessels have no shifting boards, owners are to fit them whenever necessary.

12. The use of intoxicating liquors on board steamer is absolutely forbidden, and any officer violating this rule must be discharged by the master on first offence.

13. Every master must keep himself advised of the changes of depths of water in harbors and the shallow portions of the rivers, and avoid loading beyond safe draught.

14. Every master shall report every accident which affects his steamer to the chairman of the said committee, on blanks to be furnished.

15. Any violation of the foregoing rules or of amendments thereof, if established to the satisfaction of the committee, or any accident to the steamers in the Association, which, in the judgment of the committee could have been avoided by the exercise of reasonable care, caution or good seamanship, will be followed by dismissal of the master by the owner, provided that upon any investigation by the committee the master shall have full opportunity to defend himself.

Rules for Engineers of Vessels.

1. The chief engineer will be engaged by the manager, but must engage a competent staff, for whom he will be responsible.

2. He will have supervision over all the machinery, boilers and piping on the ship and must keep the same in efficient order. This includes all pumping and heating arrangements, deck and steering machinery. He will also make all necessary repairs to the hull which can be made with the facilities at his command in order to keep the ship seaworthy.

3. He must particularly look after the telegraph and whistles and their pulls, and see that they are at all times in perfect order.

4. He must also examine the steering gear daily, and particularly each trip before leaving port, and see that everything is in perfect order, as the safety of the ship depends on this often more than on the main engines. The chains, cables, etc., must be carefully examined, and when links show appreciable wear new chains must be put on and the worn section removed and replaced by new. When perfect links break or fracture, the chain must be discarded.

5. He must not leave the handling of engines, in canals or ports, or in making docks, to oilers or firemen; and either chief or second engineer, which-

ever is on watch, must always be by the handling levers when the ship is manœuvring.

6. He must see that all orders given by the master for handling of the machinery are promptly and efficiently obeyed, and in case of any accident to any of the machinery, which may delay or endanger the safety of the ship, he will immediately notify the master and co-operate in the necessary steps taken to guard the safety of the vessel.

7. When it is necessary to make any repairs which necessitate stopping the ship, he will consult with the master before doing so and arrange for the necessary time with the least possible delay or danger to the ship.

8. In case the master overlooks advising him, he will inquire of the master as to the likely time of sailing, and be ready in ample time; and the master will ring the "Stand by" on the telegraph a sufficiently long time before lines will be thrown off to give the engineer a chance to have everything ready to sail.

9. No dispute of the master's orders will be allowed. If he considers the master is giving unreasonable orders, he will report this promptly to the manager, who will deal with it. But, as the safety of the ship may be in danger, every order of the master must be obeyed at once when given.

10. He shall arrange with the master some signal which can be instantly transmitted to the bridge by telegraph in case of accident to the machinery, whether it is to steering gear or propelling power so that the master can immediately take steps to protect the ship.

11. The use of intoxicating liquors on board ship is strictly forbidden, and the chief engineer will co-operate with the master in enforcing this rule, and any man breaking this rule must be discharged. He will also enforce discipline with his staff and endeavor to have them show courtesy at all times to every one with whom they may come in contact.

12. Any violation of the foregoing rules, or of amendments thereof, by a chief engineer, if established to the satisfaction of the committee of the Association, will be followed by dismissal of the engineer, and his conduct will be reported to the chairman of the Board of Steamboat Inspection, provided that upon any investigation by the committee the engineer shall have full opportunity to defend himself.

◆

A Government bill is under consideration in the Dominion Parliament to amend the Telegraphs Act by providing that all vessels carrying more than 50 passengers except those plying between ports not more than 200 miles distant from each other. must be equipped with wireless telegraph apparatus

During Dec. 1910, 26 employes were killed and three injured in the course of their work in connection with the navigation of Canadian waters. Of the fatalities, 21 occurred in connection with the foundering of the s.s. St Denis off the coast of Vancouver Island, two were due to drowning, and one each to machinery, to being run over, and to a fall, while of the other acicdents. two were due to falls, and one to an explosion.

The Canadian Waterways Improvement Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $50,000, and office at Port Burwell, to carry on a dredging and construction business, for the erection of buildings, machinery, railways, bridges, piers, breakwaters, masonry and other structures. The provisional directors are F. W. Fay, L. Lewis, G. A Van Order, D. F. Williams and F. W. Young, Port Burwell.

Aids to Navigation on the St. Lawrence and the Great Lakes.

Following is the report of the committee on aids to navigation presented at the Dominion Marine Association's annual meeting recently:—

The committee held two meetings in 1910, but its work has been supplemented by the proceedings of the executive and of the grain section of the Association, both of which committees have in many cases undertaken to deal with matters requiring attention from time to time rather than refer them to the committee having jurisdiction. Doubtless this has been wise in some cases for delay has thus been prevented. The usual list of recommendations for the Light House Board was considered and prepared at the committee's first meeting, and correspondence and interviews regarding its items and regarding the later recommendations of the committee have been carried on throughout the year by the officers. The general list of recommendations prepared by selection and revision in April last may be summarized as follows:—

The early erection of the Michipicoten light.

The retention of the Myles buoy (red) light in Kingston harbor.

The retention of the gas buoy near Lachine Wharf which the Board proposed to remove.

The early erection of the promised ranges marking the entrance to the outer harbor at Kingston.

The lighting of the Murray canal.

The improvement of Brighton entrance inside of Salt Point.

The placing of a gas buoy at the turn from the range line to the line of the canal in Brighton bay.

The placing of a gas buoy to mark the end of the shoal east of Indian Island near Trenton; or the removal of the gas buoy marking the entrance to Trenton so as to make it serve the double purpose.

The early completion of the work on Telegraph channel, in the Bay of Quinte.

Lights between Smiths Falls and Merrickville on the Rideau canal, and in Mud Lake near Newboro, according to plans of the Superintending Engineer of the canal.

A range on Centre Island bank; north shore of Lake Huron.

A lighted whistling gas buoy, instead of whistling buoy only, on Bad Neighbor shoal.

Alteration of the lights at the eastern entrance of Toronto harbor, to make them effective as ranges.

Distinguishing tops on all port and starboard buoys.

Of these recommendations many will require the continued attention of the committee, and it is recommended that the list be kept in view in framing a petition to the Light House Board in 1911.

At the meeting of the committee in November last special consideration was given to the question of the preservation and improvement of the Rideau canal, with special regard to its utility in the transportation of freight and passengers from Lake Ontario and its ports, to the Ottawa River and Montreal. The committee appointed delegates to join a deputation to the Minister, and is pleased to report the success of that deputation.

The developing trade in the Bay of Quinte was also the subject of special discussion, and the recommendations already made for additional lights and dredging, and for the early completion of works already undertaken in these waters, were strongly endorsed, and correspondence has been had with the proper authorities to give effect to these resolutions.

At its first meeting the committee had refused to endorse a petition from the Lake Ontario Coal Carriers' Association for a light on the Main Duck in Lake Ontario, but in November, on the suggestion of the Light House Board that it might be advisable to move the light from the False Duck to the Main Island, the committee protested against such action, and without urging the erection of the light on the Main island, asked that if a light is placed there it should be placed in such a location as to serve the traffic up and down the lake as well as the parties asking for its erection. The Board points out that on account of recent soundings and discovery of more shoal water between the islands than was indicated on the charts, vessels of deep draft which will come down Lake Ontario through a new Welland Canal will require to keep over well towards the Main Duck.

The committee particularly urged the provision of men at the canal entrances on the St. Lawrence to take lines from approaching vessels. The matter is referred to in the executive committee's report, and the failure of the Department to carry out the recommendations of the late Chief Engineer, to say nothing of the additional recommendations of the Association, is there noted. The next committee on aids to navigation should devote special attention to an effort to procure this very necessary assistance.

The committee also protested against the development of power in the St. Lawrence River to the prejudice of navigation interests and endorsed the proceedings taken against the application of the Canadian Light & Power Co.

The improvement of various canal entrances and the strengthening of the banks of the Soulanges canal by concrete walls in certain locations, as well as other minor improvements in the system, were also considered by the committee, and some of the recommendations in the report of the executive committee are identical with those of this committee.

The committee asked that the gas and bell buoy lost from Niagara shoal should be replaced at the opening of navigation in 1911, and is pleased to be able to report that this will be done.

Mention may be made of the fact that your counsel has been nominated as the Association's representative on the Light House Board of Canada, and it may be hoped that when the appointment is made the consideration of the prayers of this Association in the light of the information which prompted them will be at least facilitated.

◆

Farrar Transportation Company.

The report for the year 1910 presented at the annual meeting at Collingwood, Ont., Jan. 31, showed that the gross earnings of the two steamers were $104,140.52, and operating expenses. $68,517, leaving a net balance of $35,622.98. The assets are placed at $438,444.30, the steamers valued at $404,495, being the chief item. The liabilities, besides the capital stock, are $121,175, leaving net balance of assets over liabilities of $67,368.

Following are the directors for the current year:—President, T. I. Thompson, Owen Sound; Vice President, E. M. Wayland, Fort William; Secretary-Treasurer and Managing Director, G. E. Fair, Collingwood; other directors, D. D. Lewis, W. E. Allen, E. Stubbs, G. P. Pearsall, M. Snetsinger, Dr. Shultis, W. T. Toner.

LAKE GRAIN SHIPMENTS, 1910 CROP.

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the grain carried by individual vessels, Canadian and foreign, from Fort William and Port Arthur, during the season of navigation, April 13 to December 6, 1910, and total shipments for the seasons 1910 and 1909. The last two figures in each column represent pounds.

The Lighthouse Board of Canada.

In accordance with the report of the Lighthouse Board of Canada, appointed by order in council, Feb. 26, 1904, to enquire and report to the Minister of Marine upon all matters assigned to him under sec. 833 of the Canada Shipping Act, an order in council has been passed with a view to increasing the efficiency of the Board, that it be reorganized as follows:

That in order to facilitate the consideration of matters submitted to the Board the undermentioned divisions be established:

Atlantic Division, comprising all the waters of Canada on the Atlantic coast, including Hudson Bay and as far inland as the head of ocean navigation;

Eastern Inland Division, comprising all the waters of Canada between Montreal and Port Arthur;

Pacific Division, comprising all the waters of Canada west of Port Arthur to the Pacific Coast.

That the following officers be appointed to the Board:

The Deputy Minister of Marine and Fisheries, Chairman;

The Chief Engineer of the Department of Marine and Fisheries;

The Wreck Commissioner and Officer-in-charge of Pilotage;

The Commissioner of Lights;

The President of the Shipping Federation of Canada as representative of the shipping interests in the Atlantic Division, the President of the Dominion Marine Association as representative of the shipping interests in the Inland Division.

Capt. J. W. Troup as representative of the shipping interests in the Pacific Division.

That in the absence of the Chief Engineer of the Department of Marine, the Assistant Chief Engineer be authorized to attend the meetings of the Board, and act as a member thereof; and that in the absence of the Commissioner of Lights the Assistant Commissioner of Lights be similarly authorized to attend and act.

That F. H. Houde, clerk in the Department of Marine be appointed Secretary of the Board.

That the members of the Board, other than officials of the Department of Marine, for whom provision in regard to travelling expenses already exists, be allowed their travelling expenses for attending meetings of the Board; and that in addition thereto such members be paid an honorarium of $5 a day each while attending the meetings, the day of departure from their homes and the day of departure from the place at which the Board holds the meetings to be considered as days in attendance for the payment of such honorarium.

That the following rules for the guidance of the Board be adopted:

A member of the Board representing the shipping interests of a division shall be entitled to vote only on matters affecting such division;

The Chairman shall vote as an ordinary member and also have a casting vote in case of a tie;

Three members of the Board, provided two of them are officers of the Department of Marine, shall form a quorum.

That the order in council of Feb. 26, 1904, constituting the Lighthouse Board originally, and all subsequent orders in council relating thereto to date, be cancelled.

◆

A bill respecting the pollution of navigable waters was read a second time in the Senate, Feb. 2. Provision is made for a penalty of $500 in the case of a corporation offending, with an addition of $50 for each day on which the offence is continued, and $50 with an addition of $10 a day in the case of individuals.

Richelieu and Ontario Navigation Co.

Following are extracts from the report for the year 1910, presented at the shareholders' annual meeting in Montreal, Feb. 13.—

	1910.	1909.
Gross receipts	$1,437,931.42	$1,238,044.31
Operating expenses	1,016,233.23	932,918.47
Fixed charges, interest, etc.	58,582.50	47,563.55
Net profit	$ 363,115.69	$ 257,562.29
Increase	$ 105,553.40	

Four quarterly dividends of 1¼% were paid, aggregating $164,430.

The new steamboat, Rapids Prince, for the rapids division, was completed and delivered in Sept. The new steamboat Rochester, operated by the R. & O.N. Co. of the United States (which company you control) had a successful initial season, and has strengthened your position in the Lake Ontario and Thousand Island trade. Continuing the company's policy of expansion, your directors have ordered a large modern twin-screw passenger and freight steamer for the Saguenay division. This vessel is now being built on the Clyde, to be delivered at Sorel, Que., for the tourist season of 1911.

The insurance fund has been credited with $61,000.00 out of the year's earnings and $229,140.95 now stands to the credit of this account. This reserve fund is in addition to the insurance carried with insurance companies on shore properties, steamers, etc. During the year $22,873.33 of the outstanding debentures were redeemed and cancelled in accordance with the deed of trust.

Including the one building the company has 21 boats, with 36,713 tons aggregate tonnage.

Net surplus	391,464.69
	$741,816.55

A New Type of Lake Freighter.

A freight steamship, The Toiler, is now being built in England for the Canadian canal and lake trade, which is a decided innovation. It is simply a hull, without any top hamper, masts, or even funnels, as it will be operated by internal combustion oil engines, the same as automobiles. It will be the first boat of this kind to be operated on the Great Lakes for commercial purposes, and will also be the first vessel in the canal carrying trade to use double propellers, which, it is claimed, will prove of great advantage in manœuvering.

The adoption of this type of boat is in line with the natural evolution of the canal freighter. With the short season and high wages paid, shippers have been using all their ingenuity to get as much out of a given size of vessel as is possible. The lake tonnage is divided into two classes, the big upper freighter and the canal boat, while the latter is divided into two types, the package freighter and the bulk carrier. The great increase in the bulk shipments of coal from Lakes Erie and Ontario points to Montreal, the building of the Port Colborne elevator and the elevators in Montreal, together with the pulpwood trade, have of late tended to make the bulk freighter a most important type. The continual struggle has been to get the greatest possible deadweight on the limited draft. But with the limitations of the canals and locks, it is impossible to increase the dimensions of ships, so that any increase in deadweight must be taken out of the material and equipment. The limit in reduction of weight of material used in construction has long been reached, so that the only method of increasing carrying capacity was by reducing the weight of the propelling machinery.

With this idea in view internal combustion oil engines have been adopted for the new boat, which was designed by John Reid & Co., Board of Trade Building, Montreal. The introduction of this type of engine has effected such a saving of space and deadweight that The Toiler will carry nearly 3,000 tons, or about 97,000 bush. of grain through the canals, an increase of about 15,000 bush. over the largest canal carriers fitted with steam engines.

To get such a carrying capacity boilers had to be dispensed with altogether. The boat's propelling machinery consists of two sets of oil engines driving twin screws. The latter feature is a revolution in itself, as it will be the first canal boat so equipped. The advantage claimed is that the vessel will be under better control while manœuvering in narrow waters and in lining up previous to entering a lock. The engines are directly connected, without clutches, to the propeller shafts, and are a modification of the Diesel engine. There is no injection system of any kind, therefore, no delicate joints or connections to get broken or loose, which might stop the engines at a critical moment. The starting and reversing gear is simple, and said to be more certain than with the steam engine, and is done by means of compressed air, the same power being also used to drive the steering engine and other auxiliaries. The fuel to be used is crude petroleum, which is injected into the cylinder without being vaporized, where it is ignited and burned in a charge of hot air. This air when the oil is injected is at a dull red heat, generated under very high compression.

The Toiler will arrive at Montreal and go into service early in the coming navigation season, and will be the first gas or oil propelled vessel to cross the Atlantic. It is regarded by ship engineers as a big step in the solution of the canal navigation problems, and the prediction

is made that within a decade or two steam will be out of date on canal and lake boats.

In connection with the construction of The Toiler, experiments are being carried on with high speed oil engines in combination with electric transmission, which it is expected will mark a further advance in economy and efficiency in Canadian canal transportation. An interesting feature will be that through suitable electric switches and connections the control of the propellers will be placed in the hands of the navigating officer right in the bow of the ship. This will be a very great advantage in handling a vessel through the narrow canal channels and locks.

Notices to Mariners.

The Department of Marine has issued the following:

10. Jan. 25. 22. New Brunswick, Chaleur Bay, Restigouche river, Dalhousie harbor, lighthouse on Government wharf increased in height. 23. Quebec, Gulf of St. Lawrence, Anticosti Island, Bagot bluff, change in fog alarm.

11. Jan. 28. 24. British Columbia, Vancouver island, southeast coast, Victoria harbor, rock off shoal point, buoy placed. 25. British Columbia Strait of Georgia, Active pass, Mayne island, Georgina point, change in character of light.

12. Feb. 7. 25. Ontario, western end of Lake Erie and lower end of Detroit river, list of buoys to be maintained by Canadian Government.

13. Feb. 8. 26. Nova Scotia, west coast, Port Maitland, dates when light will be exhibited. 27. Nova Scotia, Cape Breton island, east coast, Sydney harbor, west arm, intended change in character of front range light. 28. Prince Edward Island, south coast Hillsborough Bay, St. Peters Island, light station, explosive for signal. 29. Ireland, south coast, Waterford harbor, Hook point light, alteration in character. 30. England, west coast, Bristol channel, Hartland point lighthouse, alteration in fog signal.

14. Feb. 9. 31. Ontario, Georgian Bay, south side, Collingwood harbor, obstructions in dredged channel removed. 32. Ontario, Georgian bay, entrance to Key harbor, depth on Alwin rock. 33 Ontario, Lake Superior, Thunder Bay, off Mutton island, wreck removed.

15. Feb. 15. 34. British Columbia, Burrard inlet, First narrows, Prospect point, change in sounding of fog bell. 35. British Columbia, Burrard inlet, Vancouver harbor, Brockton point, change in sounding of fog bell. 36. British Columbia, Arthur passage, Herbert reef, beacon erected.

16. Feb. 17. 37. New Brunswick, Bay of Fundy, south of Grand Manan Island, Little Wood island, life saving station established. 38. New Brunswick, Bay of Fundy, south of Grand Manan island, telephone connections between Gannet rock lighthouse, Little Wood island life saving station, Big Wood island and Seal Cove.

17. Feb. 21. 39 New Brunswick, Chaleur Bay, Restigouche river, Dalhousie harbor, red sectors inserted in light on Government wharf. 40. Quebec, Chaleur bay, Garde point, lightboat withdrawn, change in position of gas buoy. 41. Quebec, Chaleur bay, Restigouche river entrance, Maguacha spit, gas buoy established. 42. Quebec, River St. Lawrence below Quebec, St. Roch des Aulnaies, marine signal station discontinued

18. Feb. 22. 43. Ontario, Lake Erie Port Stanley breakwater, change in character of light. 44. Ontario, Lake Superior, Thunder Bay, Port Arthur light station, fog bell established.

19. Feb. 22. 45. New Brunswick, south coast, Bay of Fundy, Chignecto channel, Grindstone island lighthouse, lantern destroyed by fire, temporary light. 46. Nova Scotia, south coast, Cross island light station, change in fog alarm.

Northern Navigation Co. Ltd,

The report for 1910, as published in our Feb. issue, was adopted at the annual meeting in Toronto Jan. 31. In moving the adoption, the President, W. J. Sheppard, referred to the agreement with the G.T.R., under which the company could be required to build another vessel of the Hamonic type, and intimated that this would probably become necessary in the near future The first agreement between the N.N Co. and the G.T.R. was made for 10 years, with the understanding that if the business required it, the G.T.R. would call on the N.N. Co. to build another vessel by giving 18 months notice, and on the new vessel being completed, the agreement between the companies was to be automatically extended for 10 years from the expiring date of the first agreement.

The directors were unanimously reelected. The board for the current year is as follows:—President, W J. Sheppard; Vice President, H. Y. Telfer; Secretary-Treasurer, C. E. Stephens; other directors, H. B. Smith, F. A. Lett, C. D. Warren, Hon. J. S. Hendrie, W. D. Matthews, W. E. Davis. The executive committee is composed of the President, Vice President, Secretary-Treasurer, F. A. Lett and H. B. Smith.

In reply to a shareholder the President said that Jas. Playfair, of Midland, and President of the Inland Lines, Ltd., had made an offer to the directors to purchase the company's stock at 125, or $1,250,000 for the $1,000,000 issued. A preliminary agreement between Mr. Playfair and the directors had been signed by six of the directors, viz., himself, H. Y. Telfer, H. B. Smith, C. E. Stephens, F. A. Lett, and C D. Warren, under which Mr. Playfair agreed to buy at $125 a share and interest from Jan. 31, 1911, at 6% all shares belonging to the shareholders who before Mar. 12 accepted the offer by depositing certificates in the Traders Bank, Toronto, provided that shareholders owning at least 51% of the entire stock accept the same and subject to the sale being approved by C. M. Hays, President G.T.R. In the case of any shareholder, under any disability as regards sale of stock or residing outside of Ontario or Quebec, a further 30 days to be allowed for deposit of certificate. Payment for the stock to be made in cash on or before March 20. Mr. Playfair to deposit $50,000 on or before Feb. 15 to the joint credit of himself and the President and Treasurer of the N.N. Co., the same to be available on and after March 20 to the purchaser for payment for shares of which certificates might be deposited, provided that at least 51% of the shareholders should have accepted the offer, and that the purchaser should, on or before March 20, be able and willing to carry out the agreement and to purchase all shares of shareholders who may before March 20 accept the offer, otherwise the $50,000 should be forfeited and paid to the shareholders accepting the offer as liquidated damages for breach of the agreement. The six directors signing the agreement accepted the offer for their shares and agreed to recommend its acceptance by the other shareholders. If certificates for 51% of the stock were not deposited by March 12 the agreement was to be void and the $50,000 returned to Mr. Playfair. The directors signing the agreement undertook, on the stock deposited being paid for as provided, to resign from the board and to elect thereto such persons as the purchaser might nominate. It was further provided that the agreement should only be binding when the deposit of $50,000 had been made, as called for, and C. M. Hays had given his written approval.

President Sheppard added that he had communicated the offer to Mr. Hays on Jan. 17, the latter replying as follows:—"I have been consulting with the officers of our freight and passenger departments, and upon receiving their views as to what is proposed, have arrived at the conclusion that it is not at present in our interests that there should be any change in the existing state of affairs. I have asked Mr. Davis to state the matter at the meeting tomorrow. I would also ask you to consider whether or not the business outlook will warrant you in placing an order for another steamship of equal capacity and general style to the Hamonic, to run in the line with that vessel. Mr. Sheppard said that as Mr. Hays did not approve of the proposed transfer of ownership, the arrangement with Mr. Playfair fell through automatically.

Mr. Playfair then went to work to change Mr. Hays' views, and secure the G.T.R.'s approval, and on Feb. 6 President Hays wrote President Sheppard as follows:—"Referring again to the matter of the acquisition by Jas. Playfair and associates, of the Northern Navigation Co., J. W. Loud, W. E. Davis, and myself have today had a conference with Mr. Playfair on this subject, and after discussing the situation fully, and the terms of the existing agreement between our companies, with the understanding arrived at on our part with Mr. Playfair that he agrees with us as to the desirability of a new steamer under the terms of the agreement, and having advised us as to his intentions as to the matter of directors and management, which he agrees shall be of a character which shall be satisfactory to us, and in which he has no present intention of making any changes, nor has he any desire to do so without conference and agreement on our part, it seems to me the conference has had the effect of eliminating any objections we might offer to what is proposed, and I am therefore advising you accordingly."

Following this, Mr. Playfair, on Feb. 15, deposited the $50,000 as provided in the agreement, and under that date the N.N. Co.'s directors issued a circular to shareholders, advising them of the offer and recommending its acceptance, the circular being signed by all the directors except W. D. Matthews. C. E. Stephens signed except as to 10 shares out of his holding of 40 shares.

It is said that British as well as Canadian capital is behind Mr Playfair in this transaction, and that Lord Furness, ship owner and ship engine builder, and head of Furness, Withy & Co., and the Furness Line, is interested

On Feb. 6 President Hays notified President Sheppard, under the agreement between the two companies, that the N.N. Co. provide an additional steamship within 18 months, the plans to be approved by the G.T.R. Mr. Sheppard replied on Feb. 10 that the company would do so, the new vessel to be ready not later than the opening of navigation in 1913, and that she would probably be 400 ft. long. The Hamonic is 365 ft.

The Minister of Public Works promised consideration to a deputation from Meaford and the vicinity, Feb. 1, in response to their request for an appropriation for the improvement of Meaford harbor.

The Department of Public Works has directed the preparing of plans for the construction of an outer breakwater at Port Stanley. It is to be 1,200 ft. long, which will give the harbor an opening of 350 ft., and it will be built to the east of the present harbor entrance. It is stated that the east pier will subsequently be destroyed.

St. Lawrence River Steamboat Co. and Thousand Islands Steamboat Co.

The property of these two companies has been acquired by a syndicate headed by E. B. Osler. President Niagara Navigation, and W. D. Matthews. President St. Lawrence and Chicago Steam Navigation Co., and including also B. W. Folger. General Manager Niagara Navigation Co. The companies were formerly controlled by Folger Bros.. Kingston, Ont., the firm consisting of the late Henry Folger and B. W. Folger. Sr. A few years ago the properties were transferred to Howard S. Folger and B. W. Folger, General Manager of the Niagara Navigation Co., both sons of the late Henry Folger. The syndicate has bought Howard S. Folger's interest, and B. W. Folger, of the N.N. Co., has put his interest in.

Both lines operate in connection with the New York Central and H.C. Rd. The St. Lawrence River Steamboat Co. has three boats, America, Pierrepont, and Jessie Bain, which run between Kingston, Ont., and Cape Vincent, N.Y., an important ferry service of some 20 miles, serving territory east and west of Kingston, and, on the U.S. side, Watertown, Syracuse, Utica, Rome and other important points. The Thousand Islands Steamboat Co. has three boats, St. Lawrence, Ramona and New Island Wanderer. A fourth boat, the Ottawa, which was burned, is to be replaced. These boats run between Clayton and Alexandria Bay, N.Y., with eight stops between, and also carry local excursions among the Thousand Islands, calling occasionally at Kingston and Gananoque, Ont.

Some changes have been made in the boards of both companies, so as to place the new ownership in control and further changes will probably be made at the annual meetings in June. Robt. Crawford, coal merchant, Kingston, is President of both companies

Howard S. Folger has retired from the management, and has been succeeded as Manager by W. J. Douglass, who was born at Troy, N.Y., June 15, 1875, and who has been employed by the New York Central Rd. since he was 20 years old, with the exception of two years spent in Cleveland in the vessel brokerage business. From 1901 to 1903 he was agent Western Transit Co.; 1903 to 1905, Superintendent Mutual Transit Co.; 1905 to 1907, General Superintendent Rutland Transit Co.; 1907 to 1909, Assistant Manager Rutland Transit Co.

The All Red Steamship Co.

The Dominion Parliament is being asked to incorporate the All Red Steamship Co., the bill having been read a first time, Feb. 1. The incorporators named are: Chaplin, Milne, Grenfell and Co., Vickers Son and Maxim, Ltd.; Perry and Co., Sir Thos. Tancred, Linton Clarke and Co., Sir Thos. Troubridge, F. J. Burt, Capt. C. E. S. Clitherow, London, Eng.; W. Beardmore and Co., Ltd.. Glasgow, Scotland; R. Stephenson and Co., Hepburn-on-Tyne, Eng.; Swan, Hunter and Wigham Richardson, Ltd.; E. L. Bentley, Newcastle-on-Tyne, Eng.; W. H. Leslie, Price Forbes and Co., Major R. P. Cobbold, W. Harris, D. H. Allan, London, Eng.; W. Fitzgerald, Dublin, Ireland; the Gloucester Wagon Co., Ltd., Gloucester, Eng.; North British Locomotive Co., Ltd., Glasgow, Scotland; J. Lithgow, Port Glasgow, Scotland; S. G. Fraser, J. Kennedy, H. McCorquodale, Hoare and Wheeler, Andrew Weir and Co., H. Haulder and Partners, Ltd.; Capt. J. A. Morrison, Gellatly, Hankey and Co., London, Eng.; Pickford and Black, H. G. Bauld, A. W Redden, R. T. MacIlreith, and J. A. Chisholm, Halifax, N.S. The provisional directors are: Sir Thos. Troubridge, N. H Skipnith, Andrew Weir, H. Haulder, H G. Bauld, W. A. Black and John Kennedy, with power to add to their number The capital stock is fixed at $1,000,000 in shares of $100 each. The head office is to be in Montreal, and the first annual meeting of shareholders is to be held on the first Wednesda yin Sept. Power is asked to own and operate steam and other vessels between Canadian ports and all ports of the British Empire and foreign countries; to build and own docks, piers, wharves, warehouse, elevators, hotels and other buildings and works, and to build branch lines of railway on its properties, provided that they do not exceed six miles in each case, and to connect them with other lines, with power to expropriate property for such work; to issue debenture stock, bonds and other securities and mortgage its property, provided that the total amount of the securities does not exceed the cost of the properties mortgaged; grant liens on subsidies, grants, etc.; to enter Ballina and Belmullet Ry. and Piers Co., into agreements with the the Collooney, in Ireland, or to acquire its property, rights and franchises, and to enter into agreements with the British, Canadian, Australian and New Zealand Governments, or with the Governments of any British colony, for the carriage of mails and for other services.

The promoters of the bill which is now before the House of Commons, have been engaged on the project for some years, and the matter has received considerable attention from the various Governments above. The original proposal provided for a quick service between a Newfoundland or Canadian port and Blacksod Bay, Ireland, with suitable rail service across Ireland, and steamboat transfer across the Irish Channel to England. The question of transfer over the Irish Channel was left open, as if a car ferry service was operated, it would necessitate the reconstruction of the Irish railways, owing to a difference in a gauge. It is anticipated that the question of Governmental aid for this project will come up for discussion at the Imperial Conference, which is to take place in London, Eng., after the coronation.

The All Red Line Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000, and office at Ottawa, to build, purchase or otherwise acquire and operate steam and other vessels, harbors, wharves, docks, piers, dry docks, warehouses and other buildings, railway and steamboat terminals, etc., and to carry on the general business of carriers of passengers and freight; to amalgamate with any person or company engaged in the transportation of passengers and freight by land or water, and to acquire interest in any similar companies. The provisional directors are J. A. and O. Ritchie, J. N. Rattey, W. J. Grace, and R. M. Bobier, Ottawa.

The All Red Line, Ltd., has been incorporated under the British Columbia Companies Act. Whether there is any connection between the companies incorporated by Dominion and British Columbia letters patent and the one which is seeking incorporation by the Dominion Parliament, has not transpired.

Buoy Depot at Prince Rupert B.C.

The Marine Department has let a contract to the Pacific Coast Construction Co. for the building of a buoy depot at Prince Rupert, B.C., for $159,445. The site consists of about five acres on the southern shore of Casey Cove, on the western side of Prince Rupert harbor, about 2½ miles from the existing wharves in the centre of the city. When completed the establishment will consist of a reinforced concrete pile wharf, a yard on the same level as the wharf, and the necessary offices, dwellings, workshops, etc., with the usual plant for handling and repairing buoys, lanterns, and other aids to navigation. The accompanying plan shows the disposition of the wharf and various buildings with relation to the site. The wharf will consist of reinforced concrete piles with reinforced concrete braces. The deck beams and decking will be of wood. The buildings will all be of wood, with the exception of the buoy shed, which will be of steel frame construction. A system of yard tracking will be supplied, and it is intended to use a locomotive crane in connection with this track for handling materials. It is intended to keep on hand a supply of coal, and a portion of the wharf has been widened for storage purposes. An overhead crane will be established in the buoy shed for handling heavy buoys. A system of water supply, fire protection and drainage, suitable for the requirements of the station, has been provided for and is included in the contract price. It is expected that this depot will meet all the requirements rendered necessary by the increase in aids to navigation in the northern waters of British Columbia, and the difficulty of handling these at such a distance from departmental headquarters. The plans and specifications were prepared by the Department's Chief Engineer, Col. W. P. Anderson, M. Can. Soc. C.E.

◆

The North Vancouver ferry receipts for Jan. were $6,570.65, against $3,426 for Jan., 1910.

R. and O. N. Co's Saguenay Steamboat.

The Richelieu and Ontario Navigation Co.'s steamship, which is under construction at Glasgow, Scotland, will be ready for service by June, and will cross the Atlantic under her own steam, when she will be placed on the Saguenay route. Her dimensions are, length 285 ft., breadth over all, 58 ft., with a draught of 12 ft., and she will be propelled by twin screws, driven by engines of the four cylinder triple expansion type, capable of developing 19 miles an hour. All her equipment will be of the most modern type, and she will be fitted with a telephone system between the pilot house, captain's and engineer's rooms and the steward's department. Her main deck forward will be open for the carriage of freight, and aft of this will be the second class quarters, while further aft will be the main entrance hall, in which will be located the baggage check room, purser's office, etc. In the centre of the entrance aft will be the entrance to the dining room which will extend to the stern of the vessel. Both the dining room and entrance hall will be panelled in mahogany, and the entire decorations will be of the most modern type. The main staircase will lead from the entrance hall to the main saloon which will have staterooms on both sides, all of the outside type 12 being parlor rooms with baths connecting, and all being provided with running water and open plumbing. At the forward and after ends of the main saloon will be large circular observation rooms, entirely surrounded by glass. The upper stateroom deck will be arranged in the same way, and above this will be an observation cabin. The entire vessel will be steam heated and lighted by electricity, and the life saving and fire apparatus will be of the most approved type.

◆

Lloyd's Register of Shipping.

An important change in the constitution of the governing body of this society has been decided upon, namely, to give direct representation to shipbuilders and Engineers. The society, which, was established on its present basis in 1834, has up to the the present been under the control of a committee composed of shipowners, underwriters, and merchants, elected by public bodies in London and the other great shipping ports of the United Kingdom. In the earliest days of the survey and classification of shipping, it was thought that a committee so composed was fully representative of all the interests concerned. The rapid growth of great shipbuilding yards and engineering works, forming as they have done what are practically universities of naval architecture and marine engineering, introduced, however, a new factor in the shipping world and the committee felt that the usefulness of the society would be greatly enhanced if the scientific knowledge and practical experience which had contributed so largely to the building up of these enterprises could be enlisted in its service. Accordingly, in 1890, a consultative committee was formed, elected by the principal British technical institutions, of men whose ability and attainments entitle them to be ranked among the foremost authorities on everything pertaining to the technical side of the society's work.

◆

Press reports state that the C.P.R. will establish a steamship line between the Maritime Provinces and the West Indies, with hotels at St. John, N.B., Yarmouth, N.S., Jamaica and Bermuda. For this service, it is stated, the steamships Empress of India and Empress of China, at present operating on the Pacific, will be transferred to the Atlantic.

Inland Marine Insurance.

A conference with underwriters took place in New York Feb. 3 at the offices of Clubb and Sons, underwriters, at which the Canadian Lake Protective Association was represented by Frank Plummer, President; A. A. Wright, Toronto, and F. S. Wiley, Port Arthur. L. Henderson, Montreal Transportation Co., and F. King, Counsel, were snowbound and unable to reach New York in time. Representatives of Johnson and Higgins, insurance brokers, and of F. Hermann, underwriter, were present. The Canadian Lake Protective Association's case was well presented and favorably received.

The failure of the Great Lakes Protective Association to take any measures to exercise control over the navigation of its members' boats was commented on as one of the main reasons for the formation of the Canadian Association, which latter organization aims to make the master's certificate a pledge of reasonable safety for the ship. The agreement constituting the association and the rules for masters and engineers, which include written consent to the penalty of dismissal, were explained, and it was shown that any negligence on the part of these officers would be dealt with by a committee interested in enforcing the regulations and free to act independently of the embarassing claims of the employe upon the sympathy of his employer. It was explained that through this committee a formal investigation by the Dominion Wreck Commissioner could always be secured, and that in one way or the other the necessary penalties could be imposed. The important argument advanced, however, was that the mere existence of the organization and its regulations, with the machinery for penalizing faults, would have a distinctly beneficial result, as experience had shown that where masters were given positive instructions with severe penalties attached, avoidable accidents do not occur.

The representatives of the Canadian Association asked that separate records be kept of the premiums and losses on vessels enrolled in that association, and that insurance rates be fixed for its members accordingly, without regard to any other rates given on the lakes. In this connection a further request was made that losses on vessels sailing under extended insurance should be dealt with separately, and not considered in the regular season's rates.

A request was also made for the appointment of a separate representation to look after Canadian business, so as to relieve R. Parry-Jones, the Salvage Association of London's representative at Cleveland, Ohio. The appointment might be made by the underwriters, or by Mr. Parry-Jones, but the volume and importance of the business and the necessity for close supervision of repairs to save unnecessary or improper charges against the policy, demanded the appointment of some one to attend exclusively and independently to Canadian affairs. The reasonableness of this proposition could be seen in the light of the facts that in 1899 there were only some 10 Canadian vessels trading out of Fort William and Port Arthur, while in 1910 there were over 80.

The withdrawal of the Canadian boats from the Great Lakes Protective Association caused a good deal of discussion, but it was made clear that the Canadian organization was designed primarily to fulfil the important functions of the United States organization, which that body was completely ignoring, and that Canadian vessels could not be expected to contribute towards unnecessary work. Regarding the expense of taking and advertising drafts of water, etc., the Canadian organization would be quite willing, however, to pay its pro rata share, either by contribution or by employment of additional service.

It may be that the assumption, by the owner, of some small part of the insurable risk on Canadian hulls, will be required by the underwriters, but doubtless this will not be considered at all a serious difficulty.

The whole question is now in the hands of underwriters, and Mr. Chubb is taking it up with the underwriters in London, Eng., as well. On the whole the members of the Canadian deputation have every reason to believe that their mission will prove successful, and that the Canadian Lake Protective Association will receive due recognition, and in due course begin to reap the benefits it expects.

◆

Sault Canals Traffic in 1910.

An analysis of the report of the Superintendent of the canals at Sault Ste Marie is quite interesting. While 12,927 vessels used the U.S. canals as against 7,972 using the Canadian canal, the Canadian canal nevertheless bore the greater part of both vessel tonnage and freight tonnage. The 7,972 vessels which used the Canadian canal had a net registered tonnage of 23,349,137 tons, while the 12,927 vessels which used the U.S. canals had a combined net registered tonnage of 26,506,986, showing that the large ships sought the Canadian waterway. The freight carried through the Canadian canal was 36,435,557 tons as against 25,927,661 tons carried through the U.S. canal. The total of 62,363,218 tons is the largest in lake history, the nearest being that of 1907, when 58,217,214 tons were carried.—Marine Review.

◆

Atlantic and Pacific Ocean Marine.

The s.s. Ottawa, of the White Star-Dominion line, formerly the Germanic, of the White Star line, is reported to have been sold to the Turkish Government for £21,000 to be used as a transport. She ran between Montreal and Liverpool in 1909, but has not been in service since.

The contract made with the Union Steamship Co., of New Zealand, for the carriage of mails between Canada and New Zealand, is for five years, monthly sailings being guaranteed. Canada contributes £37,000 and New Zealand £22,000 as subsidy.

The Thomson Line s.s. Gerona, which is approaching completion, is scheduled to leave Southampton, Eng., about May 30, on her maiden voyage, arriving at Montreal June 17. She is a twin screw vessel, equipped with Marconi wireless telegraph apparatus and fitted for passenger and freight business.

A Montreal press dispatch of Feb. 7, stated that amended plans for the new vessels which the C.P.R. will have built for its trans-Pacific service, were received there recently. The general plan, it is stated, as previously approved, was confirmed, and only a few minor changes were made. The speed of the vessels is given as 23 knots an hour, and it is reported that turbine engines will be utilized.

The C.P.R. and J. N. Boyde, owners, respectively of the steamships Montcalm and Kron Prinz Olaf, have entered cross actions for damages sustained by their vessels in collision in the St. Lawrence River, Sept. 24, 1910. The C.P.R. claims $25,000, and J. N. Boyde $15,000. The judgment of the Wreck Commissioner, Capt. L. A. Demers, after an enquiry into the affair, in which he censured the master and mate of the Kron Prinz Olaf, and fined the pilot, was given in full in our last issue.

Dividend Notice.

At a Meeting of the Board of Directors held this day the following dividends were declared:—

On the Preference Stock two per cent. for the half year ended 31st December last.

On the Common Stock two and one-half per cent. for the quarter ended 31st December last, being at the rate of seven per cent. per annum from revenue, and three per cent. per annum from interest on proceeds of land sales and other extraneous assets.

Both dividends are payable 1st April next to shareholders of record at 3.00 p.m. on 1st March next.

Warrants will be mailed on 31st March next.

By order of the Board.

W. R. BAKER,
Secretary.

Montreal, Feb. 13, 1911.

A bill was read a first time in the House of Commons recently, providing for the payment of a subsidy not exceeding £25,000 a year for a steamship service between the Pacific coast of Canada and China and Japan, the contract to run for 10 years from April 7. The Premier explained that the subsidy was first granted about 20 years ago, when the C.P.R. entered into a contract to provide the service, with the steamers Empress of India, Empress of China and Empress of Japan. The Imperial Government joined in the subsidy, and the two governments were now in communication as to the terms of its renewal. The C.P.R. had in contemplation the placing of newer and faster steamers on the service, and it was expected that some information as to when such steamers would be available, would be given the Government before the bill was finally passed.

Maritime Provinces and Newfoundland.

The Reid Newfoundland Co.'s s.s. Home struck a rock, while entering Port aux Basques, Feb. 3. The damage was not great, and during repairs, she will be relieved by the s.s. Ethie.

The Government s.s. Montcalm, which left Quebec Feb. 5, for the usual winter trip to North Shore points and Anticosti, returned Feb. 12. Considerable difficulty was experienced on the upward trip, with floating ice.

The Government wharf at Trepassey, Nfld., has been completed, and the s.s. Portia, landed goods there, Feb. 3, for the first time. This wharf has been in an incomplete condition for several years.

The reports of traffic at Halifax, N.S., for Jan., state that there has been about three times more cargo landed, than in Jan. 1910, and appearances indicate that the increase will be maintained throughout the remainder of the winter.

Montreal press reports recently stated that the C.P.R. intended increasing its facilities at St. John, N.B., and to spend about $1,000,000 on the building of terminal property on land purchased there. The improvements mentioned included the operation of a double daily service between St. John and Digby, N.S. W. Downie, General Superintendent Atlantic Division, stated that he had no information to the effect stated.

Tenders were received Feb. 15, by the curator of the Star Line Steamship Co., Ltd., in liquidation for the purchase of all or any part of its property consisting of the s.s. Majestic, built at Toronto, in 1899, equipped with engine of 33 n.h.p. driving a screw, with dimensions, length 110 ft.; breadth 21.9 ft.; depth 5.2 ft.; tonnage, 275 gross, 156 register: the s.s. Victoria, built at St. John, N.B., in 1897, equipped with engine of 53 n.h.p. driving paddle wheels, and with dimensions, length 191.2 ft., breadth 30 ft.; depth 7.9 ft.; tonnage, 1,002 gross, 631 register, with all tackle, wharf, warehouse and buildings at Fredericton, N.B.

Province of Quebec Marine.

Ad. Tanguay has been appointed Manager Levis Ferry, Ltd., in place of the late J. F. Demers.

The plant of F. Gilbert, dredging contractor, insolvent, Montreal, consisting of the steam tug Beaver, the dredge Premier, and a number of dump scows and sundry items, has been sold by the curator.

The Kaine and Bird Transportation Co., Quebec has elected the following officers and directors for the current year: President and Managing Director, Hon. J. C. Kaine; Secretary-Treasurer, M. P. Connolly; other directors, J. Bird, C. E. Taschereau and D. C. T. Atkinson.

The Quebec Harbor Commissioners have issued plans of their proposed improvements to Louise dock, etc, including three piers to the north of the Louise dock, creating four basins for the use of vessels. The plans were prepared by St. G. Boswell, the Commission's Chief Engineer.

The Montreal Harbor Commission has purchased about 76,000 sq. ft. of land fronting to the south on the river, and to the north on Notre Dame St., for a harbor yard, repair shops and for storing supplies. Possession will be secured by May, when the work of preparation will be commenced.

The Lachine Canal traffic for 1910, was 3,178,311 tons against 2,790,056 for 1909. There was a decrease in the number of U.S. vessels using the canal, but Canadian vessels increased by about 800. The chief increases were in grain, while there were decreases in flax and flour.

The finance committee of the Quebec city council announced, Feb. 9, in connection with an enquiry by H. Russell, that exemption from taxes for 20 years, in addition to a liberal bonus, would be granted, should the company, with which he is connected, decide to build a shipbuilding plant in the port of Quebec.

The Marine Department, on the reopening of navigation will establish a gas buoy to mark the position of the dismantled and submerged pier at no. 3 curve in Lake St. Peter. The buoy will be of steel painted red, numbered 221, and will be moored in 32 ft of water. The light exhibited will be of white, automately occulted at short intervals.

The Development Co. of Canada is applying to the Quebec Legislature for incorporation, to carry on a general merchants' business, and in connection therewith to build, purchase or otherwise acquire and operate steam and other vessels, and to carry on the business of carriers by land and water. R. H. Welden, C. W. Batho and W. B. Smith, Montreal, are the incorporators.

The Louiseville Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at Montreal, to carry on the business of transportation of goods and passengers by land and water; to carry on a towing, wrecking and salvage business; to own, operate and maintain steamship lines and other lines of marine transportation; to build, own and operate steam and other vessels, and to acquire from I. Yergeau, the steamboats Le Louiseville and L'Allege, by payment in fully paid up shares of the company. The provisional directors are: V. Plamondon, O. Lapierre, O. Marchand, Montreal; I. Yergeau, Pierreville, Que.; and H.L. O'Donoghue, Hudson, Que.

The amendments to the Quebec city charter which came before the Legislature, Feb. 9, among other things, provides that should the contract for the operation of the ferry between Quebec and Levis, come to an end in any way, before the date of its expiry, the city may by resolution order the calling of tenders for the sale of the exclusive privilege, or order the sale of such privilege by auction, after giving notice as required by law, and with the consent of the parties the bylaw and contract now in force respecting the ferry service, may be amended, or the parties may put an end to them, and that in future the ferry committee shall consist of eight, instead of six, members, five of whom shall be appointed by Quebec and three by Levis.

The Levis Ferry Co.'s boats were described in our last issue, illustrations of one winter boat and one summer boat being given. For the two winter boats, Plessis and Colomb, the nominal horse power of the engines of each was given as 128, which was according to the registration certificate. The attention of the Quebec city council ferry committee has been called to this, and it has been pointed out that the n.h.p. has been incorrectly stated in the registration. A. Johnston, chairman of the Steamboat Inspection, has communicated with the city council, to the effect that in the returns forwarded by the local inspector, the diameters of the cylinders on each vessels are 15⅛, 25⅛ and 42⅛ ins. diar., which under the rules, gives the nominal horse power as 87.81 and he has been instructed to withdraw the incorrect certificates and issue new ones, giving the n.h.p. as 87.81.

Ontario and the Great Lakes.

The Fort William Coal Dock Co., Ltd., has increased its capital stock from $50,000 to $200,000.

Capt. Jas. Collier, a shipbuilder and mariner on Lake Ontario for over 50 years, died at Picton, Feb. 10, aged 74.

It is reported that the Northern Navigation Co., and C.P.R. vessels operating on the Great Lakes, are to be equipped with wireless telegraph apparatus for the approaching season.

An order in council has been passed making regulations for the governance of the ferry across the Ottawa River between Pembroke, Ont., and Allumette Island, Que.

The Niagara Navigation Co., invited tenders recently for building a passenger and freight shed 300 by 45 ft. on its east dock pier 22, Toronto, to replace the one burned last year.

The application of the Kingston city council to exempt the Kingston dry dock from payment of school taxes, has been refused by the Private Bills Committee of the House of Commons.

Montgomery and Fisher, owners of the tug Saucy Jim, which was burned last fall, have ordered a new one to replace her. The vessel, which will be built in Collingwood, will be 90ft. long.

The Ontario Public Works Department is rebuilding the lock on the Magnetawan River at Magnetawan, and it is anticipated that it will be completed in time for the re-opening of navigation. The lock is 120 ft. long by 28 ft. wide, and about 12 ft. high.

Press reports from Collingwood state that arrangements are being made for the transfer of the C.P.R. vessels from Owen Sound to Victoria Harbor, during the coming season. It is stated two of the vessels will be transferred on May 1, and the others during the season.

Capt. W. O. Parkinson, well known on the Great Lakes for many years, and at one time connected with the old ferry company at Toronto, died there, Feb. 3, aged 57. He retired from active service several years ago, since when he has been in indifferent health.

Following is the board of the Mutual Steamship Co., for the current year: President, D. McGillivray, Port Colborne; Vice President, W. M. German, Welland; Managing Director, J. W. Norcross, Toronto; other directors, R. M. Wolvin, Winnipeg; W. E. Phin, Welland.

The C.P.R., which has been suffering considerable losses through the thefts from cars in transit on its car ferries across the Detroit river, recently caused the arrest of a number of the crews concerned, seven of whom were sentenced to periods of imprisonment ranging from 12 to three months, Feb. 21.

The Dominion Parliament has extended the time within which the Lake Champlain and St. Lawrence Ship Canal Co., may construct the canal authorized by chap. 107 of the Statutes of 1898, to five years from Feb. 7, and limiting to

TENDERS WANTED.

The Quebec and Saguenay Railway.

Tenders will be received up to March 10th, 1911, at noon, by the undersigned, for the construction of about 56 miles of the above railway, from Cap Tourmente to Murray Bay Wharf, divided up into sections of ten miles.

A certified check amounting to $20,000 for each ten mile section tendered for must accompany each tender.

Forms of tender may be obtained and specifications and plans examined at the office of J. F. Guay, Civil Engineer, Morin Building, Quebec; also at office of The Railway and Marine World, 70 Bond Street, Toronto.

The right is reserved by the company to reject any or all tenders

(Sgd.) J. F. GUAY.

◆

NOTICE is hereby given that the Annual Meeting of the Shareholders of the Victoria Rolling Stock and Realty Company of Ontario, Limited, will be held at the offices of Messrs. Osler & Hammond, 21 Jordan Street, Toronto, on Wednesday, March 1, 1911, at twelve o'clock noon, for the reception of the Annual Report and election of Directors for the ensuing year

By order,

G. T. CHISHOLM,
Secretary.

Toronto, February 11, 1911

two years from the same date, the time within which $50,000 must be spent on the work.

A deputation representing the Kingston city council and the Board of Trade, waited on the Minister of Public Works, Feb. 2. to urge the dredging of the lower harbor and the erection of a new bridge to replace the old Cataraqui structure, in order to make Kingston harbor more suitable for deep draught vessels.

The Department of Public Works has awarded the contract for the construction of a breakwater at Port Burwell, to M. Hogan, Westmount, Que., his tender being $234,000. He built the Port Colborne breakwater. The Port Burwell breakwater will be built to the west of the pier, and the contract calls for the work to be completed in 18 months from Jan. 30 last.

The Grimsby Beach and South Shore Navigation Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $50,000, and office at Toronto, to build, acquire and operate steam and other vessels, and carry on a general ship owning and transportation business. The provisional directors are W. H. Irving, H. H. Davis and N. Boynes, Toronto.

Polson Iron Works, Ltd., has notified the Toronto board of control that it desires to purchase the old city yard on the west side of Frederic St., to the south of the Esplanade, to enable it to construct a floating dry dock, capable of holding the largest type of vessels sailing on Lake Ontario. The company's plans for the dry dock have been approved by the Government engineers, but nothing can be done until a site has been obtained.

After enquiry into the collision, last fall, between the U.S. tug General and the C.P.R. s.s. Athabasca, in the St. Marys River, the U.S. marine inspectors have suspended the license of the tug captain for six months, and have suggested to the Canadian authorities to investigate the conduct of the Athabasca at the time. We are officially advised that a formal investigation will be held in this matter, some time in March.

The Victoria Navigation Co., Ltd., has been incorporated under the Dominion Companies Act., with a capital of $50,000, and office at Ottawa, to own and operate steam and other vessels; to conduct salvage operations, own wharves, docks, piers, warehouses, etc., and to carry on a general navigation business. The provisional directors are, E. A. Hall, L'Orignal, Ont.: J. H. Half, R. T. Holcomb, J. Galbraith, Ottawa, Ont., and F. Elliott, Thurso, Que.

A proposal is under consideration for the construction of a dry dock and shipbuilding plant at Amherstburg, where it is stated enough shore front property has been secured and negotiations are proceeding for acquiring the necessary land. It is also stated that subscriptions have been received to the extent of $250,000. It is proposed to build at 600 ft. dry dock, with the necessary machine repair shops, etc. Among those mentioned as being interested in the proposition are A. H. Clarke, D. H. Lerry and A. Woods.

The annual meeting of Inland Lines, Ltd., was held at Hamilton, Feb. 9, when the directors' report for the past year was adopted. Following is the board for the current year· President, Jas. Playfair, Midland, Ont.; Vice President, J. P. Steedman. Hamilton, Ont.; Secretary, F. A. Magee, Hamilton, Ont.; other directors, W. J. Southam, W. G. Walton, F. H. Whitton, Hamilton; C. W. Band, Toronto; D. L. White, Jr., Midland; H. W. Richardson, Kingston; Treasurer, J. I. Hobson, Hamilton, Ont.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for Jan., as follows:—Superior, 601.07; Michigan and Huron 579.31; Erie 570.92; Ontario 244.78 As compared with the average January levels for the past 10 years, Superior was 1.23 ft. below; Michigan and Huron 0.85 ft. below; Erie 0.78 ft. below, and Ontario 0.60 ft. below. It was anticipated that during Feb. Superior would fall 0.2 ft.; Michigan and Huron would remain stationary; Erie would fall 0.2 ft., and Ontario would rise 0.1 ft.

The Huntsville, Lake of Bays and Lake Simcoe Navigation Co's annual meeting was held at Huntsville, Feb. 4, when the report for 1910 was submitted and adopted. The balance remaining in hand after the season's operations was carried to profit and loss, no dividend being declared. The officers and directors were re-elected for the current year, as follows: President, C O. Shaw, Huntsville; Vice President, H. Foster Chaffee, Toronto; General Manager, S. H. Jacobs, Secretary and Assistant General Manager, W. J. Moore: Treasurer, J. W. McKee.

In connection with the construction of the Livingstone channel by the U.S. Government, which includes the extension of the dam in the Detroit River to the head of Bois Blanc island, in Canadian waters, a notification has been served on the U. S. Government, by the contractors, that unless an order is issued instructing them to proceed with the work, they will withdraw their men and plant. The order to cease operations, which was given last fall was the outcome of objections raised by Amherst'urg, to the extension of the proposed dam.

The Ontario and Quebec Navigation Co.'s steel passenger and freight steamboat, which is under construction, is expected to be ready for service by June 1, when she will be placed on the run from Toronto to Quebec and return, making the round trip each week, passing through the Bay of Quinte, by Thousand Islands, and running the rapids without transferring passengers. The s.s. Alexandria will continue on the route between Rochester N.Y., and Montreal and Quebec, and the steamers Brockville, Alethea, Varuna, Where Now and Madge will operate on the Bay of Quinte, as before.

The captains and chief engineers of the Inland Lines vessels, for the forthcoming season, have been appointed:

	Captain	Engineer
Donnacona	C. R. Alexander	J. Dee
Dundee	J Woolner	E. Shaw
Dundurn	R. Cooney	J. Morris
Emperor	G. W. Pearson	G. Smith
Empress of Fort William	C. R. Albinson	J. Murphy

Winona	B. Garvie	J.A.McLaughlin

Capt. W. H. Featherstonehaugh has been appointed Marine Superintendent, and E. Abbey, Superintending Engineer

A steamboat is being built at Kingston for Capt. A. Foster, mayor of Smiths Falls, for operation between Smiths Falls and Kingston. It will make three trips a week, and is expected to be in operation by May 1. The dimensions are, length 96 ft. long overall; 18 ft. beam; 6½ ft. deep. It is of the composite type throughout, with steel frame and steel shear strake. The machinery will consist of Fitzgibbon boiler with fore and aft vertical compound engine, with cylinders 9 and 18 ins. diar., by 14 ins. stroke, supplied with steam at a working pressure of 150 pounds. The condenser will be of the independent type, jet condenser and pump combined and the boiler is to be fed by the regular duplex pump. Hand fire and test pumps are included in the outfit. The cost of the boat is about $12,000. The Davis Dry Dock Co. has the contract.

Manitoba, Saskatchewan and Alberta.

Col. W. P. Anderson, Chief Engineer Marine Department, was in Selkirk, Man., recently conferring with local officials regarding proposed improvements and aids to navigation on Lake Winnipeg.

The development of navigation in Western Canada, proceeds apace. A pupil in an eastern school, in an examination, states: "Many vessels have been wrecked and sunk, in attempting to force a passage through the Rockies."

The Lake Winnipeg Shipping and Supply Co. has deposited with the Minister of Public Works, at Ottawa, plans, etc., for the construction of a dock on the bank of the Red River to extend along the water front from Water St. to Broadway Bridge, Winnipeg.

Capt. C. D. A. Barber, Manager Northern Transportation Co., Athabasca Landing, Alta., who was in Edmonton recently, is reported to have stated that the company was building a fourth vessel for its fleet, which would be ready for operation by the spring. The vessel, which would be a stern wheeler would be operated between Athabasca Landing and the Grand Rapids for passenger traffic, the Northern Light, which was used on that service last season, would be devoted entirely to the freight traffic. The new vessel, which will be named Northland Call, is being equipped with the most modern improvements.

B.C. and Pacific Coast Marine.

The Canadian Fishing Co.'s s.s. Celestial Empire, which is being generally overhauled at Esquimalt, is also having a new boiler installed, which has been brought from Great Britain.

C. H. Nicholson, Manager G.T.P. Steamship Co., was in Winnipeg and Montreal during February, consulting with the general management regarding the proposed works in Vancouver and at other points along the coast.

An order in council has been passed confirming bylaws passed by the Pilotage Commissioners for the district of Victoria and Esquimalt, respecting licenses, certificates, maintenance of boats, ports in the district and dues.

The All Red Line, Ltd., has been incorporated under the B.C. Companies Act, with a capital of $150,000, to build, purchase or otherwise acquire and operate steamships, etc., and to build graving docks, floating docks, etc., and carry on a general ship owning and shipping business.

The Lincoln Steamship Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $150,000, to carry on the general business of ship owners, merchants, carriers by land and water, etc., and in connection therewith to own and operate steam and other vessels of every description

The Selkirk Steamship Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $5,000, to acquire and operate the s.s. Selkirk, and also to own and operate steam and other vessels of all kinds, and to carry on the general business of ship owners and shippers.

A Victoria, B.C., dispatch says it has been officially announced that the B.C. Marine Ry. Co. will build a dry dock at Lang's Cove, Esquimalt, 900 by 100 ft., at a cost of $3,000,000, and that it will establish a shipyard capable of con-

structing destroyers and cruisers for the Canadian Navy.

The city of Vancouver is applying, under the Navigable Waters Protection Act, for approval of the plan showing the site, mode of construction and description of its proposed wharf on the foreshore of Burrard Inlet, at the mouth of Seymour Creek and the Second Narrows, in connection with the Seymour Creek water works system.

The keel of the Dominion Government's steam tug, contract for which was recently awarded to McDougall and Jenkins, has been laid at North Vancouver, and it is expected that she will be in operation by July. She will be 91½ ft. long, beam 20 ft., depth 12¾ ft.

The harbor engineer has submitted plans to the New Westminster city council for general improvements in the harbor. They cover the extension of the present wharves farther into the river, and the building of additional piers where desirable. Eventually it is hoped to have a port, including the area from the lower end of Annacis island to the Pitt River.

The s.s. Staffa, one of the first vessels operated by Mackenzie Bros., but recently being operated in freight business on the Fraser River, has been condemned. She was built in 1893 at Vancouver, her dimensions being: length, 81.5; breadth, 15.3 ft.; depth, 6 ft.; tonnage, 51 gross, 35 register, and she is equipped with engine of 6 n.h.p,, driving a screw.

The steam tug, contract for which was placed by the Dominion Government, in North Vancouver, recently, will cost about $45,000. She is intended for use in Victoria harbor, and it is anticipated that she will be ready for operation by July, when she will act as a tender for the new dredge, now on the way from Great Britain. The tug will be of steel throughout, except the pilot house, and will be classed 100 A1 at Lloyds. Her dimensions will be: length, 91½ ft. overall, 78½ ft. between perpendiculars; breadth, 20½ ft.; depth, molded 12¾ ft. She will be equipped with five water tight bulkheads, extending from the floor plates to the deck. The machinery will consist of an inverted fore and aft compound surface condensing engine, with a high pressure cylinder of 15 ins. diar., and a low pressure cylinder of 34 ins. diar. by 24 ins. stroke, developing about 500 h.p. Steam will be supplied by a Scotch marine single ended boiler, 12 ft. diar., at a pressure of 150 lbs. The air pumps, 12 ins. by 12 ins. stroke, of the latest design, will be driven from the low pressure cross head. The circulating pump will be independent, direct connected and steam driven, the main feed pump direct acting, and the engine feed pump, driven by the air pump cross head, as also will be the engine bilge pump. Steam steering gear is being installed, with steam winches. and complete electric lighting equipment.

TRANSITION CURVES.

*By Henry K. Wicksteed B. A. Sc., **M.** Can. Soc. C. E., Chief Engineer of Surveys, Mackenzie, Mann and Co. Ltd.*

Copyright, Canada, 1911, by Acton Burrows Limited.

Mr. Wicksteed has recently written an introduction to the transition curve for a new edition of instructions to assistant and resident engineers Canadian Northern Ontario Ry., which is being got out. At our request he has kindly placed the matter at our disposal, and in transmitting it to us has written as follows:—

"We have tables and diagrams in our present little volume and most of the men have some idea of how to use and apply them, but in talking to them I find that not one in ten of them understands the underlying principles, the whys and the wherefores of the transition curve, and how he may work out the formulas himself, and on occasion do without the tables altogether. When one of them makes a mistake it is apt to be a very glaring and conspicuous one, and such as he would not have made if he had understood the raison d'etre of the curve, and in any case such an understanding is calculated to broaden his ideas and vastly increase his interest in his work and his efficiency.

"Mr. Howard's article in your February issue will, I think, do much to create an interest in the subject, but, even he assumes a considerable initial knowledge on the part of the reader and does not start from the beginning. I have endeavored to do so, and as we wish to make our little volume as useful as possible, I think we cannot do better than to invite your co-operation and ask through your columns for criticism and suggestions as to how we may best make the subject as clear and as simple as possible.

"It has been a hobby with me for nearly twenty years back, and I laid down then, and have since seen proved, the principle that 'the exact mathematical form of the curve used was of little consequence,' but that 'the form which would come into general use was that which could be most readily run on the ground with the least use of tables and formulæ.' That the curve which is the easiest to manipulate is also the most perfect theoretically, is a fortunate accident, but it is an accident nevertheless, and had it not happened so, we should have probably chosen some less perfect one on account of its greater simplicity.

"Just as the earlier railway engineers used the parabolic curve because the ordinates were easier to calculate than those of the circle, and they had no other method than that of ordinates to work with, when some inventive mind brought in the method of deflections, the circular curve immediately took its place, because easier to manipulate, and the parabola disappeared. Aside from the fact of its being a most useful, in fact, as we have come to believe, essential factor in railway alignment, the cubic parabola or quadratic curve is a very beautiful geometrical study in itself, and well worthy of a mathematician's attention."

In accordance with Mr. Wicksteed's suggestion, we will be pleased to receive criticisms or comments on it for publication in our columns. The paper follows:—

Henry K. Wicksteed, B.A.Sc., M.Can.Soc.C.E.,
Chief Engineer of Surveys Mackenzie Mann & Co. Ltd.

The object of the transition curve is to accomplish the super-elevation of the outside rail uniformly and gradually so that the elevation shall, at any and every point, be adapted to the curvature at that point. Inasmuch as the centrifugal force which the elevation is intended to offset is inversely proportional to the radius of the curve, it follows that if the rise of the outside rail over the inner is to be uniform throughout the transition, the radius of the curvature must diminish uniformly and regularly. In other words, the curve should be one of "uniform acceleration."

If the final curve into which we transide is a 5°, for example, and we divide the transition into five equal parts, the curvature at the ends of the several divisions should be 1°, 2°, 3°, 4° and 5° respectively. This has always been admitted, but it was not until the late A. M. Wellington investigated the properties of the ideal curve that it was deemed practicable to meet these requirements exactly and a number of more or less cumbersome substitutes were in use, so cumbersome and difficult of practical application that few engineers attempted to use or even understand them, and either nothing was done at all or a mere arbitrary allowance was made by offsetting the curve inwards so as to allow room for the flattening at the ends, the form which the flattening took being dependent altogether upon the artistic sense and eye of the section foreman.

Refer to figure 1.—Let A-B be a circular curve terminating at A in the tangent F-A. C is a parallel tangent, and C-B is the transition curve, and is such that it is bisected in length by the perpendicular A-G, and A-G is in its turn bisected by it. This is somewhat obvious and scarcely needs demonstration.

Another more remarkable property, which is not obvious, but is quite susceptible of demonstration, is that the angle B.D.E., representing the total angle of the transition, is always three times B.C.E., which is the tangential angle corresponding to the point B, at which D.B. is tangential to the curve. It follows that C.B.D.= B.D.E.—B.C.D. = 3 B.C.D.—B.C.D. =2 B.C.D.

Now, assuming as in our first suppositious case, that the constant curve A-B is 5°. By hypothesis our curve is uniformly accelerating from 0° to 5° at B, and the mean curvature must be 2° 30′. If we make C.B. 150 ft., then the total deflection B.D.E. must be 3° 45′, and the tangential angle B.C.E. ⅓ of this, or 1° 15′. Double the final curvature at B. to 10°, and B.C. proportionately to 300 ft., and we get B.D.E.=15° and B.C.E. =5°, or four times what we had in the first instance. In other words, the tangential angle to any point is proportional to the square of the distance of that point from the beginning or origin of the curve.

It will be further seen that as the curve accelerates uniformly the proper transition is got, not by scheming a separate curve for each degree or pitch of central circular curve, but by cutting off a standard transition at the proper point corresponding to the degree of the central curve. If we divide this standard into a number of equal chords, and designate the chord points P, P_1, P_2, P_3, etc., the transition for a 4° curve will be the same as that for a 10°, but we shall stop it in the one case at P_4, and run an ordinary 4° circular curve from

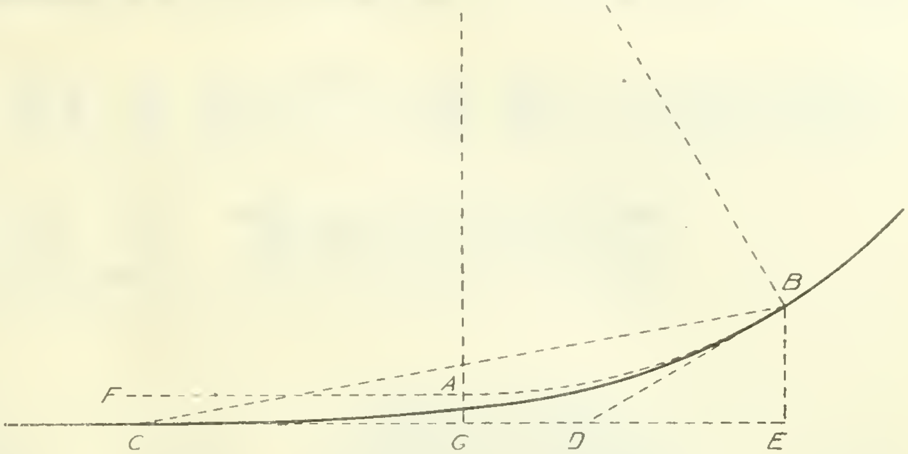
this point on, while in the other we shall continue it to P_{10}.

Now, as to the proper chord length. It has been found by experiment that in order to avoid any ill effects from an abrupt change in the position of the car body, from upright to inclined, the elevation of the outside rail should not gain on that of the inside more than about ¾ of an inch per second. At 60 miles an hour a train will travel 90 ft. (88 ft. exactly) in this time, and with our ordinary rule for elevating at ½ inch per degree of curvature, ¾ inch would correspond to a 1° 30′ curve. Proportionately, the distance for a 1° curve would be 60 ft., and this would be our chord length for a 60 mile speed. But this speed is not a safe one on curves of more than 3° or thereabouts. And as the longer chord length and resulting transition throws the curve inside its tangents much more than the short, consequently lessening its efficiency in avoiding an obstacle, it is desirable and quite permissible to use a shorter chord length in connection with the sharper curves and a corresponding less elevation of outer rail.

Following out this reasoning the writer suggested some years ago that inasmuch as the centrifugal force varied as to the square of the speed, and the permissible speed varied about in the inverse ratio of the degree of curvature, the proper formula for elevation should be one involving the square root of the degree of curvature, and that if E. represented the elevation in inches and D. the degrees of curvature, then the simple formula $E. = \sqrt{D}$ would give results not far from the best practice on curves between 1° and 10°. Engineering News commented very favorably on the suggestion, and it is believed to be in common use.

In view of these considerations, but in order to avoid unnecessary complication, three standard chord lengths, 60′, 45′ and 30′ will be used, the first for curves up to 3° or 4°, the second to 7°, and the third from 7° to 10°. Main line curves sharper than 10° are seldom used, and when they are resorted to are necessarily run over at very low speeds, and considerations other than centrifugal force, properly so called, make it desirable that the super-elevation should be still further reduced, hence, while it is still desirable to insert a transition of some kind, it is permissible to make it very short indeed. Our rule would give for a 16° curve, for instance, 4 ins. of elevation, while the older rule of ½ in. per degree would give 8 inches. This last is quite inadmissible, and the first more than will be found in good practice, and for the following reasons:—

Super-elevation counteracts the dynamical centrifugal force due to velocity, but there is a tendency to thrust against and override the outside rail of the curve which, while it acts in the same direction, is quite independent of the centrifugal force, and is due to the obliquity of the car axles to the radius of the curve. At low speeds and on very sharp curves it is very much the most important component of the two, and no moderate amount of super-elevation will counteract it to any considerable extent, but rather the reverse, for the wheel is held on the track by contact of the outside flange against the head of the rail, and is constantly trying to climb up over it, and only prevented from doing so by the weight of the car upon its journal. Decrease this weight by tilting the car inwards until we throw all the weight on the inside rail, and the outside wheel will inevitably climb over and the car be derailed. It follows that on a sharp curve with excessive elevation it is safer to move at a speed sufficient to generate sufficient centrifugal force to equalize the weight on the two wheels, than it is to crawl around it, and actual experience proves the truth of this apparent paradox.



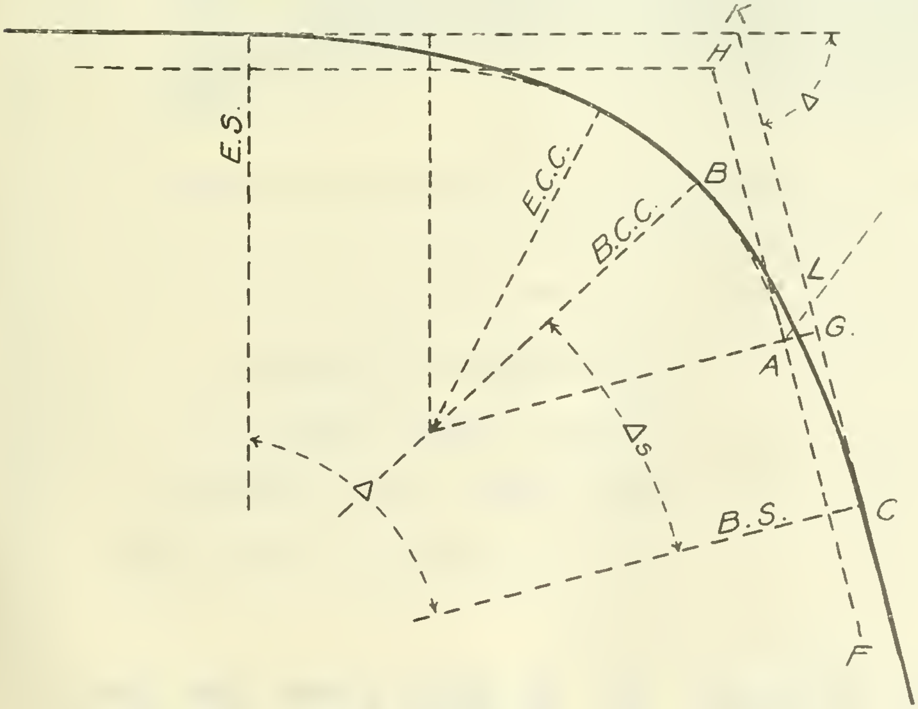
Transition Curves, Fig. 1.

To return to our transition curve. We have established a 60 ft. chord for curves up to 3°, and for this curvature we shall have three chords terminating at points P_1, P_2, P_3.

Refer to Figure 2.—The mean curvature is 1° 30′, and the total length 180 ft., giving a total deflection 2° 42′ or 162′ and a tangential angle for P_3 of $\frac{162}{3}$ or 54′. As it has been shown that the tangential angle to any point is proportional to the square of the distance of that point from the beginning of the transition curve, then the corresponding angles for the intermediate points P_1 and P_2 will be $(\frac{1}{3})^2$ or 1-9 and $(\frac{2}{3})^2$ or 4-9 respectively of the tangential angle at P_3, thus giving an angle of 6′ at P_1 and 24^1 at P_2. We have then for the 60 ft. chord transition the series of tangential angles:—

$$6 \times 1^2 = 6'; \quad 6' \times 2^2 = 24'; \quad 6' \times 3^2 = 54'.$$

To run the curve by the transit we set up on the initial point P. and turn off these successive angles from the tangent produced. Arrived at P_3, the end of the transition for a 3° curve, we put in a hub. Setting up over it we sight back at P. and turn off for the tangent at P_3 not 0° 54′, but double this or 1°, 48′ from which tangent we run in the 3° circular curve in the ordinary way. Arrived at the other end we simply reverse the process, or we may proceed as follows, still referring to fig. 2 At P_3 the 3° curve produced would swing inside the transition and leave it at exactly the same rate that the transition left the tangent at P. Our angles from the tan-



Transition Curves, Notation Diagram.

Recapitulation of Symbols and Formulas.

Offset of Main Curve = O = A.G.

Transition Curves, Fig. 2.

gent at P_3 to P_2, P_1 and P are therefore those for the corresponding distances on a 3° curve minus the three initial spiral angles—

	P_2	P_1	P
Curve angles	0°54′	1°48′	2°42′
Spiral "	0°06′	0°24′	0°54′
Diff.	0°48′	1°24′	1°48′

By a similar train of reasoning we find the tangential angles for the 45 ft. chord to be—

4½′, 18′, 40½′, 1°.12′
1°.52½′, 2°.42′, 3°.40½′ &c.

And for the 30 ft. chord—

3′, 12′, 27′, 48′,
1°.15′, 1°.48′, 2°.27′,
3°.12′ &c.

We may express the above in a general formula in which C is the chord length, d. the tangential angle for the first chord, and N. the number of chord point. Then d (in minutes) $= \frac{C}{10}$ or generally the deflection angle for any chord point $d_n = \frac{C \times n^2}{10}$

This property of the curve in question of having its tangential angles proportional to the square of the distance has suggested that it be called the quadratic curve as distinguished from the circle where the angles are proportional to the distances themselves and which is the "simple curve."

A moment's consideration will show that if the angles are proportional to the squares the offsets from the initial tangent to the ends of several chords must be proportional to the cubes of the distance and this has led to the curve being styled the cubic parabola. As a matter of fact this property of the curve holds good only for arcs of small total angle and so long as the sines of the tangential angles are practically equal to the angles themselves, but within the limits of the ordinary transition curve, the curves are identical and the formulas may be used interchangeably just as in the case of the circle and the parabola.

This property gives us another method of laying down the curve on the ground in special cases by offsets from the initial tangent and also of calculating quickly the amount by which the tangent of the original circular curve will be displaced by the insertion of the transition ends. This displacement is the distance A—G in our original diagram (fig. 1).

By hypothesis A.G. is bisected by the transition, which in its turn is bisected by A. G.; C. E. is therefore twice C. G. and the offset B. E. 8 times (2^3) that at G. or 4 times A. G.

Suppose the central circular curve D to be 4°, the chord length C to be 45 ft., then the chord C.B. will be 180 ft., the tangential angle for B. will be $\frac{C}{10} \times 4^2 =$ 4.5×16=72′ or 1° 12′. The offset B.E. will be 180 ft. × Sin 1° 12′=180×.0209= 3.762 ft. and the displacement or offset A.G. which we will call $0 = \frac{B.E.}{4} = 0.94$ ft

We may put this in the form of a general formula, thus ("d" being the deflection angle to the first chord point):

$$0 = \frac{\text{Sin d. } D^2 \times D \times C}{4}$$

It has been pointed out that d. is essentially a small angle seldom exceeding 0° .06′ and d. D^2. the tangential angle for the long chord. seldom exceeds 5°, which it would reach when C is 30 ft. and D. is 10°. Consequently for practical purposes and field operations. w may assume the sine of the angle to be equal to the angle itself expressed in circular measure. The circular measure of an angle of d minutes is $\frac{d}{3438}$ (3438 being the number of minutes in the angular unit) and the formula given above becomes $0 = \frac{d.\ D^3\ C}{3834 \times 4}$. Memorizing this number will enable us to dispose with a table of sines, it is perhaps even simpler to remember the reciprocal of 3438, which is the circular measure of an angle of 0° 01′, and will be found in Chamber's tables as .00029. The formula in this case takes the form:—

$$0 = \frac{.00029 \times d \times D^3 \times C.}{4}$$

It should be noted carefully that while d the tangential angle for the first chord is expressed in minutes, D, the degree of central circular curve, is in degrees and decimals of a degree.

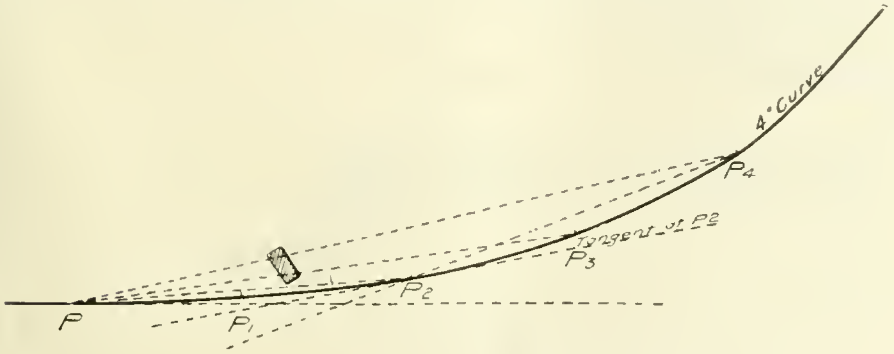
It will be seen from the foregoing that the offset for a 4° curve with 45 ft. chords is only 0.94 ft., which is quite insignificant on ordinary ground, but suppose the central curve D is doubled to 8°, the offset is then 8 times as much, or 7.5 ft., which on a steep side hill is very important indeed, but if we reduce C to 30 ft. d becomes 3′ and O=3.35 ft. It will be seen at once how much more freely we may indulge in long chords when dealing with flat curves. And in the preceeding discussion it has been shown that owing to the high speeds, which may be indulged in with the flatter curves it is there that the long transitions are most desirable.

In actual laying down of the transition or spiral on paper and subsequently on the ground, it will generally be sufficient to locate the B.S. or the beginning of the spiral further back by a distance equal to half the length of the spiral itself, in other words, the subtangent of the whole curve is longer than that of the unspiralled circular curve by this amount; this, however, is not mathematically correct, and in the comparatively rare cases where the two tangents are fixed exactly, and especially where the central angle is large and the displacement O considerable, it is necessary to add a correction which an ordinary trigonometrical construction will show amounts to—0 tan ½ Δ where Δ represents the angle of intersection between the initial and final tangents or the total deflection of the curve, including the spirals at either ends. The total distance from apex to beginning of spiral will then be

$$T_s = T + \tfrac{1}{2}S + O \tan \tfrac{1}{2} \Delta$$

The angles to the successive chord points to be turned off by an instrument set up at B.S. will be readily computed from the foregoing, but suppose we cannot see the B.C.C. or beginning of constant curvature, and have to set up at an intermediate point, as an example refer to figure 3.

Let us assume a 60 ft. chord spiral to a 4° curve; the spiral S. is 240 ft. and the total tangential angle to the B.C.C., which will be at P_4, will be $6_3 \times 16$=1° 36′, but owing to an obstacle we cannot see so far and have to put in a hub at P_2 and sighting back at the B.S (P) we turn 48′ to the tangent of the spiral P_2: the curvature at this point is 2°, and the spiral from this point forward leaves the 2° curve at exactly the same rate as it left the initial tangent at P. If the 2° curve be continued the angle to P_3 and P_4 would be 48+36=1° 24′ and 48+72=2° 00′. With the spiral continued they will be 48+36+6=1° 30′ and



Transition Curves, Fig. 3.

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

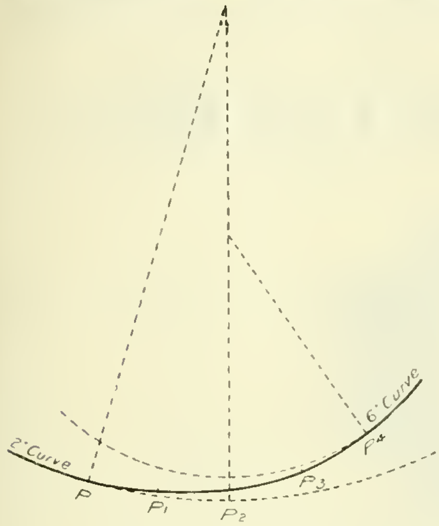
Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT



Transition Curves, Fig. 4.

48+72+24=2° 24'. Arriving at and setting up at P4 and sighting back at P2, the angle to the tangent at P4 (where the curvature is 4°) will be that for 120 ft. of a 4° curve less the spiral deflection for two chords, or 2° 24'—24'= 2° 00', and from this we run in our circular curve in the ordinary way.

As these additions and calculations, although simple in themselves, are apt to confuse a novice, it will be well for him to keep his final deflections at each point on a separate column, so that he may add them up and check them with the proper total deflections at any point. In this case we have turned off

at P 0° 24'
at P2 2° 24'
at P4 2° 00'
Total..4° 48'

If we had sighted through from P to P4 we should have deflected

at P 1° 36'
at P_1 3° 12'
Total..4° 48'

Which shows that our figuring is correct.

Arrived at the E.C.C., or end of constant curve, the process is identical. We turn off from the tangent of the circular curve the angle corresponding to 240 ft. of a 4° curve, less the tangential angle for 4 chords of the spiral; 4° 48'—1° 36'=3° 12', and at the E.S. or end of spiral 1° 36' to the final tangent, which gives us a total of 4° 48', as before.

Refer to figure 4.—Spirals between two arms of a compound curve are treated precisely the same way, and the reasoning is exactly the same. In the case of a 2° running into a 6° for instance, we subtract the one "D" from the other, leaving 4°, and run in four chords of say 60 ft. The angles are the same as before, except that as we start from a 2° instead of a tangent, we must add the equivalent angles for the 2° curve, and the series becomes for P_1 6'+36=0° 42'; for P_2, 24+1° 12'=1° 36'; for P_3, 54'+1° 48'=2° 42', and for P_4, 1° 36'+2° 24'=4° 00'. At P_4 we are on a 6° curve, so that we turn off from our back sight on P, 7° 12'-1° 36'=5° 36^3 to our tangent at P_4.

Checking up, our final deflections are

at P 4° 00'
at P_4 5° 36'
Total ..9° 36'

As our mean curvature between the two points is $\frac{2+6}{2}=4^\circ$, and the distance is 240 ft., our deflection should be 9° 36', which proves our work, as before.

Refer to figure 5.—The transition between two reverse curves can be treated in the same way, calling the angles to R+ and those to L—, and taking the algebraic difference between them. A 4° R merging into a 4° L would be equivalent to an 8° curve and require 8 chords..

The deflections will be for 60 ft. chords:—

To P_1 1° 12'— 6'=1° .06'
To P_2 2° 24'—0° .24'=2° .00'
To P_3 3° 36'—0° .54'=2° .42'
To P_6 7° 12'—3° .36'=3° .36'
To P_5 6° 00'—2° .30'=3° .30'
Point of reversal } To P_4 4° 48'—1° .36'=3° .12'
To P_7 8° 24'—4° .54'=3° .30'
To P_8 9° 36'—6° .24'=3° .12'

In this case it will be noticed that there is the same deflection to P4 and to P8, which means that the long chord of 480 ft. from P to P8 will pass through P4, the point of reversal, which it should obviously do, and this checks our arithmetic. These angles are all positive, or to right.

Setting up at P8 we reverse the process and turn 3° 12' to left, which puts us on a parallel tangent and is again obviously correct.

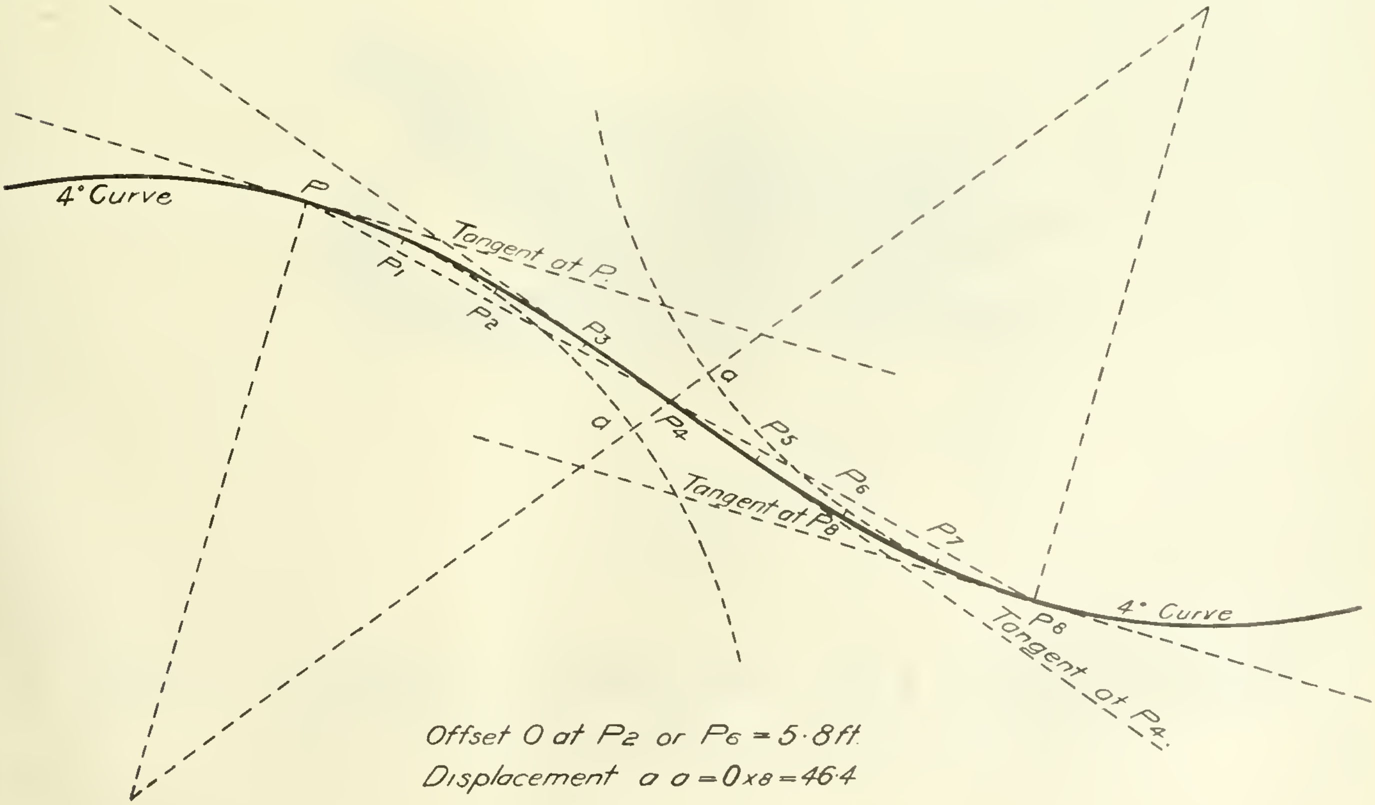
We have dealt in the preceding with a standard, or rather a series of standard chord lengths. It is sometimes convenient to depart a little from the standard. Suppose, for instance, we have schemed a long curve over rough ground to connect two existing tangents, but the end of the curve does not hit out just where it was intended to, but runs into a parallel tangent some feet away—we have no reason to suspect had work, and we have fitted the ground as we intended. It is simply a case of subtangents being difficult to chain accurately on very rough ground, or perhaps we have merely scaled them from the paper plan and cannot expect precision. Using a simple circular curve we should have no alternative but to go back to the B.C. and run the whole thing over again, or else "fudge" the end to make it come in. The transition curve offers us a very neat way of adjusting such a discrepancy by merely altering the chord length.

We evolved above the formulæ:—

$$0=\frac{d.D^3 C.}{4\times 3438} \text{ and } d.=\frac{C}{10}$$

Substituting the above value of d we get

$0=\frac{C^2\ D^3}{137520}$ or if D be a constant, 0 varies as the square of C or C as the square



Transition Curves, Fig. 5.

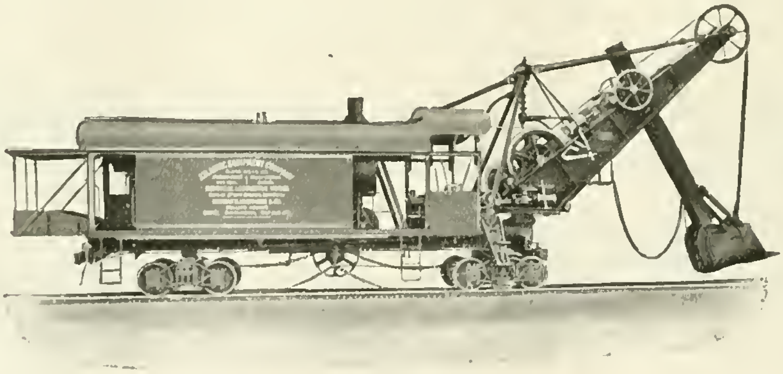
ROTARY SNOW PLOWS

CANADIAN
PACIFIC
4241

Rotary Snow Plows have been in successful operation under the
most trying conditions for over twenty-five years.
They keep the road open.
Work with certainty and regularity.
Do not spread the rails.
Do not derail.
Heavy snowstorms and deep drifts increase operating expenses.
No snow too heavy or too hard for the Rotary.
No drift too deep.

THE NEW ATLANTIC STEAM SHOVEL

SIMPLE - STURDY



For heavy or light digging.
No chain troubles.
Few repairs.
Not top heavy.
Saves fuel.

MONTREAL LOCOMOTIVE WORKS, LTD.

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

root of 0—if the curve we have been running in was a 4° and the intended chord length was 60 ft.—0 would have been $\frac{3600\times64}{137520} = 1.67'$. Suppose it comes out 4 ft. Since C varies as the square root of O we have

$$C_1 : C :: \sqrt{4} : \sqrt{1.67}$$

$$C_1 = \frac{2\ C}{1.3} = \frac{120}{1.3} = 92.3 \text{ ft.}$$

By taking a chord length of 92 ft. then instead of 60 ft., we shall be able to correct the error and bring the curve out as it was intended to come in the first place.

Intercolonial Ry. and G. T. R. Arbitration.

The Minister of Railways in reply to questions in the House of Commons, recently said, a board of arbitrators was appointed under an agreement of Feb. 1, 1898, between the Intercolonial Ry. and the G.T.R., for the award and determination of questions arising under the agreement in June 1904. The questions before the arbitrators had reference to the issue of bills of lading, rating of freight, diversion of traffic, and disputed accounts.

The several matters were submitted for arbitration under the provisions of the agreement, either at the initiation of the Crown or of the G.T.R. and disposed of by the arbitrators, some in favor of the Crown, and others adversely. They were practically questions of interpretation of the provisions of agreement as applying to matters from time to time arising in connection with the operation of the respective railways, subject to the agreement. Other questions submitted were not disposed of by the board of arbitrators, owing to the death of the then chairman, the late A. C. Killam, and are now for the consideration of the board of arbitrators as at present constituted. The Intercolonial Ry. has paid the G.T.R. under the awards, already made, $49,737.97.

Recent British Columbia Legislation

The following acts having to do with transportation interests were passed at the recent session of the B.C. Legislature:—

Canadian North Eastern Ry.—New title of Portland Canal Short Line Ry.; extending time for construction, and authorizing building of additional lines.

Crow's Nest and Northern Ry.—Extending time for construction.

Department of Railways.—Authorizing creation of provincial department of railways.

Great Northern Ry. — Confirming agreement re False Creek, Vancouver.

Greenwood-Phoenix Tramway Co.—Incorporation.

Grouse Mountain Scenic Incline Ry. —Incorporation.

Mid-Provincial and Nechaco Ry.—Incorporation.

Naas and Skeena Rivers Ry.—Incorporation.

Northern Vancouver Island Ry.—Incorporation.

Pacific Coast Coal Mines Co.—To reduce capital, and authorizing issue of debentures.

Peace and Naas River Ry.—Incorporation.

Railway Camps.—To regulate and inspect railway construction and other camps.

Railways.—Consolidation and amendment of acts relating to.

Tramways.—Amending Tramways Inspection Act.

Temiskaming and Northern Ontario Ry.

Hon. A. J. Matheson, Treasurer of Ontario, in presenting the accounts for the year ended Oct. 31, 1910, in the Ontario Legislature recently referred to the revenue and cost of the T. and N. O. R. He said the revenue was estimated at $625,000, enough to pay the sinking fund and interest on the debt. The Government received $420,000; the line actually earned $436,000, but the Commissioners retained $16,000 in order to carry them along. While the adoption of compressed air in the Cobalt mines caused a decrease in the consumption of coal 53,000 tons being carried over the line, as against 105,000 tons in the previous year, the real factor causing the decrease in earnings was the large amount paid for maintenance of way. The total gross earnings were larger than in 1908-09, notwithstanding the decrease of nearly $30,000 on coal, but $164,000 more was expended on maintenance of way, and employes' wages were increased to practically the same standard as on the C.P.R. and G.T.R. The total increase on maintenance was $178,000, while the decreases were $14,000, leaving a net increase of $164,000. The result is that there is a good and safe roadbed, which was borne testimony to by the fact that while 670,000 passengers were carried, not one was killed. In this connection, he thought too much attention was sometimes paid by the Dominion Board of Railway Commissioners to reducing freight rates. The first care, he thought, of that and other similar boards, ought to be to see that every railway was maintaining its road bed in proper order. The safety of the people, the freedom from accidents, is a great factor that ought to be established.

From the Superintendent of the Grand Trunk Railway Car Department.

J. Coleman, Superintendent Car Department, Grand Trunk Railway, Montreal, writes to the Railway and Marine World as follows:—

"I look forward with a great deal of pleasure to receiving your monthly publication. I am sure it is highly appreciated by everybody who has the opportunity to read it."

The total expenditure charged to maintenance was $376,000, against $212,000 in the previous year. This increase was caused largely by the following items: ballast, $11,000; ties, $46,000; rails $12,000; roadway and track, $77,000; bridges, trestles and culverts, $12,000. All these increases have been charged to ordinary revenue. In addition, there had been advanced to the Commissioners $785,000 which had been expended upon buildings, putting in steel trestles instead of temporary bridges, straightening tracks, and various betterments of that sort.

The principal charge during the current year will be the building of the Porcupine extension, of 30 or 40 miles, under the authority of the Act passed last year. This will be a light railway, and is expected to cost $15,000 a mile. It will be sufficient to handle the traffic of the district, without being much of a burden on the province. Already a very large traffic for that country is going and coming by way of Kelso, from which place the extension will run in to Porcupine. The Chairman of the Commission hopes that the line will be complete by the end of June.

He had no doubt that the whole of the T. & N. O. R. would in a year or two pay interest and sinking fund on the cost. Negotiations were going on with the G.T.R., in regard to which he could not go into details, but he could say that the G.T.R. expected to send a very large traffic over the line.

The total cost of the line to date represented by money advanced by the Government is $16,123,338.69.

Minimum Car Load Weight on Evaporated Milk.

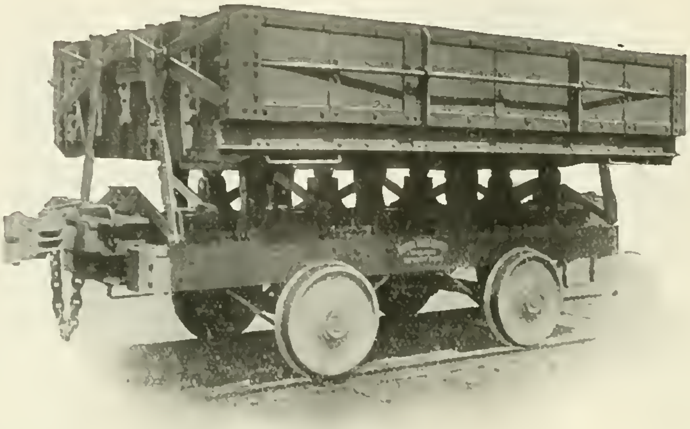
In the case of the Canadian Condensing Co., Ltd., vs. the C.P.R., Chief Railway Commissioner Mabee gave the following judgment Jan. 7, which was concurred in by Assistant Chief Commissioner Scott and Commissioner McLean:

The applicants allege that on Oct. 14, 1910, they loaded at Chesterville, Ont., a car of evaporated milk, destined to Vancouver. The following is an excerpt from their letter:—"Being under the impression the minimum carload weight was 30,000 lbs., we loaded 30,350 lbs., took our bill of lading to the C.P.R. agent marked 'prepaid,' who figured up the freight and we paid him $288.33. We heard nothing more of the matter until about the middle of November we had a debit note from the consignees, Little Bros., for $91.67, paid additional freight on car received Oct. 27. Enquiring into the matter, we ascertained that the minimum weight had been advanced to 40,000 lbs., and we made a claim on the C.P.R. for a refund of the $91.67, feeling that they had a perfect right to entertain the claim, since the error was clearly one of their agent's, and not ours."

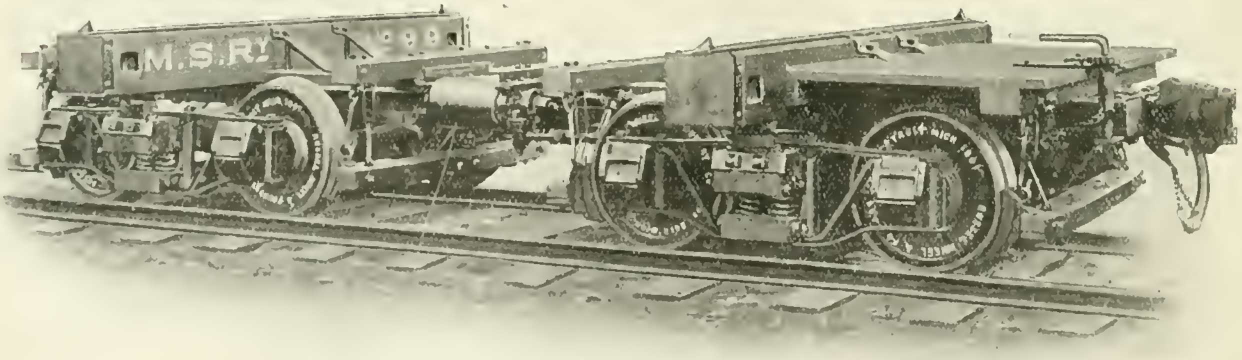
The applicants no doubt feel that they have been injured to the extent of $91.67, alleging, as they do, that the car was shipped on a laid down price, and in fixing that price the freight was figured on the basis of the 30,000 lbs. minimum, and that the error, be whose it may, has put them to loss to the extent of $91.67. Now the facts are that the tariff rate in carload lots from Chesterville to Vancouver on evaporated cream is $1.75 per 100 lbs., classification minimum of 24,000 lbs. This would have made the charge upon the shipment in question $420. There is, however, a special commodity tariff showing a toll of 95 cents per 100 lbs. on a minimum of 40,000 lbs. This commodity rate, based on the 40,000 lbs. minimum, has been in force since Dec., 1909, so that the applicants are in error in saying that the minimum had been advanced to 40,000 lbs. On the contrary, it had been in effect at least nine months before the shipment moved. Of course, the railway agent at Chesterville was in error in accepting prepayment at 95c per 100 lbs. on the actual weight loaded. However, if the shipment had been permitted to move at this rate, it would have been a variation from the published tariff which is declared to be unlawful and illegal. Likewise, if the railway company was compelled to refund the applicants the $91.67, the same result would follow. This case is an illustration that occasionally an individual hardship follows by reason of the law permitting no departure from the published tariff.

Getting back, however, to the root of the matter, the applicants committed the initial error by permitting "the impression the minimum carload weight was 30,000 lbs." to prevail. Had they not acted under a mere impression, but had looked up the tariff which the law compels to be kept published at the Chesterville station, they would at once have ascertained the true facts, and the error would not have followed. To permit a refund of this $91.67 might work discrimination in favor of the applicants, as it may be that other shipments have moved from Ontario points upon the basis of the lawfully published tariffs. No redress can be given to the applicants.

Russel Heavy Duty Dump Cars



The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

G. T. P. R. Maintenance of Way Employes' Pay.

The Board of Conciliation and Investigation which was appointed by the Minister of Labor in connection with matters in dispute between the Grand Trunk Pacific Ry. and its maintenance of way employes, consisted of J. W. Dawsey, of Melville, Sask., appointed on the company's recommendation; W. T. J. Lee, of Toronto, appointed on the employes' recommendation, and Judge McGibbon, of Brampton, Ont., as Chairman, appointed on the first recommendation of the other two members. The Board met at Winnipeg and went over the line to Edmonton, and afterwards met in Toronto. The Board was unanimous in its finding, except the question of wages, for which two schedules were submitted, one by Mr. Lee, representing the employes, which was concurred in by the Chairman and one by Mr. Dawsey, representing the company. The Labor Department was subsequently informed that the report of the Board was satisfactory to the employes. Following is the principal portion of the report:—

The members of the Board have been able to agree upon all the articles of the following schedule except the rates of pay.

The following rules will govern the employes of the G.T.P.R., as set out further in sec. one thereof.

When additional positions of a like class are created compensation will be fixed in conformity with that of similar positions as shown by this schedule.

This schedule will become and be effective as of Dec. 1, 1910, and will not be changed unless on 60 days notice, by either party given between May 1, and Nov. 1, of any year.

These rules will not take away any privileges that are now in effect with employes.

The schedule of rates marked A. attached hereto are the rates offered by the representative of the Company, and which he considers fair. The schedule of rates marked B., attached hereto are the rates which the representative of the employes believes should exist and be paid by the Company, and which he considers fair. The Chairman concurs in the position and rates as recommended by the representative of the men, feeling that from the evidence adduced before the Board that there should be an increase in the rates recommended by the Company's representative.

Sec. 1.—By permanent maintenance-of-way employes is meant employes who take their orders from the Road Masters and Bridge and Building Masters, and who have been in the maintenance-of-way service continuously for nine months or more, or who have had nine months cumulative service during the two years immediately preceding, and same will hereinafter be referred to as employes. Laborers in extra gangs, unless those practically engaged all the year round will not be ranked as permanent employes.

Sec. 2.—Ten hours shall constitute a day's work, excepting for track and bridge watchmen, signal men (except when employed as telegraph operators), pump men and pump repairers. When required to work in excess of these hours, time will be allowed for such excess at the rate of time and a half. Time and a half will be allowed on Sundays, Christmas Day and New Year's Day. Employes called for duty after having been relieved at 6 p.m., shall receive a minimum of four hours, and shall not be required to suspend work in schedule working hours to equalize overtime.

(a) Twelve hours will constitute a day's work for bridge watchmen, signal men, pump men and pump repairers. When required to work more than 12 hours, straight time will be allowed.

(b) In emergencies, employes will not be required to work more than 24 hours continuously without a rest of eight hours.

(c) Employes detained when travelling on orders of the Company after regular working hours will be allowed straight time except when provided with boarding and sleeping cars.

(d) Foremen will be allowed straight time for wet days, provided they remain on duty.

(e) When the Company's interests do not suffer thereby, employes will be allowed, at their request, to quit work on Saturday during the summer months at 12 noon. If required to work after these hours, overtime will not begin until 6 p.m.

(f) Employes transferred by the Company to construction work will not lose their seniority standing as employes.

Sec. 3.—Employes will be promoted hereafter on their respective superintendents' division, in order of seniority, provided they are qualified. All employes shall be advised of vacancies or of any new appointments that may occur in the department in which they are employed, and their applications, if presented within ten days, will be considered. Employes may be transferred from one division to another for extra gang work, or on the opening of new lines, or when the necessary qualified men for maintenance-of-way work are not obtainable on the division.

(a) Employes refusing promotion become junior to employes accepting such promotion.

(b) An employe who is transferred to another department at his own request, or is transferred from the bridge and building department to the road master's department, or vice versa will lose his seniority standing, but an employe transferred without his consent shall have the right of appeal.

(c) Employes leaving the service of the Company when their services are required, in the event of re-employment will rank as new men.

(d) A list of all employes will be prepared for each superintendent's division, and such list will show seniority standing of each employe. The list will be revised from time to time to agree with length of service and promotions made and a copy will be furnished representatives of employes. They will be open for correction on proper representation by the employe to the head of his department.

(e) In the event of reduction in the number of men employed, those longest in service shall have preference of employment.

(f) The position of track and bridge watchmen and signal men at crossings not interlocked are not subject to the general rules for promotion, being intended to take care of men who become unfit for other service.

Sec. 4.—No employe shall be suspended (except for investigation), or discharged, until his case has been investigated and he has been proven guilty of the offence charged, the decision in such case to be arrived at within 10 days from date of suspension. If an employe be found blameless, he will be reinstated and paid at schedule wages for time lost, and will be reimbursed reasonable expenses, if away from home in such case. If detained more than ten days at Company's instance, awaiting decision, he will be paid schedule wages for all time lost in excess of ten days regardless of decision reached. An employe may have the assistance of another employe during investigation, should he so desire. A written statement setting forth the result of the investigation and the reasons therefor, will, if requested, be furnished by the Company to the employe or employes affected.

(a) Should an employe at any time consider himself unjustly treated for any cause whatsoever, he shall be entitled to a fair and impartial investigation within thirty days from date of complaint by him to his superior officer, and a decision shall be given him in writing within ten days thereafter.

Sec. 5.—Leave of absence and free transportation will be granted to employes who are witnesses and members of duly appointed committees for the adjustment of matters in dispute between the Company and the employes within ten days after request in writing has been made on the proper officer.

Sec. 6.—Employes taken off their regular sections temporarily to work on snow or tie trains, or other work, will be compensated for the boarding and lodging expenses they necessarily incur.

(a) Bridge and building employes taken from their place of residence or boarding outfits will be compensated for the extra expense they necessarily incur, not to exceed $1 a day.

(b) Section foremen or any other foremen taken from their gang for any reason for one or more days will be relieved of the duties of foremen during their absence, and the relieving foreman will be paid the rate of the foreman he relieves during the absence of the regular foreman, and be held responsible during the absence of the regular foreman.

(c) That a regular section foreman having his gang increased to over 20 men for 14 days or over shall receive extra gang foreman's rates.

Sec. 7.—Employes required to attend and light semaphore and switch lamps will receive schedule rate of section men. When lamps are located at more than half a mile from the station, they will be attended to in regular working hours. Employes required to walk track or attend lamps on Sunday will be paid at the regular rate and one-quarter for the time so engaged. A suitable place will be provided for tending to all lamps.

Sec. 8.—The company will keep the section house in good repair; the cost of repairs other than ordinary wear and tear will be charged to occupants. Regular section houses shall be for the use of section foremen and their families only.

(a) Where water is transported for use of section gang, good water will be provided. Where water is not supplied by the company it will be procured on the company's time.

(b) Employes shall not be required to do scavenger work, except such as pertains to their quarters and at such stations as cannot otherwise be taken care of.

(c) The Company will provide suitable houses for pumpmen; until such houses are provided pumpmen shall receive $5 extra per month.

Sec. 9.—The employes will be granted leave of absence when consistent with the carrying on of their work and be given transportation in accordance with the current pass regulations.

(a) As far as practicable, employes will be afforded the opportunity of visiting their place of residence, and furnished transportation when requested from proper authority, and when it will not interfere with the company's business.

(b) Employes will be granted free transportation and leave of absence to attend their meetings, but such free transportation will not extend over more than 300 miles, and leave of absence will not exceed two days, and will only be granted when it will not interfere with the service and when the Company will not be put to any expense thereby.

Sec. 10.—All bridges and building employes in the service of the Company at the date of this schedule becoming effective shall rank as permanent employes.

Railway Taxation in Ontario.—A resolution of the Ontario Legislature, passed Mar. 1, provides for the payment by railway companies of a tax of $60 for each mile of single track line, $40 for each mile of second track, and $20 for each mile of additional tracks, in territory without municipal organization, provided that for lines forming a system not exceeding 150 miles from terminus to terminus, the tax shall be $15 a mile for one track, and $5 a mile for each additional track, and on lines less than 30 miles long the tax shall be $10 a mile for a single track and $5 a mile for any additional track. The resolution is being given effect to in an act.

Steam Railway Track Laid in 1910.—In the details of track laid by the G.T. Pacific Ry. in our last issue, it was stated that 36 miles had been laid between mileage 17 and Canora, Sask., instead of 38 miles. The total given, 335 miles, is correct, so that the error in no way affects the totals given in the various tables.

R. S. Richardson, formerly Assistant Superintendent Canadian Northern Quebec Railway at Joliette, Que., who has been appointed by MacDonnell and O'Brien as Superintendent of operation of the portion of the National Transcontinental Ry., of which they are contractors, writes: "I have always enjoyed reading the Railway and Marine World."

C. P. R. Land Taxation in Alberta.

Following is a summary of Lord Macnaghten's judgment delivered in London, Eng., in the appeal of the Alberta Government, against the judgment of the Alberta Supreme Court, respecting the taxation of C.P.R. lands in the province:

The two actions which have given rise to these appeals were brought to enforce two separate claims by the province of Alberta to tax certain lands belonging to the C.P.R. Co. The lands in question formed part of the land subsidy earned by the company in the construction of its railway. In 1881, when the construction contract was ratified by the Dominion Parliament, the district in which the lands are situated was part of the Northwest Territories. The province of Alberta, which was carved out of the Territories, was not established until 1905. Though the questions involved in the two actions are quite distinct, they both turn on the wording of clause 16 of the construction contract, which says in part that the company's lands in the Territories, until they are either sold or occupied, shall be free from taxation by the Dominion or by any province hereafter to be established or by any municipal corporation therein for 20 years after the grant thereof from the Crown. In the appeal the question turns upon the meaning of the word "sold," as used in that clause. It seems that in Sept., 1902. the company agreed to sell three sections of land which had been conveyed to the company by letters patent, July 20, 1901. The price of one of the sections was $1,644, and of each of the others $1,920 On signing the agreements $320 was paid by the purchaser in respect of each section. The remainder was to be paid in five annual instalments at dates specified. In each case time was made of the essence of the contract. Beside the three sums of $320 paid on the execution of three agreements nothing was ever paid by the purchaser towards the purchase money, and on Nov. 1, 1905. the company declared the three agreements null and void.

It is admitted that the lands have never been occupied within the meaning of clause 16. The contention on the part of the province is that although there was no sale in fact, and although each of the three agreements for sale was duly voided and annulled in pursuance of authority contained in the agreement itself, yet the lands have been sold within the meaning of that expression in the construction contract So strange a contention does not seem to require a serious answer. But an answer may be given in the language of Chief Justice Ritchie, who disposed of the point when it was raised in 1891 before the Supreme Court. He said:—"There must have been a completed sale. and the property must have passed out of the C.P.R. and vested in the purchaser before it could become liable to taxation."

The action which gave rise to the other appeal was brought by the Alberta Minister of Public Works to determine the date from which the period of exemption mentioned in the latter part of clause 16 is to be reckoned. In the case of the lands of the company in the Northwest Territories. which have not been sold or occupied, the period of exemption is defined as 20 years after the grant from the Crown. The proper meaning of the expression, grant from the Crown, in the case of a land grant is a conveyance by letters patent, and although. of course, Crown lands may be transferred to a subject by Act of Parliament, such a transfer would not ordinarily or properly be described as a grant from the Crown.

The respondent's contention is that in the case of lands proposed to be taxed the period of exemption must be reckoned from the date of the letters patent conveying those lands to the company. The earliest patent in the present case is dated April 6, 1903. The appellant's contention is that the period of exemption runs not from the date of the conveyance of the lands now proposed to be taxed, but from June 18, 1884, the date on which the survey of these lands was approved by the Surveyor General of Canada, and the lands were thus identified as part of the subsidy in land to which the company was entitled. It was one of the conditions of the construction contract that grants in respect of the land subsidy should be made in alternate sections of 640 acres extending back 24 miles on each side of the railway—the company receiving the sections bearing uneven numbers. It was, however, provided that if any of such sections consisted in a material degree of land not fairly fit for settlement, the company should not be bound to receive them as part of such grant. This provision led to prolonged discussion and negotiation between the company and the Government. Some lands which the company at first rejected were afterwards accepted, and some that were at first accepted were rejected afterwards. The result was that in a considerable number of cases the destination of lands appropriated to the land subsidy was not definitely fixed until long after the date when the survey was approved in the Surveyor General's office. As counsel for respondent pointed out, there would have been much complication and confusion if the construction contended for by the appellant had been adopted.

In point of fact, however whenever the question has been argued in the Canadian courts the ordinary and proper signification of the expression "grant from the Crown" has been adopted. The leading case is the case of North Cypress vs. C.P.R. In deference to the decision of the Supreme Court of Canada in that case, formal judgments were only delivered by the trial judge, and by the judges in the Alberta Supreme Court, from which the second appeal is brought. It was argued that if the expression "grant from the Crown" was to have its proper and ordinary signification it would be in the power of the railway company, by delaying to accept Crown grants or even by simply abstaining from pressing for such grants, to defer their liability to taxation for an indefinite period. It must, however. be remembered that at the time when the construction contract was made lands in the Northwest Territories were the property of the Dominion, and that any delay in perfecting Crown grants would be the fault of Dominion officers. The circumstance that but for the contract the lands would now be liable to taxation for provincial purposes cannot alter the rights of the railway company. nor does that fact of itself necessarily lead to delay in perfecting the grants. The whole contract was subjected to a very close and critical examination. but their Lordships are satisfied that there is no reason for departing from the ordinary and proper signification of the expression, grant from the Crown. Their Lordships are therefore of opinion that in the case of lands not sold or occupied the period of exemption from taxation mentioned in clause 16 of the construction contract runs in each case from the date of the letters patent conveying the lands to the railway company, and will therefore advise His Majesty that both appeals should be dismissed In accordance with an agreement between the parties, there will be no order as to the costs of the appeal.—Canadian Gazette.

Can. Soc. C. E. Officers.

Three mistakes occurred in the list of officers of the Canadian Society of Civil Engineers in our last issue.

J. G. Sullivan, Assistant Chief Engineer C.P.R., Winnipeg, was included in the list of councillors. He is one of the vice presidents, holding office for three years.

J. H. Kennedy, Chief Engineer Vancouver, Victoria and Eastern Ry., Keremeos, B.C., was included in the list of councillors, instead of J. C. Kennedy, Vancouver, B.C.

H. M. Jaquays, M.A., M. Sc., Montreal, was omitted from the list of councillors.

Following are the standing committees:—Finance, J. M. Shanly, Chairman; C. N. Monsarrat, G. H. Duggan, W. J. Francis, E. Marceau, Treasurer. Library, and House. L. A. Herdt, Chairman; Jas. White, F. P. Shearwood, R. S. Lea, J. M. R. Fairbairn.

Following are the officers of some of the sections from June 1911, to June 1912:—General, P. Johnson, Chairman; H. M. Mackay, Vice Chairman. Electrical, L. A. Herdt, Chairman; R. M. Wilson, Vice Chairman. Mechanical, H. H. Vaughan, Chairman; W. J. Francis, Vice Chairman.

The society's branches are as follows:

Quebec: P. E. Parent, Chairman; S. S. Oliver, Secretary. Headquarters, City Hall, Quebec.

Ottawa: A. A. Dion, Chairman; H. V. Brayley, Secretary,. Headquarters, 177 Sparks St., Ottawa.

Kingston officers not yet appointed.

Toronto: H. E. T. Haultain, Chairman; A. C. D. Blanchard, Secretary. Headquarters, Engineers' Club, King St. West, Toronto.

Winnipeg: C. H. Dancer, Chairman; E. E. Brydone-Jack, Secretary. Headquarters, University of Manitoba, Winnipeg.

Vancouver: G. H. Webster, Chairman; H. K. Dutcher, Secretary. Headquarters McGill University College, Vancouver.

American Association of General Baggage Agents.

At the annual meeting in San Antonio, Texas, recently, the following officers were elected:—President, F. H. Jones, G.B.A. St. Louis Southwestern Ry., Texarkana, Tex..: Vice President, B. Quick, G. B. A., Missouri Pacific Ry., St. Louis, Mo.; Secretary-Treasurer, J. E. Quick, G.B.A., Grand Trunk Ry., Toronto; Executive Committee, G. F. Lee, G.B.A., Rock Island Lines, Chicago, chairman;G. L. Alley, G.B.A., Oregon Short Line Rd., Salt Lake, Utah; C. J. Wiggins, G.B.A., Boston & Maine System, Boston, Mass.

The fundamental rules of the Association as revised were adopted.

The most important action taken was that of determining the maximum weight of corpses and their caskets to be handled by the baggagemen This aggregate maximum weight was determined at 500 lbs.

A committee of 11 to be appointed by the chairman, was assigned the task of drafting standard blanks, checks, and tickets for baggage. To this same committee was also referred the subjects of irregularities in the settlement of concealed losses, a special form of tickets for corpses, extra tickets for checking baggage, showing the condition of baggage on transfer bills to and from transfer companies and connecting lines, and disposition of uncollectable c.o.d. charges.

The matter of fumigating immigrants' baggage was left to the action of the health authorities of the different places where the immigrants arrive.

The matter of forwarding baggage on telegraphic request, regardless of transportation, was disposed of by the adoption of a form of telegram to be used in such connection.

The Association resolved to continue the practice of transfer companies receiving and checking through baggage handled by such transfer companies.

A method for dispatching to its proper destination improperly routed baggage was adopted.

In reference to the transmission through New York City of corpses checked to points beyond, the Association concluded to transmit them on the original death certificate instead of delaying shipment to obtain certificate in New York.

The practice of giving prepaid certificates was abrogated.

The requirement for showing form and number of ticket on inter-line checks was discussed at length and the provision to that end was lost when put to a vote.

The matter of showing weather conditions on waybills was also discussed and it was resolved to have the bills show such conditions.

A change in the form of c.o.d. checks was adopted, by which it was supposed that collections of that kind will be more feasible.

Victoria Rolling Stock and Realty Co. of Ontario Ltd.

Following are extracts from the report for the year ended Feb. 15, presented at the annual meeting in Toronto, March 1:

During the year the company has not issued any new debentures, and outstanding debentures against leases have been reduced by $215,000. All payments maturing during the year have been promptly met. The profit on the year's business, after charging up directors' fees and expense account is $28,062.81, out of which a dividend of 6% per annum on the paid up capital stock has been paid, amounting to $14,400.00, leaving $13,662.81 carried forward to profit and loss account, which now stands at $34,412.02.

Assets.

Obligations on leases	$1,227,008 33
Debentures held by company and accrued interest	158,359 72
Cash in bank	79,710 64
Call loans	100,000 00
	$1,565,078 69

Liabilities.

Capital stock subscribed	$600,000 00	
Capital stock paid up		$ 240,000 00
Debentures outstanding		1,280,000 00
Interest accrued on same		10,666 67
Balance at credit of profit and loss		34,412 02
		$1,565,078 69

Profit and Loss Account.

Balance at credit Feb. 15, 1910	$ 20,749 21
Rents received and accrued on leases, interest on advances and debentures held by company	87,560 90
	$108,310 11
Interest paid and accrued on debentures	$ 56,833 00
Expense account	1,365 09
Directors' fees last year	1,300 00
Dividend account	14,400 00
Balance carried forward	34,412 02
	$108,310 11
Original cost of rolling stock held under existing leases	$2,939,370 00
Amount paid in on account by railway companies in addition to interest	1,659,370 00
	$1,280,000 00
Total amount of company's debentures outstanding	$1,280,000 00

The board for the current year is as follows:—President, E. B. Osler; Vice President, W. D. Matthews; Managing Director, R. A. Smith; other directors, D. Coulson, F. G. Osler, D. R. Wilkie, Hon. J. S. Hendrie.

Fuel Economy.

By T. Duff Smith, Fuel Agent Grand Trunk Pacific Railway.

Some years ago it was thought that the coal fields of the U.S. were inexhaustible, but the cry today is for conservation and great efforts are being put forth by our neighbors on the south to economize fuel as much as possible. In Canada we can hardly estimate our resources in the way of fuel, as new fields are being opened up every year, but, although we have such large visible supplies, we have no right or reason to waste fuel to the extent we are now doing.

We find from latest statistics that during the year ended June 30, 1910, our Canadian railways used 6,252,054 tons of coal valued at $18,570,393, to which must be added the cost of transportation to point of consumption, handling to tenders, inspection and general supervision, so that we may safely estimate the cost of our annual coal bill at over $25,000,000. Next to labor, fuel is the greatest individual item of expense to a railway, averaging about 10% of the total expense.

I believe that the fuel proposition has been very much neglected. Whenever it becomes necessary to effect economies the first men called on to make a reduction are those in charge of maintenance, both mechanical and permanent way. We stop repairing cars and engines, reduce shop forces, stop putting in new ties, discontinue construction, but the fuel bill goes right along. The management of the average railway is never much surprised when the fuel bill jumps up a few thousand dollars, they look at it as a sort of "guess" proposition. My own experience is, that the more you learn about the fuel question the deeper you go into it, the more you discover how little you really know and how much there is to learn.

How can we further fuel economy? There are several ways, and I will touch briefly on those which have struck me as practicable. The coal producer is a factor in our economy. The railway official who does not recognize that fact is remiss in his duty to the company that employs him. Every railway passes in some section, through coal fields, and therefore by helping operators to develop the mines it reaps returns upon the commercial coal shipped, and as all coal is not of suitable size and character for commercial use, the railway could or should assist the operator to dispose of this coal by finding a use for it, I would question the wisdom of getting any great reduction in selling price by an organized attack, but would consider it better all around economy to pay him a living price and so foster an increased output, the benefit of which would be felt in increased traffic returns.

Here, in my opinion, is the place where all our endeavors are required. We all know that engineers will often resort to the excuse that "poor" coal was responsible for a delay, believing that it is the simplest method of preventing trouble for themselves or shielding other parties. Engine troubles occur more frequently during the busy season, because they are of more importance at that time, and are, therefore, noted more carefully. Good coal will frequently overcome leaky valves, leaky flues, leaky packing rings and other mechanical defects, but this does not relieve the motive power department from its responsibility to keep the engine in good repair, for had these defects not existed less fuel would have been consumed on the run. The man who uses the words "poor coal" should be in a position to define to you openly and frankly what constitutes "poor coal." The impurity in the coal is detrimental to the burning and will deteriorate the relative value of results, but that does not change the coal. It may be high grade coal, it may be low grade coal, and the difference, in my opinion, is that good coal contains the highest per cent. of carbon, the lesser per cent. of sulphur and the lowest per cent. of ash. Poor coal is the coal that contains the lower per cent. of carbon, the higher per cent. of sulphur, and also the higher per cent. of ash, and those two things are divided into classes by themselves and can only be determined by the actual work of each grade of coal, as no two grades of coal are supposed to perform the same identical work under the same conditions. Therefore, it rests with the motive power department and especially with road foremen of engines to see that their firemen use their fuel intelligently and economically, and this is the kernel of the whole question of fuel economy.

Allow me to quote a few remarks made by a road foreman of engines:—"In speaking of educating men how to use coal, it is the aim of every person here to do the very best he can for those we represent in general. It is a fact that good steam pressure on a locomotive is always very satisfactory to the men that handle the train, as well as to the management. but it is also a fact that we waste much high priced coal. Good coal costs more money than poor coal, and we are more apt to waste high priced coal by way of popping engines, etc., than we would by way of a poorer grade of coal, and while it is a question of economy today, is it not a fact that we could burn, possibly by putting our best efforts into it, a cheaper grade of coal and get almost as good results as we would with high priced coal? Now, if that is a fact, that we can do it, it seems to me that we should be willing to do it so far as lies in our power. Popping engines, we are told, are a great loss, and surely there are many things about our engines that if we had good coal we would be careless about. Pop valves may not get proper attention, it does not make any difference, the engine is making her time, she has made her run, she is making plenty of steam and of course we are buying the highest grade of coal. Might we not make some of our neighbors in the shops a little bit indifferent, a little bit careless. On the other hand, I believe the best results would be obtained by not being too particular as to the grades of coal, and if the management at all times would understand the kind of coal that we were using and in the event that we got into trouble, in trying to help along in a general way, it would be simple enough for us to say very little about it. Now, it is a fact that an engine will usually go over the road after the train has started, and suppose an engine carries 200 lbs of steam, it is not necessary that that engine should maintain 200 lbs of steam from one end of the road to the other. We would probably get just as good results from that engine with 190 lbs. steam, there are times when we would not need even that, and by having a medium grade of coal we would be all out with our sleeves rolled up and we would go through in time just the same.'

FROM A MEMBER OF THE GOVERNMENT RAILWAYS MANAGING BOARD.

F. P. Brady, Member Government Railways Managing Board and General Superintendent Intercolonial Railway and Prince Edward Island Railway, writes from Moncton, N.B.

"I admire very much the Railway and Marine World on account of the remarkable correctness of the information and statistics it publishes, and anticipate its receipt with pleasure."

So much for economy in quality. Now how are we to obtain results from engineers and firemen. The road foreman should see that the engineers and firemen understand their duties and follow the instructions given them in regard to the proper method of handling and firing their locomotives. He must also endeavor to have the locomotives kept in condition to give the best and most economical service.

The master mechanic should keep the locomotives in good condition for the service they perform, that they steam freely, that the injectors are of the proper size so that the boiler can be fed continuously, and that there are no burnt or broken grates for coal to fall through into the ash pan, that coal is not wasted at the terminals by hostlers, fireknockers or fire builders, and that they do not allow a locomotive to leave a terminal with a fire having clinkers, either caused by a badly cleaned fire or by engine waiting a long time after the fire was built before starting on a trip.

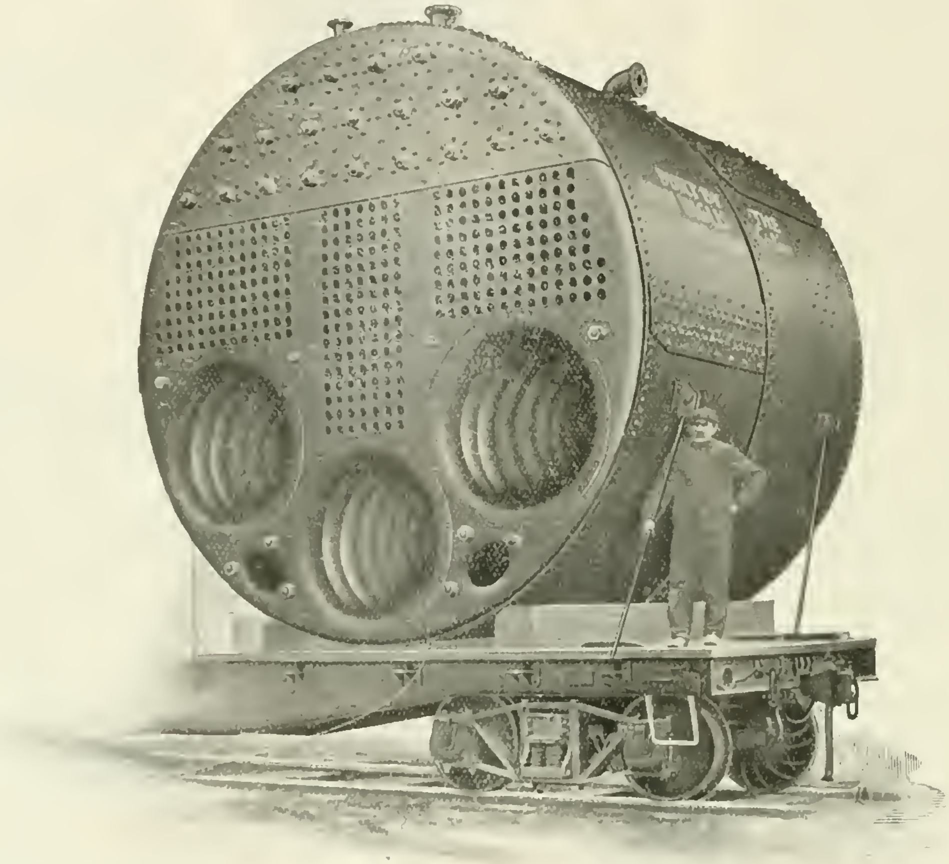
The superintendent should see that the locomotives in through freight service are loaded as far as possible to the economical limit and not beyond it. He should have the tonnage reduced when unfavorable weather conditions require it and increased when favorable weather conditions allow it. Failure to do this causes a great waste of fuel.

The dispatchers should endeavor to keep trains moving with as little delay as possible and not allow those that on account of having work to do or from other causes cannot make as good time as others, delay those behind them. I think dispatchers should be required to take as much interest in fuel economy as any other officials. On some roads this is done.

A performance sheet should be compiled monthly and a copy posted in each roundhouse. This should show the number of engine-miles made per ton of coal and the number of tons used per 1,000 ton-mile. The fact is that a road foreman who does not have any information to work on, cannot work intelligently. With this information he is in a position to compare results, he can dig out the men on the different districts that are in similar service, and if there is a big variation he is in a position to locate the man that is making the poor performance. If he could come down to the refinement of ton-miles per hour, we would get a closer and better performance, which we all hope to do, but if we are going to get the maximum amount of value out of our road foremen we will have to give them information to work on and the more information we give them, and the better information, the better and more valuable men they will be. The trouble is that we do not spend money enough to give our road foremen information to work on. If you get out a performance sheet and compare it monthly, the engineer also will take an interest in it, and if he has an engine that is not in condition, he will make an effort to get that engine put in condition, he will make a complaint to the roundhouse foreman or master mechanic and he will get those repairs made, otherwise he lets them go as long as he is able to make time. The performance sheet rouses the fireman's interest and as no man naturally prefers to have the worst performance, a healthy rivalry is promoted.

There is a general tendency, especially with western coal, for firemen to fire too heavily to get enough air to the fire. Then to admit air they go to extremes in shaking the grates, shaking live fire into the ashbox which is cleaned at intervals along the road and we have all seen in walking the tracks, how in this way the company's money is used for ballast.

BOILERS



Marine Boiler built for the R. & O. Nav. Coy's Str. Rapids Prince

We are headquarters for Boilers of all Kinds. — We guarantee Satisfaction, Quick Delivery and Right Prices. —Write us for Catalogue, Photos and Prices. — Sole Canadian makers of the well known

Erie City Water Tube Boiler

THE JOHN INGLIS CO. LIMITED
Engineers and Boilermakers
14 Strachan Ave. - - - TORONTO, CANADA

Coal is too expensive an article to use in place of gravel for ballasting.

Leaky tubes are another source of waste of fuel. Another thing which I believe demands attention along these lines is the care and attention given the inside of the boilers. An engine uses a great deal of water every day in service, and in so doing leaves the mud and scale-making properties affixed to the flues, and in fact all parts of the boiler occupied by the water, and, while we consider they are washed out, there is left that solid coating on the flue and elsewhere that will not come off. In a very short time the formation of this scale begins to thicken and acts as a non-conductor of the heat to the water and the gases pass through the flue having left but small portion of their heat to the water as there was an insulator between it and the water, hence a most decided waste of fuel.

Some U. S. Government statistics relative to boiler scale may be of interest:—"To produce 100 h.p. for 3,000 working hours, with clean flues and boiler, it would cost $1,269, with coal at $1.50 a ton. Scale 1-16 in. thick, same length of time, $1,459; ¼ in. thick, $2,030; ½ in. thick, $3,172.50."

Further economy may be made by utilizing the deposits of lignite we have in the west. We are not allowed, even if we cared, to use this class of coal for locomotive purposes, but there is a great quantity, which could be used and thus save the higher priced coal. During the whole of this winter I have been using lignite for heating all our station buildings on the prairie with satisfactory results.

I have briefly and in a rambling manner outlined a few of the ways in which we can economize and further thought along these lines will suggest others. If we wish for results it must be by a long pull, a strong pull and a pull together, every man, from general manager to the man at the coal chute, must be made to feel a personal interest, and it should be the aim of every fuel agent to create this interest by starting with his own department and getting into close touch with the mechanical officials, who are the actual consumers of the largest portion of his fuel. It means team work all along the fuel line, and if this is done in the proper spirit, I have no hesitation in saying that you will get the desired results.

The foregoing paper was read before the Western Canada Railway Club, in Winnipeg recently.

In the discussion which followed, W. H. Rosevear said that on the G.T.R., which he was connected with some years ago, a performance sheet was got out, and this created a sort of rivalry amongst the engineers and firemen, to bring out the very best results possible. A great many schemes had been tried in connection with this. Bonuses had been given the engineers and firemen for the best results, not only for fuel economy but also for oil economy. This worked very well, but it fostered a feeling among the different crews that was not conducive to the very best results. It was found that a freight train would be standing on a siding, and a passenger train would pull in. The driver of the passenger train would make it his business to pull in his train so that the two engines would be opposite each other, and when the crew of the freight train was busy the fireman would help himself to the oil and also get as many lumps of coal as possible. But the getting out of performance sheets, and giving credit marks to the crews which brought out the best results, worked out very satisfactorily indeed.

J. Hillis said that some months ago another paper on fuel economy was read before the Club which he thought gave the actual results as something like 10% going to actual fuel. To an outsider it seemed waste to throw away 90% at the very commencement. There seems to be a large field for economy just there.

In answer to questions Mr. Smith said the possibility of buying coal on the basis of chemical analysis had been considered. The U.S. Government was buying its coal on supply analysis, but the difficulty seemed to be in arriving at the standard of analysis. They make 100 samples and have each one analysed and then make a fair average. Some U.S. railways were working along similar lines, but the question of buying coal absolutely on analysis was not yet down to a set standard.

A. H. Eager having stated that the C.P.R. used a certain quantity of briquettes, Mr. Smith said there was not a briquetting plant in the west, but briquettes would be a great help. It was a subject that would have to be dealt with soon. He thought briquetted coal would be the thing of the future. Mr. Eager added that when in the C.P.R. service at Calgary he had considerable experience with briquettes. It was found that while they were injurious to the eyes, owing to the dust, during hot weather, still a certain quantity, say one-third, mixed with a poor grade of coal for locomotive purposes, gave satisfactory results. A poor grade of Crows Nest coal mixed with one-third of briquet gave better results. He thought that in the west and in B.C., where the coal is soft and fine, mixing with briquettes would be a very economical way of using it, on the smaller engines at least. Mr. Smith said that some of the largest engines running out of St. Louis, Mo., were using, and most of the European continental railways were using, briquettes—in Germany and France, at all events. There is a large quantity of lignite in this country, but he did not think the construction of the locomotives was adapted for this class of coal. The Board of Railway Commissioners will only allow its use three months in the year and that is during the busy and cold season when it is impossible to use it.

A. C. Frith referred to tests made in Washington State. They got on an engine specially constructed for burning lignite, and tested it against a standard engine burning bituminous coal, and the result was very much in favor of the lignite. In connection with the question of throwing fire, there were fewer sparks from the lignite coal than from the bituminous. Of course, the boiler and the smoke box had been specially arranged for the purpose. He thought this experiment showed that lignite could be burned without the excessive throwing of sparks, and he had no doubt that if this could be demonstrated to the Board of Railway Commissioners the restrictions on its use might be removed.

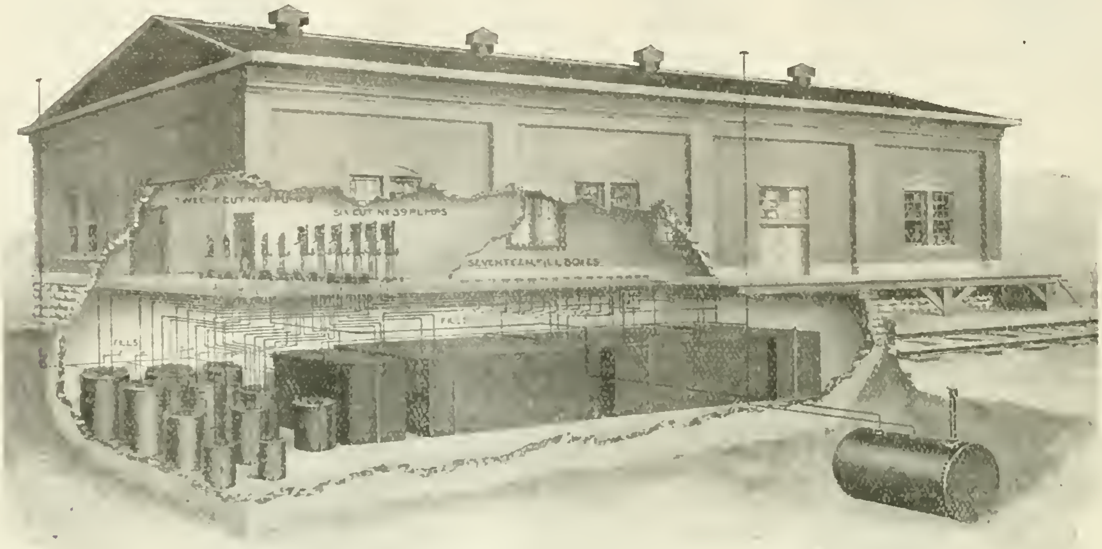
R. R. Neild pointed out that a great deal had been said about the commercial value of coal, but very little about the economy. As mentioned by Mr. Smith, a great deal could be done by the fireman, and also in seeing that the boiler is kept in proper condition. Every road running in the west passes through bad water districts, and all knew the formation of scale in the boilers during the time they are running through those districts. Eventually the economy which might be effected by the purification of the water may be very material. At the present time, of course, there was a great deal of expense in fuel, in running through these bad water districts, because, where scale has formed on the boiler more fuel is required. It was to be hoped, however, that there were no boilers in use with half an inch of scale. If firemen could be trained also in the method of firing coal, a great deal could be saved in that way. A great deal can be learned by firemen, in studying the engines which they are on, and also the class of power they use on the various divisions, and the most economical class of power to be put on the different divisions. The class of power that would be most economical in bad water districts and in good water districts could be watched. He thought that was where the economy would come in and not in the commercial value of the coal altogether.

A. H. Eager referred to Mr. Smith's suggestion that the chief dispatcher should be held responsible. He thought the superintendent of the division should be held equally responsible for fuel economy, as he was the man in charge. He had often been asked to turn out power, whether it was in condition or not. Until the time arrived when the superintendent was held responsible, the desired economy would not be got. When a superintendent asked a man in the locomotive department for an engine, it had to be furnished, if possible. When there was a rush of traffic, engines were often required when they were not in good repair, the result being a waste of fuel, as well as other things that the railways have to spend good money for. Mr. Smith had referred to engines left standing out of doors. There was not a road running west of Fort William that could house 50% of its engines, yet the mechanical department was asked to economize on fuel.

T. Duff Smith said he thought that would come under the team work. If they have not got the roundhouses in which to put the locomotives they should get them. He had seen the same thing. He had seen the dispatcher ask for an engine to be ready at a certain time, and then it would stand five or six hours without being used. If the dispatcher was fully conversant with the circumstances this would not be necessary; so that it came down to the old thing, it had to be team work from the very beginning.

A. H. Eager, Superintendent Shops Canadian Northern Ry., said that at Winnipeg they had last fall a 20 stall roundhouse, and made applications for 19 additional stalls. When they got into the cold weather they figured that they lost $150 a day for the want of the 19 stalls. At Rainy River they had 10 stalls for 50 engines. At Calgary the same conditions prevailed.

Mr. Young, of the C.P.R. Chemists Department, said that of course, one of the chief substances in water which caused scale was carbonate of lime. This was held in the water by carbonic acid gas, and when the water was evaporated the carbonate of lime was deposited in the form of soft mud. There was not so much difficulty arising from that however, as when the engine was washed out the mud was easily removed. There were other substances in water which cause scale; these are sulphate of lime and magnesia and sometimes chloride of magnesia. The chemist removes these substances by a process known as softening, in which the chemical agents used were lime and soda. There was a diversity of opinion as to the advantages of softening water. On the C.P.R. some engineers said that water softening was no good, and that they got better results before the softening was started. The reason of this was that the softening was not general. Soft water might be taken at one station, and when hard water was obtained at the next station reaction set in. He said it undoubtedly produced economy, perhaps not only in the economy of coal, but in the economy of the boiler, because there was not so much pitting and corroding of the boilers. Less coal would be required to generate heat from a boiler, the tubes of which were not coated with scale. If the scale forming constituents of water were removed by softening previously to putting the water in the boiler, they would not be deposited in the tubes, etc.



Central of Georgia Railway Oil House, Macon, Georgia

Railway Men Want Practical Things

That's why the

Bowser Storage Systems

have been adopted by more than one hundred and fifty railroads.

All the perplexing problems of oil storage, dispensing and expense are satisfactorily solved in a common-sense, practical way, by a Bowser.

The oil supply for shops, terminal stations and store rooms is placed on a money-saving basis by using a Bowser.

Just remember there is no phase of railroad oil storage that is not successfully met by a Bowser.

We have just published a book which covers this question fully. Let us send you one for your files. Ask for Book No. 6.

S. F. Bowser & Co., Ltd. Toronto, Ont.

66-68 Frazer Ave.

A. C. Frith said there was one direction in which economy might be effected, viz., in the question of design of the locomotive, and of late years a great deal had been done in that direction. The railways had been making efforts in that direction to get increased efficiency out of materials at hand, and in that way considerable improvements had been made in the design of locomotives in the direction of fuel economy. Some 15 years ago there was a great movement towards the use of compound engines, which gave very much increased fuel economy over that obtained with simple engines. More recently still there had been further improvements made by superheater engines, which had been found to give better results than with the compound engines, so that the designers were helping in the matter of fuel economy. With the engines of today they got more of the heat value of the fuel used than they did some years ago.

A. W. G. Clark said it appeared to him that Mr. Smith had hit at every other department but his own. The question of fuel economy begins at the mine itself. If you turn out 100% locomotives you are justified in expecting 100% work out of them. On the other hand, if you do not turn out 100% power you cannot look for that percentage of work. Now, if coal is supplied that runs from 20 to 25% ash, you cannot expect a fireman to do as well as he could with a better grade of coal. While no doubt the throwing of the blame to "bad coal" is sometimes resorted to as an excuse, his experience had been that in many cases it was justifiable. He thought there was a big field for a saving there. As he understood, the fuel department was also in charge of the contractors at the different terminals, and hence of the storing and distribution of coal, it was their duty to see that the coal was piled properly, for instance, not so high that a loss will be effected through spontaneous combustion, and that tenders are not coaled so high that the excess will spill over. He thought all these things added together should effect a saving.

T. Duff Smith said he recognized that they should buy the best quality of coal as far as the money lasted, but if the management cut down the expenditure to a certain figure they had to cut their coat according to the cloth. He believed that every railway should have its own inspector at the mine, so that he could see they were getting coal and not slate and rock. As far as buying the coal was concerned, every man had to stand by what his management said.

A. H. Eager said: "I think from what experience I have had there is one branch of fuel economy that is neglected more than any other—that is, the education of the firemen. We hire a man; he is put in the roundhouse as a wiper, and the first thing he knows he is put out on a locomotive some night, and he is a fireman. Sometimes he turns out a good man, but more often he is a misfit. Mr. Smith spoke about a road foreman. I speak more strongly for a travelling fireman, which is one of the best investments the companies could make. I used to go out on the engines myself, but I could not get down and handle the scoop to show the new fireman. I think that is a point that should be brought before the management of the railways, i.e., the education of the firemen. I have in mind a man running out of Calgary who can fire a 1100 or C 2 class engine, run 180 miles, and never shake his grates nor clean out the ash pan. It is just because he knows how"

A member said: The coal dock has not been touched upon. You can go to any coal dock in Winnipeg and you will find a large quantity of coal in big lumps. You don't get the benefit of that coal when it goes in in big lumps. You can also go round these coal docks, and you will find in this coal they are getting, (you have got to watch the box cars for it), there is a quantity of sand. The first man responsible for economy is the fuel agent. Let him see that he gets a decent quality of coal. With reference to putting a country lad on the engines. Mr. Eager says he wipes in the roundhouse about three months; then he is put on an engine, and if he gets over the road it is all right. They throw as much coal into the firebox as they can get in. There is more coal being burned on locomotives today than there is any need for. The dispatcher issues an order for an engine, and you have got to turn it out. Very likely the man in the roundhouse knows that the engine should not be turned out. You cannot expect an engine to go over the road and be economical, if it is not in a fit condition to go.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T Western Ry. and D.G.H. and M. Ry. separately, for Jan., as compared with Jan., 1910:—

Grand Trunk Railway.

	1911.	1910.
Earnings	$2,502,600	$2,385,700
Expenses	2,105,000	2,063,000
Net earnings	$ 397,600	$ 322,700

Canada Atlantic Railway.

	1911.	1910.
Earnings	$ 158,600	$ 142,900
Expenses	130,000	129,900
Net earnings	$ 28,600	$ 13,000

Grand Trunk Western Railway.

	1911.	1910.
Earnings	$ 550,800	$ 465,500
Expenses	433,500	381,200
Net earnings	$ 117,300	$ 84,300

Detroit, Grand Haven & Milwaukee Railway

	1911.	1910.
Earnings	$ 169,1[illegible]	$ 158,700
Expenses	148,400	134,600
Net earnings	$ 20,700	$ 24,100

Approximate earnings for Feb., $3,103,166, and for two weeks ended Mar. 14, $1,672,085, against $2,965,729, and $1,601,797 for same periods 1910.

Traffic Receipts of the System.

Aggregate receipts from Jan. 1 to Feb. 28:—

	1911..	1910.
Grand Trunk Ry.	£ 992,346	£ 952,123
Canada Atlantic Ry.	57,585	53,253
G.T. Western Ry.	215,440	190,437
D.G.H. & M. Ry.	67,041	61,458
Totals	£1,332,412	£1,257,271

The Manitoba Legislature and Railway Bills.—The Railway Committee of the Manitoba Legislature called attention, Mar. 9, to the great difficulty which it had in dealing with the various railway bills before it, "owing to the most varied and extraordinary powers asked for in all the applications, nearly all the regulations and rules applying to such railway bills never having been enforced. Committee recommended that all the requirements of the rules of the House respecting this class of bill be strictly adhered to, and that the general Railway Act of the province be so amended as to cover the usual and ordinary requirements of railway companies, that is to say, railways and tramways. The committee also recommended that the model bill attached to the rules of the House be used for all railway companies' applications, and that no departure be permitted from the rules of House in future." The report was received, to be considered at a later date.

During Jan. 20 employes were killed, and 29 were injured in the course of their work in connection with Canadian railways. Of the fatalities, seven were due to premature explosions of dynamite, five were due to crushing, five to being run over, and three to collisions, while of the other accidents, 13 were due to collisions, five to derailments, three each to being run over and to explosions of coal oil, and one each to striking object in passing, to being struck by engine, to being struck by coal in passing tender, to a fall and to a premature explosion of dynamite.

Discussion on Report on Ties by Can. Soc. C. E. Committee.

The report of the committee on ties presented at the Canadian Society of Civil Engineers' annual meeting in Winnipeg recently, as published in our last issue, with additional matter in connection with the question which we exclusively secured, has excited considerable interest among railway engineers and other officials of the construction and maintenance departments. As pointed out in that issue, the letter from the Chairman of the committee transmitting the report, stated that W. B. Mackenzie, Chief Engineer, and T. C. Burpee, Engineer of Maintenance of Way, Intercolonial Ry., dissented from the part of the report about the use of 10½ ft. ties. Their letters of dissent were not submitted with the report and as we deemed it of great importance to give both sides of the question, we obtained copies of the letters from them and published the same.

We also gave a complete report of the remarks made on the question at the meeting by the Chairman of the committee, D. MacPherson, who wrote us that he was very incorrectly reported in the other reports of the discussion he had seen. Our report, therefore, we believe, is the only complete and correct one of the whole matter that has been published. We have since received the following letters in answer to requests for opinions on the question.

J. G. SULLIVAN, Assistant Chief Engineer, C.P.R. Western Lines, writes from Winnipeg: "I note from the reports that my name was given as approving of 10½ ft. ties. I may say that I dissented from this portion of the report in letters to Mr. MacPherson. I do not think the 10½ ft. tie either an economically or scientifically designed tie."

In accordance with our usual practice, we communicated the contents of Mr. Sullivan's letter to Mr. MacPherson, who has written us in reply as follows:—"I attach you copies of the correspondence between Mr. Sullivan and myself with regard to tie committee's report, from which you will see that, although he did at first object to the 10½ ft. ties, the only reason he gave for the objection was the cost, and that he finally said he would gladly subscribe to the report (which contained the recommendation about 10½ ft. ties), provided I would introduce the word 'if' in the paragraph referring to the cost of preservative treatment of ties."

As the correspondence referred to contains a lot of important information, we give it in full further on. Mr. Sullivan, at the outset, opposed the portion of the report favoring 10½ ft. ties, to which later he added that the principal objection was the extra cost. A careful reading of the correspondence will show that he did not withdraw his objection. The subsequent correspondence between him and Mr. MacPherson was devoted practically entirely to the preservative treatment of ties, in connection with which he agreed to the report as changed. We do not think he intended to approve the portion of the report relating to 10½ ties, and although Mr. MacPherson was undoubtedly justified in affixing Mr. Sullivan's name to the report, we think the latter did not intend to assent to the portion of the report dealing with the length of ties.

G. A. MOUNTAIN, Past President and Honorary Councillor of the Society and Chief Engineer Board of Railway Commissioners, writes from Ottawa: "When I was Chief Engineer of the Canada Atlantic Ry., I made a lot of tests for length of ties, and I am of the opinion that for a high class main line such as the Grand Trunk, Canadian Pacific, and Grand Trunk Pacific Rys., where heavy engines are used, and the rails from 80 to 100 lbs. that an 8 ft. tie is too short, and I would recommend that a 9 ft. tie, 7 ins. square, be used in these cases. On a secondary line, say a line somewhat equal to the old Grand Trunk line passing through Guelph and the Sarnia tunnel, which I claim to be a secondary line, and where rails are laid varying from 65 to 80 lbs., I think that the tie should be 8½ ft. long, 6½ ins. square. Then for branch lines where rails from 56 to 65 lbs. are used, I would hold the 8 ft. ties 6 ins. square. This gives, in my opinion, a better distribution of load, and is a decided improvement on the present practice. Where there is much creeping particularly in swamps, I would use ties from 10 to 12 ft. long, depending on the softness of the swamp or muskeg. No creeping device that I have ever seen, and I have seen most of them, can compare with a long tie in resisting creeping track. I would add to these long ties, for track creeping, the clamp that goes on the base of the rail and catches hold of the tie. I am not of the opinion that it is good policy to bore a hole in the rail to put on an anti-creeping device."

C. M. ODELL, Resident Engineer, Sydney and Louisburg Ry., writes from Glace Bay, N.S.: "We are using ties of regulation specifications, 8 ft. long, 6 ins. face at the small end. These we are usin gon a road which as you know, carries very heavy traffic, some of our locomotives carrying 80 tons on a 15 ft. wheel base. Our road is laid with 80 lb. A.S.C.E. rails, and the ties are mostly hemlock, spaced 20 ins. centres. At the time the I.R.C. changed to a 9 ft. tie, we followed suit, mainly for the reason that manufacturers were then making 9 ft. ties, but I was never able to perceive any great benefit to the roadbed from the change, and we cheerfully returned to the 8 ft. ties. I would oppose any increase in length of ties, on account of the increase in cost, which I believe would be out of all proportion to the increased size of the tie, as not only would the tie getter have to go farther afield to find timber of sufficient size, but a stick of timber which would make two ties 8 ft. would make but one if the length were appreciably increased. For these reasons I would think it better, if necessary, to space the ties closer than to increase the length. We use tie plates on all curves on our main line. As an instance of the rapid increase in cost of ties, I may say that in 1894 I bought ties 8 ft. long, with 8 ins. face at the small end, delivered on right of way at 14c. each. To-day ties of same length, with 6 ins. face at small end, cost us 42c delivered on right of way. I am very glad to see so much interest being taken in this discussion, as the tie question is becoming a serious problem all over this continent."

T. J. KENNEDY, President Superior Construction Co., which is building 46 miles of the Manitoulin and North Shore Ry. from Crean Hill to Whitefish, Ont., who was until recently for many years General Superintendent of the Algoma Central and Hudson Bay Ry., and prior to that in the C.P.R. engineer and maintenance of way service, writes us from Espanola, Ont.:—"You ask for an expression of opinion on the use of a 10½ ft. tie instead of that now used which is eight feet. I beg to say that W. B. Mackenzie, Chief Engineer of the I.C.R., has so clearly outlined in his opinion, as given in your March issue, my own views in the matter that I find it hard to add anything to what he has said. I may, however, say that what is more required than anything else, in my opinion, to decrease cost of maintenance and increase life of ties is good ballast. Anyone at all familiar with the conditions as they now are on our Canadian lines will confirm the fact that the great weakness in our roadbed is caused by poor ballast, not 8 ft. ties."

S. B. CLEMENT, Chief Engineer, Temiskaming and Northern Ontario Ry., writes from North Bay, Ont.:—"In the report of the committee on ties, as presented at the recent meeting of the Canadian Society of Civil Engineers at Winnipeg, the use of 10½ ft. ties is strongly advocated. It is stated that 8½ ft. ties cannot be fully tamped at the centre for fear of breaking the ties, but that if 10½ ft. ties were used the ties could be fully tamped throughout their entire length. It is true that, if an 8½ ft. tie were fully tamped under its entire length, the maximum B Mt. would be at the centre of the tie, and that by lightly tamping the centre the B Mt. at the centre may be reduced until it is equal to or less than the B Mt. under the rails, but this light tamping of the centre is not only a protection to the tie itself, but it makes an easier riding track by increasing the stability of the track and preventing centre binding. The resultants of the pressures on each side of the centre of the tie fall within the rails. By lightly tamping the centre, these resultant pressures are kept closer to the rail and the stability is increased.

"A simple calculation will show that when the length of the tie is $5^1 (1+\frac{1}{\sqrt{2}}) = 8.54'$, and the tie is uniformly supported throughout its length, the B Mt. at the centre equals the B Mt. under the rails. When the tie is 10½ ft. long, as suggested by the committee, the B Mt. under the rails greatly exceeds the B Mt. at the centre of the tie.

"The committee on rails, in its calculation, assumes an axle load of 50,000 lbs. and allows 100% for impact, and also assumes that the rails, acting as continuous girders, distribute the axle load between three ties, the centre tie being an unstable support. With an axle over the centre tie, it is probable that only one-half of the axle load is transmitted to the adjacent ties and the centre tie carries one-half of the load, or 50,000 lbs., including impact.

"With a 7 ins. x 9 ins. x 8½ ft. tie and the above load, it is found that:

"The bearing area of tie on ballast equals 918 sq. in.

"Unit pressure on ballast equals 54.5 lbs. per sq. in.

"Max. fibre stress in tie equals 1,470 lbs. per sq. in.

"With a 7 ins. x 9 ins. x 10½ ft. tie:

"Bearing of tie on ballast equals 1,134 sq. in.

"Unit pressure on ballast equals 44.1 lbs. per sq. in.

"Max. fibre stress in tie equals 2,935 lbs. per sq. in.

"The fibre stress of 1,470 lbs. per sq. in. in the 8½ ft. tie is approximately one-third of the ultimate strength of the timbers ordinarily used for ties, giving the lowest factor of safety it is advisable to use. If the maximum fibre stress in the 10½ ft. ties is not to exceed the above amount, it will be necessary to use ties 9.8 ins. thick, or the nearest commercial size, viz., 10 ins.

"The committee assumes that the same ballast section can be used for 10½ ft. ties as is used for 8½ ft. ties. This assumption is not entirely justified, as the track requires a shoulder of ballast at the end of the tie to give it lateral stability, and without this shoulder the ballast under the ends of the tie will not carry the same pressure as the ballast under the centre of the tie. It is more probable that the use of 10½ ft. ties would necessitate the widening of cuts and embankments.

"The committee suggests a minimum spacing of 20 ins. centre to centre of ties, which is the equivalent to 20 ties per 33 ft. rail. When ties have a 9 ins. face there will be 11 ins. between the ties. Applying Thos. H. Johnson's formula (Proceedings A.R.E. & M.W.A., vol. 7, pg. 104), it is found that 35 ins.

of gravel ballast or 17½ ins.. of stone ballast will be necessary to produce a uniform distribution of pressure over the surface of the roadbed. With but 12 ins. of gravel ballast under ties with 9 ins. face, spaced 20 ins. centre to centre, all the bearing area of the roadbed will not be utilized, and there will be a tendency for the ballast immediately under the ties to sink in the roadbed, forcing the material of which the roadbed is composed up between the ties. It will not be economical to widen the roadbed. as will be necessary for use with longer ties, until all the available bearing area of our present roadbed is fully utilized. We have seen that 10½ ft. ties require to be 10 ins. thick, and if they can be properly tamped when spaced 20 ins. centre to centre, ties 7 ins. thick can be tamped when 18 ins. centre to centre, or 22 ties per rail.

"To summarize, I believe the following conclusions are justified:—

"1. Increasing the length of ties beyond 8½ ft. to prevent breaking at the centre is unnecessary.

"2. A tie 10½ ft. long should be 10 ins. thick to be of the same strength as an 8½ ft. tie 7 ins. thick. A 7 ins. x 10 ins. x 10½ ft. tie contains 73.5 FBM. while the 7 ins. x 7 ins. x 8½ ft. tie of equivalent strength contains but 41.6 FBM.

"3. The 10½ ft. ties will require a wider spacing and wider roadbed and a greater width of ballast than the 8½ ft. ties.

"4. The 8½ ft. ties, with the permissable closer spacing and with the narrower but deeper bed of ballast will give the desired result more cheaply and satisfactorily than the 10½ ft. ties.

"5. As two 9 ft. ties can be sawn from an 18 ft. piece of timber, and as timber is not generally cut, except in the even feet. a 9 ft. tie can be obtained quite as cheaply and as readily as an 8½ ft. tie. I believe that the adoption of 9 ft. as the standard length of ties is advisable, but that at present there is no necessity for adopting a length in excess of 9 ft."

H. K. WICKSTEED, Chief Engineer of Surveys, Mackenzie, Mann and Co., Ltd., writes from Toronto:—"You ask for my opinion on the proposal to increase the standard length tie from 8 to 10½ ft. While I am quite of opinion that a longer tie is desirable and that the arguments adduced by the committee are in the main sound and good, the increase of 30% seems to me rather a radical change, and I think that there is a good deal to be said on the opposite side, and that 9 ft. would be a sufficient departure from existing practice for initial experimenting. If results were satisfactory a further increase might be tried. In any case the tie must of necessity be at least proportionately increased in thickness."

T. HICKEY, Roadmaster Michigan Central Rd., writes from St. Thomas, Ont.: "I have, with a great deal of interest, read the report of the Canadian Society of Civil Engineers' committee on ties, in your March issue. The length recommended by the committee, 10½ ft. is in my opinion, too great, and too much of a radical change in the length of track ties for general use. I fear that many of the 10½ ft. ties would break at point of rail bearing. My experience is that our 8 ft. ties, which are being used at present, break less than the 9 ft. ties, which we used some years ago; 75 per cent. of the breakages took place at the rail bearing. I think the best dimensions for track ties are 8½ ft. long 7 ins. thick, and 9 ins. wide."

F. CHISHOLM, Roadmaster, Halifax & Southwestern Ry., Bridgewater, N.S., writes:—"I have had considerable experience with the 9 ft. ties and some 14 years experience with the 8 ft. ties, and I find that the 9 ft. ties break very much more readily. I would suggest that if any change is made in the dimensions of ties, they should be made 7 ins. thick instead of 6 ins., which I believe is in general use at present in this province. On account of the heavier rolling stock, I think the thicker ties would give very much more satisfactory service. I would not approve of a longer tie than that in use at present, except in a boggy piece of road where they would make the track much firmer and lessen the tendency to roll."

E. BRAZEAU, Roadmaster G.T.R., writes from Richmond, Que.: "In my opinion 8 ft. ties are giving more satisfaction than 10½ ft. ties would, in this part of the country especially, on account of the frost. For instance, during the present spring the track is working very badly under the 8 ft. ties and I am of the opinion that the frost would work more under the 10½ ft. ties, having more surface to work under, thus making the track worse. The 10½ ft. ties would take up a great deal more ballast than the 8 ft. ties do and also almost all the cuts on the single track at least would have to be widened to allow for a ditch. In yards where there are lots of tracks with 14 ft. centres, they would be of no use at all and besides would take a lot more labor to put them in and take them out.

In handling the ties from station to station, at present, we put four tiers of 8 ft. ties per car and with the 10½ ft. ties we could only put three tiers, thus losing one car on every four. To my knowledge, the C.P.R. made a practical test of ties 9 ft. long between Montreal and Vaudreuil, but they did not give satisfaction so they cut them all to the 8 ft. length. I entirely agree with the views of Mr. W. B. Mackenzie, Chief Engineer of the I.C.R. as published in your March issue."

S. J. FAUGHT, Supervisor Temiskaming & Northern Ontario Ry., writes from Englehart, Ont.: "I have read with much interest the matter in The Railway and Marine World for March respecting the proposal to increase the length of ties. I certainly agree that we should have longer ties in our roadbed. It is a well-known fact to all practical maintenance of way men that our ties and roadbed have not improved in comparison with the increase in weight of rolling stock during the past 25 years. The fact that we are still using the same 8 ft. tie goes to prove this. Of course, we are placing our ties closer, trying to overcome the difficulty with but slight success. When it is taken into consideration that our engines have not only increased over 100% in weight but more than 25% in width, also the cars, it is quite evident they are top heavy on the track on 8 ft. ties. No one knows as well as the roadmaster and the section foreman, the difficulty there is in keeping track in surface and line, especially in northern latitudes where the frost heaves and twists the track in all manner of shapes and forms. When the ties get loose in the spring and the frost is still in the roadbed, 8 ft. ties are not a good foundation for 200 ton engines running 50 miles an hour. No wonder that when the roadmaster is called out of bed at night to go with the auxiliary his first thought is spread track caused by bad surface or line, owing to lack of solidity of the roadbed. Then there is no excuse for the section foreman for allowing track to get out of gauge, although he is placed in the position that it is beyond the ingenuity of man to prevent it owing to the weakness of the roadbed and ties. My opinion is that 10½ ft. ties would improve the condition at least 50%.

"I cannot agree with Mr. T. C. Burpee that the breakage of ties would increase 75% or even 5%. Supposing it is in a cold country, all our 10½ ft ties would be tamped throughout and would have a solid bearing. Neither do I agree with Mr. W. B. Mackenzie that the cost of labor would be doubled. We do not expect one man to handle 8 ft. ties, and two men could handle the 10½ ft. ties almost as easily as they do the shorter ties. Because some writer said a long time ago that the 8 ft. tie was the best is no reason why it should be the best today when conditions have changed so much. The change from short to long ties would not appear so radical if brought about in the proper manner; that is to say if in running we first put in the long ties under joints and counters, or the weakest parts of the rail, then renew the other ties with long ties according as they decayed.

"I am also of the opinion that in using the 10½ ft. tie we could increase the space between ties considerably, as it is a well known fact that in trying to increase the strength of our roadbed we have placed our ties too close for proper tamping. Where we are now using from 20 to 23 8 ft. ties under a 33 ft. rail, our present standard, 18 10½ ft. ties would be sufficient. This would decrease the apparent lineal feet of 10½ ft. ties considerably. I say by all means, give us the longer ties and we will give you better track and will reduce the deficits by 50%."

ANOTHER ROADMASTER writes:—I think that the large increase of cost in material and labor would not justify the use of 10½ ft. ties. In the first place they would cost 25% more, and the cost of labor in putting them in and renewing and lining track would at least be 40%. It would be necessary to widen the ballast surface in order to have a shoulder of at least 9 ins. at end of ties to hold track in line; this would also incur an increased expenditure. I am also of the opinion that the longer ties would cause a more uneven surface by frost heaving, on account of the longer surface affected by frost. In winter, the tendency to breaking would not be diminished in the longer ties on account of the ends being exposed which would let the frost out at the ends before the centre, causing track to get centre bound and ties breaking. When ties are well down in ballast and a good shoulder of ballast at the ends, track is not liable to get centre bound, minimizing the breaking of ties. I would recommend ties to be 8½ ft. long. This would give about 19 ins. outside of rail tamped firmly, and 19 ins. inside of each rail also tamped firmly, this would leave about 15 ins. in centre of track which should be filled just enough to exclude water, but not tamped so firmly as the other parts. This prevents track getting centre bound and out of line, and gives a firm, equal bearing surface inside and out of rail. I am therefore strongly of the opinion that an 8½ ft. tie put in in this way is superior to ties 10½ ft. and 75% cheaper.—J. J. B."

CORRESPONDENCE BETWEEN D. MACPHERSON AND J .G. SULLIVAN.

Following is the complete correspondence between the Chairman of the Can. Soc. C.E.'s committee on ties and J. G. Sullivan, Assistant Chief Engineer C.P.R., referred to above:—

J. G. SULLIVAN to D. MACPHERSON, Nov. 24, 1910:—"Your circular letter of Nov. 18 received. I cannot subscribe to your assumption re saving by using treated ties. In the first place, the first cost of our ties at present is not 50c, but is between 40c and 45c. To this should be added the cost of freight and the cost of putting in track. Then this sum at compound interest for the life

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

CHICAGO

of the tie, on our road over eight years, would be the total cost for the time given. Then, the cost of renewal, added to this sum taken at compound interest for the time that the treated tie would last, which I think would be about 16 years, would give the cost for the second period.

"The cost of treated ties would be the first cost of tie, freight, cost of treatment, and cost of putting in track, figured at compound interest for the life of the tie, I should say about 16 years.

"I think you will find that these two sums will very nearly balance, for the reason that you cannot treat ties for 12c. with creosote. It will be closer to 32c., somewhere between 30 and 35c.

"I do not like to subscribe to any particular method of treating the tie. I am perfectly willing to endorse creosoting for Canadian climates, in preference to other methods of treatment, but I am not willing to endorse any specific method of doing the work.

"Another part of the report that I would not care to subscribe to is the length of 10½ ft. for ties."

D. MacPherson to J. G. Sullivan, Nov. 28, 1910:—"Replying to your criticisms of the 24th inst., on proposed draft of tie committee report. You say that your ties only cost from 40 to 45c., but ours have been costing from 50 to 75c., and, of course, in our report, we only want to arrive at a fair average, and 50c. is the average price fixed by the Maintenance of Way Association for hewn ties in their last report. You are fortunate if you get an average life of eight years out of untreated ties, and, for the sake of comparison, I will accept that figure with 16 years for treated ties.

"My price of 12c. for creosoting was doubtless too low, but, on the other hand, I think yours of 32c. too high. It all depends, of course, on the completeness of the plant and the number of ties treated. The Atchison, Topeka and Santa Fe Ry. has gone into the matter pretty extensively, and reports the cost of creosoting pine ties to be 20c. In order to try and meet you half way, I will assume the following values for a basis of calculation:—First cost of untreated ties, 50c.; treated ties, 75c., with an addition of 15c. for freight and putting in track for all ties. Life of untreated ties, 8 years; treated, 16 years; rate of interest, 4%. Annual consumption of untreated ties, 12,000,000. On this basis the total capitalization necessary to buy an untreated tie and to produce in compound interest enough to renew it at the end of its life, would be $2.41, and, for a treated tie, $1.93.

12,000,000 ties at $2.41	$28,920,000.00
12,000,000 ties at $1.93	23,160,000.00
Difference in capital expenditure	$ 5,760,000.00

$5,760,000 at 4% = $230,000 a year.

"This same capital expenditure would have to be repeated for eight years until all the ties were treated and the renewing fund complete, which would make a total saving in capital of 8×$5.76 millions = $46,080,000, which at 4% = $1,842,000. Annual saving equal to $18,420,000 if annual consumption 120,000,000 ties.

"Would you be agreeable to substituting the above figures for paragraph 3 in the draft of report sent you?

"In regard to 10½ ft. ties, I did not expect any one to be very enthusiastic about it, but would be glad to have your full reasons for objecting."

J. G. Sullivan to D. MacPherson, Nov. 30, 1910:—"Your letter, Nov. 28, re tie committee report. I heartily agree with you that on account of conservation of timber we should go to the treated tie just as soon as we can afford to, and our company has carefully gone into this matter in the past four or five years, and has recently let a contract for treating several millions. The figures I gave in my previous letter were the honest results of our investigations. We went further and discounted the price we might have to pay for ties in the future in making the comparisons, and we could not figure out any place where we would be justified in treating ties, excepting Winnipeg, which is practically the eastern gateway for the ties used on a large portion of our prairie, and there is no great extra cost for freight to and from the works.

"I cannot follow your figures, and give you below a comparative statement that I would make up if I was making a report to my company, using the price of ties as 50c. for the present, and 56c. for eight years hence, as you do. You must remember that on a great many of our branch lines and unimportant main lines, ties rot out before they wear out. On these we are not compelled to put tie plates, excepting on curves. If we go to creosote, we will have to put tie plates on every tie in the track, or they will wear out before they rot.

"We have several tenders for treating ties, and they averaged from 9 to 12c. a tie, exclusive of creosote. The cost of unloading and piling that I give is actual contract price. The cost of piling and reloading, we are paying $1.25 per 100 ties, but in case we furnish cars in which they can be loaded direct, there is no charge. In the comparative statement I have put down half a cent for this, and I have figured that a plant would only have to supply a district with a radius of 300 miles. This, as you know, is too small for a Canadian road.

"Comparative statement of cost of treated and untreated ties:—

First cost of tie	50c	
Freight, 150 to 200 M. ⅓ ton	05c	
Putting in place	15c	
		70c
Interest compounded at 4% 16 years		61c
First renewal.		
Cost of tie (estimated increase 6c)	56c	
Freight, 150 to 200 M. ⅓ ton	05c	
Putting in place	15c	
		76c
Interest compounded, 4%, 8 years		28c
Total cost per untreated tie in track (for 16 years)		$2.35

$2.35 discounted at 4% compound interest, 16 years, equals $1.25½.

First cost of tie	50c
Freight, 150 to 200 miles, ⅓ ton	05c
Unloading and piling	01c
Insurance and interest, one year	01c
Treating, exclusive cost of creosote	10c
Piling and loading	00½c
Freight, 175 to 300 M. at ⅓ ton	08¾c
Tie plates (½ ties extra)	12c
Putting in track	15c
Total	$1.03¼

"Leaving a balance of 22¼c. to pay for creosote and freight on same to works.

"As to the 10½ ft. tie, of course, the principal objection is the extra cost. We may have to come to a 9 ft. tie if we increase our axle loads very much more."

D. MacPherson to J. G. Sullivan, Dec. 3, 1910:—"Many thanks for yours of Nov. 30. It seems to me that we are pretty well agreed as to advisability of making a beginning at tie preservation, and, though there are doubtless many places where it would not pay to treat ties as yet, there are some places where it would, and the only way the public can be educated up to the necessity for beginning is to assume reasonable average data and figure out the possible saving. It is difficult to make an absolutely fair practical comparison of this saving, but, as nearly all the ties in use at present are untreated, and about 12,000,000 are used per year in Canada, the total number in track must be about 96,000,000, if we assume the average life eight years. Now, all these ties must be renewed within the next eight years, and capital must be provided for the purpose and for future renewals as well. It seems to me the fairest way to make this comparison is:—First, to estimate the amount of capital necessary to renew all the ties, without treatment, and provide for future renewals of the same kind. Second, to estimate the amount of capital to replace all the ties with treated ones, and provide for their future renewal. The interest on the difference between these two capital amounts will surely represent the annual possible saving, on the basis assumed for purposes of calculation. The basis of my calculations were:—Cost of untreated ties in track, 65c.; treated ties, 90c.; life of former, 8 years; latter, 16 years, and interest 4%; cost of treatment, 25c. On those assumptions the capital necessary to purchase and put an untreated tie in the track and furnish interest sufficient for its perpetual renewal would be $2.41, and $1.93 for treated ties. I do not quite see what figures of mine you do not follow, but our results would seem to be about the same, except for the difference in the data. There is something in what you say about tie plates, but to bring them into the question makes it still more difficult to make anything like an accurate comparison, for which reason I have omitted them. Your own figures, after allowing 12c. a tie for tie plates, show a balance of 43½c. for treatment, and, if that can be done for 25c. the saving would be 18½c. a tie, or 30½c. if tie plates are not considered.

"I agree with you that the principal objection to the 10½ ft. ties is the cost, and, of course, the practical difficulty of making the change from shorter ties, but there would not be much improvement in substituting 9 ft. ties for 8 ft., and the practical difficulties of bringing them into use would be almost as great as for 10½ ft.

"I propose to change paragraphs 3 and 4 to read as follows:—

"(3) Assume average cost of untreated ties at point of shipment at 50c.; freight and putting in tracks, 15c.; total, 75c.; average life, 8 years. Initial cost of treated tie the same as above, cost of treatment, including extra handling, 25c.; total, 90c.; average life, 16 years. If 12,000,000 untreated ties are being used annually, and their average life is 8 years, there must be about 96,000,000 in use, and the capital necessary to place these ties in the track and provide for their renewal every 8 years, on a 4% basis, would be $2.41 a tie. The capital necessary to place treated ties in the track and provide for renewal every 16 years would be $1.93 a tie. The total capital necessary:—

96,000,000 ties at $2.41 = $231,360,000 for untreated ties.
96,000,000 ties at $1.93 = 185,280,000 for treated ties.
Total difference in capital $146,080,000 for treated ties.
$46,000,000 at 4% = $1,843,200 = eventual annual saving.

"(4) As the cost of untreated ties and the numbers used are increasing very rapidly, and the cost of treatment is likely to be reduced, surely no more need be said to prove the urgent necessity of beginning at once the introduction of treated ties, at all points where their capitalized values will show a fair saving on the investment, even if the question is only viewed from the standpoint of economy for the railways.

"As our report is intended only to point out how the best results might be attained, without putting any onus on the railway companies, I trust you will still see your way clear to concurrence in same. Kindly let me hear from you if you will sign report not later than Thursday, the 8th, and oblige."

J. G. Sullivan to D. MacPherson, Dec. 6, 1910:—"Your letter, Dec. 3. I will be very glad to sign the report as

you have it now, providing you will put the statement of the cost of treatment of ties, including extra handlings, 25c., in the subjunctive mood, as I do not like to sign a statement showing a cost of at least 50% less than my company are having to pay for the treatment of ties. However, if you will introduce an 'if' in that statement, I will gladly subscribe to the report."

D. MacPherson to J. G. Sullivan, Dec. 9, 1910:—"Replying to yours of the 6th inst. about tie committee report, I have introduced the word 'if,' as suggested by you, and am sending the report to the Council today. Please accept my thanks for the interest you have shown in the matter."

We would be pleased to hear from others on this important sbject.

In this connection we think a change in the method of submitting reports by the Society's Committees is very desirable. As already pointed out, the report of the committee on ties, to which the signatures of a considerable majority of the committee were appended, advocated the use of 10½ ft. ties, and suggested that tests be made. The Chairman's letter transmitting the report mentioned Messrs. Mackenzie and Burpee as dissenting, but did not give their reasons, which would probably have remained unknown, except to the chairman, had we not secured copies of their letters for publication. It is quite true the dissenting members did not submit any minority reports, but the value to the Society generally of the committee's report would undoubtedly have been considerably enhanced had the views of the members of the committee who dissented from the majority been appended to the report fully. We are told that it was assumed they would attend the meeting in Winnipeg or send to me written discussion. As they had already submitted their reasons in writing, it appears to us that it was hardly reasonable to expect them to send in a written discussion in addition, or to attend the meeting unless it was convenient for them to do so.

◆

Prince Edward Island Railway.

In his transportation speech in the House of Commons Mar. 10, the Minister of Railways, referring to the P.E.I.R., said up to Dec. 31, 1909, there was a net loss of $53,294.11, representing a decrease in the loss for nine months of $11,114.93 as against the preceding year. It did not pay, never would pay, and no one need ever try to make it pay. It was not the Department's intention to try to make it pay. When the Island came into Confederation the Government took over the railway, and it is the duty of Parliament to give the P.E.I. people a good railway service so far as that is possible. Although it is a certain contribution from the Federal Government to the people of the Island, so long as he was a Minister, he was prepared to advocate a liberal treatment of the people there in reference to their transportation facilities. The capital expenditure on the line during the past financial year was $185,000. and there was a branch line being built on which there had been expended $206,297.

◆

Train Dispatching by Telephone.—We are advised that the Michigan Central Rd. has installed telephones on its line between St. Thomas and Windsor, Ont., for train dispatching. It is hoped to complete the telephone system between St. Thomas, Niagara Falls and Buffalo by the end of the year. At present the company is dispatching trains by telephone on eight divisions west of the Detroit River, with satisfactory results. It is intended in time to extend telephone dispatching over the entire system.

British Columbia Railway Acts.

Two measures of importance affecting railway companies were passed at the recent session of the British Columbia Legislature. The first, "An Act respecting the Department of Railways," provides for the appointment of a permanent Deputy Minister of Railways, with such other officers as may be necessary, to work under the Minister of Railways whose duty it shall be "to exercise superintendence and control over all railways subject to the legislative control of the province," whether the company owning or controlling such line was incorporated under special act of the legislature or otherwise. The act is to be retro-active, but all such companies as are already in existence are given any new powers conferred upon companies by this new act. The reason for the creation of the department arises from the construction and operation of various lines under provincial charters, such as the Canadian Northern Pacific Ry., the Portland Canal Short Line Ry., and the Victoria and Sidney Ry. We are advised that the Department will be organized under the Minister of Public Works, the Hon. Thos. Taylor, and that it is the intention that F. C. Gamble, Provincial Public Works Engineer, shall act as Chief Engineer.

The second measure, "An Act respecting railways," amends and consolidates the previously existing acts relating to railways. The first part provides for the administration of the act by the Department of Railways subject to the approval of the Lieut.-Governor-in-Council, and enacts that the provisions of the act shall apply to all existing companies chartered within the province. Part two deals with the incorporation of railway companies. The eight sections in this part provide that any five or more persons may by subscribing their names to a memorandum of association, and complying with the various other requirements of the act become a body corporate for the purpose of building a railway wholly situate within the province, and no railway company may hereafter be formed in British Columbia except under the act. Within 30 days after the filing of the certificate of incorporation the company must deposit $15,000 with the Minister of Railways, which is to be returned on the completion of construction, or forfeited if the line is not built. If the money is not deposited the charter is automatically voided. The Minister is given power to define the company's borrowing powers, to fix the price of the securities to be issued and the purposes to which the proceeds are to be applied. Part three deals with the granting of permission to build branch lines and extensions; the acquirement of other similar companies, etc. Part four deals with the general powers usually conferred upon railway companies. Part five grants permission to companies to occupy unoccupied Crown Lands, and authorizes the Chief Commissioner of Crown Lands to fix the price of such lands. The sixth part provides that the companies incorporated must begin construction within 12 months after incorporation, expend at least 15% of the share capital within two years, and complete construction within five years. Extensions of time to complete the line may be given, but only if the provisions as to actual commencement of construction and initial expenditure have been faithfully complied with. The seventh part contains the provisions for the conduct and management of companies, and succeeding parts up to and including 23, deal with everything connected with the building of the railway. The operation of the line, in all its departments is dealt with in 24 and subsequent parts. These sections provide that standard tariffs are to be made for passengers freight, express, etc., and are subject to the approval of the Department. The company may, subject to the Department's approval, make bylaws, rules and regulations for the regulation of traffic, etc., and special constables may be appointed by the companies for the protection of property and the enforcement of its bylaws and regulations. Statistical returns, in accordance with forms to be prescribed by the Minister are to be sent in annually, and special returns may be asked for at any time. Various penalties may be enforced for non-compliance with the terms of the act.

The act repeals the following acts:—Chap. 163, 1897, "An act respecting railways; chap. 44, 1901; chap. 40, 1905; chap. 32, 1907, being acts amending chap. 163 of 1897; chap. 185, respecting the incorporation of Tramway, Telegraph and Telephone companies, of 1897, chap. 40, 1900, and chap. 51, 1901, being acts amending the same.

◆

Canadian Ticket Agents Association.

At a meeting of the executive committee in Toronto, March 9, invitations for the holding of the annual meeting, etc., at Sault Ste. Marie, Ont., and Charlottetown, P.E.I., were considered. The question of meeting at Ottawa, Cleveland or Toronto, with a trip to Muskoka, was also talked over. W. B. Moorhouse, C.P.R. ticket agent, Sault Ste. Marie, advocated the claims of that place, presenting invitations from the mayor and board of trade, and it was decided to accept the same. It is probable that most of the members will go to Sault Ste. Marie by train and return by boat.

W. McIlroy, C.P.R. City Ticket Agent at Peterborough, Ont., was appointed to represent the Association at the American Association of General Passenger and Ticket Agents' convention at St. Paul, Minn.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Albert and Moncton Ry.—The provisional directors named in the application to the Dominion Parliament for the incorporation of a company with this title are: F. V. Wedderburn, T. M. Robinson, St. John N.B.; Hon. P. McSweeney, Moncton, N.B.; J. W. Domville, Rothesay, N.B.; J. W. Domville, W. S. Gardner, E. Domville, Montreal; J. D. Mackenzie, J. C. D. Mackenzie, J. E. Hawkins, J. King, London, Eng. The company proposes to build a line from Hillsboro, N.B., to the Albert Mines, and thence to Moncton, obtaining entry into that city by means of a railway and general traffic bridge to be erected over the Petitcordiac River. The company asks authority to enter into agreements with the General Oil Shales Co., of Canada. (Feb., pg., 109.)

Alberta and Great Waterways Ry.—By a judgment of the Alberta courts the company and the Western Canada Construction Co., have been made co-defendants with the Royal Bank, in the case instituted by the Province to secure the proceeds of the bonds which were guaranteed by the province.

The Alberta Government has received a number of claims aggregating about $30,000 for work done upon this projected railway. Under the act cancelling the contract. the government undertook to investigate and discharge claims for work done under the contract. (Mar, pg. 205.)

Alberta Central Ry.—We are advised that the two spur lines at Rocky Mountain House, the route maps of which have been approved by the Board of Railway Commissioners are for industrial purposes. One line is to a coal mine in the vicinity and the other to a lumber yard at the mouth of the Clearwater River. Each of these branches is over a mile long. On the line under construction for 50 miles west of Red Deer, Alta., about 20 miles have been completed to grade. The Board of Railway Commissioners has approved location plans for a further distance of 40 miles, from mileage 80, sec. 19, tp. 33, range 17 to mileage 120, in sec. 15, tp. 32, Alta.

In the course of the passage of the bill through the House of Commons, the routes of three branch lines which it is proposed to build in the vicinity of the Big Horn Range were more particularly defined than in the original act. The first is a 30-mile branch starting from the main line between the North Saskatchewan and Brazeau Rivers, and the route as defined is "along or near the Wapiabi Creek, South Creek, and Chungo or Trail Creek respectively;" and two branch lines each 25 miles long northerly and easterly from near the north end of the Big Horn Range of Mountains through ranges 20, 21 and 22, tps. 43, 44, 45 and 46 west of the fifth. meridian; and northeasterly from near the same point, along the Brazeau River to the mouth of its north branch, thence northerly up the Pembina River near where the already authorized line crosses the Brazeau River. (Mar., pg. 205.)

Algoma Central and Hudson Bay Ry.—It is proposed to start filling in all the trestle bridges on the line from Sault Ste. Marie to mileage 69, from which point the line is being extended to Hobon, on the C.P.R. transcontinental line. This extension is expected to be completed this year. A new station is to be built at Bruce St., Sault Ste. Marie, and a new terminal yard laid out north of the Tagoma section of the town, and it is also contemplated to extend the line along the river front as far as the ferry docks. (Mar., pg. 205.)

Atlantic, Quebec and Western Ry.—The Minister of Railway stated in the House of Commons recently that the audit department was making a complete audit of the company's books to ascertain the exact amount of money spent upon construction, and the chief engineer was making an inspection of the line in order to see how far it had been constructed. From papers which had been previously brought down it appeared that the total cost to date was reported to the Government to have been $2,451,550, and that a further sum of $769,902 was required to complete the 102 miles. The subsidy, amounting to $396,902 had been paid to the Bank of Montreal which held a power of attorney from the company. Of the 102 miles, 56 had been completed and considerable work had been done on the remaining 46 miles. The operations on the portions of the line opened to June 30, 1910, showed a deficit of $9,872. (Feb., pg. 109.)

British Columbia and Alaska Ry.—L. M. Rice, C.E., Seattle, Wash., who is in charge of the surveys for this projected line from Vancouver to Alaska, is reported as having stated Mar. 13, that the surveys are well in hand, and that they will be pushed to a completion at the earliest possible moment. The northern terminus has not been definitely selected. (Mar., pg. 205.)

Burrard Inlet Tunnel and Bridge Co.—A deputation from Vancouver, B.C., and surrounding places affected, waited on the Dominion Government, Mar. 14, and asked that a subsidy be voted towards the building of the proposed bridge. Consideration of the request was promised.

Negotiations are in progress with the Seymour Creek Indians, with a view of the company acquiring 100 acres of the waterfront lands of the reservation. (Mar., pg. 249.)

Canadian Coal and Coke Co.—A company with this title was organized Feb. 19, in Montreal, with a capital of $12,000,000 for the purpose of taking over and amalgamating the following companies: Western Coal & Coke Co.; Lethbridge Collieries; St. Albert Collieries, and the Pacific Pass Coal Fields Co. The following are the officers and directors: President, H. K. Lovett, K.C.; Vice President, E. B. Greenshields; other directors: Hon. R. Mackay, R. Forget, M.P.; C. H. Cohan, K.C.; J. N. Greenshields, J. W. McConnell, N. Curry, J. P. Ross and A. H. Cook.. Since the meeting a number of actions have been entered by sections of the shareholders of the Pacific Pass Coal Fields Co., to prevent the absorption of that company.

The Western Coal and Coke Co. controls the charter of the Kootenay and Alberta Ry.; the Lethbridge Collieries Co. and has a spur line under construction to connect its collieries with the C.P.R. Crow's Nest Pass branch, while the other companies named have power to build railway lines.

Canadian North Eastern Ry.—The British Columbia Legislature has changed the name of the Portland Canal Short Line Ry., as above, and authorized the building of an extension to the eastern boundary of the province near the Pine River Pass, and other lines.

A cargo of 40,000 ties has been delivered at Stewart in readiness for restarting work on the building of the line from Stewart to Bear River, B.C. The grading is reported to be completed, with the exception of a rock cut at the canyon, on which work is still in progress. Early in the spring a spur line is to be built to the Portland Canal concentrator. (Mar., pg. 249.)

The Caribou, Barkerville and Willow River Ry. Co., which was incorporated by the British Columbia Legislature in 1910, is asking the Dominion Parliament to declare that the line to be built is a work for the general advantage of Canada, and to authorize it to make a connection with the G.T. Pacific Ry., at Eagle Lake, B.C. Senckler, Spinks and Van Horne, Vancouver, B.C., are solicitors for applicants. (Mar., pg. 349.)

Crow's Nest and Northern Ry.—The British Columbia Legislature has extended the time within which this projected line may be built. (April 1909, pg. 244, and Jan., 1909, pg. 17.)

Dominion Development Ry.—In the course of the passage of the bill through the House of Commons objection was taken to the title of the company, and an arrangement was made by which it should be changed to the British Columbia and Central Canada Ry. This was carried out by resolution of the House of Commons in committee, Mar. 14. (Mar., pg. 249.)

Great Lakes and Hudson Bay Ry.—It was decided not to proceed with the application to the Ontario Legislature for the incorporation of a company with this title to build a railway from Peninsula Bay on Lake Superior, to Hudson Bay. (May, pg. 205.)

Grouse Mountain Scenic Incline Ry.—The British Columbia Legislature has incorporated a company with this title; the application of a second company for the incorporation with the title of the Grouse Mountain Scenic Ry. being withdrawn. (See Vancouver, North to Grouse Mountain, Mar., pg. 249.)

Hartland and Miramichi Ry.—Application is being made to the New Brunswick Government for a guarantee of bonds to aid in the building of the line authorized last session of the Legislature, from Hartland, on the St. John River, to Sparkle on the National Transcontinental Ry., 40 miles. S. S. Miller, is President, and M. L. Hayward Secretary of the company. Its office is at Hartland, N.B. (July, 1910, pg. 547.)

Howe Sound and Northern Ry.—Press reports state tenders will be called for at an early date for grading an additional 10 miles on this line, and for building a bridge across the Cheakamus River. This point is 10 miles from Newport on Howe Sound, B.C., and the reports say that track has already been laid between these two points. (Feb., p. 111.)

Hudson Bay, Peace River and Pacific Ry.—The provisional directors named in the bill, before the Dominion Parliament for the incorporation of a company with this title, are: J. Nairn, Edinburgh, Scotland; R. M. Simpson, R. McLennan, H. Ross, R. D. Waugh, W. M. Noble, H. W. Adcock. Winnipeg. In addition to the powers already mentioned as being asked for, the promoters are applying for power to build a branch line from Winnipeg, easterly and northerly to Fort Churchill, on Hudson Bay. H. W. Adcock, Winnipeg, is solicitor for applicants. (Feb., pg. 155.)

Intercolonial Ry.—Plans for the laying out of additional terminal facilities at Halifax, on plans, prepared by J. Kennedy, Consulting Engineer, Montreal, were discussed between the Government Railways Managing Board, and the Halifax Board of Trade, Mar. 12. They provide for an expenditure of about $2,000,000 and were approved by the Board of Trade.

With reference to press reports as to the early construction of a diversion of the line between Nelson and Derby Jct., N.B., we are officially advised that nothing has been decided.

Tenders are under consideration for the erection of a stone and brick passenger station at Campbellton, N.B., to replace the temporary structure used since the fire. The roundhouse and machine shop erected there to replace the build-

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto - - -	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto - - -	9.40 p.m.	Daily except Sunday.
Leave North Toronto - - -	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service.

SLEEPING CAR SPACE HELD

Toronto City Office, 16 King St. East

North Toronto Station King Edward Hotel West Toronto Station

ings destroyed by fire are completed. (Mar., pg. 205.)

Intercolonial Ry.—Press reports state that it is proposed to build a new steel bridge over the Nashwack River, near Marysville, N.B., and another one near Doaktown, N.B. (Mar., pg. 205.)

International Ry. of New Brunswick.—We are officially advised that this company has power under its act of incorporation to build a bridge for railway traffic across the St. John River, at St. Leonards, N. B., in conjunction with any company incorporated for a similar purpose in the State of Maine. A number of citizens of Van Buren, Me., are considering the desirability of obtaining such a charter and undertaking the building of the bridge. At present a bridge for highway traffic is being built by a joint commission representing the State of Maine and Canada. Application was made to have this bridge made of sufficient strength to carry railway freight cars, drawn by electric motors, and it is said that both governments were agreeable, to make the necessary contributions towards the extra cost. The Maine Railway Commission either would not, or could not, agree to this being done, in the face of the act of the Maine Legislature which had appropriated money for the building of a highway bridge.

With regard to the proposed bridge over the Restigouche River, on the New Brunswick-Quebec boundary, at Campbellton, which would enable a connection to be made between the I.R. of N.B. and the old Atlantic and Lake Superior Ry., we are advised that there is a reasonable prospect of something being done. However, this depends on the Dominion Parliament granting aid towards the cost of construction. The construction of such a bridge would give to the Gaspe peninsula an outlet to New England points, especially in winter, for its fish, lumber, and farm products over the I. R. of N.B.

The I.R. of N.B. has paid into the Supreme Court of New Brunswick $3,000 and interest, the amount of the award in respect of land taken for right of way, and forming part of the lands subject to the provisions of the New Brunswick Ry. Act, in which the New Brunswick Ry. Co. has an interest. (Feb., pg. 111.)

Kettle Valley Lines.—The Board of Railway Commissioners has approved location plans of the extension of the line west and north of Midway, B.C., between Rock Creek, mileage 10.43, and Westbridge, mileage 20.91. Track was reported to have been laid to Cardiff, about 10 miles from Midway, when work was given over, owing to the uncertain weather. It is expected that work will be resumed April 1, both at the Midway and the Merrit ends of the extension. Press reports state a contract has been let to Macdonnell, Gzowski & Co., Vancouver, for a further 30 mile section of the extension, and that it is expected to have the 60 miles between Midway and Merrit completed in the fall. An arrangement is reported to have been completed for the purchase of 50 acres at Penticton, from which a spur will be built to a wharf which is to be built on the lake.

Application has been made to the Board of Railway Commissioners for approval of the location plans of the extension over the Hope Mountains, and notice of opposition has been filed by the Vancouver, Victoria and Eastern Ry., which has a route staked out through the same section of country. (Mar., pg. 205 and pg. 249.)

Kootenay and Alberta Ry.—We are advised that tenders for the building of a section of this projected railway are under consideration, and that a contract is expected to be awarded shortly. L. B. Merriam, 609 Builders' Exchange, Winnipeg, Man., is Chief Engineer. (See also Canadian Coal and Coke Co.)

L'Avenir and Melbourne Ry.—Application is being made to the Quebec Legislature for a subsidy in aid of this projected railway. (June, 1910, pg. 449.)

Lethbridge Collieries Co.—See Canadian Coal and Coke Co.

Manitoulin and North Shore Ry.—This contract for building the section of the line to connect the Sudbury-Krean Hill portions of the line, with the Whitefish Bay-Little Current portion has been let to the Superior Construction Co. The length of the section, including the loop to Espanola, is 46 miles. The route is described on pg. 111 of our Feb. issue. T. J. Kennedy, formerly General Superintendent of the Algoma Central and Hudson Bay Ry., President of the construction company, is in charge of the work, with offices at Espanola, Ont. J. D. McArthur, Winnipeg, Man., is Vice President of the Construction Co. The work is estimated to cost $1,500,000, and the contract has been let on a percentage basis. (Mar., pg. 207.)

Mid-Provincial and Nechaco Ry.—The British Columbia Legislature has authorized the incorporation of a company with this title to build the railway mentioned in our last issue. (Mar., pg. 249.)

Michigan Central Rd.—The Board of Railway Commissioners has authorized the use of subways, as follows: Tecumseh and Dougall roads, Sandwich tp.; Charing Cross, Kent county; and Ross St., St. Thomas, Ont.; and to use the drawbridges at Chippewa Creek. (Feb., pg. 111.)

Montreal and Northern Colonization Ry.—In re-drafting the bill before the Quebec Legislature asking for the incorporation of a company with this title, the promoters have reproduced almost entirely the sections of the Canadian Eastern Ry., a company incorporated by the Quebec Legislature in 1906. In committee Mar. 10. the names of the provisional directors were changed to A. Bougevin, W. Williamson, O. S. Perrault, R. Bickerdike and O. Faucher. (Mar., pg. 209.)

Montreal Central Terminal Ry.—Application is being made to the Dominion Parliament to extend the time within which the company's projected works may be constructed. Hogg and Hogg, Montreal, are solicitors for applicants. (Mar., pg. 207.)

Naas and Skeena Rivers Ry.—The British Columbia Ry. has incorporated a company with this title. (March, pg. 249.)

Northern Vancouver Island Ry.—The British Columbia Legislature has incorporated a company with this title. (Mar., pg. 249.)

Ontario Railways Co.—The provisional directors named in the bill before the Dominion Parliament, for the incorporation of a company with this title are: J. H. Kittermaster, J. Newton, I. Newton, H. F. Holland, Sarnia, Ont.; A. W. McLimond, Jackson, Mich.; A. D. Bennett, M. W. Mills, Port Huron, Mich. (Mar., pg. 249.)

Pacific and Hudson Bay Ry.—The provisional directors named in the bill before the Dominion Parliament, for the incorporation of a company with this title, to build the railways specifically mentioned in our Feb. issue, are: W. D. Verschoyle, J. F. Bledsoe, S. R. MacClinton, W. F. Brougham, T. J. L. Peake and G. D. Eaton, Vancouver, B.C., (Feb., pg. 113.)

Peace and Naas River Ry.—The British Columbia Legislature has incorporated a company with this title. The title appearing in the notice of application was the Naas and Peace River Ry. (See Naas and Peace River Ry., Mar., pg. 249.)

Prince Edward Island Ry.—We are advised in connection with the reports as to the early construction of the North Shore branch to connect Kensington and New London, P.E.I., about 12 miles, that nothing has been decided.

Reid Newfoundland Co.—In the Newfoundland Legislature Mar. 2, the Premier said the branch line from Shoal Harbor to Bonavista would not be considered complete until the spur line at Trinity had been built. The surveys for the spur, which would be a mile and a half long, had been made and approved; a portion of the right of way, and the site of the station in Trinity had been acquired. (Jan., pg. 23.)

Simcoe, Bruce and Grey Ry.—The Minister of Railways, replying to a deputation recently, said the application for a subsidy in aid of construction would receive careful consideration. The particular piece of line which the company proposes to build is that from Owen Sound to Meaford, for which Parliament has on previous occasions voted a subsidy. (Mar., pg. 209.)

Southern Central Pacific Ry.—The routes of the two branch lines which the company is asking the Dominion Parliament to authorize it to build, were more explicitly described when the bill was in committee. As passed by the House of Commons, one branch will start from the point where the projected main line crosses the Blind Man, or the North Saskatchewan Rivers, northwesterly crossing the Athabasca River, to Dunvegan on the Peace River, thence to the Parsnip River, then southerly to the Nechaco River, and then southwesterly to Deans Channel or Gardiner's Canal, B.C.; and the other starting from the Elk River, B.C., and proceeding easterly to Pincher Creek, the Waterton River, and Cardston, reaching the International boundary at Milk River. (Dec., 1910, pg. 1027.)

Temiskaming and Northern Ontario Ry.—The Ontario Legislature has authorized the Government to raise $3,000,000 for construction on this railway. The Provincial Treasurer said the extension to the Porcupine country would absorb $600.000 of this, and a further sum would be utilized for building a connection between the T. and N.O. R., and the G.T.R. at North Bay. The connecting line, several miles in length, would cross the C.P.R. line without going into the North Bay yards.

Application is being made to the commission to arrange for the building of a spur line along the water front at Haileybury, Ont.

Tenders are under consideration for the erection of a passenger station at Matheson.

A decision is expected to be made at an early date in reference to the proposal to build a line to Elk City and Gowganda.

The final location map of the Porcupine branch shows a line branching off from the main line at Iroquois Falls, mileage 224.5, and proceeding southerly and westerly to the shore of Frederick House Lake, skirting the south of the lake for about five miles, thence in the same direction through Matheson and Whitney tps. to Porcupine Lake, passing to the south of the lake to Porcupine River in Tisdale tp., mileage 29. It is possible that it may be necessary to extend the branch further west, but this will depend upon the future development of the camp. The branch has been located with maximum gradient of 1%, and a maximum curvature of six degrees. In order to hasten the completion of the branch, temporary construction curves in excess of 1% have been

THE MILBURN LIGHT

MADE FROM ACETYLENE GAS

For WRECKING CARS, STEAM SHOVELS, DREDGES, Etc.

For this class of work it is unsurpassed. The Light is supplied with a water tight cover, enabling it to withstand any amount of vibration.

One or two powerful reflected lights can be supplied by the one outfit, also a series of smaller burners. The light follows the crane or shovel and throws its rays directly upon the work. It lights instantly, requires no attention during use and positively defies wind and weather.

It gives 5,000 CANDLE POWER FOR ABOUT 6c AN HOUR AND LIGHTS 1,500 FEET OF WORK.

used in a few places. The principal structure on the route is a pile trestle, 900 ft. long, across the Frederick House River. Work on the line is being pushed rapidly, and it is expected that track will be laid on the first 11 miles early in April. The bridge timbers for the bridge at Frederick House River are being prepared, on which work is to be started at once. Considerable progress has been made with the clearing and grading beyond that point. (Mar., pg. 209, and also Charlton to Elk Lake, (Mar., pg. 249.)

Toronto, Hamilton and Buffalo Ry.—The Board of Railway Commissioners has authorized the company to take certain lands in Barton tp., to increase its yard facilities at Hamilton, Ont. (Mar., pg. 209.)

Toronto, Proposed Central Terminal Station.—Representatives of a New York syndicate propose to renew their application to the Toronto city council for permission to build a central terminal station in the city. The new proposal, press reports state, is to lease the tunnels connecting with the station to the railways, and to build the station on a block about 1,000 ft. square in the centre of the city. (Jan., 1910, pg. 23.)

Yellow Head Pass.—A press report states that "C. J. Leyland, Haggerstown Castle, Scotland, who owns a coal property near the Yellow Head Pass, B.C.," is having surveys made for "a 20 mile line to connect the mines with the G. T. Pacific Ry." Haggerston Castle is in Northumberland, Eng., and not in Scotland.

Winnipeg North Eastern Ry.—Application to the Manitoba Legislature to incorporate a company with this title, to build a railway from Winnipeg, easterly and northerly along the east side of Lake Winnipeg to the northern boundary of the province. H. P. Blackwood, Winnipeg, is solicitor for applicants.

Press reports from Winnipeg state that the surveys for the first section of this line, from Winnipeg to Fort Alexander, on the Winnipeg River, are being made by Canadian Northern Ry. engineers, and that a considerable portion of the right of way has been acquired by interests closely connected with Mackenzie, Mann & Co.

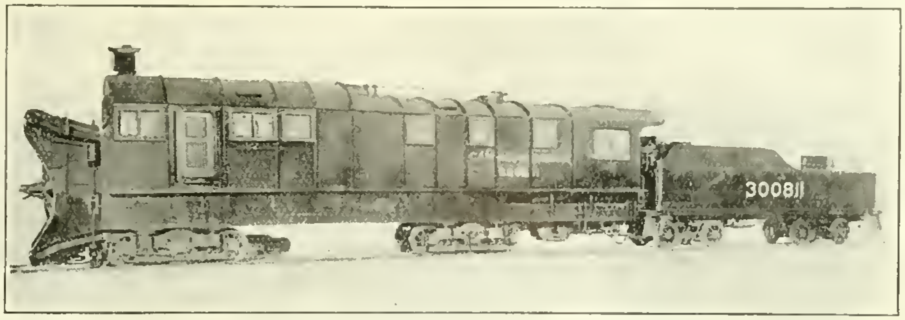
The British Columbia Legislature has passed an act authorizing the regulation of railway construction camps, and providing for the inspection of the same by medical officers.



C.P.R. Rotary Snow Plough.

C. P. R. Rotary Snow Ploughs.

Two of the accompanying illustrations show the outside appearance of the two rotary snow ploughs which the C.P.R. had built in the latter part of last year by the Montreal Locomotive Works. The other illustration shows the appearance of the plough before the cab was put on.

During the past few winters the C.P.R. experienced considerable delay and trouble on account of the older types of rotary snow ploughs, usually known as the Leslie, giving trouble by breaking down when working in heavy drifts, on account of the lack of stiffness in the frame, and the consequent springing and distortion of the engines, and the fact that the wheels being made of sheet steel were easily damaged in case of trees or rocks being present in the drifts, as occasionally occurs when track is obstructed by slides. Delays of any kind nowadays are so objectionable that it was decided to construct two ploughs which would in every way be as strong as it was possible to make them. The wheels, instead of being built of sheet steel, are made of steel castings, the blades being 1 in. thick at the edge and heavily ribbed. The framing, instead of being constructed of I beams, is made of two heavy box girders about 3 ft. deep for the greater portion of their length. The engines, instead of being placed by the side of the boiler in driving the wheel shaft through gearing, are vertical, and drive directly on the wheel shaft. The boiler is made of ample capacity to supply sufficient steam. The result is the plough shown in the accompanying illustrations. These ploughs weigh 260,000 lbs. each; the wheel shaft is driven by a 24 in. vertical engine, giving steam at 200 lbs. pressure; the boiler is 61 ins. diameter at the front end, and has a grate area of 34 sq. ft. The tender is made with 8,000 gallon capacity, and is specially long so as to separate the weight of the plough from the engines pushing it. A novelty is introduced in the way of a steadying device placed under the hood, which is lowered down on the track when the plow is running, thus taking all vibration off the springs. The results, we are advised, are entirely satisfactory, and the ploughs, which are employed on the mountain section in British Columbia, are doing all that can be expected.

We are indebted to H. H. Vaughan, Assistant to the Vice President C.P.R., for the foregoing data, and also for the photographs.

The Quebec Bridge.

The Minister of Railways replying to questions in House of Commons, Mar. 7, said the contract for the building of the bridge had not been signed. There were details in connection with the contract that it would not be in the interest of the public to mention at present. In a very short time he expected to have the matter closed up so far as the wording of the contract was concerned, when all papers in connection with it would be laid before the House. On Mar. 8, he stated that the plans and specifications for the bridge had not been submitted to the Chief Engineer of the G.T. Pacific Ry., as the bridge is not comprised in the eastern division of the National Transcontinental Railway as covered by statute. The question of using the bridge, he added, had been discussed with the G.T. Pacific Ry., but it was considered premature to endeavor to make any arrangements with the railway companies until the construction of the bridge was further advanced.

Some days previously the Minister made a lengthy statement as to the bridge, in which he said that the estimated cost of the building including the loss on account of the old bridge would be $20,000,000. There had been only one proposal made for a suspension type of bridge, and that this had been unanimously condemned as unsuited for the purpose. It was estimated that the bridge would be completed in from three to five years, but in his opinion, five years would be required. Mr. Fitzmaurice had resigned from the Commission because of ill health in the first place, and because he did not altogether agree with the design which the other two Commissioners had favored. His resignation had been accepted, because it was desirable at that stage of the proceedings that there should be a man in his place who would be able to give more time to the work. Mr. Vautelet had

resigned because of his health, and as the design which he favored had not been adopted he (the Minister) thought that the work of carrying out the design should be in the hands of an engineer who was more in sympathy with the accepted plans. It was expected that the contract with the St. Lawrence Bridge Co., would be signed within a short time.

The question of the damage to one of the caissons used at the foundation work for the new bridge was the subject of a series of question in the House of Commons recently. The Minister of Railways in reply said one of the caissons was damaged owing to the breaking of a pump, and the consequent grounding of the caisson, on an uneven bottom. The caisson was strained, necessitating the removal of the concrete which had been placed in it, and the placing of the caisson itself in dry dock for repairs. The cost to date for labor and material in connection with repairs was $75,000. about 2,300 cubic yards of concrete had been placed in the caisson at the time of the accident, its approximate value in place being $14,000, and the cost of removal $7,000. The work of sinking the caisson stopped Aug. 31, 1910, and nothing more was done on that part of the work, while all work was stopped for the winter Dec. 23. The contractor was responsible for any loss on account of the accident to the caisson, and the Department was not aware of any claim having been made by him on account of any alleged loss. The plans for the caisson were made for the contractor by A. Noble of New York, and were approved by the Board of Engineers appointed by the Government to have charge of the reconstructing of the bridge. (Mar., pg. 215.)

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

RATES ONTARIO TO MISSISSIPPI POINTS.

12854. Feb. 1.—Re application of J. F. Tucker, Chairman Central Freight Association, Chicago, as agent for the carriers parties thereto, for permission to postpone the effective date of his joint and proportional tariff on classes and commodities from points within the competitive territory in Ontario south of and including the G.T.R. line from Sarnia Tunnel to Suspension Bridge, via London and Hamilton, to Lower Mississippi River, Alabama, and Louisiana points, until Sep. 1, 1911. Upon its appearing that the said postponement has been ordered by the Interstate Commerce Commission with respect to the rates shown in the said tariff to the said territory from points south of the International Boundary: and in pursuance of the powers conferred upon the Board by sec. 329 of the Railway Act, it is ordered that permission be granted for the suspension of the freight rates from Ontario shown in the tariff of joint and proportional rates, C.R.C. 188, issued by J. F. Tucker, of Chicago, until Sept. 1, and for the reinstatement until and including Aug. 31, of the joint and proportional rates between the same points shown in J. F. Tucker's tariff C.R.C. 180, which tariff was superseded by C.R.C. 188, Nov. 1, 1910.

EXPORT RATES TO HALIFAX.

12882. Jan. 25 and 26.—Re application of Board of Trade of Halifax, N.S. complaining that the G.T.R. unjustly discriminates against the port of Halifax and in favor of other Atlantic ports in its differential rate of 1c per 100 lbs. on all traffic between Halifax and Montreal and points east of Montreal. Upon reading what has been filed in support of the application and on behalf of the railway; and upon hearing the application in the presence of counsel for applicant and the company, it is ordered that the application be dismissed.

Chief Commissioner Mabee gave oral judgment in this case as follows:—The matter is one of very great importance, we are fully alive to that, to the port of Halifax, and it is with regret that we feel we are not at liberty to enter into the merits of this contention. Perhaps, as we have not heard the merits, it would be unfair to the parties that we should give any indication of what we might think of them or as to what impression we have obtained from the statement of the case by counsel for the applicants.

The one short ground upon which the case must be put, in so far as this Board is concerned, is that of jurisdiction, and we are all of the opinion that in the peculiar situation this matter stands it is not a case in which we are at liberty to interfere. The matter lies within a brief compass. Parliament defines certain rules for railways to operate under and live up to. It says that railway companies shall not discriminate against persons or localities. Then it constitutes this tribunal and hands this act to us and says to us. "As far as you are able see that the regulations we have laid down there are lived up to." But in handing us this statute it says: "See that the provisions of this act are in force so long as they are not in conflict with some other statutes that we have put upon the books." It retains to itself power to incorporate a railway and insert in that act of incorporation anything it sees fit. And Parliament can tomorrow incorporate a railway and say that none of the provisions of the Railway Act, with reference to discrimination, shall apply to that road. If it did that it would paralyze the arm of this tribunal to the extent of preventing it from applying to that particular road the provisions in this law dealing with discrimination.

Parliament has said that, in so far as or wherever the provisions of the Railway Act and of any special act passed by the Parliament of Canada relate to the same subject matter, the provisions of the special act shall, in so far as is necessary to give effect to such special act, be taken to override the provisions of this act. Now, is there a special act? There clearly is: chap. 5, 62 and 63 Vic. Does it deal with the same subject matter? Now, one of the subject matters of the Railway Act is that respecting rates which carriers may charge. Does the special act deal with that? It clearly does. Because it says the Halifax rates are to be 1c. per 100 lbs. on all classes over the rates to and from St. John or Portland. Now, we have got a special act in conflict with the provisions of the Railway Act, to the extent of saying that the rates over these two roads to Halifax shall be 1c. per 100 lbs. more than the rates to Portland or St. John. So that, applying sec. 3 of the Railway Act to the special act we have got conflict, and the law says that where there is conflict with reference to the same subject matter, the provisions of the special act shall govern. Can there be any doubt about this being a special act and about this agreement really forming part of it? The special act deals with the agreement, it confirms it, and part of the thing that is confirmed is this 20c. a ton differential against Halifax.

The late Chief Commissioner Killam (for whose opinion, both in his lifetime and since his death the bar of this country have always had the greatest respect) held that this supplemental traffic agreement of Feb., 1898, must be considered to have been confirmed by statute. I think we would have come to the same conclusion as he did, even had we not had his well-considered opinion to guide us. So it seems to us to be perfectly clear that this tribunal cannot interfere and wipe out the arrangement that Parliament put into effect between these two roads. We do not put it upon the ground that the Intercolonial is owned by the Government. The situation would be the same, we think, if it were an agreement between the C.P.R. and the G.T.R., or between any two roads in Canada. If railway companies are able to get legislation of this character upon the statute book, we have no alternative but to be guided by what Parliament has said. We cannot undo this transaction, we cannot interfere with it. The only body that can interfere with it is the body that brought it into effect and made it law.

WHITE PASS AND YUKON RATES.

The White Pass and Yukon Route has applied to the Board of Railway Commissioners for leave to appeal against the Board's recent order directing it to file new freight tariffs showing reductions, to come into effect Apl. 1.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them

12950. Feb. 11.—Approving revised location of C.P.R. Kipp to Aldersyde branch, previously approved by orders 6870 and 9278, from mileage 28 to 67.06, Alta.

12951. Feb. 11.—Authorizing C.P.R. to build spur to Diamond Coal Co.'s premises along and across Jarvis St. and lot 22, Toronto.

12952. Feb. 8. — Authorizing Vancouver, Victoria & Eastern Ry. to take whole of bed and foreshore of False Creek east of Westminster Ave., Vancouver, B.C., with exception of portion reserved by city.

12953. Feb. 10.—Prescribing forms of merchandise receipt, money receipt, collection receipt, limited liability livestock contract, livestock attendants' contract to be used by express companies, and ordering that the express classification for Canada C.R.C. 2, appended to judgment delivered Dec. 24, 1910, be approved and take effect Mar. 1.

12954. Jan. 23, 24.—Approving C.N.Q.R. Standard Tariff of Maximum Sleeping and Parlor Car Tolls C.R.C. S3.

12955. Feb. 10.—Approving Marconi Wireless Telegraph Co.'s tariff of rates C.R.C. 4 and 5.

12956. Jan. 16.—Authorizing G.T.R. to build spur to Massey-Harris Co.'s premises, Brantford, Ont.

12957. Feb. 7.—Authorizing T.H. & B.R. to take certain lands in Barton tp., Ont., to increase yard facilities at Hamilton, Ont.

12958. Feb. 13.—Authorizing Marx & Rawolle of Canada, Ltd., to lay water main under G.T.R. near St. Ambroise St., Montreal.

12959, 12960. Feb. 13.—Authorizing Ontario Hydro-Electric Commission to erect wires across G.T.R. at Main St., Norwich, and at Concession St., Tillsonburg.

12961. Feb. 13.—Authorizing Water Commissioners of London, Ont., to erect wires across G.T.R. at Talbot St.

12962. Feb. 13.—Ordering that G.T.R. trains do not exceed four miles an hour, and that standpipe and exhaust pipes be removed at Lyster station, Que.

12963. Feb. 13.—Approving location of G.T.P. station at Tofield, Alta.

12964. Feb. 13.—Authorizing C.N.O.R. to build across public road at con. 1, Grenville tp., Que.

12965 to 12996. Feb. 11, 13, 14.—Authorizing C.P.R. to build second track across public highways in Portage La Prairie and Rosser, Man., on Brandon subdivision, at 32 points.

12997. Feb. 11.—Approving C.N.O.R. revised location at Grenville, Que.

12998 to 13002. Feb. 10, 11, 13.—Authorizing C.P.R. to build additional second track across public highways in Portage la Prairie and Rosser, Man., on Brandon Subdivision, at five points.

13003. Feb. 13.—Authorizing C.P.R. to build spur to Macleod Quarrying & Contracting Co.'s premises in secs. 16 and 17, tp. 10, r. 24, w. 4 m., Alta.

13004. Feb. 7.—Authorizing Nepean tp. and Westboro village, Ont., to extend Victoria Ave. to Pacific Ave., across C.P.R.

13005. Feb. 13.—Authorizing D. J. Cyr, of Green River, N.B., to lay water pipe under C.P.R.

13006. Feb. 12.—Relieving C.N.R. from further protection at highway crossing at Lloydminster, Alta.

13007, 13008. Jan. 23, 24.—Approving Standard Tariff of Maximum Sleeping and Parlor Car Tolls of Maine Central Rd. and Central Vermont Ry.

13009. Feb. 7.—Authorizing C.N.O.R. to divert road on lots 5A and 4E, con. 1, Grenville tp., Que.

13010. Jan. 23, 24.—Approving Esquimalt, & Naniamo Ry. Standard Tariff of Maximum Sleeping and Parlor Car Tolls.

13011. Feb. 14.—Amending order 12949 Feb. 10, by adding, "It being understood that in engaging watchman, the M.C.R. is acting only as agent of the N. St. C. & T. Ry.

13012. Feb. 14.—Extending to May 15 time within which C.P.R. shall instal improved electric bell at Cote des Neiges road, Hochelaga Co., Que., as provided in order 12321, Nov. 18, 1910.

13013. Feb. 14.—Ordering that C.N.R. erect fences along right of way before June 15, 1911, under penalty of $25 a day, on complaint of Davidson, Sask., board of trade.

13014. Feb. 7.—Authorizing C.P.R. to divert highway between con. A and con. 1, Ottawa Front, Nepean tp., Ont., portion of highway to be deeded to township by C.P.R.

13015. Feb. 7.—Providing that G.T.R. maintain interlocking plant ordered in connection with N. St. C. & T. Ry., by order 9646, Feb. 17, 1910, and varying order 10310, April 20, 1910, in regard to working of interlocker, method of rendering bill, etc.

13016. Feb. 15.—Authorizing G.T.P. Branch Lines Co. to cross highway between secs. 23 and 26, tp. 36, r. 27, w. 2 m., Saskatoon District, Sask.

13017. Feb. 14.—Authorizing C.P.R. to build spur to International Harvester Co.'s premises in lots 5 and 6, block 165, plan 07 Saskatoon, Sask.

13018 to 13021. Feb. 14. — Authorizing M.C.R. to use subways at Tecumseh Road and Dougall Road, Sandwich West tp., at Charing Cross, Kent Co., and at Ross St., St. Thomas, Ont.

13022, 13023. Feb. 14.—Authorizing M.C.R. to use drawbridges at Chippewa Creek, Ont.

13024. Feb. 15.—Providing for interchange tracks between G.T.R. and N. St. C. & T. Ry., in St. Catharines, Ont., and authorizing crossing of John and Page Sts., and an unopened street.

13025. Feb. 15.—Authorizing G.T.P. Branch Lines Co. to cross highway between sec. 33, tp. 34, r. 27, and sec. 3, tp. 35, r. 27, w. 2 m., Saskatoon District, Sask.

13026. Feb. 15.—Approving G.T.R. plans for change of location and details of construction of retaining wall at Exhibition grounds, Toronto.

13027. Jan. 21.—Authorizing C.N.O.R. to cross Cotsmore Ave., Cobourg.

13028. Feb. 15.—Authorizing South River Electric Co. to erect wires across G.T.R. track and wires near South River village, between Strong and Machar tps., Ont.

13029. Feb. 7.—Approving G.T.R. plans of Howard Ave. subway, Toronto, and Jane St. subway, York tp., Ont.

13030. Feb. 7.—Authorizing C.N.O.R. to build bridge over North River, St. Andrews parish, Que., mileage 13.5, from Hawkesbury Ont.

13031. Feb. 17.—Authorizing Ontario Hydro-Electric Commission to erect wires across Bell Telephone Co.'s wires at lot 2, con. 11 Downie tp.

13032, 13033. Feb. 16.—Relieving G.T.R. from further protection at crossings 1¼ miles north of Paisley, Ont., and at Versaille St., Montreal.

13034. Feb. 18.—Approving C.N.O.R. location through unsurveyed territory, Algoma District, mileage 260 to 280, from Sudbury Jct., Ont.

13035. Feb. 18.—Approving location of C.P.R. Weyburn-Lethbridge branch from sec. 29, tp. 6, r. 13, w. 4 m., to the Lethbridge subdivision in sec. 4, tp. 9, r. 21, w. 4 m., from mileage 400 to 449.9.

13036. Feb. 16.—Correcting error in right of way plan registered as 678R of Calgary and Edmonton Ry. Lacombe branch (C.P.R.)

13037. Nov. 14.—Approving location of G.T.P. Branch Lines Co.'s station at Yorkton, Sask.

13038. Feb. 18.—Authorizing C.P.R. to build bridge over Eagle River, B.C.

13039. Feb. 16.—Authorizing G.T.R. to build spur to Thornbury Transportation and Reduction Co.'s premises, Thornbury, Ont.

13040 to 13044. Feb. 18.—Authorizing G.T.P. Branch Lines Co. to cross certain highways in Saskatchewan and Alberta.

13045. Feb. 20.—Authorizing Ontario Hydro-Electric Commission to erect wires across G.T.R. track and wires at lot 19, con. 2 East Oxford tp., Ont.

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

THE HALL SIGNAL COMPANY

13227. Mar. 14.—Authorizing G.T.P.R. to divert road in n.e. ¼ sec. 8, tp. 35, r. 3, w. 3 m., East Saskatchewan District.

13228. Jan. 17.—Ordering on application of Battle Creek Toasted Corn Flake Co., London, Ont., that Canadian Classification 15 be amended to provide minimum carload weight of not more than 24,000 lbs. for flaked or cooked cereals.

13229. Feb. 7.—Approving deviation of G.T.R. from Lindsay to Port Hope, Ont., as already built between Reaboro, on lot 10, con. 10, Ops tp., near Rice Lake Summit, on lot 16, con. 9, Hope tp., Ont.

13230. Feb. 24.—Ordering that 20% of cost of work at M.C.R. crossing at Fletcher's station, Ont., less expense of moving of Bell Telephone Co.'s poles, be paid out of railway grade crossing fund.

13231. Mar. 14.—Authorizing C.N.O.R. to build spur to National Bridge Co.'s premises, on lots 325 and 326, Longue Point Parish, Que.

13232. Mar. 14.—Approving Maine Central Rd. bylaw of Mar. 8, authorizing W. K. Sanderson, General Freight Agent and F. E. Boothby, General Passenger Agent to prepare and issue tariffs of tolls.

13233 to 13235. Mar. 15.—Approving London and Lake Erie Ry. and Transportation Co.'s Standard Passenger Tariff C.R.C. 1, at 2¼c. a mile, and Standard Freight Tariff C.R.C. 1, to take effect March 27, and approving bylaw 3, authorizing S. W. Mower, General Manager, to prepare and issue all tariffs.

13236. Mar. 15.—Authorizing G.T.P.R. to cross highway on its main line from mileage 61, sec. 26, tp. 53, r. 7, to mileage 90, sec. 8, tp. 54, r. 11, w. 5 m., Alta.

13237 to 13242. Mar. 15.—Authorizing city of Toronto to carry wires across G.T.R. and C.P.R., and G.N.W. Telegraph Co.'s wires at various streets.

◆

Following are the officers and directors of the Montreal Warehousing Co., for the current year: President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, W. M. Ramsay, J. W. Loud, Wm. Wainwright; manager and secretary G. H. Hanna.

The Cowan Construction Co., which recently applied for an authorization from the Manitoba Legislature to change its name to the Union Construction Co., will retain its old name, the application having been refused on the ground that there is already a company carrying on business under a Dominion charter as the Union Construction Co.

National Transcontinental Railway.

Replying to questions in the House of Commons recently, the Minister of Railways said the general standard of the railway through New Brunswick comprised a single track railway with necessary sidings of the standard gauge on a roadbed constructed and ballasted in accordance with the general specifications for the entire line, on which is laid 80-lb steel rails on first class cross ties, with steel fastenings. The bridges have concrete or stone substructures with steel superstructures, built in accordance with the general specifications of the Department of Railways, issued in 1908. The line is constructed with gradients not in general exceeding 0.4% adverse to east bound, and 0.6% adverse to west bound traffic, and with curves of a minimum radius of 955 ft. Near Tobique River, owing to the physical character of the country, a gradient of 1.1% is allowed. The present estimated cost per mile by contract divisions is as follows: No. 1, from Moncton westerly for 50 miles, $49,190 per mile; no. 2 eight miles to Chipman, $89,710 per mile; no. 3, Chipman to Intercolonial Ry., 39.7 miles, $35,333 per mile; no. 4, from Intercolonial Ry. to crossing of Tobique River, 67 miles, $46,920 per mile; no. 5, from Tobique River to mileage 2.5 west of Grand Falls, 31.5 miles, $133,518 per mile; no. 6, from last mentioned point to New Brunswick-Quebec boundary, 67 miles, $46,484 per mile. The cost per mile on no. 2 is high on account of the heavy grade; at the east end of the contract there is a cut about two miles long and 18 ft. deep at the highest point; there is also a heavy fill at the crossing of the Salmon River at mileage 57, and a viaduct of 1,200 ft. The cost per mile on no. 5 is high on account of the grading being unusually heavy and there is a steel viaduct nearly 4,000 ft. long, with a maximum height of 250 ft. across the Little Salmon River. The work provided for in the estimated cost includes clearing, excavation, culverts, substructures of bridges, tracklaying, ballasting, ties, signals, interlocking appliances, telegraph lines, fencing, water supply, track scales, temporary trestles, and extra work, also pumps and pumphouses, rails and fastenings, including frogs, switches and diamond crosses, and the steel superstructures and flooring of bridges.

The Minister of Railways in the course of a speech in the House of Commons Mar. 10, upon transportation matters, said with regard to the portion of the N.T.R. being built by the Government from Moncton, N.B., to Winnipeg, presented a statement prepared by the Commission as to the various contracts. This shows districts, mileages, etc., percentage of work done on each contract, miles of grading done, miles of track laid, miles of telegraph line completed, percentage of steel bridge superstructures completed, and total percentage of work done on all these 21 contracts up to Dec. 31, 1910. The total quantity of work done to that date was 67.62%. The statement, signed by D. MacPherson, Assistant Chief Engineer, is given below.

Mileages are given in the statement for 24 contracts the reason for this being that in three cases adjacent contracts are being carried out by the same contractor. The total mileage given is for the line to the west bank of the Red River at Winnipeg, while the percentage of contracts completed covers only to the east bank of the river.

An itemized statement of the cost of the work done to Dec. 31, 1910, and an estimate of the cost of the work required to complete the line, is as follows:

Items.	Work done.	Required to complete.
Grading, contract items	$69,176,400	$28,175,800
Right of way, expenses, etc.	1,629,900	1,910,100
Rails and fastenings, etc.	8,534,900	4,037,100
Buildings	664,800	3,644,200
Steel superstructures of bridges	3,342,100	2,242,900
Surveys and expenses	3,987,000	26,000
Engineering and expenses	4,398,500	2,712,000
Springfield shops	1,117,800	1,227,200
" car shop plant, etc.	nil	1,300,000
Terminals at Quebec, including connecting lines	19,000	4,419,000
Rentals joint terminals, Winnipeg	105,000	95,000
Headquarter expenses	1,605,100	969,900
Total	$94,580,500	$50,759,200
